It is expedient, no doubt, for the safety of our shores, that big guns from Woolwich Arsenal should be mounted at coast forts and batteries, and that artillerymen should be trained in their use. But the infantry, small as well as big, form a part of our national resources which must always be of considerable importance. A certain proportion of the English people being in arms—we allude to the babies—there is reason to hope that the intending foreign invader, whoever he may be, will think twice about the matter. Thousands of little boys, ere they have reached their fifth birthday, announce a patriotic determination to conquer every possible foe. In this valiant resolution, it may usually be observed, they are faithfully encouraged by their sisters, while their nurses are content to forbid only such actual exercises of precocious pugnacity as might be dangerous to those of tender age. The sight of a cannon, of a rifle or pistol, and much more of a real live soldier, arouses the British lion, metaphorically, that lies dormant in the breast of boyhood from earliest infancy; and mothers are sometimes troubled with anxious fears lest the beloved urchin, when he grows to manly stature, take a fancy to the military or naval career. It would be difficult to keep such thoughts out of a child's head, if it were desirable; for nearly all his learning of history, besides the names and dates of Kings and their reigns, consists of land and sea battles; and in the conversation of his elders, whenever there are wars or rumours of wars, no subject is discussed with equal zest. This may hereafter be regarded as a puerile disposition, a remnant of childishness in the slowly improving race of mankind, who are to become so wise, sober, and rational, that all international disputes will be settled without military conflict. What will the boys be like then, if the men are converted to equity and gentleness, and there be no such playthings as swords and guns! A time is promised, indeed, when nation shall no more rise up against nation; and there may be a time when national interests and pretensions shall be merged in the common welfare of humanity. As the world is now, we are still compelled to look to "our national defences," and the youngest child born among us will not live to see the end of this stern necessity, which is exemplified by the great gun bidding defiance to a possible enemy on the cliffs of our Channel shore.

Cardinal Manning, assisted by several other dignitaries of the Roman Catholic Church, on Sept. 20 opened the new college at Tooting, which has been erected in place of the old one at Clapham.

A new hospital, erected at a cost of about £10,000, was formally opened at Great Yarmouth on Sept. 20. Sir James Paget, the Mayor and Town Council, the members of the Board of Guardians, the Earl of Orford, Sir E. Birkbeck, M.P., the friendly societies of the town, and a considerable number of the local public took part in the proceedings, which commenced with Divine service at the parish church. Thence a procession was formed to the new hospital. The institution was inaugurated by Sir J. Paget unlocking the front door of the building with a silver-gilt key, handed to him for the purpose. A tour of inspection was made round the hospital, the south wing of which has been fitted up for immediate use. A luncheon followed at the Townhall.

A retired Austrian Government clerk who had for many years lived the life of a recluse in one of the large barracklike houses of suburban Vienna, died a few days ago, and in his will he bequeathed a considerable sum of money to one of his neighbours in the subjoined terms:—"Up the second flight of stairs there lives at door No. 63 a widow who has two daughters. I leave a sum of 80,000 fl. to the one who always nodded in such a friendly way when she met me." At first there was great rejoicing in the widow's home, but presently the two sisters fell out as to which of them the old gentleman had left the money. Both of them had nodded when they met him, and both claimed the legacy. Legal proceedings are impending, but the solicitors on either side are said to be inclined for a compromise by dividing the money in equal shares between the two sisters.

The celebration of the tercentenary of the defeat of the Spanish Armada was carried out at Hastings on Sept. 20. A meeting was held in the Townhall, under the presidency of the Mayor. Lord Brassey moved a resolution to the effect that the deeds of 1588 deserved to be held in undying reverence, and observed that the proceedings in connection with the celebration had not the object of conveying an affront to any foreign Power or religious party. At eight o'clock a torchlight procession started from the Fishmarket, and proceeded along the seafront to St. Leonards, the route being lined with thousands of spectators. The procession was led by a party of coastguards in boats festooned with fancy lights, drawn on cars by horses. Then followed detachments of Naval Artillery Volunteers, also in boats; three batteries of Artillery Volunteers, with guns; two companies of the First Cinque Ports Volunteers; the Charles Arkcoll life-boat and crew; and the local fire brigade. Five bands attended the procession, and torches were borne by one hundred fishermen in tanned frocks. At the conclusion a *feu-de-joie* was fired from the West-hill by the Rifle Volunteers, and a display of fireworks, at the same spot, wound up the proceedings.

BIG HAMMER MAN.

SHELL FACTORY, WOOLWICH ARSENAL.

The manufacture of shells, of shrapnel shells containing bullets, and of Whitehead torpedoes, in the Royal Arsenal at Woolwich, has been sufficiently described in the last two Numbers of *The Illustrated London News*. The additional Sketches, made at the Rifled Shell Factory and at the Foundry of the Arsenal, which are presented this week, do not require much further explanation. Several of them represent the stalwart figures of the men who wield big hammers in the foundry, and who deal with steel plates as dextrously as a tailor can manipulate broadcloth. This is nothing to what is done in the Gun Factory, with the great steam-hammer which weighs forty tons, and the anvil of which is mounted on an iron bed of immense thickness, weighing altogether 650 tons, with a bed of timber and concrete below 30 ft. deep; the steam-hammer is used to weld the double or treble coils of steel together, in the building-up of a gun. The Ordnance Stores Factories, to which our attention is at present directed, are of vast extent and of interesting variety, including, besides those already noticed, the Laboratory, containing five hundred lathes, with the Chemical Department, where so much is done with gunpowder and gun-cotton; the cartridge factories both for cannon and for small-arms; the sheds in which detonating apparatus, fuses, and percussion caps are manufactured; the "lead-squirting room" and bullet factory, the rocket factory; and the special appliances for making all kinds of military ammunition. There is also the gun-carriage factory, with its carpentry of timber, its numerous forges of iron, machine-shops, and wheelwrights' shops. The pattern-room exhibits an interesting collection of models, drawings, and photographs, duplicates of which are sent to the War Office and to some foreign stations. The testing of guns and ammunition is conducted at the proof butts in the open ground east of the Arsenal; but the space occupied by the different factories and stores of this immense establishment is three hundred and fifty acres. More than ten thousand hands are often employed in various works at the same time, and even this does not suffice; there is also the Enfield Factory, and special factories at other places, besides work done by contract; yet the demands of our Army and Navy for mechanical and material instruments are scarcely met by the supply in time of peace, and in war-time it might become needful to make far greater efforts, more especially in the Ordnance Department.

MUSICAL PUBLICATIONS.

"Because I Love Thee" is the title of a song by Ernest Ford, who has produced a very pleasing piece in which sentimental sadness is well expressed without degenerating into mawkish commonplace. Messrs. Chappell and Co. are the publishers, as also of "Beauty's Eyes," by F. P. Tosti, a setting of a love-song from the experienced hand of Mr. F. E. Weatherly. The vocal part is flowing and melodious, its unaffected simplicity being well contrasted by the moving accompaniment of triplets. An ad libitum violin part is supplied to enhance the general effect. "'Tis for the Best" (also from Messrs. Chappell) is a setting, by Mr. F. Cellier, of lines by Mr. C. Bridgman, in which religious sentiment is well expressed, and this has been successfully reflected in Mr. Cellier's music, which is calculated to produce much effect without undue strain on the vocalist—a merit that belongs to the other vocal pieces above referred to. "The Day of Love" (from the same publishers) is a setting of lines by Thomas Moore, by Mr. Hamish MacCunn, who has recently attracted attention by some highly characteristic music, including important orchestral and choral accessories. The song now referred to affords fresh evidence of the composer's possession of an original train of musical thought. The vocal melody, which is extremely simple, is well contrasted by the peculiar rhythm of the accompaniment. Messrs. Chappell and Co. have also issued pianoforte arrangements from Lecocq's comic opera "Pepita" (recently produced at Toole's Theatre after a successful provincial career). A selection of the favourite themes has been arranged, in effective and easy style, by W. Winterbottom; a Fantasia, derived from the same sources, having been produced by Mr. W. Smallwood, who has avoided difficulties, and has facilitated even what is easy, by indicating the lending fingering. The "Diamond Music Books"—issued by the same firm—contain a large variety of pianoforte and vocal pieces, sacred and secular, neatly engraved and printed, and issued at the almost nominal price of sixpence each number.

Boosey's "Instrumental Library" (shilling series) has now reached a hundred numbers, and includes a large collection of violin music—solo and duet, exercises, studies, and arrangements—forming a comprehensive and varied collection suited to all tastes. The cornet, also, is provided for in the series now referred to, others of Messrs. Boosey and Co.'s cheap publications including a "Banjo Album" containing arrangement

CLEANING OUT A SHELL.

LACQUERING A SHELL AT WOOLWICH ARSENAL.

BIG HAMMER MAN AT WOOLWICH ARSENAL.

of modern songs for an instrument which has of late years been brought into prominent notice.

"My Heart's Beloved," by F. H. Cowen, is a setting of sentimental lines by Mr. A. Chapman. The music has that artistic and gracious touch which distinguishes most of Mr. Cowen's productions, and will please both singers and hearers. "First in the Fight" is a song, by F. Bevan, of a stirring martial character, well suited to a singer possessed of declamatory power. "A Garden of Memories" is a graceful song by M. Watson, who has produced some musical strains that are sentimental without being commonplace, and will be welcome alike to vocalists and audiences. "As Once We Met" is the title of a song by Mr. E. Bucalossi, who has here produced a vocal piece of a melodious and gracious character that can scarcely fail to please both in execution and audition. All the songs just referred to are published by Messrs. R. Cocks and Co., as are the following:—"He Will Forgive," an impressive sacred piece by F. L. Moir; and "Long Ago," by E. Birch, a pleasing vocal duet, in which the voices (soprano and contralto) are very effectively displayed, in association and alternation. "Ellaline" (from the same publishers) is a gavotte (for the pianoforte) by Hamilton Clarke. The piece (which is dedicated to Miss Ellen Terry) is a graceful reflection of the quaint old dance form indicated by the title.

FASHIONABLE MARRIAGES.

The first fashionable wedding of the autumn took place on Sept. 19, at St. George's Church, Hanover-square, the contracting parties being Colonel Montague Gilbert Gerard, C.B., of Rochsoles, Lanarkshire, and Miss Helen Meade, youngest daughter of Mr. Edward Meade, of 28, Hill-street, Berkeley-square. The bride was attired in a handsome duchesse satin striped moiré antique, the front of the dress being entirely covered with old Brussels lace and sprays of orange-blossom. The long Court train was trimmed with old Brussels lace and bunches of orange-blossom, while her tulle veil was caught up by a diamond star and exquisite bunch of orange-blossom. The bridesmaids wore white China silk, with plain draped skirts and bodice trimmed with white moiré. Their white chip hats were decorated with a lovely shade of green velvet and bunches of mignonette. Their ornaments were gold bangles, the gift of the bridegroom, and they also carried large bouquets of mignonette.

The marriage of Sir William Brampton Gurdon, younger son of the late Mr. Brampton Gurdon, with Lady Eveline Camilla Wallop, second daughter of the Earl and Countess of Portsmouth, took place on Sept. 20, at Wembworthy, Devon. The bride was given away by her father. She wore a dress of ivory velvet, ornamented with sixteenth-century period point lace, and her veil was of Honiton lace. Her ornaments were a pearl tiara and other ornaments, the gift of Lady Camilla Fortescue; and she carried a bouquet of orange-blossoms and myrtle, the gift of the bridegroom. There were four bridesmaids—Ladies Margaret and Henrietta Wallop (sisters of the bride); Miss Brooke, niece of the bridegroom; and Lady Margaret Herbert, cousin of the bride, who were dressed in ivory muslin and large Eton-blue sashes. They also wore pretty Tosca hats, trimmed with blue ribbon and sprays of nuts. Lord John Hervey acted as best man.

FOUNDRY HAND, AT WOOLWICH ARSENAL.

NEW BOOKS.

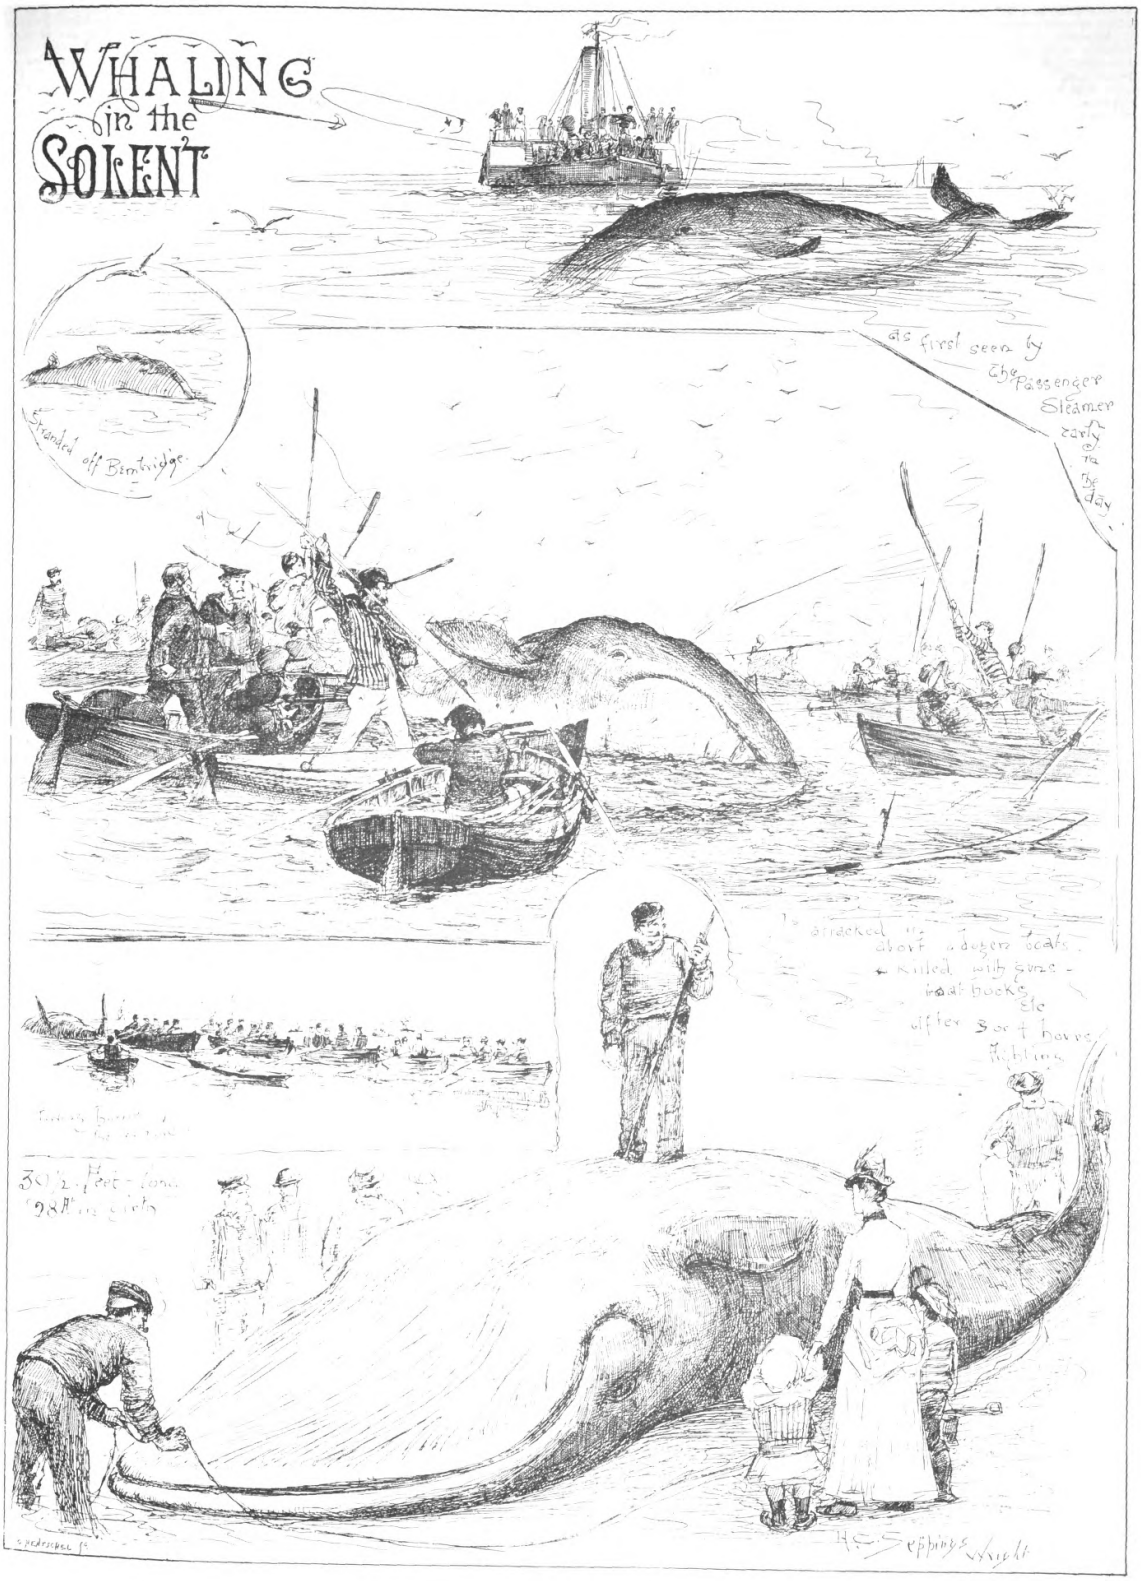
Ulysses; or, Scenes and Studies in Many Lands. By W. Gifford Palgrave (Macmillan and Co.).—It is not, in the present age, so rare a personal distinction to have resided or travelled in different countries of Europe, Asia, Africa, and America, that an author of descriptive essays should claim for his peculiar prototype the wily wanderer of the Homeric legend, who escaped the magic of Circe, the fatal song of the Sirens, and the kitchen of Polyphemus. But Mr. Gifford Palgrave has seen many cities of mankind and observed their manners and humours; while his official experiences, in the consular and diplomatic services, and his missions of an earlier date, in Syria and Palestine, as an agent of the Jesuit Order, and in Arabia, on a special errand of inquiry patronised by the late French Emperor, have made him more intimately acquainted than the ordinary "globe-trotter" can be with non-European nations. He is an attractive and engaging writer, whose style, as well as his tone of sentiment and contemplative mood, often reminds us of Mr. Froude; and this volume, containing articles mostly reprinted from the magazines of ten or fifteen years past, is welcome as agreeable reading. The views that it presents, however, of the condition of some parts of the world, though doubtless based on accurate detailed observation at the time, require now to be accepted with large modification from our knowledge of subsequent changes. We can no longer speak of "the unchanging East," when vast Asiatic regions, from the shores of the Euxine and the Caspian to the islands of Japan, are rapidly undergoing a political and social transformation far more complete than is witnessed in modern Europe. The advance of Russian conquest and Russian civilisation, now triumphant at Samarcand and Bokhara, on the one hand, and the eager adoption of European arts and habits by the Japanese, with the hastening decay of the Mohammedan Empires in Western Asia, promise soon to obliterate much that was distinctive of Oriental life. A certain almost pathetic interest therefore belongs to Mr. Palgrave's sketches of secluded rustic communities under Turkish rule, in Anatolia or Asia Minor, or in Gurgistan, a corner of Georgia which in 1867 and 1871 was not yet annexed to Russia; and there is a flavour of departing Eastern romance in his Arabian story of "Alkamah's Cave," which he gathered from native reciters during his sojourn in Nejd. The significance which he found in Siamese Buddhism, when he visited the famous shrine of Phra-Bat, and that of the ancient religion of Japan, called "Shinto," which appeared to him more salutary than the sacerdotal doctrine and practice of the Buddhists, may still command thoughtful study among other themes of historical and critical investigation with regard to comparative theology, which occupy some philosophical minds. Leaving all that, with the comments of the learned and travelled author who has been initiated into the mysteries of so many religions, unknown to Ulysses or to Homer, we are greatly pleased with his account of Hong-Kong, a noble modern creation of British commercial enterprise and administrative government, and regret that his chapter-title, "The Three Cities," has not been justified by adding the promised descriptions of Macao and Canton. The Japanese city of Kioto has been more fully described in several other books, and Mr. Palgrave has more to say of the Mikado, not as he is now, an actually ruling Emperor, but in the days of his enforced seclusion, as a gentle, venerable figure of sacred hereditary Sovereignty, dwelling amidst a loyal and contented people. In the nearer East, returning to the shores of the Black Sea, where the author, from 1867 to 1873, held the post of Consul at Trebizond, his excursion to the Greek monastery of Sumelas, a singular mountain stronghold of ancient ecclesiastical traditions, may be followed with interest; but there is little fresh in his account of the ruins of the Egyptian Thebes, Karnac and Luxor. His "West Indian Memories," too, comprising some notice of the French islands, Martinique and Guadaloupe, and the narrative of an expedition to the Grande Soufrière and boiling lake in Dominica, are the description of places that have been visited by others besides "Ulysses." Nevertheless, all that he writes is sufficiently entertaining and substantially instructive. From the Far East, where he treats of "Malay Life in the Philippines," to the River Plate and Paraguay, where he is now resident British Minister, Mr. Palgrave has everywhere collected rich stores of diverse knowledge, which have been digested by a reflecting mind, and which are here presented in a graceful literary form, worth a score of the books of slipshod writing and the trivial or silly anecdotes that some travellers make haste to print.

Twenty-five Years in a Waggon, in the Gold Regions of Africa. By Andrew A. Anderson. Two vols. (Chapman and Hall).—A large amount of geographical information concerning the inland regions of South Africa, north of the Cape Colony and north-west of Natal and the Transvaal, is contained in these volumes; but the narrative of travel, the accounts of dealings with Boers and other settlers or squatters, and with various Kaffir tribes, and probably also the hunting experiences, seem to belong to a period before the changes that have altered the condition of affairs. Mr. Anderson began his extensive and discursive waggon-journeys in 1860, starting from Natal across the Drakensberg into the Orange River country, which he found very monotonous; in 1864 he explored the Transvaal and Griqualand West, now the Diamond Fields; afterwards he traversed Bechuanaland, which was then known to few except the missionaries, and crossed the Kalahara Desert westward; in 1872 he went far into the interior, visiting Lake Ngami and the Zambesi, and reached the southern tributaries of the Congo; on a different occasion he travelled over Great Namaqualand, Damaraland, and Ovampoland, the western countries of South Africa beyond the Kalahara Desert. These countries last mentioned, which are still comparatively little known, have recently been spoken of as a possible sphere of German commercial or colonial enterprise; and Mr. Anderson's description of them seems calculated to be of more utility than what he relates of the past state of things in the Transvaal, though his abundant and exact notices of the physical geography and topography, the soil and climate, and the natural products and resources, animals, plants, and minerals of every part of South Africa have an abiding value. Great Namaqualand, which extends 420 miles along the shore of the South Atlantic Ocean, from the Orange River mouth to Wallfish Bay, and on the coast of which is Angra Pequena, a new German possession, does not appear to be a pleasant country. Water and grass are scarce even in the highlands, while the coast, with the strip of land fifty miles wide next the sea, is an utterly barren waste. Wood grows only on the river-banks and in the kloofs or ravines; but there are copper, lead, and iron ores, which will be valuable when they are worked. To the north is Damaraland, extending to the Portuguese boundary of Benguela, which seems to be a rather better country, as the natives keep large flocks of cattle, sheep, and goats. The only harbour, Wallfish Bay, belongs to the Cape Colony, and is an important trading station; there is much copper, lead, and silver, also iron, in the mountains. Behind this country, in the interior, lies Ovampoland, "one of the most beautiful parts of South Central Africa, with picturesque mountains, lovely open glades, well-wooded districts, a rich soil for corn, and a dry and healthy climate." This might be worth looking after, in connection with the British Protectorate of Bechuanaland, which approaches it from the south; but Mr. Anderson says that Ovampoland is at present no country for emigration, being extensively occupied by "too many uncivilised natives, who are averse to whites living in that country." These poor "Ovaheros," as they are called, have, nevertheless, the character of being friendly, honest, and hospitable, although no mission stations exist among them. The author recommends the making of a good road from Wallfish Bay to Lake Ngami, the establishment of British sovereignty north and south of Wallfish Bay, and measures to encourage trade with the interior of South Central Africa. There is a good deal to be learned from this book, partly written from his direct observations, partly compiled, as we suppose, from other works on the subject.

Scotland and Scotsmen in the Eighteenth Century. From the MSS. of John Ramsay, Esq., of Ochtertyre. Two vols. (W. Blackwood and Sons).—This series of contemporary biographical memoirs, followed in the second volume by some essays, of much historical value, on the social and economic conditions of Scotland after the Jacobite Rebellion of 1745, may be esteemed an important contribution to our studies of the past. The author, who was born in 1736 and died in 1814, was a friend of Sir Walter Scott, lived the life of a discreet and quiet country gentleman, cultivated the best society of his time, reflected wisely on his personal observations, and wrote the clear, elegant, unaffected English prose style of Hume and Robertson, which was perhaps as good as any written in our own age. His papers, now edited with care and fidelity by Mr. Alexander Allardyce, author of the biography of Admiral Lord Keith, constitute a substantial work, connected by the affinity of its subjects, which fully merits preservation as a standard literary authority, and should be placed on the library shelf after Dr. John Hill Burton's excellent History, along with some publications of the Grampian Club and with the useful compilations of Messrs. William and Robert Chambers. They will serve, besides, for those old-fashioned lovers of the best of the Waverley Novels who appreciate Scott's genuine vein of humour in his delineation of Scottish characters and manners as he actually saw them—a source of imaginative interest that will outlive the puerilities of chivalrous romance—to recognise the truth with which Scott drew from nature in his most lifelike portraits of men not less typical of different classes than distinctly individual persons. It is of the Baron of Bradwardine, Oldbuck of Monkbarns, Lawyer Pleydell, Dandie Dinmont, Bailie Nicol Jarvie, and other eighteenth-century characters that we are apt to think, not of Ivanhoe, Marmion, or Quentin Durward, as the real living figures in Scott's imaginative creations. We only wish that he had been allowed by the taste of his readers to employ more of his genius in depicting what lay immediately around him; for the robust vigour of the Scottish national temperament, and the circumstances of his age and country, presented an abundance of dramatic subjects. Mr. Ramsay of Ochtertyre was not a great literary humourist, but a diligent and conscientious memorialist, and a judicious, friendly, veracious commentator on social and domestic affairs. During his residence at Edinburgh, by constant personal intercourse, and after 1760, when he withdrew to the management of his rural estate, by continued private correspondence and visiting, he kept up an acquaintance with the eminent lawyers, University professors, and clergymen of the Established Kirk; and he learnt much of their predecessors. Duncan Forbes of Culloden, President of the Court of Session at the political crisis of 1745; Dundas of Arniston; Baron Kennedy; Lord Justice Clerk Erskine; Lord President Craigie; Lord Prestongrange; Lord Pitfour; Lord Auchinleck (Boswell's father); and Lord Kames, the acute and ingenious philosophical writer, appear in this gallery as ornaments of the Bench of Judges. Lord Monboddo, with his versatile cleverness and his eccentric whims, and Lord Hailes, the accomplished scholar and zealous antiquary, with several other notable men of the lawyer class, are here introduced. Among the men of literary note we find Adam Smith, Dr. Thomas Reid, Dr. Gregory, Dr. George Campbell, Macpherson, and Beattie, several principals and professors of different Scottish Universities, and several preachers or theologians in the Kirk ministry. But the general descriptions of the state of Scotland a century and a half ago, the popular feeling towards the government of the Hanoverian Kings, the aspects of town and country, the state of agriculture, the relations between lairds and tenants and peasants, the old local and family customs, the habits of the gentry and their ladies, the fashions of dress, of dwelling, of diet, and of drink, may prove more interesting to the ordinary reader. These Ramsay reminiscences are highly acceptable, making a very good book of its kind.

Chronicles of Bow-street Police-Office. By Percy Fitzgerald, F.S.A. Two vols. (Chapman and Hall).—The old building, nearly opposite the Covent-Garden Opera Theatre, recently demolished to erect a more commodious police-court, had many curious associations with London social history. These volumes, the work of a practised literary compiler, are filled with anecdotes of the Bow-street police magistrates, from Henry Fielding, the great English humourist and novelist, who occupied the bench from 1749 to 1753, and Sir John Fielding, his half-brother, who succeeded him, down to Sir James Ingham of our own day; also, the Bow-street "Runners," detective officers, and pursuers of criminals, including the famous Townsend, who died in 1832, and who was a diverting character of strong originality; and the former police patrol, which was under the special direction of the Bow-street office, before the creation of the Metropolitan Police. In the second volume, bringing down the chronicles of notable inquiries conducted at Bow-street to a recent date, there is a much less degree of local flavour; and such well-remembered events as the blowing-up of the Clerkenwell prison wall, in 1867, and the later dynamite conspiracy; the conviction of Slade, the fraudulent "Medium"; and several different forgeries, swindles, and bank robberies, are narrated on their own score. These transactions would perhaps be not less worthy of remembrance apart from the manner of their investigation at Bow-street as the Chief Office for the Metropolis; but the peculiar domestic characteristics of the ancient system there, under a singular administrative household or family of police officials, which did good service in the reigns of George III. and George IV., have a particular unique interest, deserving of antiquarian record. Henry Fielding, a name that will not be effaced from the list of ornaments of English literature, performed in 1753 the arduous task of breaking up a formidable organisation of gangs of housebreakers, street robbers, and occasional murderers, who had grown to be the terror of London. Sir John Fielding, though a blind man, exercised his office with the greatest ability and practical success; his plan, originally devised by Henry Fielding, was that of harrying and driving out the known habitual criminals from all their local haunts and places of meeting, and circulating the "hue and cry" for the arrest of highwaymen. It was he who also projected the horse-patrol for the safety of the roads around London, which Sir Richard Ford permanently organised in 1805, employing fifty-four retired cavalry soldiers, with six inspectors. In 1821, the day and night patrol of the London streets was performed by a force of about eighty men, in addition to the old "Charlies" or night watchmen. But the most characteristic feature of the establishment was that of the "Bow-street Runners," whose sagacity and alacrity might bear comparison, perhaps, with the modern Detective Branch, though Townsend is suspected by the author of this book to have been "something of a impostor." He seems, indeed, to have been a vain chatterer and boaster, flattered by the injudicious familiarity with which persons of the highest rank, the Royal Princes and the nobility, sometimes the King himself, would treat him when in personal attendance upon them; he was cunning, impudent, and greedy of fees and presents, by which he amassed £20,000. Some of the anecdotes told of his bold and pert sayings are quite in the vein of the privileged Court jesters in Shakspeare, but it is probable that he never said them to the exalted personages with whom he affected to be on such easy terms. Vickery, Sayer, Macmanus, Armstrong, Ruthven, Bishop, and Keys, are enumerated among the skilful and courageous detective officers who contrived the discovery or apprehension of noted criminals in the early part of this century. George Ruthven, who died in 1844, landlord of the One Tun Tavern in Chandos-street, was the captor of Thistlewood, the Cato-street conspirator, and of Thurtell, the murderer, and the detector of extensive bank robberies and forgeries; he was, indeed, considered the most efficient of the Bow-street "Runners." Portraits of the two Fieldings, and of Sir Richard Birnie, an eminent police magistrate, of Townsend the "Runner," and other persons, views of old buildings, and other illustrative woodcuts, are given in these entertaining volumes. The subject is of a popular nature, and is treated in an unobjectionable manner, but there is not much originality in the work.

The Henry Irving Shakspeare. Vol. IV. (Blackie and Son).—Critical revision and annotation still find employment, and publishers display their enterprise, in completing the presentment of the greatest dramatic poet's works, aided by all that English scholarship can do for their elucidation. This publication, which has reached its fourth volume, is the joint work of Mr. Henry Irving, the most eminent Shakspeare actor and manager of Shakspeare's plays on the stage now living, and of Mr. Frank A. Marshall, the executive literary editor, aided by several competent scholars, among whom are Mr. A. Wilson Verity, Mr. Arthur Symons, Mr. P. Z. Round, and Mr. P. A. Daniel, while assistance has been also received from Dr. F. J. Furnivall, Mr. Halliwell-Phillips, and other high Shakspearean authorities. Mr. Irving, in his prefatory essay on "Shakspeare as a Playwright," pointed out that the mighty genius of the poet would be most fully appreciated by regarding his plays as intended to be acted; they should be studied in the light of the explicit directions, and farther in that of the implied stage directions contained in the text, and with regard to many points of gesture or by-play among the actors; moreover, as the words are intended to be spoken aloud, the "dramatic rhythm," agreeable to the sentiment or passion expressed, has to be noted, as well as the sense and the metre. With these requirements skilfully attended to, the use of the present edition should supersede every other in the viva voce recitation of the plays, as well as in the private social practice of reading aloud by members of a party, each taking his or her part, or in single reading aloud, as in preparing for a stage performance. For the mere literary student, nevertheless, who seeks the most complete knowledge of the text, its corruptions and its corrections or proposed emendations, and of the numerous allusions and citations that occur in it, with the explanation of phrases either obsolete or equivocal in meaning, this edition will prove as serviceable as another; very brief notes to the text are put at the foot of each page, while there are notes of more elaborate discussion following each play. In order to guide the viva voce reader, whether at home or on a platform, who must omit some passages and rearrange others, to bring his recital within tolerable limits, the pieces which can be left out without detriment to the story or action of the play are set between brackets. Each play has a threefold introduction—firstly, treating of its literary history, the sources of the plot and any part of the dialogue, and the printed editions; secondly, the history of its stage representations; and thirdly, original comment and critical analysis, not quoting the opinions of former critics. The time supposed to be occupied in the development of the story through the five acts of the play is carefully specified. With all these abundant helps, among which is that of small maps, very useful in the historical plays, besides a variety of illustrative engravings, the "Henry Irving Shakspeare" is a work of great practical utility. The volumes, published at regular intervals, are not expensive for a work of so much labour and research. The fourth volume contains the plays of "King Henry V.," "Merry Wives of Windsor," "Much Ado About Nothing," "As You Like It," and "Twelfth Night"; and four more volumes are yet to come.



WHALING IN THE SOLENT.

The great whale which was caught off the Isle of Wight on Friday, Sept. 21, was successfully landed next day at Sea View. It has been inspected by crowds of people. The dimensions of the whale are as follows:—Length, 40 ft.; circumference, 20 ft.; estimated weight, 10 tons; length of mouth from point to top of jaw, 7 ft.; length of fins, 4 ft. each; width of tail, 8 ft. Great difficulty was experienced in landing the huge creature. Some stout ropes having been lashed round the tail, eight boats began to pull away, and by dint of great exertions eventually brought the whale to shore. In order to kill it some fifty or sixty shots were fired into its body by the coastguard and others, and the blood that flowed from the wounds dyed the water for a considerable distance. There is some appearance on the body of the whale of having come smartly into collision with a vessel. The whale made an effort to pass under the archway of Sea View Pier, but without success. Its vitality, however, was so great that when a hawser was put round his tail, after gunshot wounds had apparently taken deadly effect, the whale made a sudden plunge, and quite overpowered the numerous boats engaged in towing. During the chase the excitement on shore became very great, as it looked as though the huge creature would escape. At one moment it was gradually making way in the direction of Ryde. When off Spring Vale the animal stuck on a sand-bank, and the combined effect of the bullets and exhaustion soon completed the capture. Large numbers of people visited Sea View, paying for admission to see the whale. The carcass is to be sold.

Resolutions were adopted at a public meeting of the inhabitants of Berkshire and adjoining counties, held at Newbury on Sept. 20, in favour of the selection of the Berkshire Downs at Churn for the future annual meetings of the National Rifle Association.

A DAY WITH AN ANTIQUARY.

WHALING in the SOLENT
Stranded off Brambridge
as first seen by the Passenger Steamer early in the day
attacked by 2 boats
Killed with gun-boat bombs
after 3 or 4 hours
30½ feet long
28 ft in girth

THE PLAYHOUSES.

Mr. Augustus Harris has made a move in the right direction. With admirable tact, and carefully seeing his way beforehand, he has managed to shake off the clinging attentions of modern melodrama, a flashy and bedizened consort, and to devote himself and his personal energy to a more edifying alliance. The heroes, impossible in their self-sacrifice, and the heroines improbable in their abnegation; the flashy Jews and Whitechapel murderers, the romances of the bar and the tap-room; the "penny plain and twopence coloured" style of dramatic fiction that was raised into unworthy prominence by capital, scenic devices, and the prestige of the "national theatre" have all been passed over this year in favour of a nobler subject and a far more ambitious style of art. Calling to his side Mr. Henry Hamilton, one of our most earnest literary workers for the stage; claiming the assistance of such authorities on costume—particularly of the Elizabethan period—as Mr. Seymour Lucas, the Hon. Lewis Wingfield, and the enthusiastic Mr. Wilhelm; using the full scope of the magnificent Drury-Lane stage for panorama, pageant, and procession, we are presented with a series of stage pictures illustrating the Armada period, the scare in England, the rival powers of Elizabeth and Philip, and the contrast between our insular dawn of freedom and Spain's degradation in connection with the Inquisition. As presented on the first night, the new drama was not without its faults. It was too long, too diffuse. Overweighted with extraneous and unnecessary matter, the story was lost in the mass of decoration. The drama could not stand against the vigorous assault of the archæologist; but, for all that, now that the ship has been lightened by throwing some ballast overboard, "The Armada" will stand forth as one of the most conspicuous and encouraging achievements of the successful reign of Mr. Augustus Harris at Drury-Lane. The interest of the drama is pretty equally divided between patriotism and romance. The reader of history and the student of romance will be equally satisfied. We see Queen Elizabeth not as she might have been, but as she was—a made-up, red-wigged, powerful woman of eight-and-fifty, prejudiced and patriotic, listless and apathetic at the moment, vigorous and domineering at another. We see the Court of good Queen Bess at Greenwich realised so far as history and existing pictures of the time permit us to do so, with stately minuets, carefully-selected phraseology, and the statesmen of the period accurately reproduced. Scenes that have now passed away and are never to be restored to us are presented with gratifying accuracy. The corn-fields of old England; the quiet homely provincial life of old Plymouth; the village of Charing, with its old cross, in the days of the London apprentices; the cathedral of Old St. Paul's, before fire destroyed the metropolitan church and Gothic architecture gave way to the Classic design of Sir Christopher Wren; the English people in the habit in which they lived in agricultural England, in provincial England, in Court and cottage, on high days and holidays;—surely these things are more stimulating and are more lasting for good than houses on fire, railway accidents, murders in back parlours, ship scuttlings, and the realised horrors that distress and agitate our daily life!

Not, indeed, that there is any lack of excitement in the new drama. The attack on the Spanish Armada off Calais by the English fire-ships, the firing of a good old-fashioned broadside, the manœuvring of the unwieldy war-vessels, the cheering, the shouting, the hand-to-hand fighting, and the expenditure of gunpowder, must interest a generation familiar alone with a scientific navy and armaments of a vastly different pattern. It is something to be able to place on the stage, and to interest an audience with, one of the most realistic representations of one of the grandest achievements recorded in English history. But this is not all. The more romantic side of the story deals with the rescue of a young English girl by her manly lover from the clutches of a dissolute Spaniard, who has denounced her to the Inquisition, and this leads us to the examination of that curious misconception and form of human error that, treated with care and good taste, need not necessarily shock susceptibilities or arouse any deplorable religious animosity. Whatever faith we may hold, we cannot, unfortunately, blot out every chapter of recorded history; and though these scenes of torture, horror, and mistaken bigotry deal with the Inquisition and the Spanish auto-da-fé—though a Protestant maiden is led to the stake to be burned as a heretic and a sorceress—though the imagination is stimulated with cowled monks and friar inquisitors, and chanted "Miserere," and all the mockery of martyrdom as practised in a Christian country, it may still be urged that there was another side of the picture. The new faith retaliated with bitter vengeance, and the old creed saw its martyrs for conscience sake as well as the new. The good taste that has distinguished these historical pictures cannot be too highly praised; whilst simply as accessories to drama, such scenes as the rescue of the condemned woman by her lover are the most eloquent and stirring that the new drama affords. In a certain sense, the battle on board the pirate Vixen, when the hero elects to save his country before the woman of his heart, the breaking up of the mummery of the Inquisition with the broadswords of the English sailors, and the processional pageant that escorts Queen Elizabeth to St. Paul's Cathedral to give thanks to God after a great victory—which, by-the-way, was supposed to be due far more to the elements and the interposition of Providence than to actual prowess—will linger longer on the memory than even the vaunted sea-picture of the defeat of the Spanish Armada. In such plays of pageantry and scenic splendour at Drury-Lane acting as an art plays a subordinate part. All its subtlety and refinement are lost on a stage peopled with an army of supernumeraries and dedicated to din. It would require lungs of leather to shout louder than the din of carpenters and scene-shifters. Consequently, Miss Winifred Emery can do little more than look pretty and engaging; Mr. Leonard Boyne does all he can do when he is passionate and energetic. The one is a graceful heroine, the other a picturesque hero. They both did their work loyally and well; but assistance of a more practically useful kind was given by Mr. Harry Nicholls as the indispensable comic man, who gives to his Elizabethan jokes a decidedly modern flavour and a nineteenth century point to his archaisms; and by Miss Ada Neilson, who gave a remarkably accurate and vigorous picture of the "Virgin Queen." Miss Edith Bruce, Miss Kate James, Mr. Beaumont, and others may be congratulated on their successful endeavours; but the play, as a play, will stand on its scenic and pictorial merits. The ambitious ode spoken by Miss Maud Milton, and the tableau representing the historic game of bowls on Plymouth Hoe, after the picture by Seymour Lucas, will probably be sacrificed to get the play over by eleven; but there will be plenty left to amuse and edify an audience not wholly slaves to frivolity and ingrained vulgarity.

Something must be done, and done quickly too, to check the spirit of reckless discourtesy that distinguishes the first nights of new plays in London. Rudeness prevailed at Drury-Lane on Saturday; still grosser rudeness was observed at the new Court Theatre in London. At Drury the "yahoos" vented their spleen because Queen Elizabeth dared to wear a farthingale, and spontaneously said "Amen" when God was asked to bless her health and enterprise. At the Court Theatre no considerations of courtesy or good taste were permitted to weigh against the innate selfishness of the modern "cad" who presumes to criticise modern plays. Unfortunately there is no other word for him. He is disturbed on getting to his seat; he considers that the pit is not large enough or the pit entrance is too small; he has been upset; his vanity has not been tickled; he has paid his two shillings, and he wants two guineas' worth of room—so he begins to yell and cat-call. He won't allow comfort to any human soul. A manageress may be anxious, an actress may be nervous, great enterprises may be at stake—what does it matter to the combative "cad"? He has to make himself heard and felt. He did it with a vengeance on the occasion of the opening of the new Court Theatre: he hissed and howled, until very shame silenced him, merely because the architect of the new playhouse had not satisfied his requirements. When will the stalls and boxes arise and cry down this boisterous bumptiousness? When will decent people be heard in the chivalrous defence of powerless actors in antagonism to the rowdyism that threatens to wreck property and to discredit art? The new theatre is an elegant little playhouse; all was done that could possibly be done to make the playgoer comfortable; and yet the personal popularity of Mrs. John Wood and the presence of Mr. Hare were not allowed to weigh against the annoyance of a rush down a pit staircase on a crowded night and on the occasion of opening a new theatre. The programme offered was extremely interesting. Mr. Charles Thomas wrote a new comedietta called "Hermine" that brought into prominence Miss Florence Wood, a young actress of strong individuality and uncommon promise; a girl of education who has style, distinction, and power. The majority of young actresses now-a-days are weak and pulseless. They are feeble, and possess the intelligence of the ordinary shop-girl—worthy creatures, no doubt, but with no nerve or stamina. Miss Florence Wood strikes us, at the outset, as a girl of no ordinary intelligence, and as a young actress of very remarkable individuality. To see her stand unmoved, with a sarcastic smile on her lips, when the pit showered on her unoffending shoulders their impudent sneers was a bit of acting worth remembering. The little play passed off as well as it could after so stormy a prologue, and then came Mr. Grundy's version of the funny French farce "Les Surprises du Divorce." Somehow or other the play in the process of translation had lost colour. It went flatter than it should have done; it had not been well rehearsed; or, if it had, some of the company had forgotten their instructions. Mr. Hare was admirable enough, and so was Mrs. John Wood. The comic despair of the one and the eccentric indifference of the other prevented collapse; but "Mamma" must be played quicker and with far more spirit if it is to run as long as the Court farces that helped to make the name of Pinero. By-the-way, Mr. Pinero is to write the next play at the new Court Theatre when Mr. Hare has packed up and gone off to manage his own theatre at Charing-cross.

There are great events in the immediate future. Mr. Mansfield will play next Monday at the Lyceum in "A Parisian Romance." On Tuesday the Globe Theatre will start a new career with "The Monk's Room," a play that is reported to have failed twice, and very distinctly, at matinées. Meanwhile, the clever "Mikado" is being acted for the last nights at the Savoy, and all the company are hard at work on the new opera by Mr. W. S. Gilbert and Sir Arthur Sullivan, which will be the talk of all London in a few days' time.

OBITUARY.

THE EARL OF MAR AND KELLIE.

The Right Hon. Walter Henry Erskine, M.A., Earl of Mar and Kellie, a Representative Peer of Scotland, Premier Viscount of Scotland, died suddenly, at Alloa, on Sept. 16. He was born Dec. 17, 1839, the eldest son of Walter Coningsby, twelfth Earl of Kellie, C.B., by Elise, his wife, daughter of Colonel Youngson, of Bowscar, Cumberland; was educated at Eton, and graduated at the University of Oxford. He married, Oct. 14, 1863, Mary Anne, eldest daughter of Mr. William Forbes, of Medwyn, and had three sons and six daughters. He succeeded to the Earldom of Kellie in 1872, and prosecuted successfully his father's claim to the earldom of Mar. This decision of the Lords led to great controversy, which ended in the Earl of Kellie being allowed the earldom of 1565, and Mr. Goodeve Erskine, now Earl of Mar, confirmed in the more ancient earldom—a title so honourably associated with the Scottish annals.

LORD CRAIGHILL.

The Hon. Lord Craighill (John Millar), a member of the College of Justice, died at his residence, Ainslee-place, Edinburgh, on Sept. 22. He was son of Mr. John Hepburn Millar, of Glasgow, merchant, and received his education at Glasgow and Edinburgh. He was called to the Bar in 1842; twice filled the office of Solicitor-General—viz., in 1867 and 1874; in the latter year he was raised to the Bench.

MAJOR BARTTELOT.

Major Edmund Musgrave Barttelot, of the Royal Fusiliers, was treacherously assassinated, on July 19, in Central Africa, by the Manyema carriers provided by Tippoo Tib, when in command of an expedition in search of Stanley, and for the relief of Emin Pasha. This lamented officer was youngest son of Sir Walter B. Barttelot, Bart., C.B., M.P., of Stopham, Sussex, by Harriet, his first wife, daughter of Sir Christopher Musgrave, Bart., of Edenhall. He was born in 1850, and educated at Rugby and Sandhurst. At the time of his barbarous murder he was Major 1st Battalion Royal Fusiliers. He served in the Afghan War, 1879-80 (medal and clasp); in the Egyptian Campaign, 1882 (medal and clasp); and in the Soudkim Expedition.

We have also to record the deaths of—

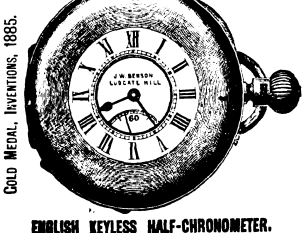
Sir Henry Anthony Farrington, Bart., on Sept. 19, aged seventy-seven. His memoir will be given in our next issue.

Alderman Henry Scrase, J.P., at his residence, Highware Bassett, Southampton, on Sept. 18, aged seventy-nine.

The Rev. Frederick A. S. Pendleton, Rector of St. Sampson, Guernsey, and formerly British Chaplain at Monte Video and at Florence, on Sept. 13.

Mr. Charles Brooke-Hunt, J.P. and D.L. for the county of Gloucester, on Sept. 19, at Merton Grange, Slough, in his ninety-fifth year.

Alexander Cook, R.N., Commander H.M.S. Duke of Wellington, flag-ship at Portsmouth, eldest surviving son of the late Mr. Alexander Shank Cook, Advocate-Sheriff of Ross and Cromarty, on Sept. 18, at Elm Hurst, Southsea.



*** We are happy to be able to state, on the very best authority, that General William Inglis, C.B., of Hildersham Hall, Cambridge, whose death was announced in our last issue, is alive and well; and we much regret that the report of his death should have appeared in our columns.

The annual conference of the Evangelical Alliance British Organisation began in Plymouth, on Sept. 25, with a conversazione, which was followed by a largely-attended public meeting, presided over by the Bishop of Exeter.

The race for the valuable Lancashire Plate at Manchester on Sept. 22 resulted in the victory of Lord Calthorpe's Seabreeze, who defeated the Duke of Portland's Ayrshire by three parts of a length, Baron Schickler's Le Sancy being third.—The Newmarket First October Meeting opened on Sept. 25 in somewhat dull weather, and with a poor attendance. The Duke of Westminster won the All-aged Trial Plate with Dornoch, Mr. L. De Rothschild the Selling Plate with Ketta, the Duke of Portland the Buckenham Stakes with Donovan and the Great Foal Stakes with Ayrshire, Mr. J. Hammond the First Nursery Plate with Laureate, Lord Rodney the Maiden Plate with Claribelle, and the Duke of Beaufort the Thirty-ninth Triennial with Rêve d'Or; and Prince Soltykoff's Gold walked over for the Boscawen Stakes. On Sept. 26, the Duke of Westminster won the Zetland Stakes with Rydal; the succeeding Sweepstakes fell to Simonia; and the Granby Stakes to Cedar. In the chief race of the day, Wise Man was first, Sandal second, and Maiden Belle third.

Silver Cases, £15 BENSON'S "FIELD" Gold Cases, £25

COLD MEDAL, INVENTIONS, 1885.

ENGLISH KEYLESS HALF-CHRONOMETER.

"THE PERFECTION OF TOUCH AND TONE."

A VISIT TO THESSALY.

A visit to the most interesting points in Thessaly is no longer a matter of difficulty, owing to the comfortable steamers which constantly ply between the Piræus and Volo, and the railway service which connects the latter town with the interior. Tolerable hotel accommodation also can be obtained at Volo and Larissa; and brigands—the bugbear of former times—are as seldom met as centaurs. Larissa has been under Greek rule for only seven years, and, in its badly-made streets, Oriental houses, and numerous minarets, still retains the characteristics of a Turkish town. The Turks are now rapidly leaving, and the population is said to have fallen from 20,000 to about 7000. The tall, needle-like minarets are nearly all that remain of the mosques, which once numbered about thirty. The ruins of these buildings and of numerous deserted Turkish houses give a very weird and dreary aspect to the rambling streets, an effect heightened by the barred and grated windows, which here and there top the bare walls of the prison-like residences that remain. Many of the houses are low, especially in the neighbourhood of the bazaar, and their humble proportions are still further dwarfed by the towering minarets. The town, however, notwithstanding its numerous ruins, seems to be entering on a fresh life. New and good streets are being made, and it is likely that a few years will see a great change in the aspect of the place. Leake describes Larissa as the most Ottoman town in Greece to the southward of Saloniki; and at the time of his visit its Turkish masters were specially notorious for their insolence. A Turk is now seldom seen: the champions of the Prophet will not live where they cannot rule. Twelve hours suffice for the visit by carriage to Tempe, even if one goes to the village of Laspochori at the far end of the vale and visits the bridge over the river beyond the guard-house; but, if time is limited, little will be missed by making the rustic café under the plane-tree the limit of the excursion, and so saving quite an hour.

We left Larissa at six o'clock on a beautiful morning last April, and were glad we had not started at an earlier hour, as the sun, though already hot, had not yet dispersed the mists which rose from the low ground we had to drive over, and which chilled us to the bone. Makrychori and some other villages, formerly occupied by Turks, are visible from the road, near which also lie some old Moslem cemeteries. The appearance of the latter is singularly desolate. They are not fenced in, but stand on the open plain as monuments of a régime which, happily alike for visitors and residents, is at an end. The tombs are marked by rough upright stones, very rudely shaped, and, so far as I saw, without inscriptions. The graves are not filled in with earth, but are covered with boards, over which a thin layer of clay is spread. It is necessary to walk among them with caution, as in some cases the wood has rotted away, and the graves have become open pitfalls. The vale proper begins at the village of Baba, where we arrived after three hours' drive, and made a short stay to visit a curious old mosque, the interior of which has been turned into a burying-place. The road now passes Ambelakia, named from its vines; the fresh fountain Kryologon, and the ruins of a mediæval castle, which derives its name, "The Fair One's Tower," from a legend recorded in the Klephtic ballads. We reached Laspochori—i.e., "mudtown"—about eleven o'clock, and then retraced our steps to the café mentioned above. Having lunched and drunk coffee *à la Turque* in the usual frail and tiny cups, we spent a couple of hours enjoying our delightful surroundings and listening to the nightingales, who did not share the ancient shepherds' scruples about disturbing Pan's noontide slumbers. We did not see any serpents, but there were many beautiful green lizards, and occasionally an eagle was seen floating high above the rocks that towered over our heads.

There has been no small conflict of opinion as to whether the leading characteristic of the vale of Tempe is savage

MONASTERY OF HOLY TRINITY, KALABAKA

grandeur or sylvan beauty. Livy describes it as "a defile, the rocks on both sides of which are so perpendicular as to cause dizziness both in the mind and eyes of those who look down from the precipice. Their terror is also increased by the depth and roar of the Peneus rushing through the midst of the valley." Modern travellers, while admitting that Livy's account is, in some respects, inaccurate, and that his description of the Peneus is singularly unsuitable to this part of its course, yet agree with him in representing the general impression produced by Lykostomo—i.e., the "Wolf's Mouth," as the valley is now called—to be one of gloom and terror. The poets, however, draw a very different picture of the spot. Homer calls the Peneus "the silver-eddying," and to Horace, Virgil, and Catullus the vale was the ideal of woodland beauty. Nor are the verse-writers alone in taking this view, for Ælian, in his "Varia Historia," has given one of the most glowing and enthusiastic descriptions we possess of the valley. Variations of season or weather may, perhaps, account for the widely divergent impressions which different visitors have carried away. Holland, who regards the vale as an abode of gloom, paid his visit at the end of November, and expressly says that the weather was wet and cold. It was my happy lot to see this "feast for the eyes," as Ælian calls it, in early summer, under a cloudless sky and bright sun. The ruggedness of the rocks was concealed or relieved by the rich foliage. The ground was gay with flowers; the air fragrant with their perfume. The plane-trees furnished delightful shade by the banks of the gently-gliding stream. Innumerable birds filled the woods with their song. As the day wore on we reluctantly took our leave, turning our backs on the richly-wooded vale, and again passing the old Turkish cemeteries, whose dreary and desolate situation was the only part of the journey suggestive of gloom.

No spot in Thessaly is more calculated to impress a visitor than Kalabaka, the quaint picturesqueness of whose rock monasteries is absolutely unique. Above the slope on which the village lies, great cliffs, towering to a height of several hundred feet, stand like isolated columns, and present the appearance of having been severed from one another by the action of the sea. The monasteries which crown these heights are veritable eyries, and can now be approached only by ladders attached to the face of the rock, or by nets or baskets, which the monks haul up with a windlass. How the ascent was made in the first instance is an unsolved mystery. The district was sometimes called Stagus—i.e., "the Place of Saints"; sometimes Meteora—i.e., "the Elevated"—according as it was desired to emphasise the piety of the monks or the security of their retreat. Most of the monasteries were founded in the fourteenth and fifteenth centuries, and must have been invaluable as places of refuge when the country was in a disturbed state. They at one time numbered twenty-three, but now only seven are occupied. Curzon saw manuscripts at two or three of the monasteries; but, at present, Meteoron, as the principal monastery is called, *par excellence*, appears to be the only one which has a library of any importance. The monks are very hospitable, and not only entertain the visitor by day, but are also willing to supply sleeping accommodation. St. Stephen's is, perhaps, the best monastery at which to pass the night.

C. H. K.

Mr. E. J. Physick, sculptor, has erected a handsome sculptured memorial in Sicilian marble at Long Melford, Suffolk, in memory of Hyde Parker, of the 8th King's Regiment, eldest son of Sir W. Parker, Bart., of Melford Hall.

The Southend Local Board have sealed a contract with Messrs. Arrol Brothers, of Glasgow, for the construction of a new pier, which is to take the place of the present wooden structure. The amount of Messrs. Arrol's tender is £43,484, this being exclusive of the superstructures and the tramway, which will be tendered for separately, the total cost being estimated at £60,000.

The seventh annual show of the Royal Windsor and Slough Poultry, Pigeon, Rabbit, and Cage Bird Association, which is under the patronage of Prince Christian, Viscount Curzon, M.P., Mr. R. Richardson-Gardner, M.P., and others, has been held in the Home Park, opposite Windsor Castle, and has been attended by a large number of visitors. It comprised 1441 handsome specimens, arranged in 124 classes, and includes a fine collection of cats. Prizes to the value of about £200 were awarded to the successful competitors.

THE MANUFACTURING

GOLDSMITHS' & SILVERSMITHS' COMPANY,

Show-Rooms: 112, REGENT-STREET, LONDON, W. (Adjoining Stereoscopic Company)

Supply the Public direct at Manufacturers' Cash Prices, saving Purchasers from 25 to 50 per Cent.

SOLID SILVER.—The largest and choicest Stock in London. Many of the designs are reproductions of the antique, at about one-third the cost of the original, whilst others are the Company's special designs, and cannot be obtained elsewhere.

WEDDING PRESENTS.—Special attention is devoted to the production of elegant and inexpensive novelties, which are arranged in special cases for the convenience of customers. Every article is marked in plain figures for cash without discount. Intending purchasers should pay a visit of inspection before deciding elsewhere, and are assured of not being importuned to purchase.

CHRISTENING PRESENTS.

BIRTHDAY PRESENTS.

MESS PLATE, of a Military character, specially designed to order. Figures or groups introducing the uniform of any regiment modelled in the highest style of art. Regiments returning from abroad supplied with complete outfits of table plate. Old plate done up as new.

PRESENTATION PLATE.—A magnificent stock of high-class plate, comprising Tea and Coffee Services, Centre-Pieces, Dessert-Stands, Candelabra, Race Cups, Bowls, Tankards, Beakers, Jugs, &c., at prices from £1 to £1000. Special and original designs by the Company's own artists prepared free of charge for committees and others.

CAUTION.—The Company regret to find that many of their Designs are being copied in a very inferior quality, charged at higher prices, and inserted in a similar form of advertisement, which is calculated to mislead the public.

They beg to notify that their only London retail address is 112, REGENT-STREET, W.

"A SUCCESSFUL BUSINESS.

We know of no enterprise of recent years which has been crowned with greater success than the Goldsmiths' and Silversmiths' Company, of 112, Regent-street, who, just seven years ago, opened their show-rooms to place the productions of their workshops direct before the public, thus saving purchasers the numerous intermediate profits which are obtained by 'middle-men' on high-class goods. Such has been the appreciation by the public that the Company have now the largest business in England, and are quite supplanting the old-fashioned houses that pride themselves upon having been established so many decades, but have utterly failed to keep pace with the times, and find it impossible to depart from their long-credit system, entailing bad debts, for which cash buyers have to compensate."—Court Journal.

Four Solid Silver Salts and Spoons, in best Morocco Case, lined Velvet, price £2 10s.

Solid Silver Bayonet Top Hunting Flask, in case complete, price £2 5s. 6d.

Solid Silver Two-Handle Challenge Cup, beautifully fluted, complete, with plinth, £12, £15, £20, £25, £30.

Solid Silver Cabinet Photograph Frame, price £3 15s.

Solid Silver Cigarette Case, price 25s.

THE QUEEN ANNE SERVICE.

Solid Silver Tea and Coffee Service, four pieces, £23 15s.; Jug, 15Ss.
Best Electro " " " " £9 10s.; " 65s.

Solid Silver Flask, to hold quarter of a pint, price £4.

Solid Silver Kings Pattern Fish Eating Knives, £12 0s. per dozen.
Best Electro-Plated " " £3 2s. "

ELECTRO-PLATE.—The Goods Manufactured by the Company are trebly plated with pure Silver on the finest Nickel Silver, are unsurpassed for durability, and are equal in design and finish to Solid Silver.

Although the prices in this Department are lower than charged by Stores and Furnishing Ironmongers, the quality is immeasurably superior.

SPOONS AND FORKS.—Trebly plated with pure Silver on the finest hard white Nickel Silver. Specially recommended for hard wear. Thousands of testimonials received from customers who have thoroughly tested their durability and excellence. Solid SILVER SPOONS and FORKS, 6s. 3d. per ounce.

TABLE CUTLERY.—With best double refined Shear Steel Blades and fine African Ivory Handles. Best Electro-plated Fish Knives and Forks, Dessert Knives and Forks, Cake Knives and Forks, Salad Spoons and Forks, Asparagus Servers, Tart Servers, &c.

APPROBATION.—Selected parcels of goods forwarded to the country on approval when desired. Correspondents not being customers should send a London reference or deposit.

COUNTRY CUSTOMERS have through this means the advantage of being supplied *direct* from an immense London stock, containing all the latest novelties, and which are not obtainable in provincial towns.

COLONIAL AND FOREIGN Orders executed with the utmost care and faithfulness under the immediate supervision of a member of the Company. Where the selection is left to the firm, customers may rely upon good taste and discretion being used, and the prices being exactly the same as if a personal selection were made.

TESTIMONIALS.—The numerous recommendations with which the Goldsmiths' Company have been favoured by customers who have used their plate for years, is a pleasing testimony to the excellence and durability of their manufactures.

OLD PLATE taken in Exchange or Bought for Cash.

MEDALS.—Awarded Seven Gold and Prize Medals and the Legion of Honour, a special distinction conferred on this Firm for the excellence of their manufactures.

CATALOGUE, containing thousands of designs, beautifully illustrated, sent post-free to all parts of the world.

CATALOGUE POST-FREE.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beaches, covered with the softest sand; the hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Venetian Fetes, &c.
There is perhaps no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special facilities and attractions—not only by the favoured climate and by the invigorating scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean seaboard, on account of its equable temperature, its delightful scenery, elegant pleasures it has to offer to its guests, which make it fascinating to travellers in Europe. Select Medical Men only thirty-three hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY,

M. BEETHAM and SON,
CHEMISTS, CHELTENHAM.

IN THE SPINNEY.

THE lads and lasses come here in the summer evenings to tell that old, old tale which is ever new; but there are many hours in the day, and many days in the year, when the spinney is as absolute a solitude as Candide himself could have desired. There are noble old oaks about it, and some stately beeches, contrasted by the lithe gracefulness of the silver birch; and the paths wind through thick, clustering brambles, where the blackberries are ripening as fast as premature fingers will permit; and you may find some clumps of bracken which already begin to show the influence of the coming Autumn. From a rising ground on the north you look down into a deep valley, lined with lawny slopes, and freely sprinkled with timber-old trees—trees of patrician bearing, not like the young upstarts which flaunt about our suburban gardens and avenues—trees strong in the strength of years, and throwing out their lusty branches with a fine air of freedom and independence, and maintaining an erectness of stature which speaks of the vigour of maturity. At the bottom of the valley nestles a tiny lake, or pool, which at one end reflects the shadows of a portion of the wood, but elsewhere lies open to the smiles of Heaven, and on clear, bright days does its best to absorb as much of the sunshine and the azure as its limited compass will hold. Some pleasant-looking mansions are scattered up and down the sides of the valley; not so many as to detract from its picturesqueness of aspect, and yet in sufficient number to invest the scene with a certain homeliness of character; while, in one direction, a tall spire lifts itself above a group of environing trees, fixing the eye as a landmark. On the eastern horizon looms a vast cloud, which indicates the neighbourhood of a mighty city; and sometimes, when the wind disperses it for a while, you get glimpses of towers and roofs and domes, and the sun strikes upon surfaces which reflect its rays with power; and further south, on a wooded ridge, rise towers and arches of glass, belonging, one might think, to some fabric of magical creation. The intervening space, broken by gentle undulations, is filled in with masses of foliage and colonies of houses, to which the distance happily lends a softened outline and subdued colouring; and church towers and spires are dotted here, there, and everywhere, for without them no English landscape—to use the phrase of the auctioneer—would be complete.

From all these signs and evidences of multitudinous life we return into the solitariness of the spinney. We cannot wholly shut out the neighbouring world, it is true, for the swift, sudden rush of passing trains breaks constantly upon the ear; but I am not sure that this is not one of the greatest charms of the spot—that it is so near to, and yet in a sense so far from, the sweeping currents of everyday activity. The scream of the engine does not silence the modest song of the chiffchaff, or the sweeter strain of the linnet; and butterflies whisk to and fro, and bees buzz about among the briers; though you may hear now and again the chink of the bricklayer's trowel from some new buildings in the road below. I think the solitude that is most precious, and certainly most enjoyable, is the solitude that lies just outside the hum of men—the solitude that we can abandon at a moment's notice—the solitude that is relieved by echoes of near-at-hand humanity. There we are alone, and yet not alone; we enjoy the pleasures of solitude, and escape its pains. In this unfrequented spinney I am as much lord of all I survey as was Alexander Selkirk on his lone island in the pathless wilds of the Pacific; but, more fortunate than he, I am not oppressed by the terrors of solitude, because in a half-a-dozen minutes I can happily restore myself to social life and companionship.

The music of the birds now grows feebler every day. The fullness and freshness of the spring, the ripeness and strength of the summer, are gone. A robin has perched on a bough of yonder chestnut, and sits and watches me with black beady eyes, but is as silent as the maiden in the fairy tale before the prince appeared who woke her into life and speech. A blackbird creeps through yonder tangle of bush and briar; but he, too, reposes on his past fame as a sweet singer. The chaffinches still call to one another, though their time of silence is fast approaching; and snatches of a thrush's song drop through the air like golden spray; but, compared with its "consort" of happy voices in the vernal dawns and noons, the spinney is now as hushed and still as the poet's "banquet-hall deserted," when the lights are fled and the garlands dead, and the merry-makers make merry in it no more. Oh! for the joyous days of June, when the blackbirds piped high up among the green branches of the oak, which are now so loaded with acorns; and the tit built her nest and warbled in the blackthorn; and the mavis carolled in the leafy ash; and the willow-wren sang his dainty song amid the leafy coverts; and all the spinney resounded with the various melodies, which crossed and recrossed one another like the eddies of a stream—or the different parts of a fugue by some great master—until the separate strains gradually melted into one another, and formed a continuous flood of harmony.

The birds are going, and so are the flowers. The children, in the chill autumnal days, are hard put to it to make up their posies. A few delicate blue-bells are left to us, and the yellow petals of the crowfoot have not wholly vanished; golden elecampane still grows freely, and the purple heath spreads in glorious patches over the common. There *are* happy hedges where the late honeysuckle flowers, and sunny fields are yellow with the rag-wort, and tufts of golden broom line the steep banks in far-away lanes; but here, in the spinney, we have no such old familiar faces. Though as yet the foliage of oak and chestnut and birch has but just felt the touch of Autumn's fingers, the flowers have passed away with the warm noons and the early sunshine; and the children, if they find their way into the spinney, must be content with blackberrying or acorn-gathering to exhaust their exuberant activity. Or they may gather the arrow-shaped bryony-leaves, and twist them into a wreath which even Beauty might be proud to wear; and the tall yellow fronds of the brake-fern, or the feathery grasses which are now so plentiful, shall help them in their pretty pastimes.

Yes; the wild flowers have faded out of the spinney, and are dying in the hedge-rows; the grass on the leas has lost its look of freshness; a few leaves have begun to drop on the outskirts of the wood. The ivy flutters on the wall; the rich pears tumble from the bending bough; the twittering swallows are making ready for their flight to warmer lands; and while we are still waiting for the summer that this year has cheated us so sorely, the presence of the autumn is coming fast upon us. We see its burning touch on the green leafage, which it covers with tiny spots of yellow, and will soon kindle into a thousand rare magical tints and shades; we feel its breath in the chill airs that blow at early morn and again as day draws in; we know that it folds itself round with the dense mists that gather now over valley and meadow, and steal up the hills almost to their summit. All the sights and sounds of the country warn us September is swiftly gliding by, as that the autumn will soon assert its power of decay in lane and field, in garden and orchard, among the pastures, and—in the spinney.

W. H. D.-A.

Lord and Lady Londonderry opened on Sept. 25 a new wing and hospital wards at the Meath Hospital and County Dublin Infirmary, which were built with money bequeathed by two gentlemen named Barber and Bury.

Harvest home was celebrated on Sept. 25 at the Philanthropic Society's Farm School, Redhill. The society is a hundred years old this year, and claims to have been the first to deal with juvenile crime in a hopeful, systematic way.

Ludgate-hill is again attractive with a display of Civic purple and fine linen, for Messrs. Samuel Brothers are again exhibiting gorgeous costumes, this time for the retainers of Mr. Alderman Gray, Sheriff-elect.

An Exhibition of Pictures was opened on Sept. 24 in the Wolverhampton Art Gallery by the Mayor. The loans include one of Landseer's works, sent by the Queen, from Buckingham Palace, and exhibits from the National and Liverpool and Manchester Corporation Galleries.

The Walsall Science and Art Institute was opened on Sept. 24 by the borough member, Sir Charles Forster, Bart., amid great rejoicings. The Earl of Bradford gave the site, and the cost of the structure (£5500) has been met by the aid of Government grants, amounting to about £1300.

The council of the National Rifle Association met on Sept. 25 to consider the relative merits of the Berkshire and Cannock Chase sites for the new Wimbledon. It was resolved to defer a decision on the question, to give further time for inquiry as to obtaining a site nearer the metropolis, and to ask the Government to assist the Association in the matter.

A meeting of the City Commission of Sewers was held at Guildhall on Sept. 25, Mr. H. Pannell presiding. A letter was read from the City Architect, stating that the whole of the property on the east side of Duke-street, Aldgate, had been rebuilt to the new line of frontage, and that the Commissioners might therefore take possession of the ground between the old and new line of frontage, for the purpose of widening and repairing it. The finance committee recommended that this should be done, and the court agreed accordingly.

The Registrar-General reports that 2463 births and 1298 deaths were registered in London during the week ending Sept. 22. Allowing for increase of population, the births were 248, and the deaths 109, below the average numbers in the corresponding weeks of the last ten years. The deaths included 32 from measles, 20 from scarlet fever, 24 from diphtheria, 22 from whooping-cough, 11 from enteric fever, 78 from diarrhœa and dysentery, and 4 from cholera and choleraic diarrhœa. The deaths referred to diseases of the respiratory organs, which had been 130, 148, and 184 in the three preceding weeks, declined to 179, being 21 below the corrected average. Different forms of violence caused 69 deaths. In Greater London 3247 births and 1629 deaths were registered.

MAPLE and CO., Manufacturers of DINING-ROOM FURNITURE. *The largest assortment* to choose from, as well as the best possible value. Three more houses have just been added to this important department. Half a century's reputation.

MAPLE and CO.'S NEW SPECIMEN DINING-ROOMS, decorated and fully appointed with furniture in pollard oak, brown oak, Chippendale mahogany, antique carved oak, American walnut, and other woods, are now open to the public, and should be seen by all intending purchasers.

THESE ROOMS are not only helpful as showing the effect of the furniture when arranged in an apartment, but also most suggestive as regards decorative treatment, as well as a guide to the entire cost of furnishing in any selected style.

MAPLE & CO

TOTTENHAM-COURT-ROAD, LONDON, W.

THE LARGEST AND MOST CONVENIENT

FURNISHING ESTABLISHMENT IN THE WORLD.

MAPLE and CO., Upholsterers by Special Appointment to her Majesty the Queen. The system of business is as established *fifty years ago—namely, small* profits on large returns for net cash. Acres of show-rooms for the display of first-class manufactured furniture.

MAPLE'S FURNISHING STORES are the largest in the world, and one of the sights of London. Acres of show-rooms. The highest class of furniture, carpets, and curtain materials. Novelties every day from all parts of the globe. Half a century's reputation.

MAPLE and CO., Timber Merchants and direct importers of the finest Woods, Manufacturers of Dining-Room and other Furniture by steam power and improved machinery. Tottenham-court-road. Factories: Beaumont-place, Euston-road; Southampton-buildings; Liverpool-road; Park-street, Islington; &c.

INDIAN CARPETS.

INDIAN CARPETS AT IMPORTERS' PRICES.—MAPLE and CO. receive all the Finest Qualities of INDIAN CARPETS direct from their Agents, and sell them at Importers' Prices, thus saving buyers of Indian Carpets at least two intermediate profits.

MAPLE and CO. have also a great number of really fine Indian Carpets, measuring about 12 ft. by 9 ft., which they are offering at the low price of 7 guineas, as well as a varied assortment of other sizes at proportionate prices.

PERSIAN CARPETS AT IMPORTERS' PRICES.—All these goods are bought by MAPLE and CO.'S Agents in Persia, and sold at Importers' Prices, thus saving purchasers of Persian Carpets at least two intermediate profits.

TO BUYERS of ORIENTAL CARPETS.—MAPLE and CO. offer exceptional facilities to buyers of ORIENTAL CARPETS. The goods are exhibited in ware-rooms, some of which are more than a hundred feet long, so that the very largest carpets can be fully displayed and minutely examined.

TURKEY CARPETS.

A TURKEY CARPET is, above all others, the most suitable for the Dining-room, its agreeable warmth of colouring enhancing the effect of the furniture and decorations, and indicating alike the good taste and comfortable circumstances of its possessor.

TURKEY CARPETS AT IMPORTERS' PRICES.—MAPLE and CO. are not only the Largest Importers of TURKEY CARPETS, but, having a Branch House at Smyrna, with Agency at Ouchak, the centre of the weaving district, are able to exercise close supervision over the whole process of manufacture which is the only way that excellence of colouring and workmanship can be guaranteed. In this way, Maple and Co. save Turkey Carpet buyers at least two intermediate profits.

MAPLE and CO.—PARQUETERIE

MAPLE and CO.—PARQUETERIE FLOORING for Dining, Billiard, or Smoking Rooms; also for Ball-rooms, Public Halls, Vestibules, as well as for surrounds to central carpets. Maple and Co. are now showing all the New Designs and Combinations of Wood at Greatly Reduced Prices.

THE SEVILLE LADY'S EASY CHAIR,
In Saddlebags of rich Persian design and colourings, mounted on velvet, £3 15s.

THE SEVILLE SUITE IN SADDLEBAGS AND VELVET.

THE SEVILLE SETTEE, Persian Design and Coverings, mounted on velvet, £7 10s.

THE SEVILLE GENT.'S EASY CHAIR,
In Saddlebags of rich Persian design and colourings, mounted on velvet, £5 10s.

DINING-ROOM FURNITURE.

MAPLE and CO. devote special attention to the production of high-class DINING-ROOM FURNITURE that will afford permanent satisfaction in wear. The numerous recommendations with which Messrs. Maple and Co. have been favoured by customers who have used the furniture for years is a pleasing testimony to the excellence of the articles.

MAPLE and CO.—DINING-ROOM SUITES.—The LICHFIELD SUITE, in solid oak, walnut, or mahogany, consisting of six small and two elbow chairs in leather, dining table with patent screw, also Early English sideboard with plate glass back; and fitted with cellaret, 16 guineas.

MAPLE and CO.—DINING-ROOM SUITES.—The STAFFORD SUITE, comprising six small chairs, two easy chairs in leather, telescope dining table, sideboard with plate glass back and cellaret, and dinner waggon, in light or dark oak, walnut or ash; very substantial in character; 23 guineas.

FURNITURE FOR EXPORTATION.

VISITORS as well as MERCHANTS are INVITED to INSPECT the largest FURNISHING ESTABLISHMENT in the world. Hundreds of Thousands of Pounds' worth of Furniture, Bedsteads, Carpets, Curtains, &c., all ready for immediate shipment. Having large space, all goods are packed on the premises by experienced packers—very essential when goods are for exportation so as to insure safe delivery. The reputation of half a century.

MAPLE and CO., Upholsterers by Special Appointment to Her Majesty the Queen. The reputation of half a century. Factories: Beaumont-place, Euston-road; Southampton-buildings, Liverpool-road; Park-street, Islington.

HUNDREDS of THOUSANDS of POUNDS' WORTH of Manufactured GOODS ready for immediate delivery. All Goods marked in plain figures for net cash—a system established 50 years.

MAPLE & CO., London, Paris, Smyrna, & 134, Calle Florida, Buenos Ayres.

BED-ROOM SUITES.

500 IN STOCK.

MAPLE and CO.—BED-ROOM SUITES. The WHITBY SUITE, in solid ash or walnut, consisting of wardrobe with plate-glass door, toilet table with glass affixed, washstand with marble top and tile back, pedestal cupboard, and three chairs, £10 10s. Illustration free.

MAPLE and CO.—BED-ROOM SUITES. The SCARBOROUGH SUITE, in solid ash or walnut, including wardrobe with plate-glass doors, and new-shaped washstand, £12 15s.; or, with bedstead and spring bedding, £17 10s. Designs and full particulars free.

MAPLE and CO.—BEDSTEADS.

MAPLE and CO. have seldom less than Ten Thousand BEDSTEADS in stock, comprising some 600 various patterns, in sizes from 2 ft. 6 in. to 6 ft. 6 in. wide, ready for immediate delivery—on the day of purchase, if desired. The disappointment and delay incident to choosing from designs only, where but a limited stock is kept, is thus avoided.

POSTAL ORDER DEPARTMENT. Messrs. MAPLE and CO. beg respectfully to state that this department is now so organised that they are fully prepared to execute and supply any article that can possibly be required in Furnishing, at the same price, if not less, than any other house in England. Patterns sent and quotations given free of charge.

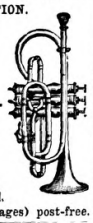
Price 1s. per Box, or 3s. per Gross.

SOLD BY ALL STATIONERS.

WHOLESALE: HOLBORN VIADUCT, LONDON.

IMPORTANT TO ALL LEAVING HOME FOR A CHANGE.



"Among the most useful medicines that have been introduced within the last century is **ENO'S 'FRUIT SALT.'** There is no doubt that where it has been taken in the earliest stage of a disease, it has, in many instances, prevented what would otherwise have been a severe illness. The effect of **ENO'S 'FRUIT SALT'** upon a disordered and feverish condition of the system is marvellous. As a nursery medicine the **'FRUIT SALT'** is invaluable; instead of children disliking it, they look upon it rather in the light of a luxury. As a gentle aperient and a corrective in cases of any sort of over-indulgence in eating or drinking, **ENO'S 'FRUIT SALT'** is all that is needful to restore freshness and vigour. In cases of Nervous Headache and Debility it is especially useful, and should be taken in all cases where persons suffer from a sluggish condition of the Liver."—*Young Lady's Journal.*

PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

KNIGHT of THE ORDER of LEOPOLD of BELGIUM
KNIGHT of THE LEGION of HONOUR
LIGHT-BROWN COD LIVER OIL
Incontestably proved by Thirty Years' Medical Experience to be
THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS
IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.
SELECT MEDICAL OPINIONS.
Dr. PROSSER JAMES, Lecturer on Materia Medica, London Hospital.
"Dr. De Jongh's Oil contains the whole of the active ingredients of the remedy, and is easily digested. Hence its value, not only in Diseases of the Throat and Lungs, but in a great number of cases to which the Profession is extending its use."
Dr. THOMAS NEDLEY, Physician to the Lord Lieutenant of Ireland.
"The most uniformly pure, the most palatable, and the most easily retained by the stomach, is Dr. De Jongh's Light-Brown Oil. I have habitually prescribed it in cases of Pulmonary Consumption, with very beneficial results."
JOSEPH J. POPE, Esq., M.R.C.S., Late Staff-Surgeon, Army, India.
"The value of 'hydro-carbons' in all debilitated states of the system is now becoming thoroughly recognised. Dr. De Jongh's Oil places in everyone's reach a reliable and valuable remedy."
LENNOX BROWNE, Esq., F.R.C.S.E., Senior Surgeon, Central London Throat Hospital.
"The action of Dr. De Jongh's Oil has proved, in my own experience, particularly valuable in many cases of Weakness of the Singing and Speaking Voice, dependent on Bronchial or Laryngeal Irritation."
Sold ONLY in Capsuled Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; by all Chemists and Druggists.

OUR NOTE BOOK.

BY JAMES PAYN.

The life of any man, as it was really lived, would, it has been well said, be the most interesting reading in the world; it would, perhaps, not be "family reading"; I can fancy, in some cases (though not, I trust, in my own), that there might be a thought, just here and there, which would be better relegated to an appendix than published in the body of the work. And, next to an autobiography of this class, it now appears that a Diary is the most popular of publications. It is supposed that this form of literature is composed every night, with the same regularity (or perhaps even greater) with which the author says his prayers; that nothing of consequence is omitted, and nothing set down in malice: and that the fact of the graces of composition being absent is itself an evidence of the genuineness of the work. I have known some eminent diarists whose observations have been recorded in volumes with a locked clasp, and which have strained the curiosity of their families to the uttermost, but without exciting mine. I have noticed them at their dreadful trade, and made a "mem." myself of how the thing is done; and the method does not inspire confidence. In the first place, they are all tired of the business. Having been at it so long, and boasted of it to others ("This minute and trustworthy record of events extending over a period of fifty years, Sir, cannot but have its value when I shall have passed away," &c.), they don't like to give it up; but the enthusiasm with which they first set about it, and bought the books and ruled the lines, has passed away. Of course, they no more expected any immediate return for their labours than one does from planting an oak; but the oak can grow of itself and the diary can't; they find the continual ministration to its wants intolerable, and then they don't continue them. No; there are immense intervals, after which they write it up to date. I've seen them at it. I know by the expression of their faces as they chew the top of their pen all their little difficulties. "Was it Tuesday or Friday? Hanged if I can remember! And was it Jack or the Bishop who told the story about the girl and the seraphine: it sounds like Jack, but then what does he know about seraphines? Was it a seraphine, by-the-by, or a seraphim? or, by Jingo, wasn't it, after all, a semaphore? That's the worst of not putting things down at once." But it's not the worst; there are often half-a-dozen blank days, and every one of these has to be filled up with occurrences—by the imagination. Whenever I see a diary produced in a Court of Law I feel the same sense of incredulity as when an expert in handwriting (or, indeed, in anything else) is ushered into the witness-box. It is no wonder that History has such a bad name, when we remember that she is the natural offspring of Diaries.

A new argument against an undue prolongation of our days comes from that "brave," but, as it would seem from the context, slightly impolite country, "little Wales." There is living, near Swansea, a lady who has contrived to reach, even under our unimproved conditions of existence, the respectable age of 108 (she is "in receipt of parish relief," but that is an accident which seems to happen to nine centenarians out of ten). "She can distinguish vessels, easily, four or five miles out to sea." If she can do this, she must, in her youth, have been nearsighted, and establishes a statement made by oculists that as near-sighted people grow older their sight improves; it has not done so in my case, but I now perceive that I have only to wait long enough. At 115 this lady will be, doubtless, able to read the vessels' names, and exchange signals with them with her pocket-handkerchief. So far the advocates of longevity can boast of their example; but she has a daughter, a young creature of 87, who comes to see her at the workhouse, doubtless (being Welsh) in a hat even taller than those in the modern fashion. A fellow-countryman of hers, we are told, met this maiden the other day, and asked her (as in the ballads) whither she was going. "I am going to see my mother, Sir," she said ("Sir, she said," probably repeated). "Oh, yes, I dare say," replied the rude Welshman: "a likely story. You with a mother alive! yah!" and so on. If this is the sort of treatment which our daughters, in the flower of their age, are likely to meet with, until people get used to our being centenarians, it certainly seems another reason why we should remain as we are.

I am sorry to see that even a cyclist now and then gets into trouble. The advocates of this admirable form of exercise would fain persuade us that its effect is so wholesome as to render any curvature in the path of rectitude impossible; but Black Care finds room to sit even behind the bicycle. The last peccadillo committed by a disciple of the wheel was humorous, but had the drawback of being at the expense of one of his own profession. Hawks should not pick out hawks' een. Scene: a desolate moor with rainfall. *Dramatis personæ:* champion cyclist, riding priceless two-wheeled steed (with money on it) from London to York; and Samaritan sitting on mile stone. A screw gets loose, and cyclist falls; all, he thinks, is lost (including his bets and honour), when Samaritan comes to the rescue. He "knows something of bicycles," he says, and has a miniature screw-driver in his pocket. He mends what is amiss and mounts the machine "just to see if it is all right." Alas, he "mounts and rides away" at 19½ miles an hour—the full velocity of the machine. In answer to the wild despairing cry for restitution, he shrieks back either "I will see you at York" or "I will see you at York *first*"—the victim is not sure which, and I am afraid it does not much matter.

I have not yet been to see "The Spanish Armada"—I am told an admirable spectacle—at Drury-Lane, but one of the advertisements of it is very attractive. It informs us that the Inquisition "existed more as a State tribunal than an ecclesiastical court," and that "Pontiff after Pontiff" issued several bulls protesting against it. They were, however, only Spanish bulls, issued not in mercy to heretics, but in jealousy of the Crown, who claimed to appoint the inquisitors. "Pontiff after Pontiff"—beginning with one misnamed "Innocent," who set in motion the holy office against the unhappy Albigenses—approved and consecrated it. What is the use of attempting to whitewash the wickedness of the Past by seven-and-six-penny advertisements in the daily papers? Twenty years ago or so, on the occasion of representing the Massacre of St. Bartholomew upon the stage, it was similarly stated that the Pope of the period had exceedingly disapproved of the event, and only struck a medal to commemorate it from æsthetic motives or for fun. Who is so foolish as to be imposed upon by this sort of rubbish? Of course it was not the Catholics only who, under pretence of religion and doing good to those who differed from them, indulged themselves in these ferocities. Calvin did not burn Servetus—as a schoolboy puts his dormouse too near the fire—in a well-meaning attempt to do him good. Cruel natures infuriated by opposition have shown themselves the same in all ages, and in all creeds. Why should we seek apologies for the ruffianism of the Past because it hypocritically wore the garb of religion? And, above all, whom are they supposed to please? It was gravely asserted during the late tercentenary of the Armada, that our Court had communicated with that of Spain to disclaim any intention of wounding her national susceptibilities; but these daily apologies to Sextus XIV. (obit 1484) for a stage scene at Drury-Lane in 1888 are much more humorous. They have ceased now; but again I ask, Whom *were* they meant to please?

The teetotallers are very strong in stories; where the apostles of other sects preach sermons, they tell anecdotes—all, of course, proving the ruin that comes from touching so much as a drop of brandy, and the "bitters" that always accompany a glass of sherry even though you have not ordered them. Here are a couple of temperance stories which, I believe, are as new as stories can reasonably be expected to be. A certain Canon, warm and something more for "the cause," was almost driven out of his mind this summer by watching the calm enjoyment with which a strange divine in the coffee-room of his hotel was getting through his bottle of port. It would have been horrible in a layman, but that one of his own cloth should thus deliberately poison himself, and with such evident contentment, was intolerable. If it had been a pint bottle he could have stood it, but it was a quart bottle, and the way the man held his glass up to the candle to see whether the wine was "moving itself aright," brought the Canon's righteous indignation up to boiling-point. At last he could not stand it, or rather sit it out, any longer. He was a kindly-hearted man, and perhaps did not altogether despair of the poor fellow's future; or, perhaps, he wished to express a somewhat "larger hope" than expectation warranted; but, at all events, pointing to the blue ribbon at his button-hole, he exclaimed, "Ah, Sir, you'll be one of us yet!" "Not a bit of it," was the curt (and wholly unexpected) rejoinder; "never was drunk in my life, Sir!"

A friend of mine was asked to dinner the other day by an excellent fellow, who was not only a teetotaller, but enjoyed a still higher moral position as a vegetarian. My friend accepted the invitation with some alarm, but he was a man who recognised virtue in everybody, and cared little for creature comforts. Unlike some persons of his strong opinions the other recollected that he was a host first and a vegetarian afterwards, and had provided fleshmeat for his guest. It was not good meat; in fact, it was exceedingly bad, but it was meat, and my friend was thankful for it. "I have some wine, too," observed the host, graciously; "foreign wine." My friend did not much like that word "foreign, which he had hoped would have been superfluous, but he expressed his satisfaction that his own weakness for a glass had been thus consulted. Then he tasted it—took, in fact, a good gulp at it. "It was never fermented," observed the host boastfully. "Then, begad, Sir, it's been fermenting ever since," exclaimed my unfortunate friend, and he is not well yet.

It is difficult for those who are wine-drinkers to understand the views of their friends as to liquor. Long before the teetotal days an instance of this was chronicled by Barham (I think, in his "Life of Hook"). A man who liked his glass was accustomed at long intervals to visit a friend who was a water-drinker; on one occasion a very fine bottle of port was produced for him, on which he pronounced a due eulogium. A year after, he called again, but was treated very differently; the wine set before him was so vile indeed that he complained of it. "Now, that only shows," exclaimed his host triumphantly, "what affectation there is in you wine-drinkers. Twelve months ago you praised the wine I gave you, and now you abuse it; yet, as it happens—for I know no topers but yourself—it's the very same identical bottle that I opened for you when you were here last."

A gentleman has written from Ojee—which is not a post town, but a hitherto unknown island in the South Seas—to tell his friends that he is there with only two companions—shipwrecked like himself in 1858—and badly off for clothing. The letter was composed four years ago, ready to be sent should opportunity offer, so that by this time he must be still more unfashionably attired. It is asked, not without reason, why he didn't come home himself by the whaler that brought his letter; but the fact is when you have been a "castaway" for thirty years the profession "grows upon you." It is not generally known that when Alexander Selkirk returned home after his prolonged residence in Juan Fernandez he found the excitement and dissipation of Largo much too much for him. After that touching recognition by his mother in church (at which he appeared in gold lace) he seems to have soon got tired of the sensation his arrival created. So far as the charms of his society were concerned, he might just as well never have come home, for his friends saw nothing of him; he went out early in the morning, with provisions for the day, and picnicked, all by himself, in desolate spots; and in the evening went straight to bed without so much as saying "Good night" to anybody. His chief amusement was the teaching a couple of cats to dance. He constructed a cave in his father's garden where he used to sit looking out to sea and ejaculating "What a fool I was to have come back to Largo; I wish I was on my island again," till his friends began to wish it too. He was not, however, quite so "insular" as he appeared, for one fine day he eloped with a young woman, "leaving his sea-chest and clothes behind him"; and twelve years afterwards another young person, purporting to be his widow, appeared at Largo, claimed them and "administered to his estate."

THE COURT.

Her Majesty, who is still at Balmoral, in good health, takes walks and drives nearly every day. The Princess of Wales, with Princesses Louise, Victoria, and Maud, and Prince Albert Victor of Wales, who arrived at Abergeldie on Sept. 27, visited the Queen in the afternoon. The Marquis of Hartington and Earl Cadogan had the honour of dining with the Queen and the Royal family. In the afternoon of the 28th her Majesty drove with Princess Alice of Hesse to Abergeldie, and visited the Princess of Wales. Prince Henry of Battenberg, attended by Colonel Clarke, went to Invercauld and joined Sir Algernon Borthwick in a grouse-drive. Madame Albani Gye had the honour of singing before the Queen and the Royal family on the 29th; the Duchess of Albany and Princess Frederica were present. Prince Henry of Battenberg joined Prince Albert Victor of Wales at Glen Muick in a drive which Mr. Mackenzie had for black game. Divine service was performed at Balmoral Castle on Sunday morning, the 30th, in the presence of the Queen, the Royal family, and the Royal household. The Rev. A. Wallace Williamson, of St. Cuthbert's, Edinburgh, officiated. The Princess of Wales, with Princesses Louise, Victoria, and Maud, and Prince Albert Victor of Wales, visited the Queen and remained to luncheon. The Rev. A. Wallace Williamson had the honour of dining with the Queen and the Royal family. On Monday, Oct. 1, Princesses Louise, Victoria, and Maud of Wales, as well as Princess Frederica of Hanover, visited her Majesty.

The Prince of Wales left Vienna on Sept. 28 for Pesth, where he arrived in the evening, and was received at the railway station by Mr. Barrington, the British Consul-General. On the morning of the 29th his Royal Highness received Professor Vambery, with whom he had a long conversation. The Prince then took a drive through the streets of the town, visited the Art Exhibition and Commercial Museum, and witnessed performances in the People's Theatre and Royal Opera House, winding up the evening by a visit to the National Casino. On the 30th the Prince dined at the National Casino, where his portrait, by Angeli, was unveiled in presence of numerous members of the Hungarian aristocracy. His Royal Highness arrived on Oct. 1 at Miskolcz, in Hungary, where he reviewed the Hussar regiment of which he is honorary Colonel. A hearty and enthusiastic welcome was accorded to the Prince by the spectators, who thronged the route. At two o'clock the civil authorities came to the hotel to pay their respects to his Royal Highness, who, through Count Apponyi, conveyed to them his most cordial thanks for the brilliant reception accorded to him at Miskolcz. The Prince drove off at four o'clock in the afternoon to attend some races organised by the corps of officers. Next day his Royal Highness returned to Pesth, and left in the afternoon for Bucharest.

General Sir Henry Ponsonby, on behalf of the Queen and Royal family, and Colonel Clarke, on behalf of the Prince of Wales, were present on Sept. 28 at the funeral of Mrs. Hull, who was for many years in the service of her Majesty as nurse.

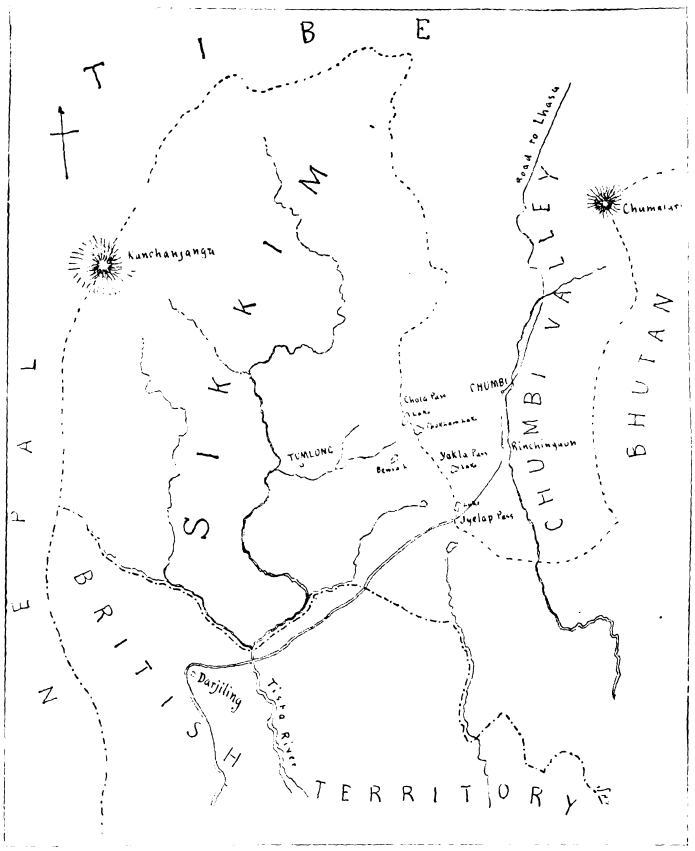
In response to an appeal from the Bishop of London, the Mercers' Company have granted £262 10s. to the Corporation of the Church House.

The Metropolitan Board of Works have resolved to prepare a concise history of the work of the Board from its establishment to the present time.

A stained glass window, which has been placed in Manchester Cathedral in memory of General Gordon, and was unveiled on Sept. 29, is the gift of Mr. C. J. Schofield to the Dean and Chapter; and is the work of Messrs. Wilson and Whitehouse, 3, Vernon-place, Bloomsbury-square.

The will (dated Aug. 24, 1887) of the Right Hon. Margaret Anne, Baroness Audley, late of No. 15, Gloucester-square, widow of the late Right Hon. George Edward, Baron Audley, who died on Aug. 22 last, was proved on Sept. 29 by George Bickersteth Hudson, the nephew, Sir Charles Nicholson, Bart., and Rowland Nevitt Bennett, jun., the executors, the value of the personal estate exceeding £154,000. The testatrix bequeaths £3000 each to the Hon. Mary Thicknesse Touchet and the Hon. Emily Thicknesse Touchet; £2500 each to Agnes Mary Ford Beckingsale and Isabella Mary Hudson; £3000 and her case of diamond, emerald, and ruby rings to her friend Lady Nicholson; £300 each to St. Mary's Hospital (Paddington) and the London Orphan Asylum (Watford); £20,000 and her house and stables, Gloucester-square, with the furniture and effects therein, to her nephew, George Bickersteth Hudson; £15,000 to her nephew, George Frederick Hudson; all her pictures and prints to her brother, the Rev. Thomas Dawson Hudson, with a request that he will not sell them, but remove them to his house, Frogmore Hall, Herts; and numerous other legacies. The residue of her real and personal estate she leaves to her said brother, the Rev. Thomas Dawson Hudson, absolutely.

The will (dated July 14, 1876), with two codicils (dated March 10, 1880, and July 6, 1888), of Sir John Hardy, Bart., J.P., late of Dunstall Hall, Stafford, and formerly of No. 7, Carlton House-terrace, who died on July 9 last, was proved on Sept. 28 by Sir Reginald Hardy, Bart., Gerald Holbeck Hardy, and Lawrence Hardy, the sons and executors, the value of the personal estate amounting to upwards of £1,033,482. The testator, after stating that by an indenture of settlement, his mansion-house, Dunstall Hall, and certain lands and messuages in Stafford, are, subject to his life interest, settled on his son Reginald, for life, with remainder to his first and other sons, successively in tail male, with divers remainders over, leaves all his other freehold and copyhold lands and hereditaments in the county of Stafford and elsewhere, and all his pictures and statuary, upon the like trusts and conditions as contained in the said indenture. He gives all his shares and interest in the Low Moor Company and all the funds comprised in his marriage settlement (his wife, Lady Laura Hardy, having predeceased him) to his three sons, and £20,000 to his son Gerald. The residue of his real and personal estate he leaves as to two-fifths thereof, upon trust, for his son Reginald for life, and then to his children as he shall appoint; one fifth each to his two sons Gerald Holbeck and Lawrence, upon the like trusts; and the remaining one fifth between his said three sons.



THE WAR ON THE SIKKIM FRONTIER OF THIBET.

A rapid and effective success has attended the resumption of military operations by the British Indian Government against the hostile forces of Thibet on the Sikkim frontier. The petty native State of Sikkim, which is situated in the Himalayas, above three hundred miles almost due north of Calcutta, having the Darjeeling district of Bengal, with a well-known sanitary station, to the south of it, is bounded on its north and east sides by Thibet. Sikkim is a rugged mountainous region, sixty-six miles long from north to south and fifty-two miles broad, with a population much less than 100,000, ruled by a native Rajah, who is in feudal dependence on the British Indian Empire, receiving a grant of £1200 a year, nominally as compensation for his cession of Darjeeling many years ago. He seems, however, to own a divided allegiance, having a territory in the Chumbi valley, which is claimed as a dependency of Thibet, and receiving from the Lamas of Thibet an additional pension of £200 a year, while his summer residence is in Chumbi, and his winter residence at Tumlong, in Sikkim. A mountain range, from 15,000 ft. to 17,000 ft. high, running from north-west to south-east, separates the Sikkim from the Chumbi territory, and is crossed by the Chola Pass, the Nathula and Yakla, the Jalapla or Jyelapla Passes, and the Pembiringo Pass: the two passes last named, with the Kupup valley below them, afford the nearest routes of advance from Gnatong, in Sikkim, which is the base of British military operations. The line of the Thibetan frontier on the east of Sikkim, where it divides that State from the Chumbi Valley, has always been well known and understood; consequently, the erection of the fort at Lingtu, on the direct line of road between Darjeeling and Lhassa, at a distance of only forty miles from the former town, was an act which it was impossible to tolerate. The present hostilities can only result in the expulsion of the Thibetans from the Chumbi territory, which juts down between Sikkim and Bhotan. Chumbi is a village where the Rajah of Sikkim has a small summer palace with a handsomely gilt roof. About fifteen miles to the north, along a very easy road, is a frontier fort called Phari or Parijong, where there are usually three Chinese officials and thirty mounted soldiers; the fort is 1500 paces round, and the walls are of rubble stone, 30 ft. high. These are the two principal places in the valley. The Chumbi Valley is the only point where our territory comes into direct contact with that of Thibet, and if the result of the present quarrel be to establish rather more satisfactory relations between British India and Thibet, the main trade route of the future will doubtless lie through the valley. Whether our military operations will be extended beyond it, must depend in great measure on the attitude of the Thibetan Government; but in whatever treaty may be arranged hereafter, due regard will doubtless be had to the trade of the future. Thibet has long been a coveted market to the Assam planters, but the difficulties raised by the Lamas have prevented any exchange of our tea against the wool which is their staple product.

The repulse of the Thibetan attack on the British position at Gnatong, which took place on May 23, will be in the recollection of our readers. Since that date, "Fort Graham," named from the commanding officer, has been erected on the site of the camp before existing at Gnatong. It is 12,600 ft. above the sea-level, and is, we believe, the only military work ever yet constructed at such an altitude. Its walls are composed of strong stockade work, loop-holed about 8 ft. above the ground. The huts inside, built of rough logs and planks, are mostly bullet-proof. The main entrance is by the Lingtu gateway, defended by two mountain guns; other guns, placed on the north front near the flagstaff, command the valley in which is the intrenched camp occupied by reinforcements lately arrived, consisting of the head-quarters battalion of the Derbyshire Regiment and the second battalion of the 1st Ghoorkas. The whole work of constructing this fort, which may be regarded as impregnable by the Thibetans, has been executed by the 32nd Pioneers and two companies of the Derbyshire Regiment, with materials got from the forests that cover the surrounding hills.

The British field-force, under the command of Colonel Graham, has now driven the Thibetans far away from all the frontier passes, capturing their fortified positions shown in the Sketches which we have engraved this week. On Sept. 25 Colonel Graham pursued the enemy to Rinchin-gaon, or Rinchingong, and next day advanced to Chumbi, while the Thibetans, completely routed, had fled to Pari and Bhotan. The Rajah of Sikkim had also fled from Chumbi, and was supposed to have taken refuge in Thibet. Colonel Graham's force has returned by the Jalapla Pass to Gnatong.

In addition to the Sketches with which we are favoured by one or two of the officers of the Sikkim field-force at Gnatong, we have been permitted to copy, from Vol. III. of the Proceedings of the Royal Geographical Society, the views of the Chola Pass, the Yakla Pass, and the Jalapla Pass, drawn by Sir Richard Temple and presented to the Society with a paper which he read there. The second volume of Sir Richard Temple's interesting "Journals in Hyderabad, Kashmir, Sikkim, and Nepaul," published last year by Messrs. W. H. Allen and Co., may be consulted with advantage for its exact description of Sikkim, aided by very good maps. One of the Views we now present shows in the distance, looking westward, the famous Himalayan mountain summit of Kinchinjunga (more correctly written "Kanchanjanga"), which is 28,156 ft. high; but Mount Everest, or Gaurisankar, rises to 29,000 ft., being the loftiest mountain on earth. Chumalari, which is with Kanchanjanga, also marked in our Map, has a height of 23,650 ft. The official orthography of names of several places, in the Map we have copied, slightly differs from common newspaper usage: thus we read "Darjiling" instead of "Darjeeling"; and "Jelapla" is more strictly notified as "the Jyelap La"; the word "la" being, in Thibet, the ordinary term for "pass," as in the "Cho-la," or water-pass, and the "Yak-la," which is the pass of that useful beast of burthen, the Yak.

SKETCH-PLAN OF THE SEAT OF WAR ON THE SIKKIM FRONTIER OF THIBET.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Oct. 2.

In the political world the most complete disorder prevails. In view of the opening of Parliament, fixed for Oct. 15, the Deputies are beginning to return to Paris, and to exchange views in the lobbies of the Chamber. The Deputies of the Governmental majority seem particularly alarmed both on account of the discontent to be remarked in the provinces and on account of the little confidence placed by the masses in the Premier, M. Floquet. Minister Goblet, in a speech made recently in Picardy, and now much commented upon, has not hesitated to declare that all is going wrong in France, and to depict in the most sombre terms the progress of the Boulangist faction: "Yes, a faction," said M. Goblet, "for there is no question here of party or of programme; there is no question of serving an idea, but merely a personal ambition." M. Goblet then asks how in such political conditions can the other countries respect France. "What can foreign Powers think of the future of France when they are wondering to which faction she will belong to-morrow? What relations can be had, what alliances hoped for, when no security can be offered!" This is all true enough, and the fact that a Republican Minister has the courage to admit the alarming progress of Boulangism is a proof how great the danger is. In the immediate future of France one sees nothing but the inevitable triumph of Boulanger. Even the Comte de Paris is obliged to admit this, since he orders his partisans and loyal subjects to go to the next electoral battle under Boulanger's flag. Even his worst enemies would not attribute to the Comte de Paris the foolish thought that Boulanger, dictator of France, will immediately offer his own black charger to Philip VII. and proclaim him King *à la* Monk. *Pas de danger!* "Vive Boulanger!" does not mean "Vive Philippe VII!" or "Vive Napoléon IV!" It means "Hurrah for something new!"

The *Journal Officiel* having published a decree reorganising the school of aerostation at Chalais, the press has begun to call for legislation concerning this new means of locomotion.

Great curiosity has been excited by the announcement of the trials of the new submarine boat, Le Gymnote, now being made in the harbour of Toulon. This boat has been designed after the ideas of the famous engineer, Dupuy de Lôme, by M. Zédé and Captain Krebs, who has, it appears, solved the problem of balloon motors and steering apparatus. The boat—56 ft. long and 6 ft. in diameter—is described as a huge Whitehead torpedo, having a displacement of thirty tons, and an estimated speed under water of nine to ten knots. The electric motor, of 55-horse power, drives the screw directly, without any gearing, at the rate of two hundred evolutions a minute, and weighs, with the Commelin-Desmazures accumulators, a little less than two tons. The crew consists of a captain, a machinist, and a steerer. What is to be done with this boat, how she is to be armed, what services she may render from the military point of view, are questions that have to be determined. At present, the experiments being made are to test the navigability of the boat, and to see what improvements can be made in the construction.

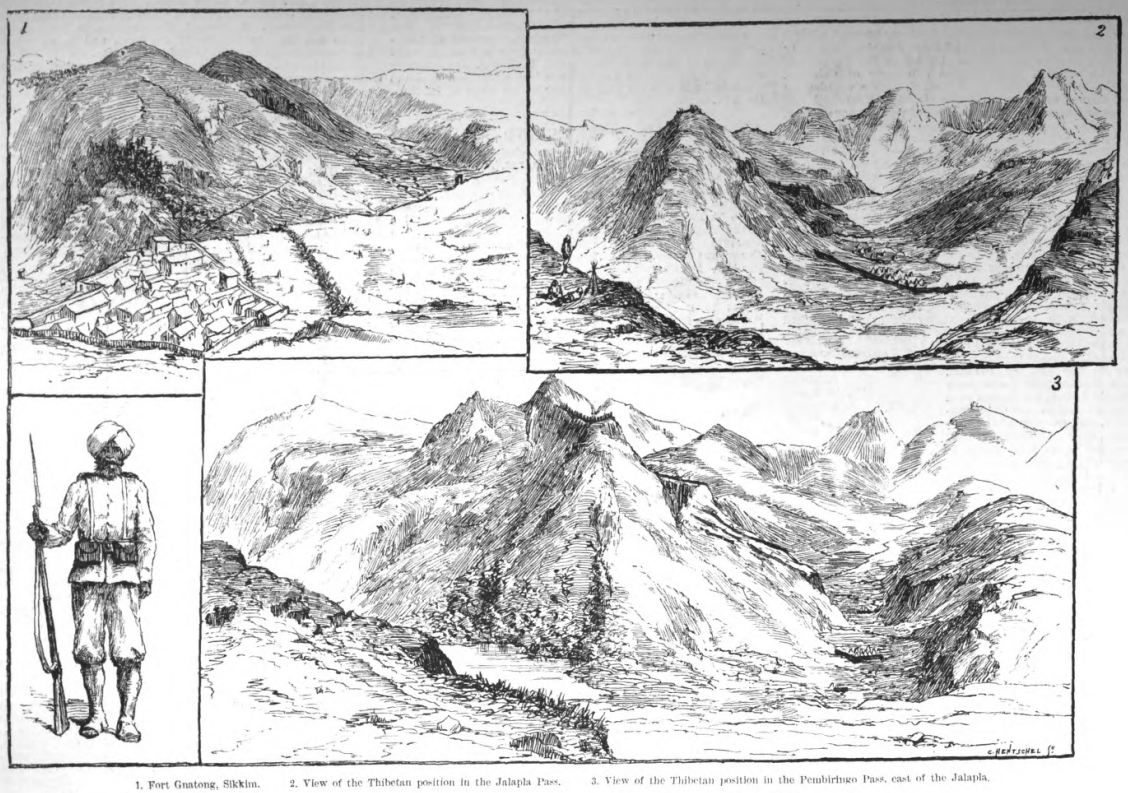
The theatrical season begins, as usual, with revivals of last summer's successes, or with successes of years ago. One would think, indeed, to judge from an inspection of the playbills, that the dramatic activity of France is diminishing, and her vaunted superiority in this department no longer a reality. The Français, for instance, can do no better than revive Georges Sand's "François le Champi"; the Châtelet has just served up an old "Cendrillon" in new dresses; the Porte Saint-Martin is playing the "Tour de Nesle," and about to revive the "Courrier de Lyon"; the Vaudeville, the Variétés, the Folies Dramatiques, the Menus Plaisirs have no new thing to offer. The Ambigu, it is true, has produced this week a commonplace melodrama, full of tears and emotion, called "Roger la Honte": but this is simply the dramatisation of a feuilleton novel published by the *Petit Journal*. Where are the new pieces? Where are Messieurs les auteurs dramatiques?

In view of the approaching Exhibition the Prefect of Police is preparing to clean the streets of Paris—I mean to clean them morally. The first steps have been the arrest of a few hundred horrible creatures of both sexes who have for months infested the boulevards night and day, and the publication of a decree prohibiting the venders of newspapers and broadsheets to cry anything but the simple title of their wares.

Still in view of this wonderful Exhibition, MM. Alfred Stevens and Henri Gervex, the distinguished painters, are at work on a panorama of the history of the century, 1789-1889, commencing with Louis XVI. and Mirabeau, and ending with Victor Hugo and President Carnot.

T. C.

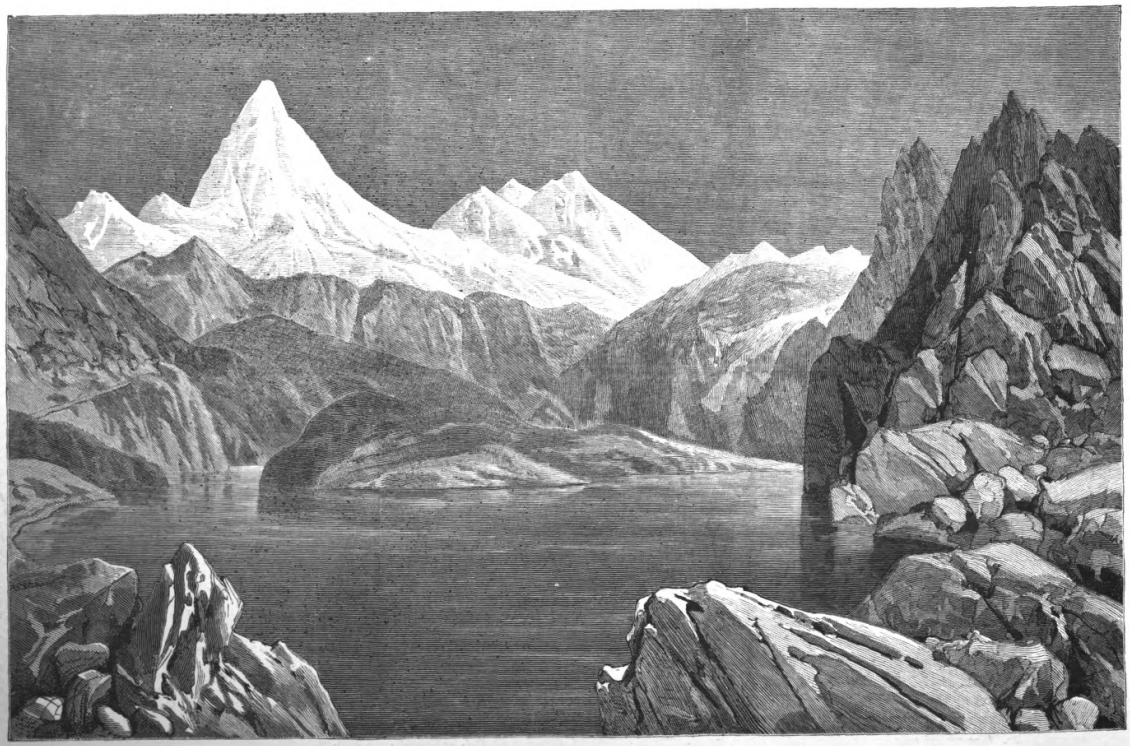
The Queen-Regent of Spain and the members of the Royal family arrived at Madrid on Oct. 2 from San Sebastian.



The ceremony which is considered as the final one of the Pope's Jubilee year was performed on Sunday, Sept. 30, at St. Peter's, at Rome, in the presence of an immense assemblage of pilgrims and others. Both on entering and departing, Leo. XIII. was greeted with loud cheers.

The meeting of the International Commercial Law Congress has been held at Brussels; a considerable number of English, French, American, Spanish, German, Russian, Italian, and even Japanese delegates attending. Questions connected with bills of exchange and maritime conflicts were discussed.

The Emperor of Germany arrived at Stuttgart on the evening of Sept. 27, and was received at the railway station by King Louis and all the Princes of the House of Würtemberg. The Emperor and the King drove, amid the acclamations of the people, to the Royal Castle, where his Imperial Majesty was received by the Queen and the Princesses. The streets leading from the station to the castle were brilliantly illuminated in honour of the Emperor's visit. Next day the Emperor was entertained at a State banquet, his Majesty's health being proposed in cordial terms by the King of Würtemberg. In reply, the Emperor expressed the pleasure it gave him to visit Würtemberg, a country that enjoyed such great prosperity and that had given to Germany so many famous rulers. His Majesty arrived at Constance late on the night of Sept 28, and was received by the Grand Duke of Baden. The Royal party went by special steamer to the Island of Mainau, the shores of the lake being brilliantly illuminated. The Emperor reached Munich on the evening of Oct. 1, amid the firing of a Royal salute, and was received at the railway station by the Prince Regent and the members of the Bavarian Royal house, the Ministers, the principal officers of the Army, and other notabilities. Leaving Munich on the 2nd, his Imperial Majesty entered Vienna next morning, where he was received with a stately ceremonial. Early on Oct. 1 the Empress Frederick, with her daughters, left Potsdam for Kiel, where her son, Prince Henry, lives, and where an English squadron is at present anchored. She arrived at Kiel at nine in the evening, and drove to the palace. There was no official reception. Her Majesty has sent a portrait of her late Consort to the English Jockey Club, of which he had been a member since the year 1881.—Prince Bismarck has obtained the Emperor's consent to prosecute the publishers of the Emperor Frederick's diary, on the ground of the revelation of State secrets. Professor Dr. Geffcken, the contributor of the extracts to the *Deutsche Rundschau*, is in custody, and has undergone an examination.



On the occasion of the opening of a park in the suburbs of Vienna on Sept. 30 by the Emperor Francis Joseph, his Majesty said that the barrier separating Vienna from its suburbs should be removed as soon as possible. The Emperor's promise was received with general enthusiasm.—The Empress of Austria returned to Schönbrunn on the 30th after her yachting excursion among the Greek islands. Her Majesty has rented a villa for three months at Gaturion, in the island of Corfu.

Prince Christian, the eldest son of the Crown Prince and Crown Princess of Denmark, came of age on Sept. 26. The King has appointed him a Lieutenant in the Royal Life Guards, and conferred on him the Order of the Elephant, the highest Danish Order. The King of the Hellenes has presented the Prince with the Grand Cross of the Order of the Saviour.—The Scandinavian and International Exhibition in Copenhagen was officially closed on Oct. 2.

THE EMIN PASHA RELIEF EXPEDITION: SKETCHES BY MR. H. WARD, A COMPANION OF MR. H. M. STANLEY.

THE EMIN PASHA RELIEF EXPEDITION UP THE CONGO AND ARUWIMI.

Mr. Ward has often assured me of the existence of cannibalism in certain Central African districts. Last year he forwarded to me four sets of cannibal knives and forks. They were engraved in *The Illustrated London News*. In a general way he has referred to this subject as one about which there was no longer reason for doubt. Mr. Stanley himself had not been altogether explicit in his evidence one way or the other, although the alleged Soko or chimpanzee skulls which he sent to Professor Huxley, as his readers will remember, turned out to be human. Whatever they were, the natives of the village where Stanley found them confessed they had eaten the bodies, which they called "Wajimi meat." It is only quite recently that the truth has come out. Stanley suspected it. He offered large rewards for a specimen of a "Soko" alive or dead. He saw plenty of skulls of the creature, but could procure no other evidence. This was at a village above Stanley Falls. It is now pretty well understood that these trophies must have been the remains of human beings. Cannibalism exists in the great basin of the Congo, on sundry of its tributaries, and was active in the neighbourhood of the camp at Aruwimi. In a special letter from Mr. Ward lately received, he gives me not only some startling details of cannibalism on the Aruwimi river, but an illustration of the ghastly business drawn on the spot. On Sunday, Feb. 26, 1888, he says:—"I went this morning to Nassibu's Camp, which is situated about an hour's march from our camp on the Falls (Aruwimi). He received me with much ceremony, and, at my request, drummed to the natives, who were in two clearings at the back of his camp. A number came, and went through the usual demonstrations of surprise at seeing a white man. Among them were about a dozen young women, with pleasing countenances and beautifully-moulded limbs. They would have been worthy models for a sculptor. I selected a man as a model for myself, but it was very difficult to induce him to stand still while I sketched him. I then started for their village with Majuta, Mr. Jameson's boy, carrying my bag, and *Fida*, a native woman who has been with the Arabs some time, to interpret from Swahili into the native language.

"Almost the first man I saw was carrying four lumps of human flesh (with the skin on) on a stick, and through *Fida* I found that they had killed a man *this* morning and had divided the flesh. She took me over to a house where some half-dozen men were squatting, and showed me more meat on sticks in front of a fire; it was frizzling and the yellow fat was dripping from it, whilst all around was a strong odour which reminded me of the smell given out by grilled elephant meat. It was not yet the general meal-time, they told me, but one or two of the natives cut off pieces of the frizzling flesh and ate it and laughed at Majuta, who, being disgusted, held his nose and backed into the bush. I spoke with the natives through Fida, and they told me from what parts the meat was cut. One tall, sturdy native was quietly leaning against a tree and picking off pieces of flesh from a thigh bone with great relish. Other dainty joints were grilling at the fire. I send you a sketch of the scene, and some day shall hope to tell you all the horrible details of the cannibal habits and customs which prevail in this strange country."

The accompanying Illustrations are of more individual than typical interest. No. 3 is an Arab slave-owner; No. 5 is Majuta (Jameson's boy); and No. 9 is a native of Diva, a village between Yambuya and the Congo River. The miserable looking wretch (No. 8) is a grim suggestion of the condition of the native warriors and carriers at the camp in the early days of the present year. The white men struggled through their privations, as they always do, more successfully than their dark companions. Says Ward, in a letter dated Feb. 18:—"I went to Selim's camp to-day, and they told me that two more of their *men* (Arabs) had been caught and eaten by the natives, whose village they had raided and burnt some weeks ago. This will probably make Selim angry, as he went with Barttelot much against his will, and only left a few men and his women. This eternal waiting is awful—waiting for what never comes! Day after day passes; we see no fresh faces, we hear no news. Many of our *men* are daily growing thinner and weaker, and are dying off. Poor wretches! they lie out in the sun, on the dusty ground, most of them with only a narrow strip of dirty loin-cloth; and all the livelong day they stare into vacancy, and at night gaze at a bit of fire. It was a pitiable sight, a few days ago, to see an emaciated skeleton crawl, with the aid of a stick, after a corpse that was being carried on a pole for interment. He staggered along, poor chap, and squatted down alongside the newly-made grave and watched the proceedings with large round sunken eyes, knowing that it would only be a matter of a few days and he himself would be a dead man. He told me in a husky voice, 'Amekwa rapiki angu' (he was my friend). Another poor fellow is a mass of bones, yet persists in doing his work, and every evening staggers into camp. He has been told to lay up, and that his manioc shall be provided for him, but he refuses, and in replying to my sympathetic remark that he was very thin, he said 'Yes, only a short time more, master.' Death is written in his face, and just as plainly in the faces of many others in this camp. Almost as many lives, I fear, will be lost in this philanthropic mission as there are lives of Emin Bey's people to save."

Ward does not say positively that Tippoo Tib is chiefly to blame for this, but he has continually referred to the suspicious nature of his delay in supplying the men he had undertaken to provide. On Jan. 18 he writes: "Selim-bin-Mahomed, who has hitherto been most pleasant and agreeable, is now beginning to get 'touchy.' Evidently we shall never get the 700 men Tippoo Tib promised us." In another of his letters, dated Feb. 8, he seems to forecast poor Barttelot's fate. "To-day," he writes, "I am orderly officer. An old empty cartridge-box was picked up in the river (Aruwimi) to-day; it was much broken and sodden; it must have been floating down the river for a very long distance. Selim-bin-Mahomed told me this morning that Bungari, the escaped prisoner, had told him, preparatory to escaping, that his life was not worth living, marching up and down in the hot sun all day, and that he knew he would be shot when caught, and that he intended shooting Barttelot dead before he would be captured."

The Sketch (No. 4) of the Aruwimi near the camp was made after a botanising trip with poor Jameson, whose death by fever is one of the latest known calamities of the expedition. "This picture," he writes, "I have done in Indian ink, but it is very uncomfortable painting out-of-doors; this is one of our hottest days, and there are swarms of black sandflies which draw blood whenever they attack one." In January he writes in regard to the Sketch (No. 4) of a corner of our "Intrenched Camp, Yambuya, Aruwimi River," that it is picturesque but dull, and wretched with waiting and hoping for orders to move. "The weather fine," he writes, "river very low. Massibu, an Arab of Tippoo Tib's, visited us, bringing some Stanley Falls rice and a goat. He told us an absurd yarn of Abdullah having seen Stanley. Jameson continues collecting birds and painting them. We sketched the second rapids from below the camp. We have not sufficient medicine, and very little food. The Zanzibaris and Soudanese are suffering seriously, and there are many deaths."

"The carved wood tobacco-bowl" (No. 6), he writes, "I bought from one of Selim's Manyemas. The bowl is constructed on the back of some legendary animal—half leopard, half elephant. On this day of the tobacco-bowl (March 3) one of Selim's head Arabs is below with twenty tusks of ivory. Bonny has seen some Arabs from Abdullah's camp, sixteen

THE RIGHT REV. FRANCIS JAYNE, THE NEW BISHOP OF CHESTER.

days above. They say they will bring us back the two men who deserted from Stanley some months ago. This awful delay of news from Stanley bodes misfortune, and we are all compelled to conclude that he has met with trouble and is in difficulties—if not worse. A brave, skilful, and determined man, a hero, one hopes and hopes he may be safe and well."

The unknown difficulties which Mr. Stanley must have encountered are sufficiently demonstrated by the known difficulties which have beset his followers in a region which had become familiar to them, and under the express cognisance of Stanley's Arab ally, Tippoo Tib. If this gentleman and his officers have been so remiss in the fulfilment of their undertakings almost within easy reach of settled Congo stations, what may have happened to Stanley in the wilderness is full of painful possibilities. Major Barttelot lost his life in endeavouring to organise a party to follow his leader. Mr. Jameson has succumbed to fever, probably induced by anxiety and worry in the same direction. In one of Ward's letters, dated early in the year, he states, with a sympathetic expression of regret, that both Jameson and Barttelot look very ill. The obstacles in the path of an advance towards Wadelai must be enormous. The dangers, while they have in some respects been reduced by the Arab alliance, have in other ways been increased by it. The Arabs harass the natives, and plunder them of ivory and slaves. The natives everywhere seek reprisals on the Arabs; it must be a difficult thing for the native mind to discriminate between Stanley's people and their Arab allies.

Up to date there is still no news of Stanley. It is beginning to be felt that it will be impossible for anything like efficient aid to be sent out either to him or to Emin Bey, except under the active direction of the Government, and with a sufficient and carefully officered force. JOSEPH HATTON.

THE LATE HON. THOMAS HOLT.

This gentleman, who died on Sept. 5, at his residence, Halcot, near Bexley, Kent, formerly held high political office in New

THE LATE HON. THOMAS HOLT,
Formerly Finance Minister of New South Wales.

South Wales. He was born in 1811, at Harbury, in Yorkshire, and at an early age entered the business carried on by his father, who was a wool-stapler. After spending several years in different parts of the Continent, he went to Australia, in 1842, and there settled. During a residence of forty years in New South Wales, he amassed a large fortune, and became one of the best-known men in the colony. Having been elected, in 1856, as member for Hanley Borough, he was, on the introduction of responsible government, appointed Colonial Treasurer in the Donaldson Administration. He continued a member of the Assembly until 1868, and two years later received a seat in the Legislative Council. Six years ago, he returned to England, and has during that period devoted all the leisure that a lingering illness allowed him, with large pecuniary gifts, to works of charity and benevolence. His remains were interred in Abney Park Cemetery, in the presence of Sir Saul Samuel and other representatives of the colony; but the most striking feature of the scene was the presence of the poor from all parts of London to testify to the loss they had sustained.

Our Portrait is from a photograph by Messrs. Fradelle and Young, Regent-street.

THE NEW BISHOP OF CHESTER.

We lately announced that Government had nominated to the See of Chester the Rev. Canon Francis John Jayne, who since 1886 has been the Vicar of Leeds in succession to the Rev. Dr. Gott, transferred to the Deanery of Worcester. The See of Chester was rendered vacant by the translation of Dr. Stubbs to the See of Oxford. The Vicar of Leeds will have spent but a short time among the people of that town, where he has won popularity and esteem. Born in or about 1844, he was educated at Wadham College, Oxford, of which he was a scholar. He took a first class in Moderations, and a first class in Literæ Humaniores and in Law and History in 1868, in which year he was elected a Fellow of Jesus College. He was Senior Hall Houghton Greek Testament Prizeman in 1870. He was ordained in 1871, and was tutor of Keble College till 1878, and then was appointed Principal of St. David's College, Lampeter. He was Whitehall Preacher in 1875-77, and Select Preacher at Oxford in 1884.

The Portrait is from a photograph by Mr. Heslop Woods, of Leeds.

ART MAGAZINES.

The *Art Journal* for October opens with a descriptive article, one of a series by Mr. Joseph Hatton, on provincial clubs: Liverpool being this month the selected town. Mr. Marcus B. Huish continues his interesting "Notes on Japan and its Art-Wares." Lacquerwork is the subject of this paper, which is profusely illustrated with examples of this wonderful art-industry. The Swiss painter Arnold Böcklin furnishes the subject of an article by Miss H. Zimmern. The Alpine Republic has never been counted among art-producing nations, yet she has at least this one son of whom she may well be proud. Born at Basel in 1827, Böcklin has resided in and studied at most of the great art-centres—Düsseldorf, Brussels, Paris, and Rome—and has painted many pictures remarkable for their originality and imaginative power. The frontispiece to this issue is an etching of Mr. Briton Rivière's clever picture, "Spilt Milk."

The October number of the *Magazine of Art* contains an extremely interesting paper by Mr. Lewis Wingfield on "Art in the Theatre." Few persons have more knowledge of, and experience in, the difficult art of costume-designing for the stage than Mr. Wingfield, who has arranged the dresses for some of the most successfully-mounted London performances. A monograph by Mr. H. Spielman accompanies a fine engraving of a portrait by himself of the late Frank Holl, R.A., whose recent death, while still in the prime of his life and his art, has caused such a blank in the ranks of the English Academy. Mr. Walter Crane contributes another article on the art of design, treating this month of relief expressed in "The Language of Lines." The examples given by the writer, drawn by himself, are, as always, charming. Mr. W. J Loftie holds out great promise of pleasure to come in his forthcoming volume "Kensington, Picturesque and Historical"; for in his paper in this periodical, entitled "Kensington Fifty Years Ago," not only do we benefit by the learning and research employed in the compilation of the coming work, but we are permitted to see many of the sketches of Old and New Kensington which will illustrate it.

Lord Brassey has been presented at Normanhurst Court with a testimonial subscribed for by inhabitants of Hastings, without regard to party, in recognition of his twenty-four years' association with the borough, his eighteen years' service as Parliamentary representative, and his munificence towards churches, schools, chapels, and other useful institutions. The presentation took the form of a portrait of Lord Brassey by the late Frank Holl, a valuable sextant, and an illuminated address and album containing the names of the subscribers.

A banquet was given on Sept. 29 by the Italian colony and exhibitors at the Italian Exhibition to Mr. J. R. Whitley and Colonel J. T. North, respectively the Director-General and President of the Reception Committee. Replying to the toast of his health, Mr. Whitley said that during the five months the Exhibition had been opened, 1,258,000 persons had visited it, and the exhibits had proved the immense resources of United Italy. He expressed a strong conviction that a second Italian Exhibition next year would meet with every encouragement from Italian exhibitors.

The artisans' classes at the Royal Victoria Hall reopened on Monday, Oct. 1, and comprise arithmetic, physiology, physiography, shorthand, chemistry, astronomy, English literature, mechanics, machine drawing, electricity, &c., many of the classes being in connection with the Science and Art Department. On the 2nd, after a lecture entitled "Science in the Saucepan," by Professor Carlton Lambert, the certificates gained by the students last session were presented by Sir P. Magnus. The winter series of ballad and operatic concerts at the above hall commenced on the 4th with a ballad concert, when Madame Antoinette Sterling, Miss Hilda Coward, and Messrs. Chilley, Thurley Beale, and Egbert Roberts sang and Mr. John Child recited.

Half the financial year 1888-9 has now expired, and the revenue receipts thus far strengthen the prospect of a surplus considerably in excess of the estimates made six months ago. The revenue returns for the quarter just ended show the following items of increase, as compared with the corresponding period of last year:—Customs, £137,000; stamps, £50,000; Post Office, £100,000; telegraph service, £25,000; miscellaneous, £84,312; total, £396,312. The departments in which there has been a decrease are the following:—Excise, £10,000; house duty, £10,000; property and income tax, £160,000; interest on purchase money of Suez Canal shares, &c., £756; total, £180,756. The net increase on the quarter is £215,556. The comparison of the half-year with the corresponding period of last year shows a net increase of £480,589; the items of increase are £233,000 from Customs, £20,000 from excise, £350,000 from stamps, £250,000 from the Post Office, £40,000 from the telegraph service, £20,000 from Crown lands, and £218,345 from miscellaneous. The decreases in the half-yearly comparison are £25,000 from house duty, £625,000 from property and income-tax, and £756 from interest on purchase money of Suez Canal shares, &c.

COALING THE STEAMER, JAMAICA.

Our Special Artist, Mr. Melton Prior, contributes a Sketch of the scene that he witnessed on the arrival of the Royal Mail Steam-Packet Company's vessel at the port of Kingston, Jamaica. His comment on the mode of operations is vigorously severe, and may help to procure some amendment; so we publish it just as he wrote it:—

"I think I may safely say that the manner of coaling steamers in Kingston, Jamaica, is unique; and I know that I share the feeling of every official, resident, and passenger, when I say that the sooner it is done away with, and a better system is introduced, the better it will be for all. As at present performed, it is a disgrace to Jamaica: and it is astounding that an English colony can put up with such a barbarous practice. As soon as a steamer is sighted, negro men and women, who are engaged all the year round at this occupation, are collected; and the moment the ship is moored to the landing-wharf, stages are run aboard, and these black human two-legged animals are at once set to work coaling the ship. It is needless to say that there are 70 per cent of women to the men, who are generally too lazy to do any work at all. The work is carried on utterly regardless of the comfort of the passengers, or their sufferings from the coal-dust, which penetrates every crevice of the ship, and settles on every exposed part of the human body. Passengers, ladies as well as men, as they land, have to pass through the most ghastly clouds of coal-dust; and during the tedious waiting at the Custom House they are still enveloped in this black mist of carbon, till they eventually arrive at the hotel, more resembling the negroes than white ladies and gentlemen. The wind invariably blows from one quarter, and it is utterly impossible to avoid this torture. The coaling-women's dresses are tucked up to the knees, and the dirtier and older the dress the better. While filling their baskets from the enormous stack of coal, and transporting it on board, they indulge in ribald songs and the coarsest of language, fortunately in such broken English that it is not easily understood by the newly-arrived passengers. Nevertheless I have heard many English ladies and gentlemen condemn the whole scene as an outrage on decency, and offensive to those who are bound to travel by the Royal Mail steam-ships. It is very seldom that a ship is coaled without some of these female barbarians quarrelling, and eventually settling their dispute by tucking up their sleeves, and engaging in what looks like a woman prize-fight, the blood flowing freely after a very short encounter. When I have expressed my opinion to those in charge, I have been told that it is the only way to get the work done; but I have seen ships coaled in most parts of the world, and never with so little regard to decency or convenience."

BIRD GROUPS AT THE NATURAL HISTORY MUSEUM.

We present an Illustration of the latest and largest addition to the instructive series of groups of British birds, which attracts so many visitors to the Natural History Museum in Cromwell-road. These groups are intended to show the nesting habits of our birds, and include generally both the parents — some in their breeding dress; others sharing the inevitable duty of bird family cares; the rest with eggs or young, and as much of the surroundings of the nest as can be retained in a glass case of suitable size. In mounting these groups, imagination is not allowed to play any part; but if the natural surroundings cannot be preserved intact as a whole, such parts as are perishable, like leaves or flowers, are faithfully copied and reproduced from nature. The tree-mallow, with the puffin group, the sea-poppies in the tern-case, the bough of evergreen oak hiding the nest of the blackbird, are masterpieces from the hand of Messrs. Mintorn, of Soho-square, so true to nature as to satisfy the most exacting botanist.

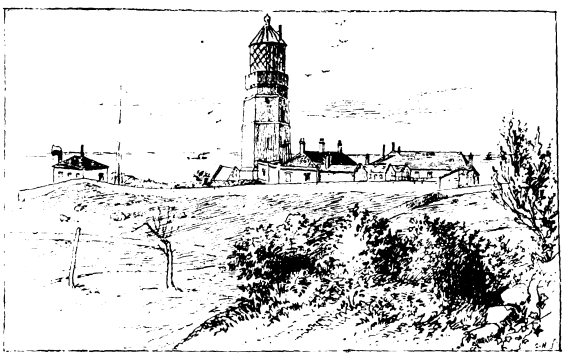
A wall-case in the pavilion of the Bird Gallery, 4 ft. 6½ in. long, 8 ft. 6 in. high, and 4 ft. deep, has been devoted to a small piece of the bird-life of the Bass Rock, one of the most celebrated stations on the east coast of Scotland, to which every spring countless multitudes of sea-birds resort for the purpose of breeding.

The position chosen for this group is a representation of two shelves, high up on the precipitous face of the rock, which are tenanted by two kinds of birds, the lower by the gannet or solan goose, the upper by the guillemot. Necessity has taught these birds to live together sociably and in peace. On the short lower shelf five pairs of gannets have found room for their nests; in one place may be seen the old bird on the nest, patiently attending to her single white egg; in another, the young gannet is on the point of emerging from the shell; in a third, the nestling, about a week old, is having its appetite satisfied, while two youngsters, of more advanced age, have been able to exchange their beds, which will require the washing of many a drenching shower, for a secure, clean, and sunny corner of the shelf. The guillemots occupy the upper shelf; they also do not mind how closely they are packed if there be only room for their large egg, which is coloured and spotted in many patterns, and which they lay on the bare rock, and incubate in a more or less upright position. A pair of kittiwakes, on the left side of the case, add not a little to the charm of this group. They have built, with some skill, their soft nest of seaweed and lichens, on a small platform of projecting rock, scarcely the width of two hands. The female is sitting on her eggs; the mate is watching for her from another projection close by.

The Bass Rock case is one of a number of cases now being set up under the direction of Dr. A. Gunther, F.R.S., who is at the head of the Zoological Department at the Museum, which are quite works of art in form and composition, as well as in general truth to nature, and are far in advance of anything of the kind we have had before. For the successful execution of this group, the authorities of the Museum are chiefly indebted to Mr. Edward Bidwell, who, in the first place, obtained a series of photographs of the nesting-places and breeding birds, and who also presented nearly all the specimens. From one of the photographs Miss E. C. Woodward made a small model, in clay, of the portion of the cliff selected, which was skilfully copied by the modeller attached to the Geological Department.

The restoration of the church of Cwmamman, South Wales, being completed, the parishioners have presented an east window, from the studio of Mr. Taylor, of Berners-street.

In St. Mary's Scottish Episcopal Church, Glasgow, on Sept. 29, Canon Harrison, of St. James's, Bury St. Edmunds, was consecrated Bishop of Glasgow by the Primate of Scotland. All the Scottish Bishops and several English Bishops, including the Bishops of Ely and Durham, assisted at the ceremony, and the sermon was preached by the Bishop of Iowa. There was a large congregation.



"A HELPING HAND."

The Coloured Picture given as an Extra Supplement to this Number of our Journal is an out-of-door scene, under the bright sky of a southern clime in the Mediterranean; but the occupation of these two children, in their light and airy costume enjoying the glowing sunshine on a garden terrace, is identical with the occasional easy task of many English little girls and boys, sitting by the winter fireside in snug rooms at home. Few of us cannot remember, some time in our infancy, being asked by a mother or sister to hold a skein of thread for unwinding; and the sensations of increasing weariness in the rigid muscles of the arms, and of the relaxing hold of the skein on the steady hands, as its threads drew near their termination, abide as physical impressions after half a lifetime. It is an excellent lesson of patience, and the faithful performance of this little office is always deserving of a kiss of approval.

THE ST. CATHERINE'S ELECTRIC LIGHT.

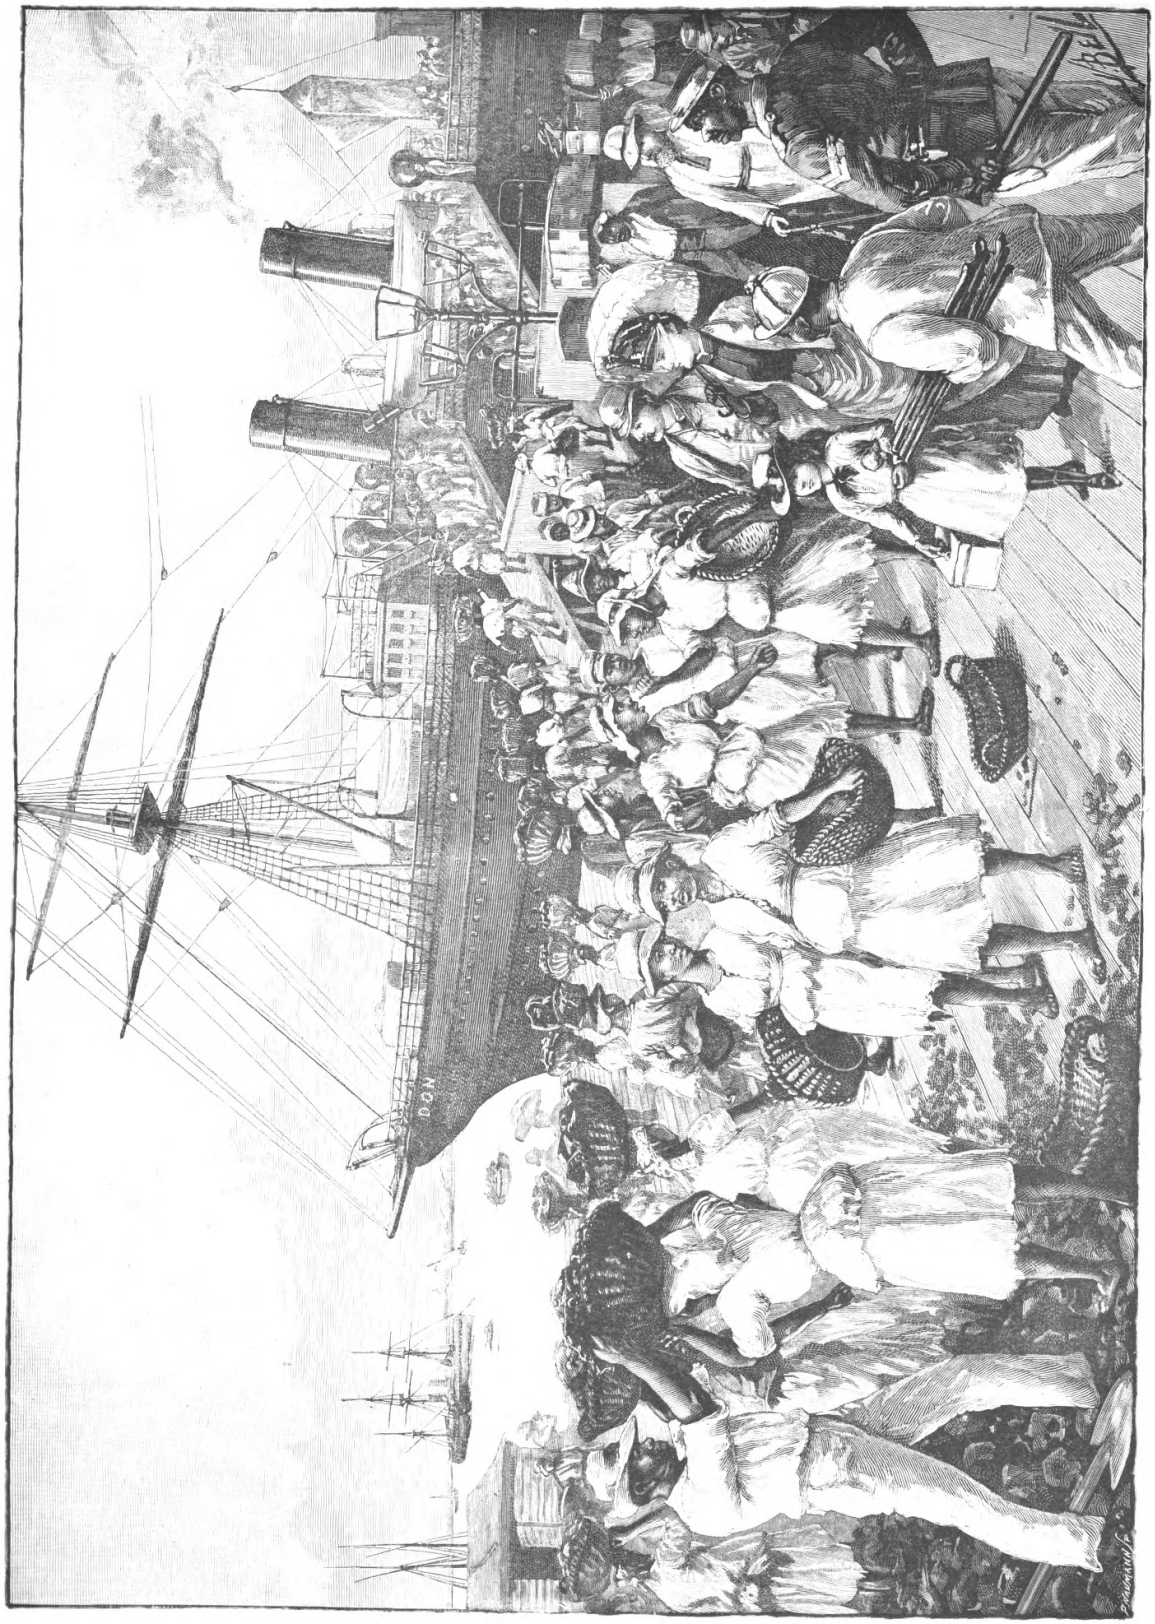
The light-house, now in full working order, on St. Catherine's Point, Isle of Wight, shows an electric light equal in illuminating power to rather more than 6,000,000 candles. Every half minute, as the light revolves, a mighty flash of five seconds' duration sweeps around the sea, and is visible at the distance of forty-two miles. A commodious engine-room has been added to the establishment, containing three steam engines of twelve-horse power each, and two magneto-electric machines of the De Meritens type. Two of the engines are to work for lighting purposes, though only one is used, in connection with one of the machines, in clear weather. The third engine is to work the double-toned fog-horn, which has been greatly increased in power. In the lantern, carbons of very large sectional area, not circular but fluted, are used, and the optical apparatus is of sixteen sides or panels. As a precaution against breakdown, everything is in duplicate at least, with an oil light in reserve as well. An experienced engineer, Mr. Millett, has taken the place of principal, supported by a competent staff of assistant light-keepers. Mr. Millett served in the Crimean and Baltic naval operations, and was ten years in the Italian navy.

The only other light-houses on the coast of England at which the light is produced by means of electricity are Souter Point, on the coast of Durham, between the mouths of the Tyne and the Wear; the South Foreland, where the two lights so well known to passengers across the Straits of Dover, were established a very long time ago, for the then three-fold purpose of leading clear of the Goodwin Sands, through the Downs and up and down the English Channel; and at the Lizard, on the Cornish coast, where two more lights mark the southernmost headland of that part of the Channel. The present St. Catherine's light is ten times more powerful than the best of them, the one on Souter Point. It is the most intensely brilliant light in existence on our shores.

ST. CATHERINE POINT ELECTRIC LIGHTHOUSE, ISLE OF WIGHT.

THE PLAYHOUSES.

That infinitely droll little comedian Mr. Penley is making everyone laugh over his quaint performance in "Uncles and Aunts" at the Comedy, a theatre that is invariably patronised by the playgoers who cannot enjoy the theatre thoroughly unless it is preceded by a good dinner at the club. Plays that begin at nine o'clock suit these good people thoroughly well, and at present they are undecided whether to secure a stall to see Mr. Penley in the Haymarket or Mrs. John Wood and Mr. Hare down in Sloane-square. But whether a course or so is sacrificed or not, it is imperative that visitors to the Comedy should be in time to see Mr. Cecil Raleigh's vigorous and clever play "The Spy." There is enough material here for a four-act drama, a happy mixture of bright comedy and grim pathos; but the author has cleverly boiled it down into an hour's entertainment that rivets the attention and excites the spectator. It is as difficult to write a good one-act drama as a startling short story. It looks easy enough, but there's the rub. There is nothing mawkish or melodramatic about "The Spy," and for once in a way a modern dramatist has touched the true chord of human interest. And there is still another recommendation: the little play is well acted, and an actress of whom no great things were expected has suddenly come to the front. Miss Vane Featherstone has had her chance, and grasped it firmly. Hitherto known only as a pretty girl usefully employed in light comedy, she has suddenly proved herself to be an exceptionally clever actress of wide range, as earnest in her sentiment as she is gay and intelligent in her comedy. She plays the heroine in Mr. Cecil Raleigh's little play admirably, and her success comes at the right moment, when everyone was beginning to despair about the coming actress. Miss Featherstone certainly ought to be employed in better work than the frivolous wives and daughters of farcical comedy. She has been hidden for some time, and now that she has been discovered, the best use should be made of her talent.



"Festina lente" is a motto that has not been carefully taken to heart by Mr. Richard Mansfield. He received a courteous welcome and fair encouragement when he appeared as the revolting monster Hyde in the very unpalatable drama founded on Louis Stevenson's novel. It was confessed at the time that the part of Dr. Jekyl, which, after all, was the true acting test, could not compare with the groaning, mumbling, and gesticulating Hyde; and those who looked deeply into the matter could not quite see how it was that a young actor, intelligent enough, but evidently of limited resource, could, in so short a time, have obtained such an enormous popularity in America. There was naturally an interest to see Mr. Mansfield in another character, particularly as the old Baron De Chevrial, in the "Parisian Romance." This was the character that first made Mr. Mansfield notorious. One day he suddenly found himself a star instead of a stock actor, because he had given a vivid, minute, and realistic rendering of the debauched old Parisian nobleman, a Sir Harcourt Courtley of the latter part of the nineteenth century. His performance was said to be a surprise in art. Unfortunately, in London it is looked at as no surprise at all. It is a leering and offensive old gentleman, adorned with most of the exaggerated tricks that made the wretch Hyde so very objectionable. We can quite understand that the constant playing of this man-monster has unbalanced Mr. Mansfield's nice sense of art. Already he develops tricks and manœuvres, and forces his effects instead of suggesting them. The constant falsetto, the wagging of the lower jaw, the mumbling manner, are cases in point. Nearly every detail is too highly coloured, and the actor seems incapable of concealing his art. That Mr. Mansfield is clever, daring, and observant cannot be doubted. But, he has as much to learn as to unlearn; and certainly he is not strong enough as an actor, or finished enough as an artist, to come over here to play the monsters of modern fiction at one of our most important theatres, and with an indifferent American company. All talent is welcome in England, but Mr. Mansfield is not powerful enough as a star. We have seen in this country Lafont, St. Germain, Got, and Regnier; we have claimed in similar kind of parts such strong actors of genius as Robson, George Belmore, and Dominic Murray; we have seen old men played by William Farren, Alfred Bishop, and John Hare: but it would be as sensible for either of these last, with Arthur Cecil thrown in, to star in America, as for Mr. Mansfield to do so here. In time to come, no doubt, he may be a great actor; but at present his art may be better explained as elaborate artifice. It is unfinished, crude, and requires discretion and discipline. It was an unfortunate mistake also to exhibit Mr. Mansfield's company in a purely Parisian play, requiring style and a grand manner. At the best, Octave Feuillet's "Roman Parisien" is not a good play. Its sentiment is exaggerated; its construction feeble; its interest slight. To make matters worse, it has been translated into inflated, silly, and "penny-journal" language, and has been handed over to the tender mercies of interpreters, who are doubtless very deserving people, but wholly deficient in manner. Mr. Mansfield, who is an excellent vocalist, would be well advised to try "Prince Karl." The public, in these days of aggravated horrors, show no disposition to take delight in fiends like Hyde, or gross sensualists like this French Baron. We don't want to see innocent gentlemen done to death on the stage by men-monsters; or the exhibition, however clever, of a blasphemous death by a paralytic seizure.

The diversity of opinion shown by critics in the case of Mr. Richard Mansfield's acting and of "The Monk's Room," a new sombre drama, written by a Mr. John Lart and produced at the Globe, is a little startling. Some people consider Mr. Mansfield a genius; others a clever entertainer. Some hold that Mr. Lart has written a powerful play; others that he has wasted his time over useless and morbid material. But surely it will be conceded that "The Monk's Room" is a well-acted drama. At last Mr. Willard has got out of the stereotyped groove and widened the field of his art. He can play the passionate lover as well as the cynical villain. Mr. Hermann Vezin has seldom acted better than as the grim old Socialist whose god is humanity; and Miss Alma Murray is evidently delighted with her artistic companions, and ably seconds their efforts. The subject of "The Monk's Room" may not be very cheerful, but, in its way and of its school, a better acted play is not to be found in London. It deserves the attention of students of the art of acting.

Mr. and Mrs. Kendal, on the occasion of their benefit at Manchester on Sept. 28, produced a new and original comedy of strong interest by Mr. A. W. Pinero. It is called "The Weaker Sex," and in its humorous scenes satirises the movement for granting the franchise to women, and amiably laughs at the strong-minded female who makes speeches and indulges in eccentric costume. Mr. Righton has been specially engaged for a funny little member of Parliament, under petticoat government, and makes every clever line tell that he has to deliver. But, of course, there is a serious side to the play. Mrs. Kendal is seen at her very best as a proud, passionate, and deeply-loving widow, who finds, to her horror, that her daughter has engaged herself to the only man to whom the mother is deeply attached. This powerful and sympathetic actress pours the whole strength of her talent on the hopes, the fears, the disappointment and anguish of Lady Vivash; but we fear that, unless a bold alteration is made in the present dénoûment, the play will not prove acceptable in London. We shall see. Meanwhile, it is an undeniably clever play, and it is excellently acted. Mr. Kendal, Miss Olga Brandon, Miss Fanny Brough, and Mr. Denison, all distinguish themselves in it; and it has been received with enthusiasm by Manchester audiences.

The theatrical event of the week—unfortunately too late in it to be described—was, of course, the production of the new comic opera at the Savoy by Mr. W. S. Gilbert and Sir Arthur Sullivan. Mr. Gilbert was at the last moment overruled by his partners. He wanted to call the opera "The Beefeater," but it was held that in America they would not understand the word and its proper significance. It was argued that "Beefeater" would simply be taken for a nickname for John Bull and not a Royal sideboard-man (buffetier). So "The Yeoman of the Guard" was substituted instead, for this is the strict military term for a Tower Beefeater, who, by the way, used to stand under the Royal box when the Queen used to go to opera or theatre in state. It was whispered in advance that the play is in a far more serious vein than usual, and treads upon the confines of grand opera. It is sure to be amusing and wholesome; and may Mr. Gilbert have in store for us pages of jokes, and Sir Arthur Sullivan a budget of melodies, that will keep the girls at the piano for months to come! We have waited long for a bright successor to the "Mikado" and to "Ruddygore," and it is pleasant to think that the winter evenings will be brightened with the last song and the choicest chorus from the "Yeoman of the Guard."

So far the autumn plays have succeeded admirably. They have been turning money away from Drury-Lane, where "The Armada" is going splendidly. Unluckily, Mr. Leonard Boyne met with an accident; but both the authors are actors, and Mr. Henry Hamilton, without a moment's hesitation, went on as Vyvyan Foster, and played the part very cleverly.

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXV.

ILMINSTER CLINK.

CAN I tell—oh! how can I sit down to tell in cold blood the story of all that followed? Some parts of it for very pity I must pass over. All that has been told or written of the Bloody Assize is most true, and yet not half that happened can be told. There are things, I mean, which the historian cannot, for the sake of pity, decency, and consideration for living people, relate, even if he hath seen them. You who read the printed page may learn how in one place so many were hanged; in another place so many; how some were hung in gemmaces, so that at every cross-road there was a frightful gibbet with a dead man on it; how some died of smallpox in the crowded prisons, and some of fever; and how Judge Jeffreys rode from town to town followed by gangs of miserable prisoners driven after him to stand their trial in towns where they would be known; how the wretched sufferers were drawn and quartered and their limbs seethed in pitch and stuck up over the whole country; how the women and boys of tender years were flogged through market-towns—you, I say, who read these things on the cold page presently (even if you be a stickler for the Right Divine, and hold rebellion as a mortal sin) feel your blood to boil with righteous wrath. The hand of the Lord was afterwards heavy upon those who ordered these things; nay, at the very time (this is a most remarkable Judgment and one little known) when this inhuman Judge was thundering at his victims—so that some went mad and even dropped down dead with fear—he was himself, as Humphrey hath assured me, suffering the most horrible pain from a dire disease; so that the terrors of his voice and of his fiery eyes were partly due to the agony of his disease, and he was enduring all through that Assize, in his own body, pangs greater than any that he ordered! As for his miserable end, and the fate that overtook his master, that we know; and candid souls cannot but confess that here were truly Judgments of God, visible for all to see and acknowledge. But no pen can truly depict what the eye saw and the ear heard during that terrible time. And, think you, if it was a terrible and a wretched time for those who had no relations among the rebels, and only looked on and saw these bloody executions and heard the lamentations of the poor women who lost their lovers or their husbands, what must it have been for me, and those like me, whose friends and all whom they loved—yea, all, all!—were overwhelmed in one common ruin and expected nothing but death?

Our own misery I cannot truly set forth. Sometimes the memory of it comes back to me, and it is as if long afterwards one should feel again the sharpness of the surgeon's knife. Oh! since I must write down what happened, let me be brief. And you who read it, if you find the words cold where you would have looked for fire; if you find no tears where there should have been weeping and wailing, remember that in the mere writing have been shed again (but these you cannot see) the tears which belonged to that time, and in the writing have been renewed (but these you cannot hear) the sobbings and wailings and terrors of that dreadful autumn.

The soldiers belonged to a company of Grenadiers of Trelawny's Regiment, stationed at Ilminster, whither they carried the prisoners. First they handcuffed Barnaby, but on his giving his parole not to escape, they let him go free; and he proved useful in the handling of the cart on which my unhappy father lay. And though the soldiers' talk was ribald, their jests unseemly, and their cursing and swearing seemed verily to invite the wrath of God, yet they proved honest fellows in the main. They offered no rudeness to us, nor did they object to our going with the prisoners; nay, they even gave us bread and meat and cider from their own provisions when they halted for dinner at noon. Barnaby walked sometimes with the soldiers, and sometimes with us; with them he talked freely, and as if he were their comrade and not their prisoner: with us he put in a word of encouragement or consolation, such as "Mother, we shall find a way out of this coil yet"; or "Sister, we shall cheat Tom Hangman. Look not so gloomy upon it"; or, again, he reminded us that may a shipwrecked sailor gets safe ashore, and that where there are so many they cannot hang all. "Would the King," he asked, "hang up the whole county of Somerset?" But he had already told me too much. In his heart I knew he had small hope of escape; yet he preserved his cheerfulness, and walked towards his prison (to outward seeming) as insensible of fear and with as unconcerned a countenance as if he were going to a banquet or a wedding. This cheerfulness of his was due to a happy confidence in the ordering of things rather than to insensibility. A sailor sees men die in many ways, yet himself remains alive. This gives him something of the disposition of the Oriental, who accepts his fate with outward unconcern, whatever it may be. Perhaps (I know not) there may have been in his mind that religious Assurance of which he had told me. Did Barnaby at this period, when death was very near unto him, really believe that there was one religion for landsmen and another for sailors—one way to heaven for ministers, another for seamen? Indeed, I cannot tell; yet how otherwise account for his courage and cheerfulness at all times—even in the very presence of death?

"Brother," he asked the Sergeant, "we have been lying hid for a fortnight, and have heard no news. Tell me how go the hangings?"

"Why, Captain," the fellow replied with a grin, "in this respect there is little for the rebels to complain of. They ought to be satisfied, so far, with the attentions paid to them. Lord Feversham hanged twenty odd to begin with. Captain Adlan and three others are trussed up in chains for their greater honour; and, in order to put the rest in good heart, one of them ran a race with a horse, being promised his life if he should win. When he had beaten the horse, his Lordship, who was ever a merry man, ordered him to be hanged just to laugh at him. And hanged he was."

"Ay," said Barnaby, "thus do the Indians in America torture their prisoners first and kill them afterwards."

"There are two hundred prisoners lying in Weston Zoyland church," the Sergeant went on; "they would have been hanged too, but the Bishop interfered. Now they are waiting to be tried. Lord! what signifies trial, except to give them longer rope?"

"Ay, ay; and how go things in Bridgwater and Taunton?"

"From Weston to Bridgwater there is a line of gibbets already; in Taunton, twenty, I believe, have swung—twenty, at least. The drums beat, the fifes played, and the trumpets sounded, and Colonel Kirke drank to the health of every man (such was his condescension!) before he was turned off. 'Twould have done your heart good, Captain, only to see the brave show."

"Ay, ay," said Barnaby, unmoved; "very like, very like. Perhaps I shall have the opportunity of playing first part in another brave show if all goes well. Hath the Duke escaped?"

"We heard yesterday that he is taken somewhere near the New Forest. So that he will before long lay his lovely head upon the block. Captain, your friends have brought their pigs to a pretty market."

"They have, Brother; they have," replied Barnaby, still with unmoved countenance. "Yet many a man hath recovered from worse straits than these."

I listened with sinking heart. Much I longed to ask if the Sergeant knew aught of Robin; but I refrained, lest merely to name him might put the soldiers on the look-out for him, should he, happily, be in hiding.

Next the Sergeant told us (which terrified me greatly) that there was no part of the country where they were not scouring for fugitives; that they were greatly assisted by the clergy, who, he said, were red-hot for King James; that the men were found hiding, as we had hidden, in linneys, in hedges, in barns, in woods; that they were captured by treachery—by information laid, and even, most cruel thing of all, by watching and following the men's sweethearts who were found taking food to them. He said also that, at the present rate, they would have to enlarge their prisons to admit ten times their number, for they were haling into them not only the men who had followed Monmouth, but also those who had helped him with money, arms, or men. The Sergeant was a brutal fellow, yet there was about him something of good nature and even of compassion for the men he had captured. But he seemed to take delight in speaking of the sufferings of the unfortunate prisoners. The soldiers, he told us, were greatly enraged towards the rebels—not, I suppose, on account of their rebellion, because three years later they themselves showed how skin-deep was their loyalty, but because the rustics, whom they thought contemptible, had surprised and nearly beaten them. And this roused in them the spirit of revenge.

"Captain," said the Sergeant, "'tis pity that so lusty a gentleman as thou shouldst die. Hast thou no friends at Court? No? Nor any who would speak for thee? 'Tis pity. Yet a man can die but once. With such a thick neck as thine, bespeak, if so much grace be accorded thee, a long rope and a high gallows. Else, when it comes to the quartering"—he stopped and shook his head—"but there—I wish you well out of it, Captain."

In the evening, just before sunset, we arrived at Ilminster, after a sad and weary march of ten miles, at least; but we could not leave the prisoners until we knew how and where they were bestowed; and during all this time my mother, who commonly walked not abroad from one Sabbath to the next, was possessed with such a spirit that she seemed to feel no weariness. When we rode all night in order to join the Duke she complained not; when we rode painfully across the hills to Taunton she murmured not; nor when we carried our wounded man up the rough and steep comb; no, nor on this day, when she walked beside her husband's head, careful lest the motion of the cart should cause him pain. But he felt nothing, poor soul! He would feel nothing any more.

Ilminster is a goodly town, rich and prosperous with its spinners and weavers. This evening, however, there was no one in the streets except the troopers, who swaggered up and down or sat drinking at the tavern door. There is a broad open place before the market, which stands upon great stone pillars. Outside the market is the Clink, whither the soldiers were taking their prisoners. The troopers paid not the least heed to our mournful little procession—a wounded man; a prisoner in scarlet and lace, but the cloth tattered and stained and the lace torn. They were only two more men on their way to death. What doth a soldier care for the sight of a man about to die?

"Mother," said Barnaby, when we drew near the Prison gates, "come not within. I will do all that I can for him. Go now and find a decent lodging, and Sister, hark ye, the lads in our army were rough, but they were as lambs compared with these swaggering troopers. Keep snug, therefore, and venture not far abroad."

I whispered in his ear that I had his bag of money safe, so that he could have whatever he wanted if that could be bought. Then the Prison gates were closed, and we stood without.

It would have been hard indeed if the wife and daughter of Dr. Comfort Eykin could not find a lodging among godly people, of whom there are always many in every town of Somerset. We presently obtained a room in the house of one Martha Prior, widow of the learned and pious Joshua Prior, whilom preacher and ejected minister. Her case was as hard as our own. This poor woman had two sons only, and both had gone to join the Duke: one already risen to be a Master Sergemaker, and one a Draper, of the town. Of her sons she could hear no news at all: whether they were alive or dead. If they were already dead, or if they should be hanged, she would have no means of support, and so must starve or eat the bread of charity. (I learned afterwards that she never did hear anything of them, so that it is certain that they must have been killed on the battle-field or cut down by the dragoons in trying to escape. But the poor soul survived not long their loss.)

The church of Ilminster stands upon a rising ground; on the north of the church is the grammar school, and on the other three sides are houses of the better sort, of which Mrs. Prior had one. The place, which surrounds the churchyard, and hath no inn or ale-house in it, is quiet and retired. The soldiers came not thither, except once or twice, with orders to search the houses (and with a private resolution to drink everything that they might lay their hands upon), so that, for two poor women in our miserable circumstances, we could not have a more quiet lodging.

Despite our troubles, I slept so well that night that it was past seven in the morning when I awoke. The needs of the body do sometimes overcome the cares of the spirit. For a whole fortnight had we been making our beds on the heather, and, therefore, without taking off our clothes: and that day we had walked ten miles, at least, with the soldiers, so that I slept without moving or waking all the night. In the morning I dressed quickly and hurried to the jail, not knowing whether I might be admitted or should be allowed speech of Barnaby. Outside the gate, however, I found a crowd of people going into the prison and coming out of it. Some of them, women like ourselves, were weeping—they were those whose brothers or lovers, husbands or sons, were in those gloomy walls. Others there were who brought, for such of the prisoners as had money to buy them, eggs, butter, white bread, chickens, fruit, and all kinds of provisions: some brought wine, cider, and ale; some, tobacco. The warders who stood at the gates made no opposition to those who would enter. I pressed in with a beating heart, prepared for a scene of the most dreadful repentance and gloomy forebodings. What I saw was quite otherwise.

The gates of the prison opened upon a courtyard, not very big, where the people were selling their wares, and some of the prisoners were walking about, and some were chaffering with the women who had the baskets. On the right hand side of the yard was the Clink itself; on the left hand were houses for the warders or officers of the prison. In general a single warder, constable, or headborough is enough for a town such as Ilminster, to keep the peace of the prison, which is for the most part empty, save when they enforce some new Act against Nonconformists and fill it with them or with Quakers. Now, however, so great was the press that, instead of two, there were a dozen guards, and, while a stout cudgel had always been weapon enough, now every man went armed with pike and cutlass to keep order and prevent escapes. Six of them occupied the gate-house; other six were within, in a sort of guard-house, where they slept on the left hand of the court.

The ground floor of the Clink we found to be a large room, at least forty feet each side in bigness. On one side of it was a great fireplace, where, though it was the month of July, there was burning a great fire of Welsh coal, partly for cooking purposes, because all that the prisoners ate was cooked at this fire; and partly because a great fire kept continually burning sweetens the air, and wards off jail fever. On another side was a long table and several benches. Thick wooden pillars supported the joists of the rooms above; the windows were heavily barred, but the shutters had been taken down, and there was no glass in them. In spite of fire and open windows, the place was stifling, and smelt most horrible. Never have I breathed so foul an air. There lived in this room about eighty prisoners (later on the numbers were doubled); some were smoking tobacco and drinking cider or ale; some were frying pieces of meat or smoked herrings over the fire; and the tobacco, the ale, the wine, the cooking, and the people themselves—nearly all country lads, unwashed, who had slept since Sedgemoor, at least, in the same clothes without once changing—made so foul an air that jail fever, putrid throats, and smallpox (all of which afterwards broke out) should have been expected sooner.

They were all talking, laughing, and even singing, so that, in addition to the noisome stench of the place, there was such a din as one may hear at Sherborne Fair of an evening. I expected, as I have said, a gloomy silence with the rattling of chains, the groans of those who looked for death, and, perhaps, a godly repentance visible upon every countenance. Yet they were all laughing, except a few who sat retired and who were wounded. I say that they were all laughing. They had nothing to expect but death, or at the best to be horribly flogged, to be transported, to be fined, branded, and ruined. Yet they laughed! What means this hardness and indifference in men? Could they not think of the women they had left at home? I warrant that none of *them* were laughing.

Among them—a pipe of tobacco in his lips and a mug of strong ale before him on the table, his hat flung backwards—sat Barnaby, his face showing, apparently, complete satisfaction with his lot.

When he saw us at the door, he rose and came to meet us.

"Welcome," he said. "This is one of the places where King Monmouth's men are to receive the honour due to them. Courage, gentle hearts. Be not cast down. Everywhere the prisons are full, and more are brought in every day. Our very numbers are our safety. They cannot hang us all. And hark!" here he whispered, "Sister, we now know that Colonel Kirke hath been selling pardons at ten pounds, twenty pounds, and thirty pounds apiece. Wherefore we are well assured that somehow or other we shall be able to buy our release. There are plenty besides Colonel Kirke who will sell a prisoner his freedom."

"Where is your father?" asked my mother.

"He is bestowed above, where it is quieter, except for the groaning of the wounded. Go up-stairs, and you will find him. And there is a surprise for you, besides. You will find with him one you little expect to see."

"Oh! Barnaby, is there new misery for me? Is Robin a prisoner?"

"Robin is not here, Sis; and as for misery, why, that is as you take it. To be sure the man above is in prison, but no harm will happen to him. Why should it? He did not go out with Monmouth's men. But go up-stairs—go up-stairs—and see for yourselves."

CHAPTER XXVI.

SIR CHRISTOPHER.

I know not whom I expected to find in consequence of Barnaby's words, as we went up the dark and dirty stairs which let to the upper room. Robin was not a prisoner. Why—then—but I know not what I thought, all being strange and dreadful.

At the top of the stairs we found ourselves in a room of the same size as the lower chamber, but not so high, and darker, being a gloomy place indeed, insomuch that it was not for some minutes that one could plainly discern things. It was lighted by a low, long window, set very close with thick bars, the shutters thrown open so that all the light and air possible to be admitted might come in. It had a great fireplace, but there was no fire burning, and the air of the room struck raw, though outside it was a warm and sunny day. The roof was supported, as in the room below, by means of thick square pillars, studded with great nails set close together, for what purpose I know not. Every part of the woodwork in the room was in the same way stuck full of nails. On the floor lay half a score mattresses, the property of those who could afford to pay the warders an exorbitant fee for the luxury. At Ilminster, as, I am told, at Newgate, the chief prison of the country, the same custom obtains of exacting heavy fees from the poor wretches clapped into ward. It is, I suppose, no sin to rob the criminal, the debtor, the traitor, or the rebel. For those who had nothing to pay there were only a few bundles of straw, and on these were lying half a dozen wretches, whose white faces and glazed eyes showed that they would indeed cheat Tom the Hangman, though not in the way that Barnaby hoped. These were wounded either in the Sedgemoor fight or in their attempt to escape.

My father lay on a pallet bed. His face showed not the least change; his eyes were closed, and you would have thought him dead; and beside him, also on a pallet, sat, to my astonishment, none other than Sir Christopher himself.

He rose and came to meet us, smiling sadly.

"Madam," he said, taking my mother's hand, "we meet in a doleful place, and we are, indeed, in wretched plight. I cannot bid you welcome: I cannot say that I am glad to see you. There is nothing that I can say of comfort or of hope, except, which you know already, that we are always in the hands of the Lord."

"Sir Christopher," said my mother, "it was kind and neighbourly in you to come. But you were always his best friend. Look at his poor white face!" she only thought upon her husband. "You would think him dead! More than a

Then he turned to me and kissed me, without saying a word.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

fortnight he hath lain thus—motionless. I think he feels no pain. Husband, if thou canst hear me, make some sign—if it be but to open one eye! No!" she cried. "Day after day have I thus entreated him and he makes no answer! He neither sees nor hears! Yet he doth not die; wherefore I think that he may yet recover speech and sit up again, and presently, perhaps, walk about, and address himself again unto his studies."

She waited not for any answer, but knelt down beside him and poured some drops of milk into the mouth of the sick man. Sir Christopher looked at her mournfully and shook his head.

Then he turned to me, and kissed me without saying a word.

"Oh! Sir," I cried, "how could you know that my father would be brought unto this place? With what goodness of heart have you come to our help!"

"Nay, Child," he replied gravely, "I came because I had no choice but to come. Like your father and your brother, Alice, I am a prisoner."

"You, Sir? You a prisoner? Why, you were not with the Duke."

"That is most true. And yet a prisoner. Why, after the news of Sedgemoor fight I looked for nothing else. They tried to arrest Mr. Speke, but he had fled; they have locked up Mr. Prideaux, of Ford Abbey; Mr. Trenchard has retired across the seas. Why should they pass me over? Nay, there were abundant proofs of my zeal for the Duke. My grandson and my grandnephew had joined the rebels. Your father and brother rode over to Lyme on my horses; with my grandson rode off a dozen lads of the village. What more could they want? Moreover, I am an old soldier of Lord Essex's army; and, to finish, they found in the window-seat a copy of Monmouth's Declaration—which, indeed, I had forgotten, or I might have destroyed it."

"Alas! alas!" I cried, wringing my hands. "Your Honour, too, a prisoner!"

Since the Sergeant spoke to Barnaby about the interest of friends, I had been thinking that Sir Christopher, whose power and interest, I fondly thought, must be equal to those of any Lord in the land, would interpose to save us all. And he was now a prisoner himself, involved in the common ruin! One who stands upon a bridge and sees with terror the last support carried away by the raging flood feels such despair as fell upon my soul.

"Oh! Sir," I cried again. "It is Line upon Line—Woe upon Woe!"

He took my hand in his, and held it tenderly.

"My child," he said, "to an old man of seventy-five what doth it matter whether he die in his bed or whether he die upon a scaffold? Through the pains of death, as through a gate, we enter upon our rest."

"It is dreadful!" I cried again. "I cannot endure it!"

"The shame and ignominy of this death," he said, "I shall, I trust, regard lightly. We have struck a blow for Freedom and for Faith. Well; we have been suffered to fail. The time hath not yet come. Yet, in the end, others shall carry on the Cause, and Religion shall prevail. Shall we murmur who have been God's instruments?"

"Alas! alas!" I cried again.

"To me, sweet child, it is not terrible to contemplate my end. But it is sad to think of thee, and of thy grave and bitter loss. Hast thou heard news of Robin and of Humphrey?"

"Oh, Sir!—are they, also, in prison—they are here?"

"No; but I have news of them. I have a letter brought to me but yesterday. Read it, my child, read it."

He pulled the letter out of his pocket and gave it to me. Then I read aloud, and thus it ran:—

"Honoured Sir and Grandfather,

"I am writing this letter from the Prison of Exeter, where, with Humphrey and about two hundred or more of our poor fellows, I am laid by the heels, and shall so continue until we shall all be tried.

"It is rumoured that Lord Jeffreys will come down to try us, and we are assured by report that the King shows himself revengeful, and is determined that there shall be no mercy shown. After Sedgemoor fight they hanged, as you will have heard, many of the prisoners at Weston Zoyland, at Bridgwater, and at Taunton, without trial. If the King continue in this disposition it is very certain that, though the common sort may be forgiven, the gentlemen and those who were officers in the rebel army will certainly not escape. Therefore I have no hope but to conclude my life upon the gallows—a thing which, I confess, I had never looked to do. But I hope to meet my fate with courage and resignation.

"Humphrey is with me, and it is some comfort (though I know not why) that we shall stand or fall together: for if I was a Captain in the army he was a Chyrurgeon. That he was also a secret agent of the exiles, and that he stirred up the Duke's friends on his way from London to Sherborne, that they know not, or it would certainly go hard with him. What do I say? Since they will hang him, things cannot very well go harder.

"When the fight was over, and the Duke and Lord Grey fled, there was nothing left but to escape as best we might. I hope that some of the Bradford lads will make their way home in safety: they stood their ground and fought valiantly. Nay, if we had been able to arm all who volunteered and would have enlisted, and if our men had all shown such a spirit as your valiant lads of Bradford Orvas, then, I say, the enemy must have been cut to pieces.

"When we had no choice left but to run, I took the road to Bridgwater, intending to ride back to that place, where, perhaps, our forces might be rallied. But this proved hopeless. There I found, however, Humphrey, and we resolved that the safest plan would be to ride by way of Taunton and Exeter, leaving behind us the great body of the King's army, and so escape to London if possible, where we should certainly find hiding-places in plenty until the pursuit should be at an end. Our plan was to travel along byways and bridle-paths, and that by night only, hiding by day in barns, linneys, and the like. We had money for the charges of our journey. Humphrey would travel as a physician returning to London from the West as soon as we had gotten out of the insurgents' country; I was to be his servant. Thus we arranged the matter in our minds, and already I thought that we were safe, and in hiding somewhere in London, or across the seas in the Low Countries again.

"Well, to make short my story, we got no further than Exeter, where we were betrayed by a rascal countryman who recognised us, caused us to be arrested, and swore to us. Thereupon we were clapped into jail, where we now lie.

"Hon'd Sir; Humphrey, I am sorry to write, is much cast down, not because he dreads death, which he doth not, any more than to lie upon his bed; but because he hath, he says, drawn so many to their ruin. He numbers me among those: though, indeed, it was none of his doing, but by my own free will, that I entered upon this business, which, contrary to reasonable expectation, hath turned out so ill. Wherefore, dear Sir, since there is no one in the world whose opinion and counsel Humphrey so greatly considers as your own, I pray you, of your goodness, send him some words of consolation and cheer."

"That will I, right readily," said Sir Christopher. "At least the poor lad cannot accuse himself of dragging me into the Clink."

"I hear," continued Robin's letter, "that my mother hath gone with Mr. Boscorel to London, to learn if aught can be done for us. If she do not return before we are finished, bid her think kindly of Humphrey and not to lay those things to his charge. As for my dear girl, my Alice, I hear nothing of her. Miss Blake, who led the Maids when they gave the flags to the Duke, is, I hear, clapped into prison. Alice is not spoken of. I am greatly perturbed in spirit concerning her, and I would gladly, if that might be compassed, have speech with her before I die. I fear she will grieve and weep; but not more than I myself at leaving her, poor maid! I hear, also, nothing concerning her father, who was red hot for the Cause, and therefore, I fear, will not be passed over or forgotten. Nor do I hear aught of Barnaby, who, I hope, hath escaped on shipboard, as he said that he should do if things went ajar. Where are they all? The roads are covered with rough men, and it is not fit for such as Alice and her mother to be travelling. I hope that they have returned in safety to Bradford Orvas, and that my old master, Dr. Eykin, hath forgotten his zeal for the Protestant Duke, and is already seated again among his books. If that is so, tell Alice, Honoured Sir, that there is no hour of the day or night but I think of her continually; that the chief pang of my approaching fate is the thought that I shall leave her in sorrow, and that I cannot say or do anything to stay her sorrow. Comfort her I cannot, save with words which will come better from the saintly lips of her father. I again pray thee to assure her of my faithful love. Tell her that the recollection of her sweet face and steadfast eyes fills me with so great a longing that I would fain die at once so as to bring nearer the moment when we shall be able to *sit together* in heaven. My life hath been glorified, if I may say so in humility, by her presence in my heart, which drove away all common and unclean things. Of such strength is earthly love. Nay, I could not, I now perceive, be happy even with the joys of heaven if she were not by my side. Where is she, my heart, my love? Pray God, she is in safety.

"And now, Sir, I have no more to say. The prison is a hot and reeking place; at night it is hard to bear the foulness and the stench of it. Humphrey says that we may shortly expect some jail fever or smallpox to break out among us, in which case the work of the Judges may be lightened. The good people of this ancient city are in no way afraid of the King's vindictiveness, but send in of their bounty quantity of provisions—fruit, eggs, fresh meat, salted meat, ale, and cider—every day for the poor prisoners, which shows which way their opinions do lean, even although the clergy are against us. Honoured Sir, I am sure and certain that the miscarriage of our enterprise was caused by the conduct of those who had us in hand. In a year or two there shall be seen (but not by us) another uprising; under another leader with another end.

"So no more. I send to thee, dear and Honoured Sir, my bounden duty and my grateful thanks for all that I owe to your tender care and affection. Pray my mother, for me, to mourn no more for me than is becoming to one of her piety and virtue.

"Alas! it is thinking upon her, and upon my poor lost Alice, that my heart is wellnigh torn in pieces. But (tell Humphrey) through no fault—no—through no fault of his.

"From thy dutiful and obedient grandson,—R. C."

I read this all through. Then I folded up the letter and returned it to Sir Christopher. As he took it, the tears came into his dear and venerable eyes and rolled down his cheeks.

"My dear—my dear," he said, "it is hard to bear. Everyone who is dear to thee will go; there is an end of all; unless some way, of which we know nothing, be opened unto us."

"Why," I said, "if we were all dead and buried, and our souls together in heaven"——

"Patience, my dear," said the old man.

"Oh! must they all die—all? My heart will burst! Oh! Sir, will not one suffice for all? Will they not take me and hang me, and let the rest go free?"

"Child," he took my hand between his own, "God knows that if one life would suffice for all it should be mine. Nay, I would willingly die ten times over to save thy Robin for thee. He is not dead yet, however. Nor is he sentenced. There are so many involved that we may hope for a large measure of mercy. Nay, more. His mother hath gone to London, as he says in his letter, with my son-in-law, Philip Boscorel, to see if aught can be done, even to the selling of my whole estate, to procure the enlargement of the boys. I know not if anything can be done, but be assured Philip Boscorel will leave no stone unturned."

"Oh! can money buy a pardon? I have two hundred gold pieces. They are Barnaby's"——

"Then, my dear, they must be used to buy pardon for Barnaby and thy father—though I doubt whether any pardon need be bought for one who is brought so low."

Beside the bed my mother sat crouched, watching his white face as she had done all day long in our hiding-place. I think she heeded nothing that went on around her, being wrapped in her hopes and prayers for the wounded man.

Then Sir Christopher kissed me gently on the forehead.

"They say the King is unforgiving, my dear. Expect not, therefore, anything. Say to thyself, every morning, that all must die. To know the worst brings with it something of consolation. Robin must die, Humphrey must die, your brother Barnaby must die, your father—but he is wellnigh dead already—and I myself, all must die upon the scaffold if we escape this noisome jail. In thinking this, remember who will be left. My dear, if thou art as a widow and yet a maiden, I charge thee solemnly that thou forget thine own private griefs and minister to those who will have none but thee to help them. Live not for thyself—but to console and solace those who, like thyself bereaved, will need thy tender cares."

(To be continued.)

The preachers on Sunday mornings at ten o'clock at Westminster Abbey during October are:—On Sunday, the 7th, the Rev. Edwin Price, Minor Canon; Sunday, the 14th, the Hon. and Rev. E. Carr Glyn, Vicar of Kensington; Sunday, the 21st, the Rev. Professor Bonney, F.R.S.; Sunday, the 28th, the Rev. Dr. Troutbeck, Canon Duckworth, as Canon in Residence, preaches each Sunday afternoon at three o'clock.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

OCTOBER 6, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates: To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (via United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (via Brindisi), India, and Java, THICK EDITION, *Fourpence-ha'penny*; THIN EDITION, *Threepence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *objective* of the mails.

SCIENCE JOTTINGS.

OUR MONTHLY LOOK ROUND.

As most of my readers are aware, certain plants—and certain animals as well, for that matter—possess extraordinary powers of survival after being dried and desiccated. The "Rose of Jericho" illustrates such a case of physiological revival, after drying, under the application of water; and one of the Selaginella tribe, known as the "Resurrection plant," has long been famous for like properties. In a dry atmosphere it curls up into a ball-like form, while in moist surroundings it expands. In the "Rose of Jericho" the curling up of the plant appears useful as a protection to the seeds under conditions unfavourable to their vitality. The plant in its curled condition is blown along by the wind, and the seeds are in this way dispersed over the earth's surface. The "Resurrection plant," however, simply preserves a high vitality through the conservation of its moisture in its contracted shape. M. Du Sablon has enabled us to understand more clearly than before, the mechanism of such plant-movements. In the upper parts of the stems, the plant possesses a layer of strong cells, possessing very thick walls. Inside these cells is contained living matter or protoplasm, which, by the thickness of the cell-walls, is protected from injurious changes of temperature. When dryness supervenes, these thick cells contract much more rapidly and strongly than the cells below, with the result that the plant-structures of which they form part are made to curl up in the familiar fashion. Safely protected in the cells, the living protoplasm resists the drying influences; and when moisture gains access to its cells, the "Resurrection plant" assumes its natural shape.

* * * * *

My friend Dr. B. W. Richardson has been experimenting on certain interesting patients with reference to the action of certain drugs on their constitution. The patients in question were the curious little fresh-water jelly-fishes which inhabit the warm water of the tropical tank in the Royal Botanic Gardens, Regent's Park. These jelly-fishes were discovered in 1880 by Mr. Sowerby, and represent the first of their race which have been found inhabiting fresh water. The biggest specimens measure about half-an-inch in diameter; and those of my readers who may be interested in the history of these curious Medusæ may be referred to the account given of them by Mr. Sowerby and by my respected teacher, the veteran Professor Allman.

* * * * *

Dr. Richardson, struck by the fact that these jelly-fishes present us with the simplest stage of development of nervous and muscular systems, proposed to note the effect upon them of active medicinal substances. It seems a "far cry" from a small jelly-fish to a man; but the acts of the former, in a close measure, resemble those actions which, in man, are performed independently of the will. Hence Dr. Richardson proposed to discover, perchance, by experiment on the Medusæ, the effects produced on human involuntary fibres by the administration of the drugs employed in the case of the jelly-fishes. Some of his results are extremely interesting. Chloroform acts on the Medusa as on man. There is preliminary excitement, then a convulsive stage, then insensibility, and finally, if the experiment is pursued further, death. Chloroform seems to act first of all, not on the brain, but on the nerves and centres regulating involuntary movements. A substance called nitrita of amyl (now largely used for the relief of certain forms of heart disease) also seems, alike in man and in Medusæ, to act primarily upon the nerves controlling such involuntary actions as those of heart, lungs, &c. Ether, well-known as an abolisher of consciousness, appeared, curiously enough, to exercise but little effect on the jelly-fishes. You can, in fact, make one of these little Medusæ insensible with ether, and in a few hours it recovers and swims about as lively as ever. These experiments demonstrate that even the gelatinous frame of a jelly-fish shows its own and distinctive peculiarities with reference to the action of drugs.

* * * * *

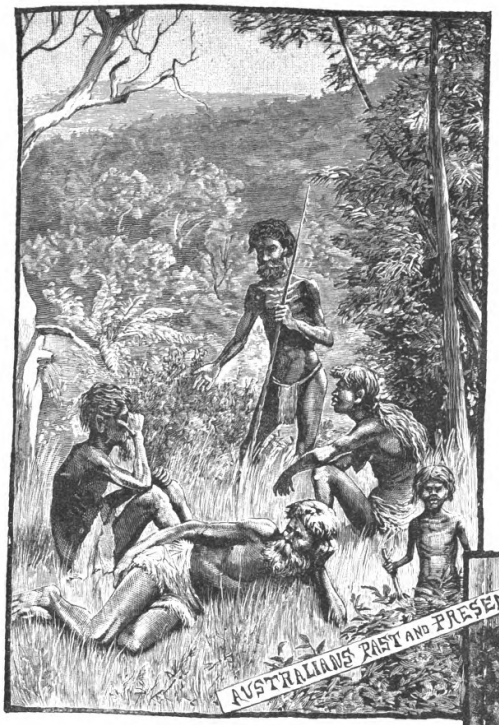
Few of my readers, save those whose tastes or professions lead them directly into the heart of science-studies, probably possess any notion of what has of late years been done in the investigation of extinct and fossil forms of quadruped life. The late British Association meeting recalls to mind the researches in which, notably, Professors Marsh, Cope, and Leidy, of America, have been engaged for years past in this matter of the fossil mammals. To-day, quadrupeds appear to be arranged by Nature in very distinct and characteristic groups. The Zoological Society's Gardens, in fact, illustrate this remark to the full. Camels, elephants, lions, rhinoceroses, giraffes, horses, dogs, deer, and so on, represent distinct orders of the quadruped class. Yet what seems clear enough in the case of living quadrupeds, is much altered when we place their fossil and extinct neighbours in relation to them. The extinct mammals which American science has unearthed mostly unite in themselves the characters of two or more of the living orders. If we could obtain a perfect series of the fossil quadrupeds, therefore, it would seem as though they would serve in a very striking fashion to join and link together the groups of living quadrupeds which, regarded by us to-day, appear to be so thoroughly distinct and diverse in character.

* * * * *

The storyteller of the present day is certainly becoming more and more scientific in his plots and treatment of his details. One can hardly open a volume of fiction now-a-days without discovering that the author has selected some scientific fact or problem as the keynote of his theme. The late Hugh Conway, in his "Called Back," was one of the first to utilise science as a basis for fiction. In his case mental physiology, in the shape of the effects of shock in abolishing and in restoring the memory, served as the central point of the romance just named. Later writers have drawn still more largely on the field of medical science. In a recent tale the incident of a physician who succeeds, by some as yet unheard of powers, in uniting the head and frame of a guillotined criminal, is made to do duty with ghastly but graphic effect. Those who delight in the more pleasant romance of science, made notable by Jules Verne, may be recommended to read a new volume entitled "A Strange Manuscript found in a Copper Cylinder." The author's description of extinct geological monsters as they might have appeared in the flesh are accurate and interesting in the extreme.

* * * * *

The odours given off by various animals are often of a notable kind. There is a cuttle-fish which emits a strong odour of musk, and certain species of alligators resemble the cuttle-fish in this respect. The musk-deer, of course, will be recalled to mind with its scent-pouch; while the skunk is *facile princeps* in the way of disagreeable secretions. The latest addition to this field of research is Professor Meldola's discovery that a male moth (*Hermimia*) secretes a substance in its front legs, which is apparently similar to the artificial essence of jargonelle pear. This curious fact is paralleled by the recital that some South American male butterflies emit the scent of vanilla.



ANDREW WILSON.

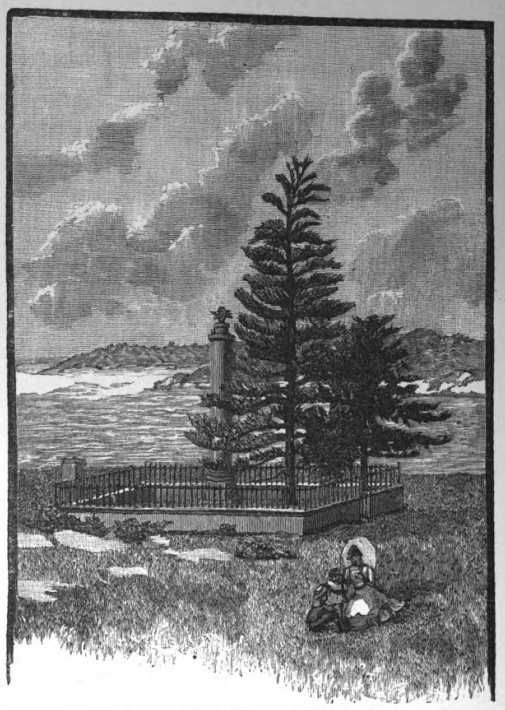
EARLY ANNALS OF THE AUSTRALIAN COLONIES.

On entering the city of Melbourne, with its many miles of broad, well-paved streets, its handsome rows of shops, stately banks, and large public buildings, its far-stretching suburbs, railways and tramways, its crowded roads and footpaths, its harbours, wharves, and shipping, its world-wide commerce and never-ceasing traffic, the stranger is filled with wonder. Is it possible, he asks himself, that here, where all that society can demand, with every luxury that science can design, or art construct, is abundantly provided, only a single generation has come and gone since these long upsweeping hills were grass-grown and forest-clad, peopled by a few scattered tribes of wandering, restless, half-starved, lazy, dirty, naked savages, homeless, and miserably degraded by superstitious terrors, distrust, and fear?

How this great Australian city grew from what it was to what it is, through what phases of infancy and insignificance, and despite what drawbacks, difficulties, and dangers, is a most interesting story, although its years are so few. But it is a story that intensifies the pride of its present greatness, and makes us marvel the more. What it was about forty years since may still be seen, over and over again, in various parts of the colonies, in obscure townships, where a few little wooden cottages are dotted about here and there, amidst huts and hovels, few and far apart, where the broad, empty streets, all duly planned and named, run at right angles, roughly fenced in with posts and rails, but not otherwise distinguishable from bush or forest.

Melbourne is the younger sister of Sydney, whom she has quickly outgrown; but it is seemly that the representatives of all the Australian colonies, and of Tasmania and New Zealand, should have assembled in 1888, at Melbourne, to commemorate, by the opening of the International Exhibition,

the centenary of the expedition which brought out Captain Arthur Phillip and the first settlers of New South Wales. They landed on Jan. 26, 1788, and then and there proclaimed the sovereignty of Great Britain, hoisting her flag, reading the Royal proclamation, and firing a salute of small arms, to which the ships responded with great guns, and commencing the career of a new empire.



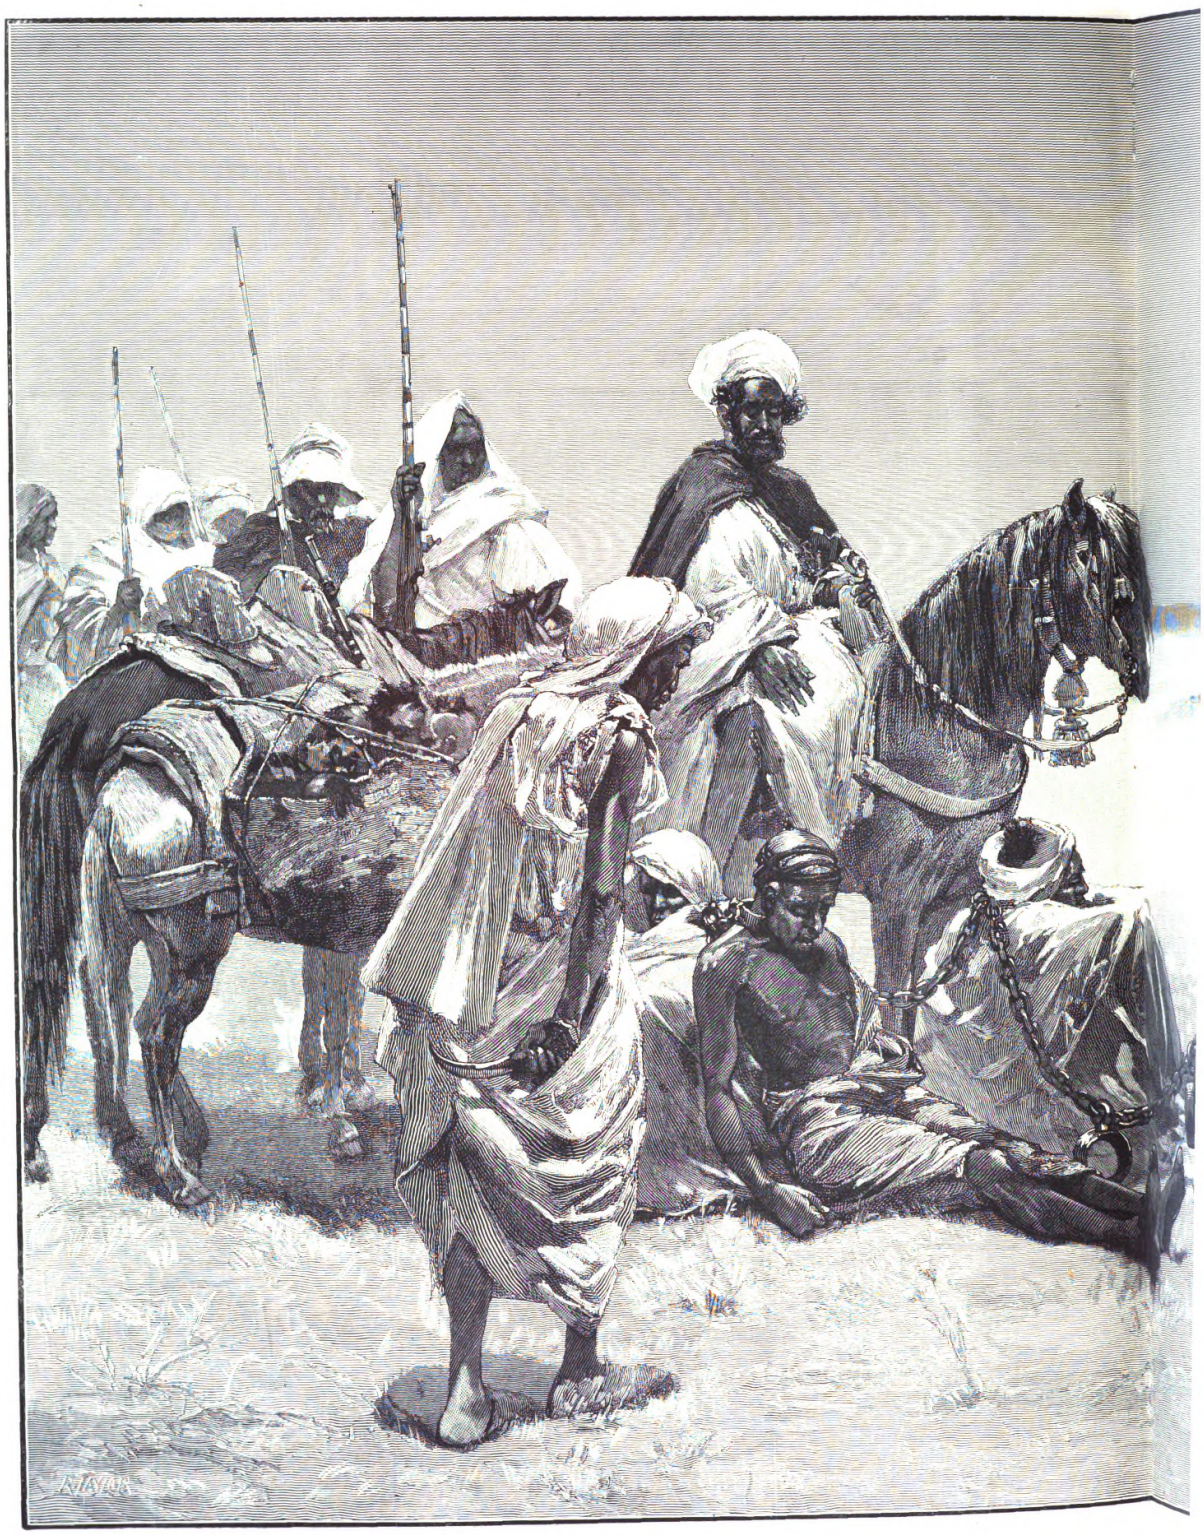
It is worthy of remark that a French exploring expedition sailed into the same waters a few hours after, just in time to hear the British cheers and guns. This was on board two of the finest frigates in the French service, La Boussole and L'Astrolabe, sent out by Louis XVI. under the command of a great maritime discoverer, the Comte de la Perouse, to whose memory, near the brass plate which indicates where Captain Cook first landed, the gilt-topped monument seen in our Sketch has been erected at Botany Bay.

As soon as the proclamation was made, the convicts were landed and set to work hewing down trees and clearing away undergrowth, raising huts, and making roads. Captain Phillip came prepared with armed men ready to suppress disobedience and disorder. He came with horses, cattle, sheep, goats, pigs; with plants or seeds of coffee, cocoa, cotton, banana, apple, orange, lemon, guava, tamarind; with vine, fig-tree, sugar-cane, bamboo, and various kinds of grain. The Governor guarded the natives against the brutality of Europeans as carefully as he guarded his men against wrong-doing. He was, in short, all that a Governor should be; yet, in his time, Sydney was merely a place of penal servitude, and its official name was scarcely recognised at home, where people commonly talked of being transported to "Botany Bay." When he left, in 1792, the population did not exceed 3500 souls.

He was succeeded by Captain John Hunter, another naval officer; the third Governor was Captain Philip King, R.N., from 1800 to 1806; and the fourth was Captain Bligh, R.N., commander of H.M.S. Bounty in the famous mutiny, whose colonial administration was abruptly cut short by a revolt of the free settlers and militia in 1808. From that period, the Governorship of New South Wales was bestowed on distinguished soldiers: Colonel Lachlan Macquarie, in 1810; Major-General Sir Thomas Brisbane, in 1821; Lieutenant-General Sir Ralph Darling, in 1825; Major-General Sir Richard Bourke, in 1831; and Major-General Sir George Gipps, in 1838, all ruling with somewhat of autocratic power; but from 1824 with a nominee Legislative Council, until, in 1842, a Constitution was granted to New South Wales, with an elective Legislature.

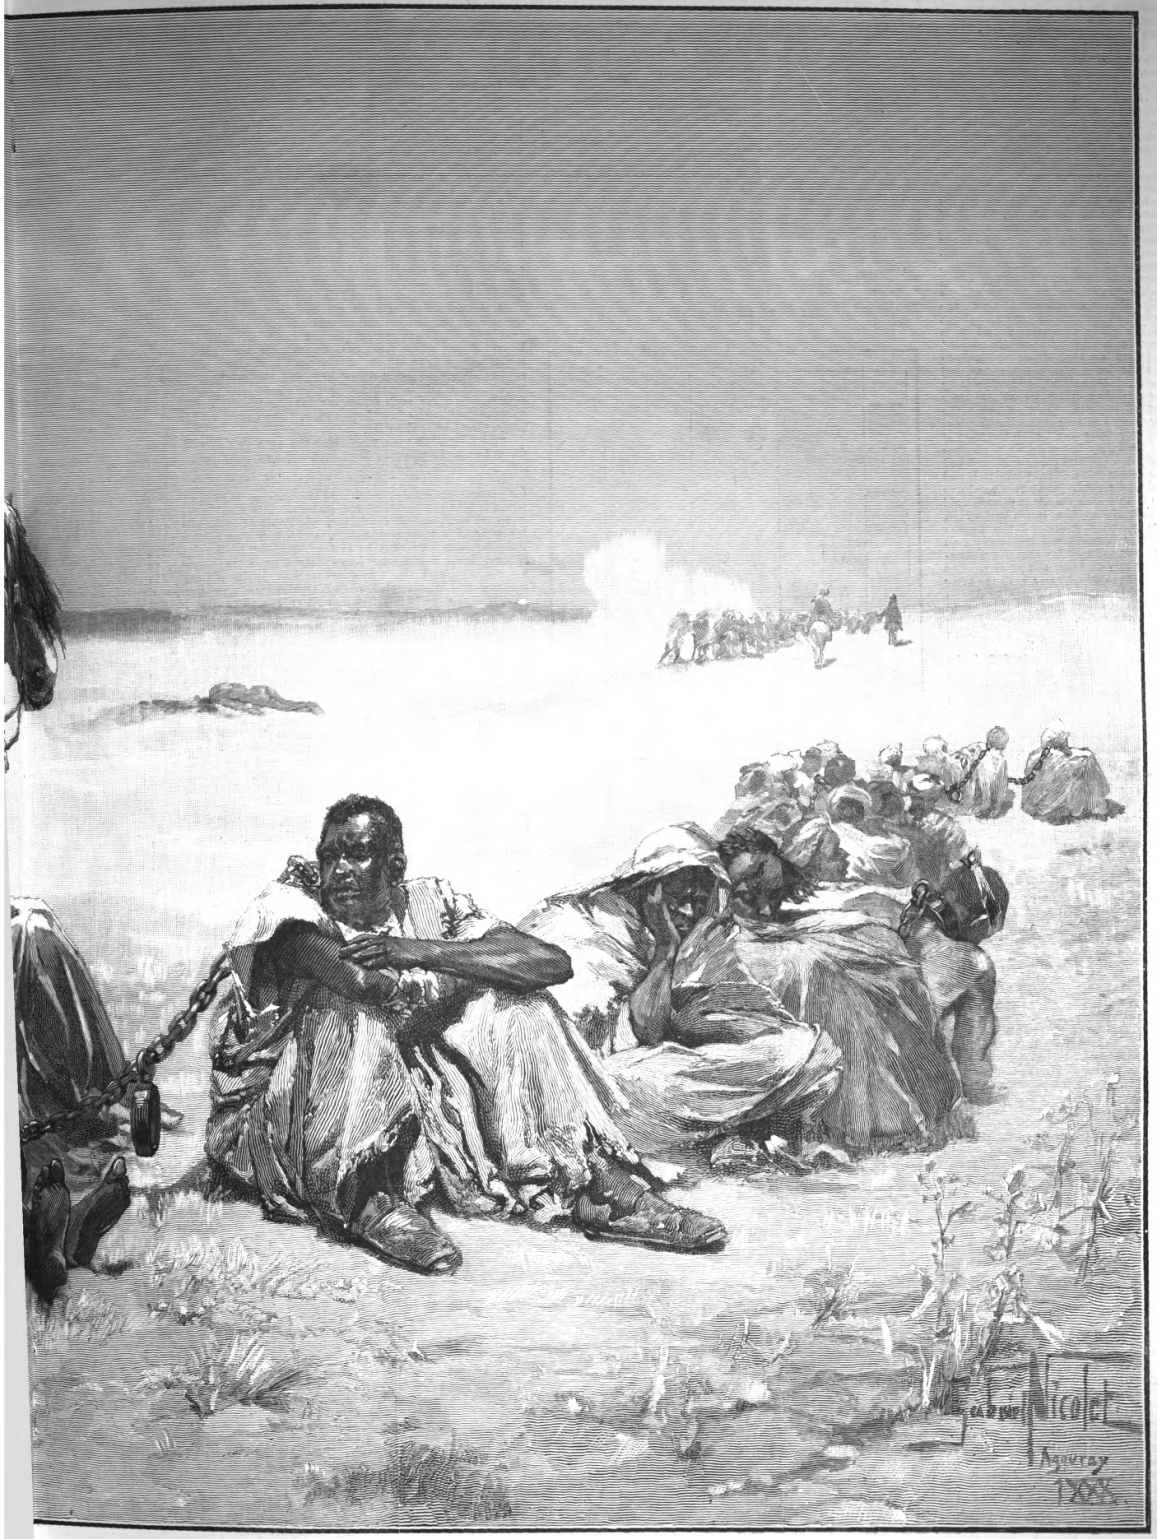
In the meantime settlements had been formed at Hobart Town, in Van Diemen's Land, now called Tasmania; in West Australia, up the Swan River, by Captain Stirling and others; in Moreton Bay, on the coast north of New South Wales, now styled Queensland; at Adelaide, South Australia, and at Port Phillip. All these settlements ultimately became separate colonies, independent of New South Wales. The commencement of colonial prosperity, in the mother colony, was due to the introduction of the merino breed of sheep by Mr. John Macarthur, in Governor King's time, for the production of the finest wool. This attracted settlers with capital, the old class of "squatters," to whom large tracts of land were allotted for pasture, and to whom the convicts were bound in service. This system was continued more than forty years, under the New South Wales Government, and its effects on the agrarian condition of some parts of Australia have scarcely yet been entirely removed. Under Governor Sir Charles Fitzroy, from 1846 to 1855, the free citizens of New South Wales, Victoria, Tasmania, and South Australia carried on a successful agitation to put an end to the transportation of convicts into these colonies; while the land laws have been made favourable to the easy purchase of small freeholds by agricultural immigrants, putting an end to the old "squatter" system.

The history of New South Wales, which is the early history of Australian colonisation, is full of stirring incidents and vicissitudes of fortune. Not the least interesting part of such history, with reference to all the Australian colonies, is that of the adventurous explorers of vast inland regions; such men as Wentworth, Lawson, and Blaxland, Oxley and Hamilton Hume, Hovell and Cunningham (the botanist), Sturt, Barker, Mitchell, Grey, Eyre, Leichhart, Burke and Wills, Grimes, Grant, and others. It was by the journey of Hume and Hovell overland from New South Wales, in 1824, and subsequently by those of Major Mitchell, from 1831 to 1836, that the fine country at first named "Australia Felix," the inland part of the present Colony of Victoria, was made known. The shore of Port Phillip, indeed, had been long before visited, and an abortive attempt had been made to establish a penal station there; but the actual opening of a settlement in the Port Phillip district fell to Messrs. Henty, who came over to Portland from Tasmania in 1834. Other pastoralists speedily followed; and Bateman, a native of Paramatta, and John Pascoe Fawkner, became the pioneers of trade between the new district and Sydney. Captain Lonsdale was appointed first resident Magistrate in 1836. Mr. Charles Joseph Latrobe succeeded Captain Lonsdale in 1839, and had the honour of conducting the affairs of the new settlement during the stages of rapid



MONUMENT TO LA PEROUSE AT BOTANY BAY.

growth which led to its independence in 1851, when his office of Superintendent was enlarged to the higher rank of Lieutenant-Governor, to correspond with the expansion of Port Phillip district into the colony of Victoria.



The discovery of gold, in July, 1851, in the Bathurst and Wellington districts of New South Wales, and within a few months, also in Victoria, on the Ballarat hills, and at Clunes, Bendigo, Mount Alexander, and the Ovens, completely revolutionised Australia. It is not our purpose, on this occasion, to speak of "the New Era" which then began for our Southern Colonies, and the results of which are shown in the great cities of Melbourne and Sydney, and at Adelaide, Brisbane, and other Australian capitals or chief towns, also in New Zealand, at Auckland, Dunedin, Wellington, and Christchurch. The official statistician now estimates the population of the Australasian Colonies (on Dec. 31, 1887) as follows:—New South Wales, 1,044,000 (approximately); Victoria, 1,035,943; New Zealand, 603,787 (exclusive of 41,828 Maoris); Queensland, 359,059; South Australia, 315,000; Tasmania, 140,711; and Western Australia, 44,532, making a grand total of 3,543,032 souls. Here is a new English-speaking nation, already three millions and a half of people, and probably destined to grow to thirty millions in the next century, occupying a Southern Dominion which actually comprises *all* the lands enjoying a temperate climate between the Indian Ocean and the South Pacific Ocean.

When timid and imperfectly informed persons in England hint a fear that some of our Southern colonies may be overwhelmed by their public debts, it should be replied that these debts, unlike those of any European State, represent not past military expenditure, but the cost of constructing many thousands of miles of well-planned railways and good useful roads, with harbour works and irrigation works in some of the colonies; and that the present value of the railways, which are State property, already opened for traffic and paying their working expenses, added to the increased value which they have given to the reserves of public lands still on sale, would at this moment suffice to pay off all the colonial debts. This is certainly true of New Zealand, as well as of New South Wales and Victoria, whose public credit should therefore stand higher than that of any nation in Continental Europe. The Colonial Legislatures, with the ardent support of these democratic communities, have so far realised the truest and wisest aims of national policy, that all the burthens of tax or loan which they lay on the country are for the immediate benefit of the people. There is no community in the Old or the New World—this is the noblest proof of civilisation—in which the State does so much for the education of the young. The New Zealand Government actually pays £4 a head for the schooling of every child; Victoria pays £4 7s. 8d. a head, in State education expenses; New South Wales and South Australia make also provision, on the most liberal scale, for this great object of social improvement. The schooling is everywhere public, free of charge to parents, entirely separate from the religious denominations, and school attendance is obligatory by law on all children in these colonies. In the quality of the instruction, the colonial public schools will at least bear comparison with any established by the School Boards in England; and there is no lack of Colleges and Universities for higher education. The noble motto of New South Wales, "Advance, Australia!" has been met with a practical response in the working of free institutions.

SKETCHES IN MOROCCO: A CHAIN OF PRISONERS

DRAWN BY G. [illegible]

PRISONERS FROM A REBEL TRIBE.

NICOLET.

THE LADIES' COLUMN.

The latest "craze" is ladies' cricket, which has taken possession of the public fancy very suddenly, and bids fair to become as commonplace as ladies' tennis. From all parts of the country come the reports of matches, and married women as well as single ones are numbered amongst the players. As conducted at present, ladies' cricket is little more than a farce: for the men are required to bat with broomsticks and bowl left-handed, and nevertheless often manage to win. But of course the ladies who play are still novices, for the fashion is yet of must-room growth. It began with a company of actresses, captained by little Miss Norreys. Suddenly, the idea "caught on," and now all over the country the end of the cricket season is being marked by ladies' matches. It remains to be seen whether they will be revived next spring. If so, they must be played more rationally: the left-handed broomsticks are amusing while novel, but are a condescension which would soon fatigue and bore the superior beings who grant it. Tennis is not less violent and golf is not less fatiguing than cricket; and tennis and golf are both commonly and well played by women of position and refinement. So it is quite possible that ladies' cricket is destined next season to be fashionable.

Dress is an obstacle to women rivalling men in such games. Only by wearing a gymnastic or a shooting costume does a lady come to realise how much her movements are hampered in her usual dress. A very remarkable document, however, addressed by a large number of American ladies to the ladies of Japan, shows that women are everywhere concerning themselves about the inconveniences of female dress—though, unfortunately, nobody appears able to invent anything much better. The American ladies have been moved to address their Japanese sisters by the announcement that the Empress of Japan has decided that European Court gowns shall be worn at her State receptions; and it is therefore probable that our dress will be generally adopted in Japan. The American ladies beg their Japanese sisters to pause before exchanging their loose and artistic national costume for our "ungraceful, inconvenient, and unhealthy fashions." They write because they desire "that Japanese ladies may be made aware of the dangers in adopting the foreign dress, and that they may consider that what they are about to do would affect not only their own health but that of their sons and daughters." This note is signed by a number of American authoresses, lady doctors, and other distinguished women, including the President's wife, Mrs. Cleveland, and the widow of the late President Garfield. What poor creatures we must be to retain a garb with which we are so dissatisfied! How is it that we cannot think of anything much better? A certain Mdlle. De Valsayre recently petitioned the French Chamber for permission to wear trousers, and has received an official reply that there are no sumptuary laws on the statute-book, and that she may wear any costume she pleases. But Mdlle. De Valsayre did not at once adopt some costume after her own mind. She only weakly applied to Worth to design her a dress on the essential basis of bifurcation. That monarch of *chiffons* scornfully declined the order. No wonder; Worth cannot bear even the ordinary English tailor-made gown, in which he avers that ladies look like stable-boys!

The October number of the *Woman's World* is, I find, the one which completes the first year under Mr. Oscar Wilde's editorship. The publishers, in announcing that henceforth the magazine will be enlarged, point with justifiable pride to the names of the contributors to this volume, and state very truly that "such an array of valuable papers from the pens of eminent women has never before appeared in any magazine." This number is not the least interesting of the year, containing as it does a paper on "Women in Pompeii," by Edith Margot; an interesting sketch of part of old Paris and its associations, by A. Mary F. Robinson (who, by-the-way, has *recently married* a Professor of the College de France, and gone to live in the city she knows so well); two essays on employments for educated girls—elementary school teaching and dressmaking; and a defence of German women, by Miss Friedericks, the clever foreign sub-editor of the *Pall Mall Gazette*, who reads seven languages, and is one of the most capable "interviewers" on the press. Then there are the fashion articles, always well written there; and last, I may mention a paper from my own pen on "A Woman's Friendship"—that which existed between Mary, Queen of Scots and Mary Seton, the only one of her "four Maries" who remained single, and who was constant in devotion to her Queen throughout her weary imprisonment. There is a charming illustration to the article, a copy of an old miniature painting of the Maries. I am only disappointed that there was not added an engraving from the Windsor miniature of the Queen of Scots herself, an authentic portrait.

Considering how great is the fame of the beauty of Mary Stuart, and how high was the position that she filled as Queen of France and Scotland, it is surprising that genuine and satisfactory portraits of her are so rare. Prince Labanoff, a Russian gentleman who early in the present century devoted a large part of his life and fortune to the study and commemoration of that fascinating personality, made a list of all the so-called portraits of Mary which he could discover to be in existence. He concluded that only a very small number so named were genuine, and had been done by painters who had seen their model. The keeper of the National Portrait Gallery is more sanguine. In some interesting and learned communications which he recently made to the *Times*, he enumerated a number of pictures now in various situations which he believes to be genuine portraits of the Queen of Scots. But anybody who can contentedly see the name of that beautiful woman labelled on the hideous and impossible caricatures which disfigure the National Portrait Gallery as likenesses of Mary, must be easily satisfied with evidence of authenticity. Indeed, scruples on this point have lately visited the authorities of the gallery, and they have decided to re-christen one of the canvases after Mary of Loraine, the mother of Mary Stuart. There is one admirable portrait of the Queen of Scots, known as "the Morton portrait," which has descended in an unbroken chain from the noble to whom the Queen herself gave it; and there are a few others which may be genuine, though poor. But the Windsor miniature (one of that fine collection made by generations of our Monarchs, which was so carefully arranged under the orders of the Prince Consort) vies with the face on the sculptured tomb in Westminster Abbey for charm, interest, and evident truthfulness. Both that miniature and the statue were received by James I. as his mother's portrait. He, of course, could not judge them himself. He never saw her after he was a young babe: the well-known engraving from a picture by Zucchero, showing the Queen with her hand on the head of her little son, is necessarily apocryphal, as are so many other pretended portraits of her. But though James did not know what his mother was like, he had around him many of her attendants and friends who did, and there is evidence that he took considerable pains to have the statue on the tomb made a fair portrait. The Windsor miniature is very like the face on the monument; and both have a look of mingled sweetness and authoritative wisdom that is very attractive.

FLORENCE FENWICK-MILLER.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

DR. F. ST.—The problem is quite sound, and you have not found the key-move.

ALPHA.—Right this time.

J. F. COLE.—Black plays his best possible defence against White: therefore, in your proposed solution of No. 2314 by 1. Q to R 2nd, K to B 3rd; 2. Q to K R 2nd, Black does not go to K Kt 3rd, but back to Q 4th, and there is no mate.

H. M. PRIDEAUX.—Thanks for game, which shall have due attention.

HEREWARD.—We have marked your problems for further consideration. Of the two we prefer the four-mover.

F. G. W.—A solution is seen at a glance, by 1. R to Q 4th.

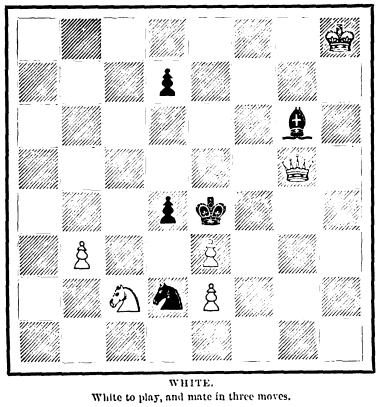
T. C. (Gateware-road).—There is something hopelessly wrong about the position you send, and it certainly possesses no similarity to any problem we have either seen or published.

G. C. HANDS.—The Black King is too cramped, otherwise your problem shows merit. A mere series of sacrifices, however, does not necessarily constitute good strategy. Try again, and give Black more elbow room.

PROBLEMS received, with thanks, from W. J. Pierce and Signor Aspa.

CORRECT SOLUTIONS OF PROBLEM No. 2315 received from J. Mann (New York) and J. B. (Bombay); of No. 2316 from J. R. and F. B. (sic); of No. 2317 from P. Read, John Grant, J. W. Shaw, Montreuil, Charles Etherington, and Blair. H. Cochrane; of No. 2318 from Shadforth, Alpha, P. Read, and F. Morley; of No. 2319 from A. W. Hamilton Gell (Exeter), F. Morley, C. E. P., and E. G. Boys.

CORRECT SOLUTIONS OF PROBLEM No. 2320 received from Dr. F. St., Joseph T. Pullen, Anglina (Lyme Regis), C. E. P., F. F. N. Banks, Jupiter Junior, W. Hillier, E. Casella (Paris), F. Phillips, E. Lucey, Dawn, A. Newman, Percy Kwan, Colonel R. J. Drew, J. Dixon (Colchester), Peterhouse, R. H. Brooks, J. D. Tucker (Leeds), Thomas Chown, Julia Short (Exeter), Dr. Gustav Wurz (Heidelberg), J. D. Tayler, Ruby Rook, F. E. Bamborough, James Sage, Columbus, D. Morley, T. Roberts, E. Louden, E. E. B., R. Bysouth, Blair. H. Cochrane, J. J. R. (Ballinatonty), Lillie Harris, W. Dunand, J. Hepworth Shaw, T. G. (Ware), W. R. Rathbone, Shadforth, A. W. Hamilton Gell (Exeter), Nicol, Howard A. J. Coad, and R. Worters (Canterbury).



SOLUTION OF PROBLEM No. 2318.

WHITE.	BLACK.
1. Kt to Kt 3rd	K takes Kt
2. R to K sq (ch)	K moves
3. Either B mates accordingly.	

If Black play 1. P takes Kt, then 2. R to Q 6th (ch); if 1. K to K 6th, then 2. Kt to B sq (ch); if B takes Kt, then 2. B to Q 6th (ch); and if B to K 7th, then 2. Kt to K 2nd, &c.

PROBLEM No. 2322.
By B. G. LAWS.

BLACK.

WHITE.

White to play, and mate in three moves.

BRITISH CHESS CONGRESS.
Game played between Messrs. LEE and BURN.

(Three Knights' Game.)

WHITE (Mr. L.)	BLACK (Mr. B.)	WHITE (Mr. L.)	BLACK (Mr. B.)
1. P to K 4th	P to K 4th	25. Kt to Kt 3rd	R to K R 2nd
2. Kt to K B 3rd	Kt to Q B 3rd	26. P to Q B 4th	
3. Kt to B 3rd	P to K Kt 3rd	White has now much the better position, an advantage well maintained to the end.	
4. B to B 4th	B to Kt 2nd		
5. P to Q 3rd	Kt to B 3rd		
6. B to K 3rd	P to Q 3rd	26.	Kt to Kt 3rd
7. P to K R 3rd	P to K R 3rd	27. R to Q B sq	K to B sq
A move that immediately proves a source of weakness.		Kt to B 4th still seems better, for B must take Kt, then K P takes B, Kt to B 5th, R to R 4th, &c.	
8. Q to Q 2nd			
Taking prompt advantage of Black's last move he cannot now Castle.		28. P to B 5th	P takes P
		29. B takes P (ch)	K to Kt sq
8.	Q to K 2nd	30. B to K 3rd	R to R sq
9. Castles (K R)	P to K Kt 4th	31. K R to Q B 2nd	B to Q sq
10. Kt to R 2nd	R to Q 2nd	32. Q to Kt 3rd	K to R 2nd
11. P to R 3rd	Kt to Q sq	33. Kt to R 5th	
This seems merely loss of time: Black might have Castled Q. R., and proceeded with an attack on the King's side of the board.		Threatening R takes B P, which cannot be taken on account of the check with Knight.	
12. P to Q 4th	Kt to K 3rd	33.	R to Q B sq
13. B takes Kt	B takes B	34. P to Q R 4th	R to B sq
14. P to Q Kt 4th	B to B 5th	35. P to Q 6th	
15. K R to K sq	Kt to Q 2nd	An excellent reply to Black's last weak move.	
16. P to Q 5th	P to Q R 3rd	35.	P to B 3rd
17. Kt to Q 2nd	B takes Kt	36. P to Kt 5th	R P takes P
18. R takes B	Kt to B 3rd	37. P takes P	K to K sq
19. Q to Q 3rd	Q to Q 2nd	38. P takes P	P takes P
20. P to Kt 4th	Kt to R 2nd	39. R to Q R sq	R to K sq
21. Kt to B sq	Kt to B sq	Fatal, losing at least a R; but Black's game is irretrievable.	
22. Kt to Kt 3rd	Kt to Kt 3rd		
23. Kt to B 5th	B to B 3rd	40. R to R 7th	Q to K 3rd
24. P to K B 3rd	Kt to K 2nd	41. P to Q 7th	K to Kt sq
Kt to R 5th; 25. B takes Kt, K P takes Kt; 26. R to Q B sq, P to K R 4th seems more to the purpose.		42. Q takes Q, and wins.	

Game played between Mr. BIRD and Herr WEISS.

(King's Bishops Gambit.)

WHITE (Mr. B.)	BLACK (Herr W.)	WHITE (Mr. B.)	BLACK (Herr W.)
1. P to K 4th	P to K 4th	14. Q to Kt 3rd	Kt to B 3rd
2. P to K B 4th	P takes P	15. R to B 4th	Kt to K 5th
3. P to K 5th		16. R to K sq	Kt takes B (ch)
The B is usually played to B 4th, but Mr. Bird has for the move a parental affection.		If Kt to Kt 6th (ch) although White loses the exchange the attack obtained by P to Q 4th more than compensates for the loss.	
3.	P to K B 4th	17. Kt takes Kt	P to Q Kt 4th
This reply does not turn out well. P to Q 4th gives Black greater freedom.		18. B to K 6th	K to Q sq
4. P to Q 5th	P to Q 3rd	19. Kt to B 3rd	P to Kt 5th
5. Kt to K B 3rd	P takes P	20. P to Q 5th	
6. Kt takes P	Q to R 5th (ch)	An excellent reply, which deprives Black of all power of resistance.	
Black might have done better by B to Q 3rd at once and if Kt to K B 3rd, B to K 3rd, &c.		20.	P takes Kt
7. K to B sq	B to Q 3rd	21. P to Q 6th	R to Q Kt sq
8. Kt to K B 3rd	Q to R 3rd	22. P takes Kt (ch)	K takes P
9. P to Q 4th	Kt to K 2nd	23. B to Q 7th (double ch)	K to Q sq
This allows White to rapidly develop his game on the Queen's side. Kt to K 3rd, with a view to Castling, appears preferable.		24. Q to B 7th	
		The game is well played throughout by Mr. Bird, and the end is a fine specimen of his skill.	
10. P to B 4th	P to B 3rd	24.	B takes B
11. Kt to B 3rd	Kt to Q 2nd	25. R to Q sq	K to B sq
12. B to Q 2nd	Q to R 3rd	26. Q takes B (ch)	K to Kt 2nd
He should have Castled while he had the opportunity.		27. B to Q 6th	Q to R 4th
13. P to B 5th	B to B 2nd	28. Q takes P (ch)	K to B sq
		29. Q to R 6th (ch)	R to Kt 2nd
		30. P to B 6th, and wins.	

In the City of London Chess Club the winter season will be inaugurated by a blindfold exhibition, which will be given by Mr. Blackburne on Monday, Oct. 8. Mr. Lord will be teller. Admission to see the exhibition will be free to all members of the club and their friends.

The North London Chess Club has issued its list of engagements for the ensuing season. Matches have been arranged with all the leading local clubs, besides which a tournament, confined to members, will commence on Oct. 25.

AMONG THE HOP-PICKERS.

The bright face of the morning is veiled by a silvery autumnal mist that hangs over the valley, hides the view of the quarried hill in the distance, with its crown of fir-trees, darkens the village street below, and seems to give a damp wheezy tone to the old bell of the older church, to-day devoted to rural marriage festival. The earth is overflowing with fruitfulness that has come too late for man's benefit; and there is the moist odour of decay in the field and orchard where the apples hang yet unreddened and the Kentish cobs are still green with sap. Too much rain and too little sunshine have worked sad havoc among the Kentish farmers this year. From the other side of the hedge rises in unintelligible tangle the chatter of the hop-pickers. They, poor people, are the heaviest sufferers by the freak of weather that has blighted the bine, shrunk the golden tassels, and lightened the harvest upon which the county of Kent depends in a great measure for its prosperity.

"On the farm yonder," says an old man who speaks with the broad Kentish burr in his voice, and has known all the hop-gardens in the neighbourhood for the last thirty years, "they are picking from forty to fifty pockets a day less than last year, and that was reckoned a bad year by the good pickers."

"Could we see the pickers at work?"

"Of course; they'll be delighted to see you, Sirs; but I expect they'll come and want to wipe your boots with a handful of hop-leaves; that is the way they indicate that strangers who visit the garden must pay their footing."

The old man does not pronounce all the letters of his words exactly as they are written, but it is better to spell them as he would have spelt them, had he spent more of his earlier years in the school-room and less in the hop and fruit gardens.

A short walk down a country lane—where the hedgerow is sweet with late bramble-bloom and ripening blackberry, where fern and wild-strawberry plant flourish without touch of human finger, where from bush to bush the busy spider spins his delicate web on which, this morning, the dew has left a silvery film with pearl drops here and there—(how many a milliner in the fashionable West-End would pay its weight in diamond-dust for such delicate sparkling lacework!)—brings us to the entrance of the hop-garden. The bailiff, on his little pony, meets us at the gate.

"Ah! Sirs," he says, "this aint the year you should come down to see the pickers; hops aint hops as they used to be; ask Mr. Perkins, there."

Mr. Perkins is the local schoolmaster, who finds employment for his autumn holiday in taking the management of the garden while it is in the hands of the pickers. His familiarity with rules of routine and discipline, his habit of authority, and his general intelligence well qualify him for such a post. Nothing is so powerful in the government of the ignorant classes, from which the hop-pickers as a rule come, as knowledge; and the schoolmaster has little difficulty in keeping under control the five hundred men, women, and children now gathered together in this—one of the largest hop-gardens in Kent.

"Many pickers, this year," he tells us, "did not come down from London; the railway companies discontinued their special cheap trains earlier than usual on account of the bad season. The owners have met the people very fairly. We are paying the pickers at the rate of four bushels a shilling, taking the good with the bad, although in ordinary years they will pick six, seven, and even eight bushels for a shilling, and earn even more than they can now."

"Are they a troublesome set of people?"

"Not at all. Of course we get all sorts, but, as a rule, they are sober and industrious. They regard the hop-picking season as both a time of holiday and profit. Families come down entire; even the babies are brought. Look at that little fellow there asleep under an umbrella; he is lying on a bag of hops, and, as no doubt you know, there is nothing like a hop-pillow to promote good sound sleep."

The babies are all over the place—some asleep, others playing; while the older children are made useful, and have to help their parents. Families, as a rule, work all together; the hop-garden being divided for the purpose of picking into sets, so many hills—that is, groups of vines as they grow on the poles—constituting a set. Each company has a leader or binman, whose duty it is to pull up the poles, hold up the bags to be measured and loaded, and do any general work that is required. This binman is paid a weekly wage by the manager, while the pickers are paid by the cashier according to the number of bushels they pick. Each picker has a book. Sometimes there are three measurings a day, sometimes less. Three days a week are called "subbing" days, when the pickers are allowed to draw something on account from the cashier; but it speaks much for the frugality of many of those engaged that they leave their earnings until the end of the time, and are then able to carry home a lump sum.

While we are getting our information from the manager the artist who accompanies us is busy sketching any bits of character that come within his observation. His proceedings are watched with acute interest by the poor people. "He's drawed my twins," we hear a proud mother confide to her friend at the next bin, who, probably, feels quite a pang of envy because she has no twins to be drawn.

"And where do these poor folk sleep and live when their labour is over?" we ask.

"Of course, the accommodation is not wonderfully good, but it is much better than it used to be. The owners of the gardens have erected sheds with good brick-walls and sound roofs for them to sleep in, and they have conveniences for cooking and washing."

On a distant hedge we can see the family wash, or, rather, several family washes; and a later examination revealed the fact that many of the experienced pickers are able to supplement the comforts offered them. Needless to say, they could not afford to pay for, nor would they probably appreciate the advantages of, a modern hotel; but the best of the families display many evidences of a knowledge of domestic economy in the arrangements of their primitive larder, and the disposition of the straw and sacks that form their bed and bed-linen. Nevertheless, the low, dirty, dark, unventilated sheds, with their grease and smoked stained walls, with their vermin and foul odours, seem hardly fit habitation for cattle. The majority of dogs are better housed; but no doubt it may be thought by some that dogs are of more account than hop-pickers.

"And do none of the local authorities concern themselves about the health and well-being of all these people!"

"As a rule they shun them; many go away during the hop-picking time. Some church society in London sends down a missionary, who preaches to those who will hear him; he is a very nice gentleman, and seems to get on well with the people, but his funds are limited, and he cannot give them much material assistance. I think most of them would rather see that lady over there," and he points to a corner of the field where a little trap is standing, and several great plum-cakes are being cut up into square pieces weighing about half-a pound each.

What is this? It does not take us long to discover the answer. A little lady, a well-known and highly esteemed

member of a somewhat despised profession—that is, of the stage—has found a novel way of spending a holiday. She has come down among these poor hard-working people against whom Nature this year has with seeming cruelty combined all her forces, and with a kind word to the mothers and a giant piece of good cake for every child she has made glad many a heart.

"May God Almighty bless the people! this is real charity!" I hear an old Irishwoman say with thankful reverence. It is, indeed, a pretty sight. This generous act and the sweet graciousness that accompanies it will have more influence than twenty sermons on hearts made hard and sceptical by adversity and the bitterness of life's struggle. A sense of all that is best and purest in the world falls upon the field; the oath and vulgar jest are silenced—every face betokens pleasure. And where did these children learn their good manners? It was only the youngest and wildest that the mothers had to reprove with "Say 'thank-you,' baby!" or "What do you say to the lady, Bobby?" The "Thank-you's" rose naturally to the little lips.

When the hops are measured from the bins into which they are picked they are placed in "pokes," and carried in the long, lumbering wains to the white capped "oast-house." This is probably a corruption of "roast-house," for here the hops are dried over a fire of smokeless coal and sulphur. They are then packed into pockets, being trodden tightly in by a peculiar process, then weighed, and sent off to the hop warehouses in Southwark.

We turn from the field, our eyes gladdened and our brain drowsy and dreamy with the subtle fragrance that is breathed from every amber cluster. The pickers are preparing for luncheon; from a cart pieces of fried fish and other provisions are being retailed at prices that would astonish some dineras-out in town; while as we pass the pleasant village inn, we observe that in one of its windows, gay with geraniums and other bright flowers, is exhibited a ticket which announces "Hot dinners, 3d."

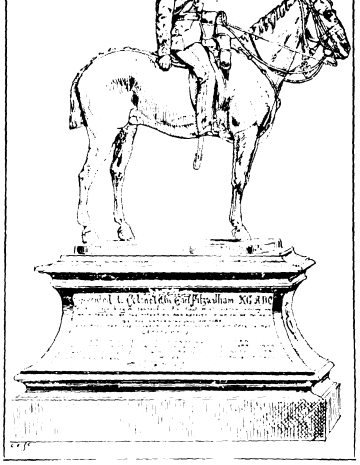
"Ah, yes, Sir," says a picker who follows the direction of our eyes, "but threepence means a bushel, and a bushel takes a lot of picking this year." H. L.

CHANGING HOUSES.

If three removes are as bad as a fire—and proverbs, we know, always speak the truth—the man who frequently changes his residence must be considerably out of pocket. And he must be a man of admirable disposition if the irritations a change of house involves do not put him out of temper. For days, and often for weeks together, everything he most wants is sure to be missing, and he lives in perpetual disorder and discomfort. His "womenkind" probably enjoy the excitement and the novel kind of house-work. They have much to do, and like doing it; he has much to endure, and has not even a den into which he can escape from the distraction. For the so-called "study" is sure to be the room into which all superfluous boxes, litter, and furniture are placed, in order, as the servants declare, to be out of the way. How ardently the master of the house wishes that he could be out of the way also!

No one probably ever yet took possession of a new house without having to spend at least twice as much upon alterations as he had anticipated. However careful his calculations he might have spared himself the trouble of making them, for they are certain to be wrong. The faculty of discovering new wants is never so largely developed as at a crisis like this. For a time the purse-bearer demurs and questions; but ere long he discovers that this is vain, and nothing remains for him but to wonder and to pay. Well, resignation is a virtue, and that, at least, he may have the credit of exercising.

It takes a long time to make a house a home. The rooms in which we have lived and loved and suffered are not without their memories; they become a part of our life, and in a new abode there is that sense of strangeness, at times almost of desolateness, which the traveller feels on the first night of his arrival in a foreign city. He scarcely knows how to describe his feelings, but is conscious of a restlessness like that of the dog which turns round and round upon the hearthrug before settling to sleep. It is difficult to leave an old home for a new one without feeling that the continuity of life has been broken. Another leaf is turned over, and by this change we seem to be nearer the end of the book and the "finis" written on the last page. And if, as may happen, we are wholly free from sentiment of this kind, there is always the suspicion, especially in what is pertinently styled a "builder's house," that something wrong will be discovered. Even surveyors are known to have been bribed; and one has heard before now of a plumber without conscience. We know the faults of an old residence by heart, and by degrees grow fairly reconciled to them: they are like blemishes in the face of a friend. When we change houses, however, it is with a view to some advantage: and the fear lest we may lose more than we gain is one of the fretting cares familiar to new tenants.



We make life more difficult by imaginary wants, and burden our houses with useless lumber. For any real service or pleasure it affords us, many a carefully-packed ornament or piece of furniture might as well be thrown away. And the folly of accumulation is never so evident as when we attempt to readjust our baggage in a new residence. There are folk who treat old furniture with the constancy due to old friends. No matter how ugly or inconvenient it may be, they cannot be induced to part with it, and will cherish a cumbersome wardrobe or table with the reverence felt by a bibliomaniac for the first folio of Shakspeare. There is something, perhaps, respectable in this regard for the chairs and sofas upon which we have sat in bygone years; but it may be carried to a ridiculous extent. If our grandfather left behind him a bedstead as large as the Great Bed of Ware, that is scarcely a reason why we should burden our house with such an incumbrance. Yet I know one lady so warmly attached to family furniture as to take a much larger house than she needed in order to make room for it; and another so devoted to the memory of a long deceased relation as to allow the house in which he had lived to fall into decay. Dust, cobwebs, and rats occupy the rooms which the impious hand of man must not touch; and the ghost of this revered relative would not recognise the home which is kept sacred to his memory.

It is well for us, perhaps, in taking possession of a house bearing on it the stamp of years, that we are ignorant of its past history. Many a sad tragedy is enacted of which the world knows nothing; many a tale of defeated hopes might be listened to if there were tongues in walls. For the most part, among ordinary people, life goes on, to all outward appearance, with monotonous regularity; but could we see beneath the surface, we should find that few families escape altogether from calamities which mark as with a red cross the doors of the houses in which they were suffered.

Happily, it is enough for us to know the present condition of a house; we have neither the wish nor the power to read its past history. If there was once a skeleton in the closet it may be hoped it was carried away by the last inmates with the rest of the furniture. What we have to do on taking possession is to resolve, as far as lies in our power, to convert the house into a home, and to fill it with fragrant memories. And to do that depends upon character far more than upon surroundings. One bright happy face, one unselfish nature, will fill a house, we know not how, with sweetness and light: and in every room a shadow will be cast when there is a want of sympathy and affection in the family circle. A noble-hearted woman said that in living to serve others she had a home within; and doubtless such service, done lovingly, as in the great Task-master's eye, will make a home of any house, no matter how mean and ugly may be its outward appearance. J. D.

EARL FITZWILLIAM, K.G.

The celebration of the "golden wedding-day" of Earl and Countess Fitzwilliam, on Sept. 10, was noticed in our Journal, following the publication of our Illustrations of his Lordship's seat, Wentworth Woodhouse, near Rotherham, Yorkshire. Among the gifts and testimonials of esteem presented to Lord and Lady Fitzwilliam on this occasion, the officers and retired officers of the 1st West York Yeomanry Cavalry gave his Lordship a silver equestrian statuette, representing himself as their Colonel, in full uniform, wearing the star and ribbon of the Order of the Garter, and the Queen's Jubilee Medal, also the aiguillettes worn by him as special Aide-de-Camp to the Queen, the badges of Colonel being shown on the shoulder-knots. His

SILVER STATUETTE OF EARL FITZWILLIAM, K.G., COLONEL OF 1st WEST YORK YEOMANRY CAVALRY.

Lordship is mounted on his favourite charger, The Owl. The statuette is on an ebony plinth, with a shield at each side, bearing inscriptions. The ornaments at the ends show the Earl's monogram, motto, and coronet, at one end, and the badge of the Regiment at the other. The likeness of the Earl is very good indeed, and the whole work is exquisitely finished, every detail being shown both in the uniform and in the trappings of the horse. The total height is 24 in. The work was executed by Messrs. James Dixon and Sons, of Sheffield.

SKETCHES IN MOROCCO.

The series of Illustrations drawn by Mr. R. Caton Woodville, with the accompanying narrative and descriptive account written by Mr. W. B. Harris, when they travelled with the British Minister on a "Visit to the Court of Morocco," presented a vivid and accurate delineation of those aspects of the country, and of native manners and customs, which the Sultan's Government would not seek to conceal from European observation. A darker picture is that which is exhibited in the Engraving of a Sketch by a Belgian artist, M. Gabriel Nicolet, who travelled last June for some days in the Sultan's camp, when his Imperial Majesty went to visit the Mohammedan shrines of Muley Ishmael and Edris-el-Kebir, the latter situated in the Zerhoun mountains, five hours' journey from Mekinez, after the successful termination of a military expedition to put down some insurgent tribes. This Sketch represents a chain of prisoners from the Beni M'guild tribe; and our Correspondent says that when a tribe of rebels is beaten by the Sultan's army, a certain number of men are taken to the prisons of the chief town of the empire, especially to Fez, Mekinez, or Morocco city. They are all bound together by a long, heavy chain passing through the strong iron collar which is fastened to the neck of each man; and they are thus marched off, a long and cruel journey. Soon, many of these wretches fall, worn out by the heat, hunger and thirst, and disease; and they have to be left on the road. As the exact number of prisoners has to be brought to the town, the heads of those who cannot follow are cut off, salted, and put into pack-baskets, carried by a mule or a small horse. This execution is done by one of the soldiers, the Kaid and his escort being present. The interior of the country is in a state of rebellion, which will probably soon excite general attention.

The Mayor of Nottingham on Sept. 28 opened the new Townhall, which has been erected there at a cost of £70,000. It is a handsome stone building, in the style of the French Renaissance, ennobled by Classical treatment, and has been erected from the plans of Messrs. Verity and Hunt, of London. It contains two commodious courts of justice, a police station and cells, a large fire station, and suites of rooms for the town-clerk and the borough engineer. The Mayor opened the principal door in the main front with a golden key, and after dedicating the building to the use of the town, unveiled a portrait of Alderman Barber, chairman of the building committee, in recognition of his public services. Subsequently Alderman Barber was entertained at a public banquet.

WILLS AND BEQUESTS.

The will (dated May 10, 1879) and four codicils (dated June 9, 1879; April 14 and Dec. 19, 1881, and Feb. 5, 1887) of Mr. Henry Brace, late of Mayfield, Walsall, Stafford, who died on May 13 last, have been proved at the Lichfield District Registry, by Frank Addison Brace, the son, Thomas Addison Negus, and Frederic Fuhrmann Clarke, the executors, the value of the personal estate amounting to upwards of £268,000. The testator bequeaths £1000 to the Vicar of Walsall, for or towards the stipend of a curate; £500 to the said Vicar for the restoration of Walsall Church; £500 to the Vicar of Walsall Wood for parochial and pastoral purposes; £500 each to the Walsall Cottage Hospital and the Wolverhampton Orphan Asylum; £250 each to the St. Matthew's Infant School (Walsall) and the Walsall Bluecoat School; £1000, all his furniture, pictures, plate, &c, an annuity of £1600, and the use, for life, of his dwelling-house, gardens, and pleasure-grounds at Mayfield, to his wife, Mrs. Eliza Brace; all his shares in the companies of Henry Brace and Co., Limited, the Cannock and Rugeley Colliery Company, the Sandwell Park Colliery Company, and J. Russell and Co., Limited, to his son, Frank Addison Brace; £7500 and £40,000 to his daughter Ellen Jane Brace; and £40,000 to his daughter, Edith Mary Brace, such sums to be held in trust for them, for life, with a power of appointment thereover, but no income is to be paid, in respect of one moiety of the two sums of £40,000 till the death of testator's wife; and legacies to his executors. The residue of his real and personal estate he leaves, upon trust, to pay the income thereof to his son, Frank Addison Brace, during the life of Mrs. Eliza Brace, his widow, and on her death, as to the capital as well as the income, to his said son absolutely.

The will (dated Aug. 18, 1887) of Mr. James Charles Henry, late of Fairleigh, Alleyn Park, West Dulwich, and Monkwell-street, Silver-street, E.C., manufacturer, who died on Aug. 16, was proved on Sept. 26 by James Godwin and Edward Powell, the executors, the value of the personal estate exceeding £27,000. The testator gives and devises his house at Stroud-green to his daughter Mrs. Elizabeth Mary Eaton; his house at Camberwell to his daughter Miss Emily Isabella Henry; £300 to Robert Dowsett; and his house, Fernleigh, with the contents thereof, to his wife, Mrs. Elizabeth Mary Henry. The residue of his real and personal estate he leaves between his wife and two daughters, in equal shares.

The will (dated Jan. 7, 1885) of George Thompson Gream, M.D., late of Mixbury House, Eastbourne, physician accoucheur to the Princess of Wales, and who also attended the present Dowager Empress Frederick at Potsdam, who died on July 20 last, was proved on Sept. 25 by Dame Ellen Emily Gooch, the widow, and sole executrix, the value of the personal estate amounting to upwards of £27,000. The testator gives and bequeaths numerous legacies and annuities to his relatives and servants, and leaves the residue of his property to his wife absolutely.

The will (dated June 3, 1879) of Mr. Leopold Schwabe, formerly of the city of Manchester, but late of No. 3, Buckingham-crescent, Victoria Park, Rusholme, merchant, who died on June 13, has been proved in the Manchester District Registry by Henry Albert Schwabe, the son, one of the executors, the value of the personal estate exceeding £27,000. The testator confirms the settlement made on his daughter, Emma Susanne Schwabe, and bequeaths her £100; his household furniture and £200 to his wife, Mrs. Emma Frances Schwabe, and the income, for life, of all his City of Manchester Consolidated Stock and the shares in the St. Paolo Railway; subject to such life interest, he gives the said stock and shares between his sons Henry Albert and Charles Leopold and his daughter Emma Susanne. The residue of his real and personal estate he leaves to his son Henry Albert. He states that the reason his other son, Charles Leopold, does not share in the residue, is that he has made advances to him during his lifetime.

The will (dated Feb. 6, 1885), with a codicil (dated July 2, 1887), of Mr. William Thomas White, late of Kingston-on-Hull and Lambert House, Hedon, York, merchant, who died on April 12 last, was proved on Aug. 15 by Charles Hargitt Johnson and Arthur Rollit, the executors, the value of the personal estate exceeding £25,000. The testator bequeaths his furniture and effects, carriages, and horses to his wife, Mrs. Ellen White, and devises his freehold house and premises in Beverley-road, Hull, to his son, William Lambert White. The residue of his real and personal estate he leaves, upon trust, for his wife, for life, and at her death to his son, William Lambert, absolutely.

The will (dated Aug. 14, 1885), with a codicil (dated Aug. 7, 1888), of Mr. Henry Richard, M.P., late of No. 22, Bolton-gardens, Kensington, who died at Treborth, Bangor, on Aug. 21 last, was proved on Sept. 25 by Mrs. Augusta Matilda Richard, the widow, and Alfred James Shepheard, the executors, the value of the personal estate exceeding £12,000. The testator bequeaths £200 and his furniture, household effects, carriages, and horses to his wife; £200 and all his interest in the farm called Wernfaur to his niece Mary Evans; £500 to his niece Magdalen Evans; £200 each to Mary Morris, Anna Williams, and the Rev. Henry Morris; and other legacies to relatives. The residue of his property he leaves, upon trust, for his wife, for life. At her decease he gives £100 each to the University College of Wales (at Aberystwith), the University College of South Wales (at Cardiff), and the University College of North Wales (at Bangor); £200 to the Society for the Promotion of Permanent and Universal Peace (commonly called the Peace Preservation Society); £400 to his said niece Mary Evans; and £1500 to his niece Magdalen Evans; and the ultimate residue he leaves, as to one half thereof, for the children of his late sister Mary Morris, and the other half for the children of his late sister Hannah Evans.

The will (dated Jan. 28, 1887), of Mr. George Henry Haigh, J.P., D.L., late of Grainsby Hall, Lincoln and Aberia, Penrhyn-Dendraeth, Merionethshire, who died on Feb. 6, was proved on Sept. 24 by George Henry Caton Haigh, J.P., the son, one of the executors, the value of the personal estate exceeding £12,000. The testator charges his settled estates with the payment of £90,000 for the purposes set forth in a certain indenture, and also with the payment of a jointure of £1000 per annum to his wife, Mrs. Emma Jane Adelaide Haigh; and there are other provisions for the benefit of his wife and children. The Cadeby Hall estate and other property in Lincolnshire are to go according to the trusts of the real estate declared in said indenture. The residue of his property he leaves to his said son.

Mr. John Gordon Kennedy, Secretary to her Majesty's Embassy at Rome, has been appointed her Majesty's Minister Resident and Consul-General in Chili.

Messrs. W. Collins and Co., of London and Glasgow, have brought out, thus early, some serviceable diaries—commercial, scribbling, portable, and handy—for the year 1889.

The Bishop of Rochester opened a new church, on Sept. 28, in the parish of Holy Trinity, Blackheath-hill, erected in the Ravensbourne Recreation Ground, Greenwich. The site was given by the Rev. G. F. Whidborne.

SKETCHES IN JERSEY.

The fair and pleasant isles off the coast of Normandy, which are the only remnant of that ancient Duchy still attached to the Crown of England, and which never belonged to the Kingdom of France, are a favourite summer resort of English tourists. Guernsey and Jersey, the largest of these "Channel Islands," are like pieces of South Devon for soft rural beauty of inland scenery, and for the picturesque aspect of their coast; in the latter respect, however, the rocks and cliffs of Sark, and even Alderney, present the wildest and most remarkable features. Jersey, twenty-five miles to the south of Guernsey, is a fertile garden of the useful vegetables that come to our London market, producing at least 50,000 tons of potatoes yearly. Its climate is delightful; its chief town, St. Helier, has a thriving trade, and many handsome buildings; it is a pleasant residence, and there are easy excursions, by road or rail, to the inviting places on the shore all round the island. In Grouville Bay lie the Martello Towers known as Forts Henry and William, the Seymour Tower being about two miles off the coast, near the spot where the French landed in 1781. The eastern railway terminus, Gorey, a fishing village, possessing a fair harbour, pier, and hotel, was at one time the headquarters of the oyster fishery. Its principal attraction is the picturesque ivy-mantled fortress of Mont Orgueil Castle, built upon a rock. Portions of the old stronghold are supposed to have existed on the wellnigh perpendicular and wave-washed headland since the days of the Romans, but it mostly dates from the twelfth century, and was long the chief seat of Government. During one of its many sieges it successfully withstood an attack by Du Guesclin, who commanded 100,000 troops. St. George's Chapel, the Roman Well, and the stairs by which King Charles II. is said to have escaped from pursuit, and the dungeons where was confined William Prynne of Puritan memory, are interesting remains.

Another brief railway journey is that by St. Aubin's, reaching its termination at Corbière. The route is almost identical with that viewed from the deck of the steamer on her approach to St. Helier's Harbour, its most attractive features being at St. Brelade's Bay, with the tiny coves of Beau Port and Bonilly Port, and the wild rocks and cliffs of the Corbière. On the north coast are the beautiful bay of Bonne Nuit, Bouley Bay, and the bay of Rozel. Near the latter are some Druidical remains, and the jutting promontories of Le Couperon and La Coupe Point. The most comprehensive prospect of Jersey is obtained from Prince's Tower, an ancient structure, on an artificial mound of considerable height, surrounded by pleasure-gardens and other attractions for picnic-parties; it is within three miles of St. Helier, and the road thence passes Government House and Five Oaks for the Troglodyte Caves. Among our Artist's sketches, besides views of some of the places mentioned, is that of the people collecting sea-weed, here called "vraick," which is either used for manure, or is calcined to produce kelp or barilla.

"My dear, a small Dog is the greatest protection to a house; we must get one."

They get one: "The werry hidentical thing!"

The Children are sent to see the new Pet.

His too friendly overtures are received with suspicion.

"Oft in the stilly night."

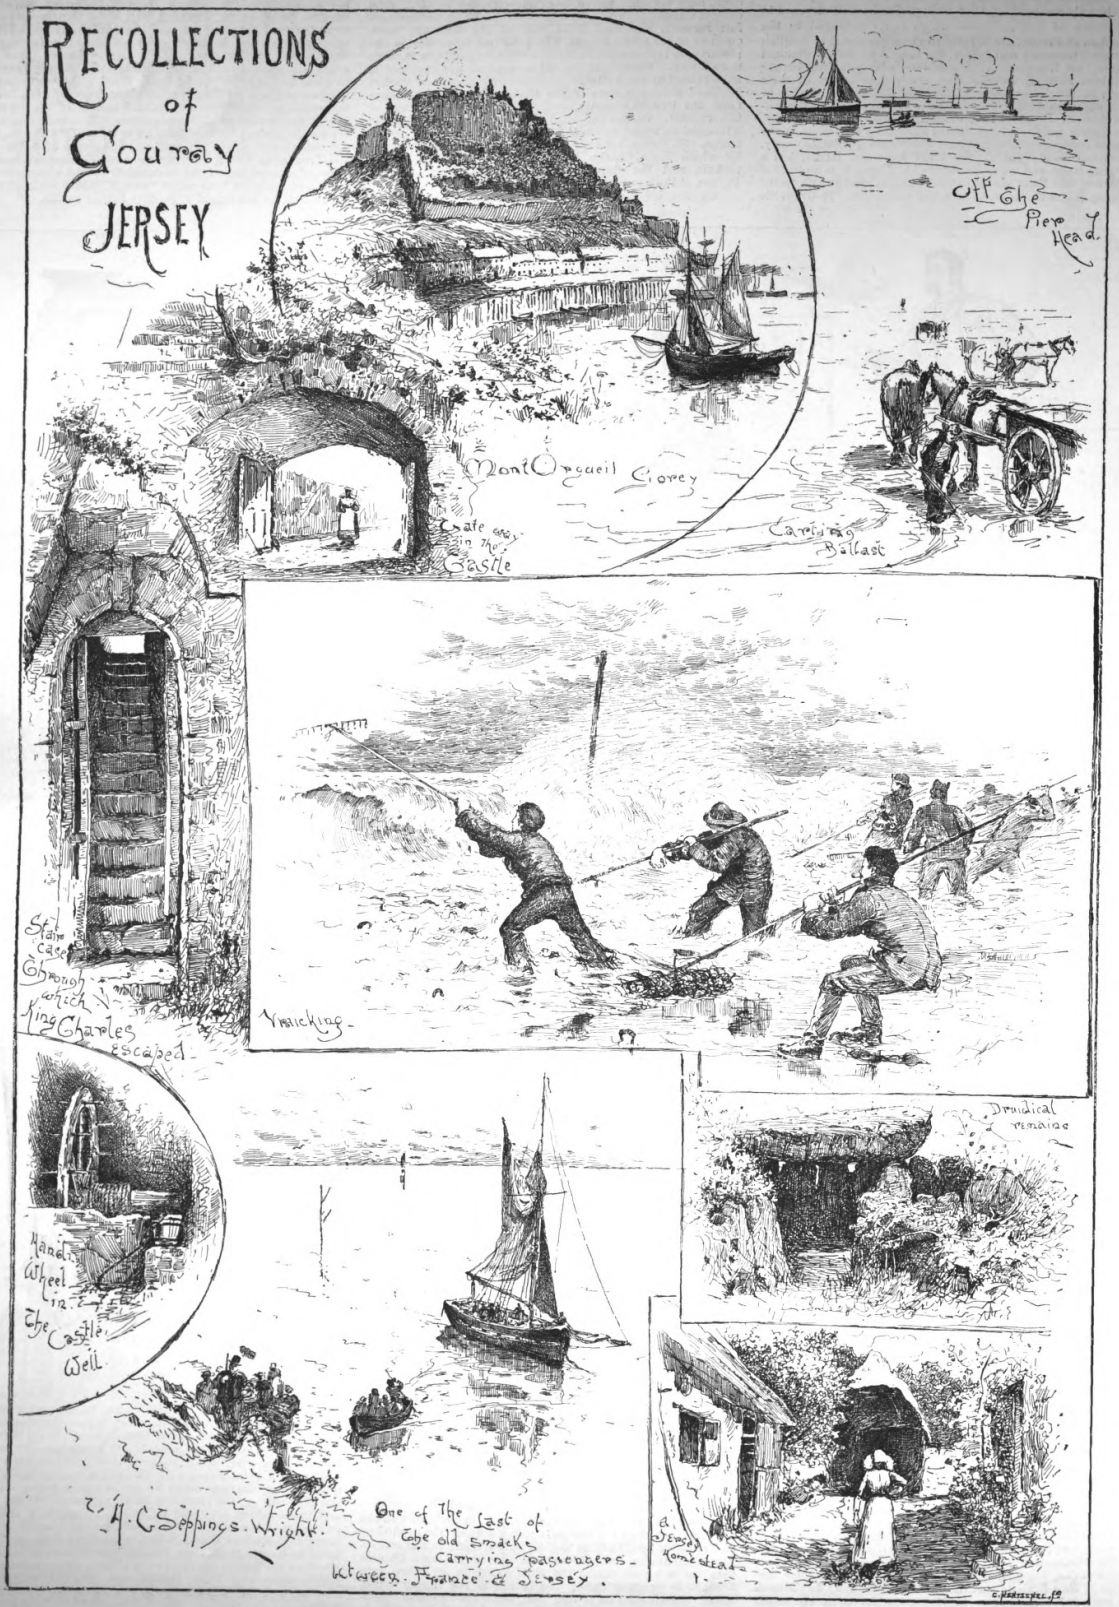
For the sake of peace and quiet.

Rest at last.

"That Puppy!"

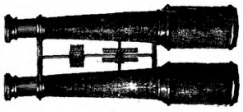
THAT TROUBLESOME PUPPY.

EMIGRANTS' INFORMATION OFFICE.



This quarter's circulars—relating to Canada, the Australasian and South African Colonies—have just been issued by this office, under the supervision of the Colonial Office; and a poster, giving a summary, is exhibited in every post office. Queensland grants free passages to female servants and selected unmarried agricultural labourers. Western Australia and Queensland grant assisted passages, and the two former and Natal nominated passages at reduced rates—mainly to female servants and agriculturists. Farmers with capital, and female servants, will find openings in all the Colonies; and agricultural labourers in Canada (in the summer months), New South Wales, Victoria, Queensland, Tasmania, and some districts of New Zealand; while mechanics are only in demand in very few localities, as in Melbourne for those connected with the building trades. Intending emigrants are invited to write to the office as to the arrangements (if any) which are made by Colonial Governments, and in some cases by private committees and individuals in the Colonies, for the reception and assistance of emigrants on landing. The committee wish to urge the need of careful selection in the case of emigrants, and of providing those who go out with money to keep them on arrival.

The circulars may be obtained, *free of cost*, from the office, 31, Broadway, Westminster, S.W.; and ten separate Handbooks, with maps, for each Colony, at 1d. each, post-free, or, bound together, at 1s. 6d.



INDIAN VERSUS CHINESE OPIUM.

The Commissioner of Customs at Hankow, in his report on the trade of that place for the past year, discusses the conditions and probable result of the contest between Indian and native-grown opium in Chinese markets. He thinks that Chinese taxation is by no means the chief thing to be taken into account in prognosticating the future of the Indian opium trade. On all sides he is told that, while opium consumption is increasing in western China, the use of the Indian drug is becoming more and more confined to the rich and the old. The smokers of the young generation, brought up on the native drug, are accustomed to its flavour. The superiority of the Indian is either unknown to them, or they do not care to pay for it. The total abolition of Chinese taxes would not bring Indian opium to the price of the native, even if China were to handicap home-grown opium by imposing on it heavier duties than it now pays. India, no doubt, can for years produce opium of better quality, but its relative superiority tends to grow less and less each year. The serious point appears to the Commissioner to be that quality is beginning to count for less and price for more in the competition. At the present moment, supposing all the duty and transit dues now paid on Indian opium to be removed, and placed on native opium in addition to what it already bears, the opium of Honan, which is nearly as good as Patna, could be bought in Hankow for about £8 a picul of 133 1-3 lb. less than the Indian opium. Such a thing as prepared opium boiled exclusively from Indian raw material without an admixture of the native drug can now hardly be found in the market.

The Kidderminster Town Council have appointed the Earl of Dudley Lord High Steward of the borough, he having intimated his willingness to accept the office. The late Earl of Dudley held the office for many years.

MAGAZINES FOR OCTOBER.

Nineteenth Century.—The pretentious futility, in general, of ordinary attempts, even by travelled and well-read Englishmen, to forecast the political destinies of France, is once more illustrated by Mr. Frederick Marshall, who preaches the impending ruin of that country from democratic action. He may learn, however, from Madame Blaze de Bury's article, in *Blackwood*, that Paris is not France, and that the rural voters do not mean to allow their country to be ruined. Earl Fortescue considers that the territorial extent and population assigned to the rule of the new London County Council is too large; he would give the parts of London south of the Thames to a separate County Council. A description is given, not the first we have read, of the "Chatauqua Reading Circle," a widespread corresponding society for literary and scientific studies, all over America, with a yearly Congress at Chatanqua, near the New York shore of Lake Erie. The claims of Wagner's musical, poetic, and dramatic art, and of his æsthetic philosophy, are contemptuously derided by Mr. J. F. Rowbotham. Those of the old English dramatist John Marston, the rival of Ben Jonson, are largely discussed by Mr. Algernon Swinburne. Prince Kropotkin advocates the organisation of labour in model industrial villages. Professor St. George Mivart deals with an inquiry of theological ethics. The experience of the late Naval Manœuvres is examined by Admiral Sir J. C. Colomb, M.P. English tobacco-growing, leprosy in India, and the exorcism of devils, are subjects taken in hand.

Contemporary Review.—In an article styled "The Liberal Creed," Mr. R. B. Haldane, M.P., propounds State action for the benefit of the labouring classes, provision for their higher education, and improvement of their dwellings, partly by a more equitable application of existing endowments, partly by graduated taxation of property, especially of property augmented in value by the increase of population—these measures he propounds for the adoption of the Liberal Party. Professor Max Müller, with reference to his lectures on "The Science of Thought," cites many of his philosophical "predecessors" who remarked the simultaneity of the formation of thoughts with that of words or names, called by him "the identity of language and thought"; his logic seems at fault when he assumes that the impossibility of existing apart makes two things identical. Mr. Andrew Lang fights against an anonymous literary censor in defence of Mr. Rider Haggard's romances. The continuation of Sir M. E. Grant Duff's recollections of a sojourn in Syria includes his impressions of Nazareth and the Lake of Tiberias. "Among the North Sea Trawlers," by Mr. James Runciman, is an interesting description of the life and work of our hardy fishermen and smacksmen, with a strong independent testimony to the great benefits of the religious mission, described more fully in Mr. E. J. Mather's book, "Nor'ard of the Dogger," and of the floating hospital and dispensary connected with it. A second paper, by Principal Donaldson, on the position of women in ancient Rome, treats chiefly of matrimonial relations, and of the morals and manners affecting that side of life. Mr. Antonio Gallenga, ever a political pessimist, contemplates the probability of a fierce quarrel and war between France and Italy.

National Review.—The analysis, by Mr. Arthur Baumann, M.P., of the report of the House of Lords Committee on the sweating system in certain London manufacturing industries, will be serviceable to those who cannot get at, or cannot get through, a bulky Bluebook. "Some Literary Idolatries" is a protest, by Mr. W. Watson, against the recent outburst of apparently concerted eulogies of Elizabethan dramatists other than Shakspeare. "A Chat about Woodcock" should please naturalists and old-fashioned sportsmen. The rather nebulous possibilities of a grand era for English opera are next discussed. Mr. E. J. Norris, M.P., furnishes precise historical details of the administration of St. Katharine's Hospital, founded by Matilda, Queen of King Stephen, and removed, with a singular transformation, from the site of St. Katharine's Dock to Regent's Park. There is a review of the biography of an Indian military hero, Sir Herbert Edwardes; an interesting description, by a Spanish lady novelist, of the peasant women of Galicia; a report of the late gathering of University Local Examination students and their teachers at Oxford; a philosophical and archæological inquiry, by Mr. Gerald Massey, concerning primitive religious myths and the "totems" or heraldic tribal emblems, in animal forms, of savage mankind; and an article by Commander V. L. Cameron, R.N., on the atrocious slave-trade cruelties in Central Africa, to suppress which he demands a British protectorate from Lake Nyassa northward to Lake Albert Nyanza.

Fortnightly Review.—More from Mr. Swinburne about Ben Jonson; he proves it easier to make Jonson the author of Bacon's Essays, than Bacon the author of Shakspeare's Plays. Dr. G. H. Savage, Medical Superintendent of Bethlem Hospital, contributes a valuable treatise on "Homicidal Mania." Mr. H. H. Johnston supplies a very useful account of British East Africa, the territory of the new Chartered Company. The Rev. Canon Taylor, writing again of the failure of missionary enterprise; Mr. J. Addington Symonds, on the Memoirs of Gozzi; Mr. Henry James, on those of the brothers Goncourt; Mrs. Lynn Lynton, on "The Irresponsibilities of Genius"; and Mr. Baden-Powell, on "mosquito" naval defences—are contributors of special ability on these topics.

Macmillan's Magazine.—Mr. Bret Harte continues "Cressy," and Mr. Walter Paton concludes "Gaston de Latour." An historical account of John Brown, the Abolitionist hero, and a narrative of editorial experiences in Tennessee, serve to illustrate some phases of American public life. Miss Cartwright's study of the career of George Savile, Marquis of Halifax, should be attractive to readers of Macaulay's History. There is an article on Shakspeare metaphors and other phrases used unawares in ordinary language, and one or two other pieces of fair quality.

English Illustrated.—A new Italian story by Mr. F. Marion Crawford, "Sant' Ilario," is a sequel to "Saracinesca." Another story now commenced, "The House of the Wolf," is one of France in the time of the Huguenots and the League. Mr. Swinburne's lyrical poem, "Olive," is fine verbal music.

Blackwood's Magazine.—A disgusting story, "Aut Diabolus aut Nihil"—that of a secret conclave of depraved Parisians, adepts of the spirit-medium conjuring trickery, who evoked and worshipped the personal Devil—occupies the first place in this magazine. We can entirely commend, on the contrary, Mr. T. E. Kebbel's sound and judicious article on the English agricultural labourer; Colonel T. Pilkington White's historical account of the Ordnance Surveys of Great Britain and Ireland; and Madame Blaze De Bury's discriminating comments on the attitude of French democracy. A review of the works of Maurice Jokai, the great Hungarian novelist, is of some literary interest.

Murray's Magazine.—There is no end to the responsive criticism of some recent criticisms of American institutions and manners; as Mr. Theodore Roosevelt had something to say in answer to Mr. Matthew Arnold, so Mr Andrew Lang has something to say in answer to Mr. Roosevelt. A personal memoir of the late Dean Burgon, and some remarks on the hindrances to parochial church work, are furnished by clergymen evidently well conversant with the subjects. The story of "The Reproach of Annesley," by the author of "The Silence of Dean Maitland," and that of "Quin Lough," an Irish story, by the Hon. Emily Lawless, are continued; while one, called "A Good Old Family," is commenced. Historical notes on the progress of music in England, and an examination of the German system of instruction in industrial art, are both very useful.

Longman's Magazine.—Pleasing reminiscences, by the Rev. Canon Butler, of a visit to the Lakes in 1844, and of walks and talks with Wordsworth, Hartley Coleridge, Arthur Clough, and Matthew Arnold, form the most attractive part of the contents, after the chapters of fiction, added by their writers to "A Dangerous Catspaw," and to the tale of Austrian Jews called "Orthodox." There is another short story; a discourse of gentle moralising by "A.K.H.B.," called "That Longest Day"; and a literary protest, by Mr. Archibald Ballantyne, against the pedantic affectation of antique forms and phrases of the English language.

Time.—The professional ways and work of the architect are described by Mr. Basil Champneys, who enters also into a discussion of the prospects of that art and profession. Mr. A. Sonnenschein's observations on the injurious effects of the system of examinations on teaching and learning are entitled to serious attention. Mrs. Power O'Donoghue proceeds with her entertaining account of a tour in Wicklow. There is more of "Kophetua XIII.," by Mr. Julian Corbett.

Gentleman's Magazine.—A continuation of the story of "Mrs. Beresford" is followed by Mr. J. Theodore Bent's account of a Greek rustic wedding in the Isle of Telos: the Rev. S. Baring Gould's historical notice of the impostor Baron Münchausen, a criminal adventurer in North Germany, about the beginning of the eighteenth century, whose marvellous boastful tales bequeathed his name, as a type of lying travellers, to the famous romance published in 1785; and several other articles of merit. Not the least in value is that on "Guthram, Dane-King, and the Danes at Barking," by Mr. F. T. Norris, who deserves the thanks of London and Essex antiquaries for his diligent study of the origin of a remarkable earthwork, still bearing witness to the Danish complete occupation of that part of the country, in the ninth century of the Christian era.

Cornhill.—The stories of "French Janet" and "A Life's Morning" proceed with added chapters. "A Coach Drive at the Lakes," from Rydal to Thirlmere, awakens pleasant recollections. The slang corruptions of our common English, by the quaint rough humour of reckless Western men, are exposed in an essay on "The Great American Langnage." There are "Sketches of Indian Life," and a strange tale, "The Phantom Piquet," current at a regimental mess-table in India.

Belgravia.—This magazine is filled with tolerably entertaining stories; those of "Undercurrents," by the author of "Phyllis," and "The Blackhall Ghosts," by Miss Tytler, are continued; and two short ones, "A Summer Hotel Fate" and "Fish Lake" have their scenes laid in America.

Temple Bar.—Miss Jessie Fothergill brings "From Moor Isles" near its conclusion, and Mr. W. E. Norris approaches that of "The Rogue." The second part of a good essay on Montaigne, and an agreeable notice of contemporary British diplomatists, are the best articles outside the due allowance of fiction.

Harper's Monthly.—An instructive account of the Limoges porcelain manufacture is furnished by Mr. Theodore Child, our own Paris Correspondent, with numerous engravings. The history of newspaper enterprise in the Western States of America is accompanied with memoirs and portraits of many local editors. There is a lively description of the carnival at St. Pierre, in the French West Indian island of Martinique. Mr. Pennell, the American artist, and his wife, who writes so well, presents sad views of the condition of the peasantry in the outer Hebrides. The exact and minutely detailed account of St. Louis, on the Mississippi, and of Kansas City, shows a marvellously rapid and complete development of American social life. The illustrations of old English ballads, by Messrs. E. A. Abbey and A. Parsons, are well imagined, but their execution is not equally good. Mr. Black's story, "In Far Lochaber," and the tales by Mr. W. D Howells and Miss Woolson, satisfy the taste for fiction.

The Century.—The frontispiece is a portrait of the late Miss Emma Lazarus, of New York, a Jewish young lady, whose genius as a poet was long since recognised by our own literary criticism, and of whose untimely death we heard with much regret. "An English Deer-park" is one of the careful, but not the less graceful, descriptive studies of our rural scenery, in which the late Mr. Richard Jefferies was unsurpassed. Mr. Theodore Roosevelt portrays in strong colours the outrageous characters and lawless conduct of the Western frontier men on the edge of the prairies towards the Rocky Mountains, a quarter of a century ago. The report, by Mr. George Kennan, of his personal inspection of the Russian system of penal transportation to Siberia, particularly of the Tomsk dépôt for forwarding convict prisoners, reveals shocking misery from neglect in the superior administration. Those who are curious about modern improvements in the apparatus of military wholesale homicide will find here the most accurate description of machine-guns—the Gatling, the Gardner, the Maxim, the Hotchkiss, which threaten to supersede infantry battalions in the field; and the dynamite shell gun, with pneumatic or compressed air-power to shoot forth the shell, which may possibly be adapted for coast batteries and forts. The history of the American Civil War is continued, and there are several tales and essays throwing light on the domestic affairs of the United States.

Scribner's Magazine.—"Problems in American Politics," especially that of discontinuing the inordinate tariff protection allowed to American manufacturers, that of encouraging a revival of American ship-building and mercantile marine, and that of restricting the electoral franchise to native Americans, are discussed by Mr. Hugh M'Culloch, whose authority should be of considerable weight. Another question of urgent importance, the traffic management of the United States railways, is only incidentally brought to view in the personal notices of some of the leading directors of that powerful administration. Lighter subjects are presented to the reader, with copious woodcut illustration, in the curious particulars of stage-machinery at the Opera-house, and in Mr Lester Wallack's agreeable reminiscences of a long theatrical career, with pleasing anecdotes of the late Mr Charles Mathews. The treatise on the construction of Egyptian temples, with fine engravings of the ruins of Karnak, Luxor, and Philæ, is a sound piece of archæological study.

The annual meeting of the National Association of Poor-law Officers was held on Saturday, in the board-room of the Board of Guardians at Southampton. Mr. Clay, clerk to the Shoreditch Guardians, presided, and delegates were present representing the 20,000 officers engaged in the administration of the Poor Laws throughout the country. Resolutions were passed pledging the association to take steps to ensure the insertion of clauses in the Local Government Act, giving Poor-law officers of all grades the right to superannuation. It was arranged that a memorial to this effect should be presented to the Local Government Board, and that all boards of guardians should be asked to support the project.

THE AUTHOR OF "MADAME MIDAS."

Mr. Fergus Hume, whose portrait accompanies this notice is the new famous author of "The Mystery of a Hansom Cab," and of the still more promising tale "Madame Midas," issued a few weeks ago by the Hansom Cab Publishing Company, Ludgate-hill, E.C. Mr. Hume is a young man in his third decade only, abounding in good spirits, full of vigour, and an indefatigable worker. He was born in Scotland; but his first recollections are of New Zealand, whither he was taken while yet only an infant. His youthful days were spent in preparing for the Australian bar, and with this object he took his degree at Dunedin University, and became qualified for legal practice. He early evinced a strong inclination for literary pursuits, and soon made a name for himself as dramatic critic, reviewer, writer of essays and short tales to well-known Australian journals. His first serious effort, however, in fiction was "The Mystery of a Hansom Cab," which was published in Melbourne in October, 1886, and republished in this country with unparalleled success in November of last year (1887).

Like many a first production of a young author in the line of sensational fiction Mr. Hume had little encouragement from the publishers to whom he originally submitte l the manuscript of "The Mystery of a Hansom Cab." A Melbourne firm of first rank declared that if Mr. Hume published it at his own risk, which he might do, they would not be able to dispose of 500 copies in twelve months. This was anything but encouraging to the young author. But the publishers were wrong, as results proved, much, evidently, to their chagrin. They lost the sale of the most popular book of modern times. The manuscript quite accidentally got into the hands of a young enterprising publisher, Mr. F. Trischler, who quickly perceived that the tale was one of startling novelty, and contained all the elements of success. In seven days after its publication not only 500 but 5000 copies were sold in Melbourne. A second and, again, a third edition quickly followed, until in three months 25,000 copies were disposed of, a circulation unexampled in the history of the colony. Mr. Hume's conquest did not end there. His publisher boldly struck out for other fields, and in December last he reproduced the work in this country with a measure of success that more than justified his adventurous speculation, for in less than six months considerably more than 200,000 volumes of Mr. Hume's marvellous story were in the hands of the British public—a success so startling as to astonish our booksellers and even the publishers themselves. Persons were found everywhere eagerly devouring the realistic sensational tale of Melbourne social life. Whether travelling by rail, rail, or river the unpretending little volume was ever present in some companion's or stranger's hands. Its popularity still prevails, for several thousand copies a week are sold even at the present time.

After such a triumph with "The Mystery of a Hansom Cab" it was unlikely Mr. Hume would remain long silent. It was anxiously doubted whether he could follow up his victory worthily, and display equal, not to say increased, power. The public had not long to wait before being satisfied as to Mr. Hume's fertility of invention and the versatility of his genius. His new story, "Madame Midas," is a considerable advance on his former novel, in literary composition, variety of incident, and subtlety of plot. Characters are more fully developed, the background more firm and well defined, and the principal figures more powerfully limned and more perfect in detail than in his earlier work. Of course, there is a mystery to be unravelled, and the tale is throughout highly sensational and realistic. The scene is again laid in Australia, this time principally in the gold-fields at Ballarat, and in Sandhurst, the largest town in the colony of Victoria devoted to gold-mining. The vivid pictures of Australian life and landscape are of peculiar interest. There is scarcely a family in the British Isles that has not some member or friend in one of our Australian colonies. The whole population is chiefly composed of our own flesh and blood—men with like passions with ourselves speaking the same language and reading the same literature. We find in "Madame Midas" accurate descriptions of the adopted land of many of our nearest and dearest. It is a tale from over the seas that awakens the interest of all true-born Englishmen who are concerned in becoming acquainted with life and manners in one of the most important dependencies of our vast and growing Empire.

It was to be expected from the foretaste of Mr. Hume's powers as a novelist in "The Mystery of a Hansom Cab" that his second effort, "Madame Midas," would be eagerly sought for by novel readers on this side of the Equator; but a sale almost beyond the dreams of avarice was not anticipated. Such, however, has been the experience. In eight weeks 158,000 copies have been sold. The press has been almost unanimous in its approval of the tale so full of mystery, imagination, and humour, and the novel-reading public has hailed the work with acclamation. It is a book that young and old of both sexes read with pleasure and profit: it amuses while it instructs them. They feel as if they had known life in the goldfields personally. The characters are by no means typically virtuous. Indeed, the hero, Vandeloup, is a villain of the most despicable kind, Madame Midas is worldly wise but not lovable, while Kitty is pretty but frail. Yet there is no impurity, no suggestive indecency, too common now-a-days in popular novels. It leads to a hate of evil-doing, and the "wages of sin" are prominently set forth in the final chapter. Although the persons portrayed are, on the whole, of very questionable character, "Madame Midas" is perfectly healthy in tone, but entirely free from obtrusive moralising. As a proof of the truthfulness to nature of Mr. Hume's writings, it is worthy of note that none appreciate him more than those who inhabit the regions where all his characters are supposed to move, and have their being. He is a prophet in the heart of his own country; his countrymen have a pride in him and his works. One firm alone ordered 25,000 copies for the supply of the Australian trade before a page of "Madame Midas" was published, and "repeat" orders have already been received by cable. Indeed, if Mr. Fergus Hume continues to write such interesting and thrilling tales as "The Mystery of a Hansom Cab," and especially "Madame Midas," his readers at home and abroad will not fail to appreciate him at his worth. Australians will certainly set a high price upon him; for not only is he a faithful delineator of Australian life, but also a faithful exponent of his countrymen's views, their aims and aspirations, as evidenced in his sympathy with the *recidiviste* question in the introduction of Vandeloup, an escaped convict from the French penal settlement of New Caledonia, who pollutes society in a neighbouring English colony. This subject is of great importance as well as Colonial interest, and claims the serious consideration of our politicians and diplomatists. The refuse of Parisian jails should be shot further away from our young, vigorous colony than New Caledonia. Rogues and villains are not so scarce even in Australia as to require fresh importations from perfidious France.

The success of Mr. Hume's novels is greatly due to his having hit the popular taste for fiction of a realistic and sensational kind. At the same time, the principal cause of the passion for such literature has been the appearance of late years of consummate masters in writing tales of weird realism. This is a disadvantage to a young author. It leads to comparisons which are generally odious to the new novelist. Where there are so many giants, a man of medium stature appears small, and is likely to be overlooked. To attract attention he must be a giant himself. Mr. Hume's predecessors in the particular domain he has entered upon have been many, and he has living competitors of striking ability. The greater, therefore, has been his achievement in breaking the record, by writing a work like "Madame Midas," of which 150,000 copies have been sold in two months. And there are no symptoms of any decrease in the demand for some time to come; and it will not be surprising to find that at the end of one year from date of publication 1,000,000 copies will have been sold. The tax upon printer and publishers to supply an almost insatiable demand is not lessening, but increasing. To the publishers there is certainly great credit due for their share in popularising Mr. Hume's famous tales. When a writer of genius meets with such enterprising publishers as "The Hansom Cab Publishing Company," great things can be done. It is to be hoped that the public may soon witness a repetition of their achievements. Indeed, it is an open secret that Mr. Hume is engaged on another novel of Australian life, which will be issued at the end of the year. If it proves to be equal in merit to "Madame Midas," the public will be abundantly satisfied with his performance

THE INTERNATIONAL FUR STORE

MUSIC.

"CARINA" AT THE OPERA COMIQUE.

Long known as one of the most gifted composers of the Royal Academy of Music, Madame Julia Woolf is fortunate to have had her tuneful comic opera of "Carina"—libretto and lyrics by Mr. E. L. Blanchard and Mr. Cunningham Bridgman—produced in the most brilliant manner by the management of the Opera Comique, and staged by so supremely skilful a stage manager as Mr. Charles Harris. "Carina" was brought out with unmistakable success on the Twenty-seventh of September. It proved a most attractive musical entertainment. Difficult would it have been to have found a more charming Carina than Miss Camille Darville, personally exceedingly captivating, and a really accomplished songstress and piquante actress. Carina is the beauty of Barcelona, which Spanish port appears about the period of the opera, early in the last century, to have abounded in beauties, to judge from the comely female representatives of "Carina." A graceful, blue-eyed blonde, with a merry smile and sweet voice, Carina is destined by her worldly-minded guardian and uncle, General Bobadillo, to wed an opulent Cuban merchant; but she chances infinitely to prefer her handsome young sweetheart, Don Felix, whose confidential servant, Cedrillo, assumes the guise of her Havannah suitor in order to further the suit of his master. Through this ruse, General Bobadillo is outwitted, Don Felix gains the hand of Carina, and Cedrillo pairs off with Carina's lively maid, Zara. Such, in brief, is the plot, which moves briskly to the tune of enlivening music, done justice to by the efficient orchestra conducted by Mr. Auguste Van Biene. The three pretty daughters of the innkeeper, Ella, Vena, and Zeta, are the first to win approval by their *chic* acting and singing. The melodious opening ballad of Don Felix (Mr. Durward Lely), "Within the Halls of Memory," well deserved its encore; and his quaint "Twelve o'clock" duet with the General (Mr. G. H. Snazelle) was likewise well received. Quite a triumph in its way for Mr. Charles Harris was the encored Chorus of Duennas, rich in the humorous "business" for the invention of which he is noted. The grotesque action and steps of the General's three servants, headed by Mr. Charles Collette as Patricho, gained the encore for Bobadillo's song of lamentation. The first song of Carina, "So brightly gleams at dawn of day," one of Mr. Blanchard's most poetical lyrics, was sung by Miss Darville with exquisite sweetness and expression, and was heartily redemanded. With equal favour was the Carina and Don Felix duet of "I am waiting, timidly waiting" greeted. And the animated finale to the first act (wherein Don Felix makes love to Carina through the open lid of his rival's strong box) formed a bright and mirthful picture. The last act vied with the first in lustrous beauty of costume. The incidental divertissement, arranged by Mr. John D'Auban, afforded scope for that dainty danseuse, Miss Alice Lethbridge. Spirit-stirring was the duet "What nerves the arm when danger near," sung by Carina and Don Felix; and waltz-inspiring was Zara's gipsy song, "Let the little Moorish maiden." The delightfully fresh voice of Miss Darville was heard to signal advantage in "The Hoop of Gold." Indeed, the songs of this captivating vocalist proved the most charming features of "Carina." The opera was throughout well acted by Miss Camille Darville, Mr. G. H. Snazelle, Miss Josephine Findlay, Madame Ada Dorée, Mr. Charles Collette, Mr. E. D. Ward, and Miss Flora Wilmot. Miss Jessica Dene, and Miss Blanche Murray. The costumes, designed by M. Wilhelm, were triumphs of harmonious colouring, and reflected credit on Madame Auguste, Alias, and Miss Fisher.

Mr. Freeman Thomas's Promenade Concerts at Covent-Garden Theatre have continued to supply attractive musical performances, at a time when London music is suspended from its usual activity. At a recent "classical" night, Madame Scalchi, Miss A. Whitacre, and Mr. E. Lloyd were the vocalists; and Miss Dora Bright, the esteemed pianist, made her first appearance at these concerts this season. This lady performed, with excellent effect, her own clever pianoforte concerto—a composition which has recently elicited deserved commendation when it was likewise worthily interpreted by herself. The concert now specially referred to also included Mr. Carrodus's fine rendering of the "Allegro" from Beethoven's violin concerto; in addition to which the classical selection included effective orchestral performances of Weber's overture to "Oberon," the entr'acte from Gounod's "Romeo et Juliette," and Hermann Goetz's symphony in F. Mr. Gwyllym Crowe conducted as usual.

On Oct. 8 the Russian National Opera Company will begin a series of concerts at the Royal Albert Hall; the programmes including selections from Rubinstein's opera "The Demon," Glinka's "Life for the Czar," and Tschaikowski's "Mazeppa"; and other compositions. Three hundred selected performers, including forty-eight lady pianists (playing on twenty-four pianos), will contribute to the general effect.

Occasional operatic performances have been successfully continued at the Alexandra Palace, under the direction of Mr. Valentine Smith, and conducted by Mr. W. Carter. A version of Bellini's "La Sonnambula" was given on Sept. 29.

Among the important provincial musical arrangements is the tour of Mr. Santley, under the direction of Mr. N. Vert, beginning at Eastbourne, on Sept. 29, and followed by concerts, during the first week of October, at Tunbridge Wells, St. Leonards, Folkestone, Reigate, Southsea, and Bournemouth; other concerts being announced for subsequent weeks.

On October 11, as previously announced, a festival performance is to take place at Hanley, under the direction of Dr. Swinnerton Heap, of Birmingham. The notion of a festival for North Staffordshire was first mooted in 1887, at a meeting of various choral societies of the district, the result having been the decision to hold a one-day festival in the new Victoria Hall, Hanley, the proceeds to be devoted to the benefit of the North Staffordshire Infirmary, and the Burslem, Longton, and Leek Cottage Hospitals—institutions of the district which are eminently deserving of all possible support. Unlike some of our provincial festivals, that now referred to will not rely on donations or collections, it being anticipated that effective performances given in so capacious a building as the Hanley Townhall—capable of holding about 2500 persons—should prove sufficiently remunerative to answer the desired purpose. It is to be hoped that the result of the forthcoming tentative experiment may be so successful as to lead to more extensive arrangements, and still greater money results for the charities on future occasions. The prospectus of the one day's festival at Hanley, on Oct. 11, is of good promise. In the morning "Elijah" will be performed; and in the evening a miscellaneous concert will be given, among many interesting features in the programme being a movement of Beethoven's violin concerto rendered by Mr. J. T. Carrodus, a new concert overture by Mr. A. Ashton, and a scena from Dr. S. Heap's cantata "The Maid of Astolat," sung by Mr. E. Lloyd.

EXHIBITION OF THE PHOTOGRAPHIC SOCIETY.

On Oct. 1, the annual exhibition of the Photographic Society of Great Britain was opened to the public at the galleries of the Royal Society of Painters in Water-Colours in Pall-mall. In spite of the experiment which the society has this year made in holding their exhibition without awarding any medal or prize, as they had been wont to do in former years, there does not seem to be any apparent falling off either in the amount or quality of the work on view. Without undertaking any special criticism of the various technical processes employed, we will confine ourselves rather to the consideration of the work more from an artistic point of view. It is, however, worth notice that the Platinotype process, which is so well suited for landscape and out-of-door work generally, seems to increase in favour with photographers, both amateur and professional, as the numerous examples in the present exhibition testify. In fact, the predominance of landscape is a distinct characteristic of this year's show, and although there is no great increase of really artistic work, yet many of the landscapes attain to a degree of excellence that deserves high praise.

The most striking feature of this year's display is undoubtedly the fine series of photographs of the ruined city of Palmyra, in the Syrian Desert, taken by Mr. Horace Gridley. Mr. Gridley, who spared no expense or trouble to accomplish his purpose, is, we believe, the first who has ever taken photographs of these magnificent ruins, and the results that he has obtained, besides possessing a great archæological value, are splendid specimens of photographic art, and afford abundant proof of the skill and discrimination with which he is able to manipulate his camera.

Among the most artistic productions in the exhibition we would include a series of ten pictures, by J. Gale (Nos. 73-83 inclusive), which are well worth examination. No. 73, "Off to Work"; No. 75, "A Sussex Drift-way"; No. 80, "The Path of the Hills"; and Nos. 81, 82, and 83, are really first-class work. On the opposite wall to Mr. Gridley's exhibit, near the door, hang two landscapes (Nos. 13 and 14), by H. Tolley, which are worthy of notice; and further along on the same wall are three remarkably powerful studies—"In the Castle Garth, Newcastle" (No. 26)—by Lyddell Sawyer.

No. 37, "Spring-time—Otterton Park," is a good example of the suitability of the Platinotype process for reproducing the complicated details of foliage. Mr. Frank Sutcliffe sends a large contribution of out-of-door subjects of great merit. There are, as usual, some excellent photographs of yachts, although the number is smaller than in former years, while mountain and river scenes abound—Captain Abney and G. S. Edwards send some good examples of the latter style of subject, principally Alpine views.

We are glad to notice that the predilection for life-size portraits—which are seldom at all satisfactory—seems to be dying out. Several well-known firms, however, send examples of a more suitable size.

Mr. W. K. Burton, who contributes several interesting photographs, has a frame of views of Mount Bandai, in Japan, taken very soon after the recent eruption there. The examples which the Autotype Company exhibit show no falling off from the high state of excellence that its work has reached.

The Roman Catholic Bishop of Southwark has opened the new schools for junior boys at Beaumont College, Old Windsor.

TAYLOR'S CIMOLITE, OR PREPARED WHITE FULLER'S EARTH, is the only reliable and thoroughly harmless SKIN POWDER. It is prepared by an experienced Chemist, and under its Latin name of "Terra Cimolia" is constantly prescribed by the most eminent Dermatologists, and was specially recommended by the late Sir Erasmus Wilson, F.R.S., and by the late Dr. Tilbury Fox. For general use it is simply invaluable, and far superior to Glycerine or any greasy compound. It is the Best Dusting-Powder for Infants. Formerly used in the Nurseries of her Majesty the Queen, the Princess of Wales, the Duchess of Teck, &c., and now extensively employed in the Nurseries of her Imperial Majesty the Empress of Russia, the Duchess of Edinburgh, our own Royal Princesses and Duchesses, H.R.H., the Duchess of Cumberland, and most of the Aristocracy. Recommended by the faculty. The eminent physician, Dr. Routh, says:—"I feel I cannot too highly recommend it." "I cannot afford to be without it."—Dr. Bainbridge. A lady writes:—"Here, in India, for 'Prickly Heat,' I found it worth a guinea a teaspoonful." Post-free. Send 14 or 36 penny stamps.
Ask for "Taylor's Cimolite." See that the Trade Mark, Name and Address, are on every Parcel, and do not be persuaded to take imitations.
Introduced into medical practice and prepared by JOHN TAYLOR, Chemist, 18, Baker-street, London, W.

AIX-LES-BAINS, SAVOY, Thermal Station. Most important of Continental Sulphurous Spas. Eleven hours from Paris. Sciatica, gout, and catarrh of the pharynx, larynx, and nasal passages efficaciously treated. The most celebrated doctors attend this luxurious and curative station.

HAUSER FRERES, Proprietors.

ROME.—Minerva Hotel. Healthful position, near Pantheon. Superior Table d'Hôte, 5 francs, wine included. Arrangements made at prices relatively cheaper than other houses. English spoken. Lift.—J. SAUVE, Propr.

WINTER RESIDENCE in the ENGADINE. The Maloja Kursaal (6000 ft. above sea-level), open for the whole Winter. New ice rink and sun gallery. Milanese band, snow-shoeing, skating, tobogganing, and sleighing. Vide "Alpine Winter in its Medical Aspects" (Churchill).

MONTE CARLO AS A SUMMER RESORT.
For a summer stay, Monte Carlo adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breeze. The beach is covered with the softest sand, and there are comfortable villas and apartments, with warm sea-baths, and every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its natural fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it leading the rendezvous of the aristocratic world, the most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Railway Carriages, Safety Brakes, and Gaze's Offices.

THE HIGHLANDS OF BRAZIL SANATORIUM, in one of the finest all-the-year-round climates known. Inland, bracing, 2300 ft. above sea-level, just within the Southern Temperate Zone; good summer and winter alike; no change of residence forced on the invalid by the advance of the seasons. English society. English church. The voyage from England or the United States is a favourite fair-weather ocean trip. Terms, 10s. to 12s. per diem. Circular, with further particulars from, Messrs. WILLIAM JONES, Esq., 39, Drury-buildings, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

COCKLE'S ANTIBILIOUS PILLS. FOR LIVER.

COCKLE'S ANTIBILIOUS PILLS. FOR BILE.

COCKLE'S ANTIBILIOUS PILLS. FOR INDIGESTION.

COCKLE'S ANTIBILIOUS PILLS. FOR HEARTBURN.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

OBITUARY.

LORD SACKVILLE.

The Right Honourable Mortimer Sackville-West, Lord Sackville, of Knole, Kent, died on Oct. 1, at Knole. Sevenoaks. He was born Sept. 22, 1820, the third son of George John, fifth Earl Delawarr, by Lady Elizabeth Sackville, his wife, daughter and heiress of John Frederick, Duke of Dorset. This lady was created, in 1864, Baroness Buckhurst, with a peculiar limitation. At her death, in 1870, her son, the nobleman whose death we record, assumed, erroneously, the title of Buckhurst; but was himself raised to the Peerage, as Baron Sackville, in 1876. He married, first, Jan. 14, 1847, Fanny Charlotte, daughter of Major-General Dickson, C.B., of Beenham, Berks, which lady died Jan. 19, 1870; and secondly, on June 12, 1873, Elizabeth, second daughter of Mr. Charles W. Faber, of Northaw House, Herts. Dying without issue, he is succeeded, under the limitation of the second patent, by his brother, the Hon. Sir Lionel Sackville Sackville-West, K.C.M.G., Ambassador at Washington.

SIR HENRY ANTHONY FARRINGTON, BART.

Sir Henry Anthony Farrington, Bart., died on Sept. 19, at Gosford House, Ottery St. Mary, Devon, aged seventy-seven. He was eldest son of Sir Henry Maturin Farrington, second Baronet, by Jane, his third wife, daughter of Mr. Roger Curry. He succeeded his father, Oct. 4, 1834, and married, May 16, 1833, Frances Elizabeth, eldest daughter of the Rev. J. Warren, D.D., of Portview, Devon. His eldest son and successor is Sir William Hicks Farrington, fifth Baronet, M.D., born in 1838, and married, Dec. 7, 1870, to Amy Florence, youngest daughter of Mr. Alexander Glendinning.

MR. GAMBIER PARRY.

Mr. Thomas Gambier Parry, of Highnam Court, in the county of Gloucester, M.A., J.P. and D.L., High Sheriff 1850, died on Sept. 28. He was born Feb. 22, 1816, only son of Mr. Richard Parry, of Banstead, Surrey, Governor of Bencoolen, by his wife, Mary Gambier. He was educated at Eton and Trinity College, Cambridge, and gained much repute as a disciple of art; he was author of several works on the subject. He married, first, 1839, Anna Maria Isabella, second daughter of Mr. Henry Fynes Clinton, of Welwyn, Herts, cousin of the Duke of Newcastle; and secondly, 1851, Ethelinda, daughter of the Ven. Rev. F. Lear, D.D., late Dean of Salisbury. He had issue by each. His eldest surviving son is Charles Hubert Hastings Parry, the composer.

Earl Fortescue distributed the prizes at the Devon County School, West Buckland.

Lord Hartington was on Oct. 2 presented with the freedom of the burgh of Nairn.

Mr. Alderman Whitehead has been elected Lord Mayor of London for the coming year.

Mr. Henry Irving was entertained at a banquet by the Edinburgh Pen and Pencil Club, on Oct. 2.

The Church Congress was opened on Oct. 2, at Manchester, with an address from the Bishop of the diocese to an audience of 4000 persons in the Free Trade Hall.

Addresses were given on Oct. 1 on the opening of several of the medical schools in connection with the metropolitan hospitals.

Lord Moncrieff, who presides over the Second Division of the Court of Session at Edinburgh, has resigned his appointment. The patronage of the chair lies with the Lord Advocate.

The town of Penang is to be lighted with 600 of the Defries patent pneumatic street-lamps of thirty-candle power, similar to those successfully in use to light the town of Erith and several other towns.

Mr. and Mrs. German Reed's Entertainment will reopen for the autumn season on Monday evening, Oct. 8, with "Wanted—an Heir," by Malcolm Watson, music by Alfred J. Caldicott; and an entirely new musical sketch by Mr. Corney Grain.

The legatees of the late Sir Joseph Whitworth have offered to the authorities of Owen's College, Manchester, a site for a hospital, £35,000 towards the cost of erecting and furnishing it, and £1000 a year towards its maintenance, without imposing any conditions.

St. Dunstan's College, situate at Catford Bridge, was formally opened on Oct. 1. The institution has been established under a scheme of the Charity Commissioners, to provide education of a high order, and in accordance with modern requirements, for 400 boys.

Mr. Boehm's statue of Lord Shaftesbury, which is placed in Westminster Abbey near the western door, was unveiled on Oct. 1 by Baroness Burdett-Coutts. A preliminary meeting was held in the Jerusalem Chamber. Canon Duckworth, in the absence of the Dean, presided; and there were present the Earl of Shaftesbury, Baroness Burdett-Coutts, Mr. Burdett-Coutts, Lord and Lady Sherbrooke, Lady Hatherton, and many other friends and admirers of the late Earl.

The first exhibition of the Arts and Crafts Society was opened on Oct. 1 at the new gallery in Regent-street. Among the promoters of the movement are Mr. Walter Crane, Mr. Burne-Jones, and Mr. William Morris, the object being to bring before the public the work of the actual designer and craftsman, as distinguished from the mere vendor or middleman. The exhibition is full of interest.

The autumnal assembly of the Baptist Union of Great Britain and Ireland began in Huddersfield on Oct. 1, and was continued until the 5th. The delegates were received at the Townhall by Mr. Alderman Joseph Brooke, the Mayor; and the Rev. John Haslam, President of the Yorkshire Association of Baptist Churches, welcomed the delegates.

The Birkbeck Literary and Scientific Institution opened its sixty-sixth session on Monday, Oct. 1. Nearly 200 classes meet weekly in commercial and technical subjects, mathematics, natural, applied, and mental science, languages, history, literature, art, music, law, &c. Special classes are arranged for University, Civil Service, and other examinations. The classes are open to both sexes.

The Registrar-General reports that in London 2395 births and 1314 deaths were registered in the week ending Sept. 29. Allowing for increase of population, the births were 325, and the deaths 94, below the average numbers in the corresponding weeks of the last ten years. The deaths included 30 from measles, 22 from scarlet fever, 27 from diphtheria, 13 from whooping-cough, 13 from enteric fever, 77 from diarrhœa and dysentery. The deaths referred to diseases of the respiratory organs rose to 213, but were 11 below the corrected average. Different forms of violence caused 61 deaths.

MARRIAGES.

On Sept. 26, at St. John's Church, Cotehill, Cumberland, by the Rev. H. Slater, M.A., Vicar of Bywell St. Andrew, Northumberland, assisted by the Rev. J. Howard, Vicar of the parish, and the Rev. R. Duncan, M.A., Vicar of St. James's, Whitehaven, Robert Hodgson, only son of Thomas Horrocks, Esq., J.P., of Eden Brows, Cumberland, to Margaret, eldest daughter of the late Robert Thomlinson, Esq., of Carleton, and niece of John Thomlinson, Esq., of Englethwaite, Cumberland. No cards.

On Sept. 27, at Holy Trinity Church, Kilburn, by the Rev. Reginald Pearse, Francis Robinson, of Great Yarmouth, to Mary Ann, elder daughter of John Faith, of Kilburn.

DEATH.

In Memoriam. In loving memory of Leopoldina Margaret Duncan, the beloved daughter of the Chevalier E. Biletta, who died Sept. 28, 1883.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

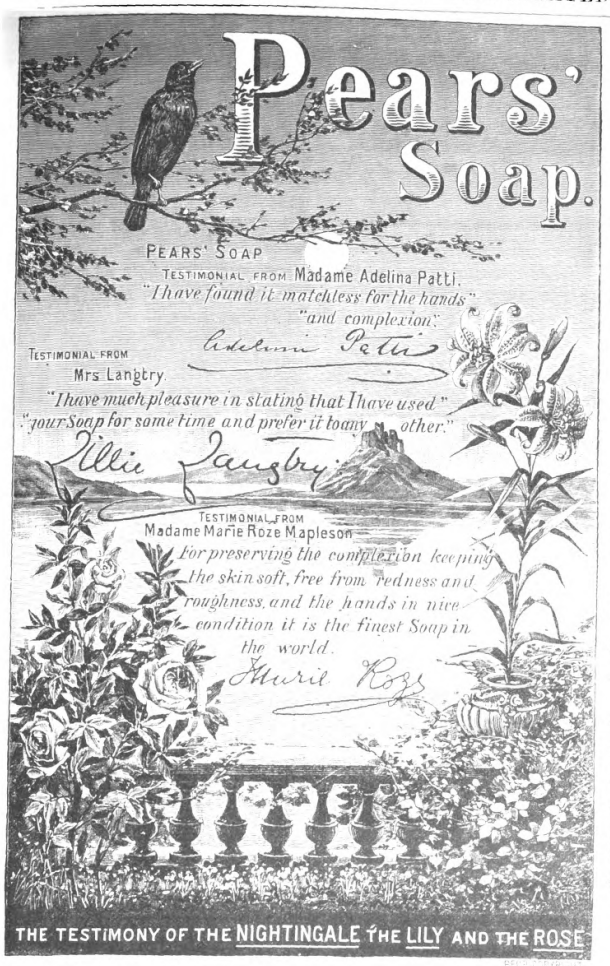
OF ALL SADDLERS, IRONMONGERS, CORN DEALERS, GROCERS, &c.



SPRATT'S PATENT LIMITED, LONDON, S.E.

THE SECRET OF SUCCESS!!!

"A new invention is brought before the public, and commands success. A score of *abominable imitations* are immediately introduced by the unscrupulous, who, in copying the original closely enough to deceive the public, and yet not so exactly as to infringe upon legal rights, exercise an ingenuity that, employed in an original channel, could not fail to secure reputation and profit."—ADAMS.

CAUTION.—*Examine each Bottle, and see that the Capsule is marked* ENO'S "FRUIT SALT." *Without it you have been imposed on by worthless imitations. Sold by all Chemists.*

PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

HEALTH·STRENGTH
VIGOUR
LONG·LIFE·

Guaranteed by the use of HUNT'S FAMILY PILLS. Large numbers of people in robust health can testify to the truth of this assertion, having regulated themselves entirely by these Pills for over 50 years. One pill will invariably relieve, and a little perseverance radically cure, either a Torpid Liver, Costiveness, Indigestion, Pains in the Back or Head, Influenza or Feverish Cold, Rheumatism, Lumbago, Flatulency, or Giddiness. THEY RESTORE BRIGHTNESS TO THE EYE, CLEARNESS TO THE COMPLEXION, SHARPNESS TO THE INTELLECT, AND ENERGY TO BOTH MIND AND BODY. To Ladies they are invaluable. Sold everywhere, in boxes, 1s. 1½d. and 2s. 9d. Wholesale Agents, WILCOX and Co., 239, Oxford-street, London. Post-free.

CAUTION.
BENGER'S FOOD differs entirely from any other Food obtainable. When mixed with warm milk it forms a delicate nutritious cream, in which the curd is reduced to the same flocculent digestible condition in which it exists in human milk, so that hard indigestible masses cannot form in the stomach.

It may be had of Chemists, &c., everywhere, or will be forwarded free by Parcel Post direct from the Manufacturers.

Allen & Hanburys'
"Perfected"
Cod Liver Oil

"Is as nearly tasteless as Cod-Liver Oil can be."—Lancet.
"Has almost the delicacy of salad oil."—Brit. Med. Journal.
"No nauseous eructations follow after it is swallowed."—Medical Press.

It can be borne and digested by the most delicate; it is the only oil which does not "repeat;" and for these reasons the most efficacious kind in use. In capsuled Bottles only, at 1s. 4d., 2s. 6d., 4s. 9d., and 9s.
Sold Everywhere.

BYNIN, LIQUID MALT, forms a valuable adjunct to Cod-Liver Oil, being not only a highly-concentrated and nutritious Food, but a powerful aid to the digestion of all starchy and farinaceous matters, rendering them easy of assimilation by the most enfeebled invalid. BYNIN, being liquid, is entirely free from the inconvenient treacle-like consistence of ordinary Malt Extract. It is very palatable, and possesses the nutritive and peptic properties of malt in perfection. It is a valuable remedy in Consumption and Wasting Diseases. In Bottles at 1s. 9d. each.

The Perfumed Realms of Flora.

Fair Flora, the Goddess of Flowers, one day
Had summoned her legions around;
And thus she addressed them in sweet, mellow tones:
"My wishes let echo resound;
'Tis my wish to distil from each beautiful flower,
That peeps from the dew-spangled scene,
The choicest, the sweetest, the richest of scents,
And such as are fit for a Queen."

Then the beautiful rose raised its sweet-tinted head,
And the violet crept from its bed;
The jessamine, sweetbriar, lavender, too,
Their fragrance around her now shed.
"Now list," said fair Flora; and waving her hand,
A change came around that fair scene;
For, bubbling aloft from a fountain of flowers,
Came gushing the sweet "FLORILINE."

FLORILINE
FOR THE TEETH AND BREATH

Is the best Liquid Dentifrice.
Cleanses the Teeth,
Hardens the Gums,
And purifies the Breath.

Preserves the Teeth by
Removing parasites, and

OUR NOTE BOOK.

BY JAMES PAYN

A medical paper furnishes us with the interesting information of how a collection for charitable purposes is made up from a concert audience of about 10,000 persons. There were found in the bags 2 sovereigns, 4 half-sovereigns, 20 florins, 150 shillings, 605 sixpences, 706 threepenny-pieces, 6714 pennies, and 2224 halfpennies. It has been found by experience that in book-buying (which is the reason why there are so many two-shilling novels) a florin is the largest sum which the ordinary railway passenger parts with easily; in charity, it seems, the coin is much smaller. Indeed, it is rather surprising to observe, in church-going families of means, how very small a sum is generally provided beforehand when a sermon "for the benefit" of something or other has been announced on the previous Sunday. Of course, however, there are exceptions to this economical practice. I remember a friend of mine, constant in his attendance at what used to be a famous "high church" place of worship in Knightsbridge, being asked in church, in my presence, by a total stranger to lend him his address-card and also a five-pound note for the collector. My friend complied; and after church I ventured to point out to him that he had been a little imprudent. It would have been easy enough to pretend to put something into that highly-ornamented velvet bag, and then to withdraw it; moreover, the charitable gentleman need not have been so eager with his handsome subscription, but might have sent his cheque the next day. My friend admitted the cogency of my remarks, and I (being very young at the time) congratulated myself not a little upon my superior intelligence and forethought. Only, by the first post next morning my friend got his money. Both these gentlemen were what, of course, would be called in the Great Republic "champion churchgoers"; but there are many benighted persons whose only notion of orthodoxy is a subscription, not to the Thirty-nine Articles, but to the plate. There is a pleasant American story of a storm at sea, when matters had become so serious that the skipper requested anyone acquainted with such matters to conduct a prayer-meeting in the chief cabin. Either through ignorance or modesty, everyone declined this office; but one gentleman, anxious to do something, however slight, in the direction indicated, observed that though preaching was out of his line, he would willingly "make a *Col*-lection."

It is an unfortunate peculiarity of the more combative of our philanthropists, and especially of those who have been called (not without some justice) Anti-everything-arians, that they seldom trouble themselves to study the nature of the subject they assail. They may be right enough in their views, but when they give their reasons for entertaining them they often show quite a curious ignorance of the matter in question and of those who practise what is found fault with. The teetotaller, for example (as if he had not work enough on his hands without making enemies outside the ring of spirit-drinkers), almost always falls foul of tobacco as being an incentive to intoxication; a statement which, to those acquainted with the subject, does not hold his favourite beverage—water. The habitual smoker hardly ever drinks, and tobacco has done more to banish wine from our dinner-tables than all the arguments that have been directed against it. This ignorance is caused, probably, by extreme virtue; the teetotaller knows nothing about "the poison pipe" and its contents; but the display of it weakens his cause. The Bishop and the Chancellor of Carlisle have recently been denouncing gambling, and with great propriety; for, next to drink, it is, perhaps, the vice that causes the most widespread misery. But (what is not surprising, perhaps, in a Bishop and a diocesan Chancellor) they do not seem very well acquainted with what they denounce. They contend that its immorality consists in the fact that "money passes from one man to another with a dead loss to one, and an unreasonable gain to another." This may be said of "threepenny whist" (and even that great moralist, Dr. Johnson, expressed his contempt for playing at cards "for nothing," as being a sheer waste of time) or of a bet of a pair of gloves with a lady. No person of commonsense would call this "gambling," any more than speculating in a raffle, which the Bishop admits he has done—though with an unsatisfactory result. The simple fact is that the proper definition of gambling is, playing for more than we can afford. Penny points at whist may be gambling in a very poor man, and pound points not be gambling in a rich one. When the game ceases to be an amusement from the size of the stake, and the stake, and not the game, is the attraction, then, and then only, gambling begins. The next greatest gamblers to the bookmakers on the turf, and the City clerks and small tradesmen who are ruined by them and led into crime, are often our bankers and merchant princes, who, though they never bet a shilling, "back their own opinion" in their "operations" with a freedom rarely seen at Doncaster or Ascot; their success in this is termed "commercial enterprise."

The "Man Hunter" is a story-book which should in these days, when we are all man (or monster) hunting, have a phenominal circulation. It purports to narrate the actual experience of a police detective, and is rather a good book of its kind; but as one reads about the hard nuts he had to crack, it cannot but strike one how very much harder is this terrible nut in Whitechapel. I am not one of those who cry shame upon the police because they have failed to discover what half the intelligence (and all the folly) of London has failed to disclose. By the time these words are read it is possible the mystery may be solved, and at least one-tenth of one's acquaintance will be telling us how they had predicted and even written (private) letters to the Home Office about it, from the very first; but at present even the most keen-sighted of us are all in the dark, and yet we expect that our policemen should know all about it as though the darkness were physical, and they must needs throw light upon it because they carry a lantern. For my part, I have reason to be impressed with the sagacity of the force with respect to this very matter. On the day after the last massacre, a friend and myself agreed to visit its scenes: such expeditions are not at all in our line, and I may say without vanity that though one individual may perhaps be discovered (in episcopal costume) as respectable-looking as either of us, there are not two persons in the world who, together, could be pronounced more respectable, or less likely to be found on any such errand. Yet this is what happened. Having taken a ticket by the Underground to Aldgate, we inquired of a police inspector on the platform whether the next train went thither—that and nothing more; and this is what he replied: "Yes, gentlemen; and when you get there you will turn to the right for Mitre-square, and to the left along the Commercial-road for Berner-street." Mr. Herbert Spencer himself could not have exhibited a greater talent for mental analysis; it would have been unnecessary (in the ridiculous supposition of either of us having been "disorderly") for that Inspector to have drawn his truncheon: he might have knocked both of us down with a feather.

What adds a grain of disgust to the mountain of horror excited by these crimes, is that, even if the wretch be caught, he will be probably found to be mad, and therefore will cheat the gallows. (*If* not mad, by-the-by, I wonder what the anti-punishment-of-death gentlemen will say to *him?* It will be rather a crucial test of "abolitionist" opinion.) Curiously enough, in the only case that can be said to be any sort of parallel to it, that of Renwick Williams (nicknamed "The Monster"), the criminal also escaped justice. *He* went about with a large knife slashing women—not only, however, in poor neighbourhoods like Whitechapel—and produced a panic in the whole sex. Being at last caught in the very act, in St. James's-street, he was tried on a number of charges; but, though capitally convicted, only suffered, for reasons best known to Father Antic the Law, two years' imprisonment for three of them.

It is said that when the need for leadership, whether intellectual or otherwise, arises, the leader appears with it—that when the hour comes we always find the man; but in this case we have certainly not found the man. It must also be admitted that no one has as yet shown himself "keen to track Suggestion to her inmost cell" in the attempt to find him. On the other hand, what is wanting in quality has been amply made up in quantity; never were there so many suggestions to "the proper quarter," nor such wild ones. Occurrences which seize the public imagination, as was seen in the Tichborne trial, prove, perhaps more than anything else, Carlyle's famous dictum as to what our population is "mostly" composed of. In a single day's voluntary contributions towards the solution of this mystery I notice no less than twenty theories, all of which might have emanated from Colney Hatch. The general impression seems to be that the murderer is a high-class religious enthusiast—of course it may be so; but I hope he will not, as usual, found a sect—and the most popular remedy is the employment of blood-hounds. Imagine a bloodhound, starting on this inquiry a week after the event, restrained with difficulty by two policemen, and followed and surrounded by certainly not less than twenty thousand persons attracted by that gratuitous spectacle! We must go to poetry—"The Questing Beast"—for a parallel to that sanguine and persevering animal. One gentleman writes: "I have seen boarhounds, not remarkable for hunting powers, carry scent up Regent-street and Portland-place, in the early morning, in either '81 or '82." This is, to me, as great a mystery as the murders. What *does* it mean? How did they "carry scent"? In scent-bottles, perhaps, round their necks, as the St. Bernard dogs carry brandy. Another writes that bloodhounds are not necessary; "bassets and dachshunds, from Germany, would be equally efficacious." This I quite believe, even though I have been hitherto under the impression that a basset was a fish. If it be so, they might hunt in couples—the dachshund on the pavement and the basset in the gutter. "The error is," observes this correspondent, "that scent is necessarily a foot scent. . . . It depends more on the will-of-the-wisp scent than the hounds." This, again, is entirely beyond my limited intelligence; but the writer has hit upon a good name for his own as well as the other theories. They are all will-of-the-wisps, leading us, if they emit light at all, upon a fruitless errand.

In gratitude to an old literary favourite, I must protest against one gentleman's theory who compares this Whitechapel ruffian to *Nick of the Woods*," the brutal hero of an old Indian story." He was not at all brutal, but one of the mildest of men, till the massacre of wife and little children by Red Indians drove him frantic with rage against that merciless race. It was not "a blind revenge," but a very intelligible antipathy, always directed against murderers of the worst type, and very much applauded by the youthful reader. "Possibly," writes this most amazing of all "our correspondents," "the Whitechapel fiend may have read the story of 'Nick of the Woods,' and made it his model." If so, he must be mad indeed. It is just as likely that he was inspired by "The Heir of Redcliffe."

The correspondence of the Versailles printer who was unexpectedly left a million of money the other day by a Transatlantic relative—or who said he had been left it—must be well worth printing. He has disappeared, and fortunately someone has taken upon himself to open the letters addressed to him. Everyone in the civilised world who wants a little money, and is not much troubled by the sense of obligation, seems to have applied to him: "Tinker, tailor, soldier, sailor, gentleman, apothecary, ploughboy, thief"—the last named class particularly numerous, though trading under other titles. No less than eight hundred letters, we are told, emanated from the fair sex. One of them goes so far as to say that "she doats on compositors"; another addressed her envelope to "M. Allamaher of Versailles, the Impersonation of Virtue Rewarded"; and another, with audacious frankness, "To the Heir of Five Million Dollars." To the world at large such a correspondence must seem incredible; but anyone who has occupied a position which by any stretch of fancy can be considered public will have little difficulty in believing in it. It is not necessary to have five millions of dollars to be supposed to hold one's property in trust for more or less deserving objects; while the interest evinced by total strangers in one's circumstances, opinions, habits, and even the state of one's liver would be complimentary (if one did not know better) in the highest degree. A letter which, in my humble capacity of British novelist, I had once the honour to receive from the other side of the world had reference to the organ above mentioned. "Dear Sir,—I perceive by the papers that you are indisposed, and I don't wonder at it, considering the life you lead." [This was a serious allegation, and from a total stranger, many thousand miles away, rather alarming. However, the next sentence reassured me.] "You don't take enough exercise. What's the matter with you is your liver. Take my advice, or you will repent it. Dig in your garden an hour before breakfast, and two hours before dinner. Use a three-pronged fork, not a spade, and throw the mould well over your shoulders. I remain, your SINCERE WELL-WISHER." Nothing could be more considerate; but the writer was, of course, unaware of the circumstances of my position. I have not got a garden, nor even a three-pronged fork; all my forks (except the carving ones) are four-pronged.

THE MAORI FOOTBALL TEAM.

The manly English game of football is practised with spirit in New Zealand not only by the Colonists and their sons of our own race, but by some of the new civilised generation of Maoris, among whom, in the North Island, many are educated in schools and colleges, adopt English fashions of dress, enter into business as farmers, sheep-owners, managers of saw-mills, and in other trades or industries, possess a fair share of property, ride and drive good horses, attend the races, and enjoy the amusements to which our own countrymen are partial wherever they reside. In the New Zealand team of football-players, however, now on a visit to England, there is a mixture of the two races, colonial and native; and their names, English, Scotch, Irish, and Maori, are W. Warbrick, D. Gage, M'Causland, Madigan, Keogh, Goldsmith, Elliott, Wynyard, Ellison, Webster, Maynard, Lee, Anderson, Taiaroa, and Karauria. They are dressed in black knickerbockers and jerseys, which in the case of the Maoris, with their dusky hue of face and hands, gives them a rather sombre aspect; but they are all men of fine growth, well knit and well proportioned, and are skilled adepts in all points of the game. When not playing, the Maoris wear certain mats and articles of their native costume at their public appearances. On Wednesday, Oct. 3, they came to Richmond for the first time, in order to play a match with the Surrey Club, beginning at half-past three in the afternoon. The Surrey men who contended with them were members of different clubs in Surrey—namely, Messrs. F. B. Hannen (Harlequins), A. B. Whitehead (Old Leysians), C. Jordan (Guy's Hospital), C. J. Prime (Guy's Hospital), W. R. M. Leake (Cambridge University), J. H. Bryant (Guy's Hospital), R. Allport (Clapham Rovers), N. F. Henderson (London Scottish), A. Allport (Guy's Hospital), W. P. Carpmael (Blackheath), J. H. Dewhurst (Richmond), T. A. Forde (St. Thomas's Hospital), J. Gould (Old Leysians), T. W. Lambert (St. Thomas's Hospital), and C. C. Moxon (St. Thomas's Hospital). The umpires were Messrs. C. Williams and F. W. Burnard; the referee, Mr. Rowland Hill. The game was played with great spirit and perseverance, but the New Zealanders, after a while, got the advantage by their greater collective weight and strength; and when, finally, "time" was run out, and "no side" was called, they left off the winners by one goal, and a "try" to a try. Their play is considered to be of high excellence; and on Saturday, Oct. 6, playing at Northampton against the picked men of that county, they were again victorious, scoring two goals and four tries to nothing.

Sir Charles Warren's report to the Home Secretary on the Metropolitan Police for 1887, shows that, while a considerable increase had been made in the number of the officers during that year, there had been a slight decrease in the strength of the men. The Commissioner has come to the conclusion that there is great need for a very considerable augmentation.

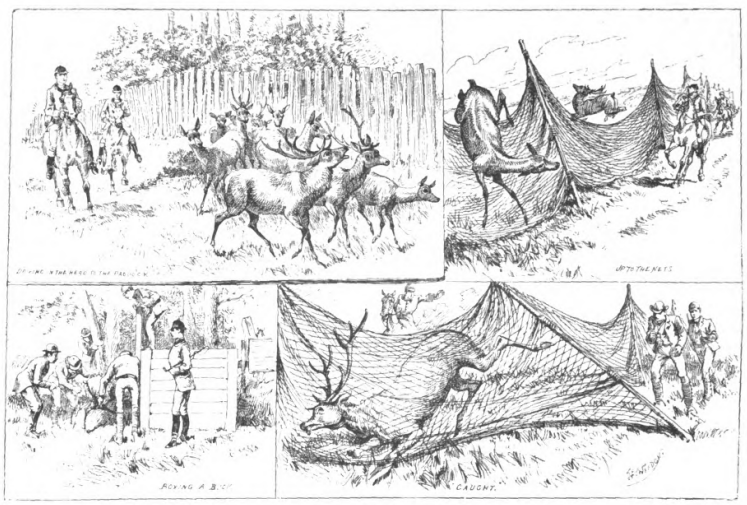
A large four-light stained glass window with elaborate tracery has been placed in the north transept of the parish church of Burley, near Leeds. The window has been placed by Mr. J. H. Denton in memory of his wife, who was a most active worker among the poor of the congregation. The artists are Messrs. Mayer and Co., who also, a short time ago, filled the window in the north-west aisle.

The first public pleasure-boat to be driven by electrical power on the River Thames was launched on Oct. 8. It is 65½ ft. long, and designed to carry eighty passengers, with a mean draught of 22 in. The electrical machinery and storage being placed below the deck fore and aft, leaves a clear run the whole length of the boat for passengers. In the middle is a handsomely fitted cabin with dining table, &c.

The Duke of Cambridge, accompanied by a brilliant staff, made an inspection, on Oct. 4, of the troops of all arms stationed at Aldershott, and witnessed some attack operations which were hastily organised for the occasion.—At Portsmouth on Oct. 6, in the presence of thousands of spectators, the Duke presented new colours to the Border Regiment, and in the course of a spirited address recalled his own associations with the old 55th.

Mr. Marshall, forty-seven years of age, while suffering, it is said, from an attack of delirium tremens, threw himself into the sea from the deck of the steamer Ionic, bound for New Zealand, while the vessel was lying in Plymouth Sound; and Mr. E. R. M'Kinstry, R.N.R., the second officer of the Ionic, jumped into the water after him, and in spite of the man's resistance, succeeded in saving his life. Mr. M'Kinstry was loudly cheered for his gallant act.

We have received from Messrs. Swan Sonnenschein and Co. four numbers of a publication entitled "Our Celebrities," each number containing three photographs, by J. Walery, of Regent-street, of persons of note in politics, literature, art, and society, with monographs by Mr. L. Engel. Among the portraits we may mention as particularly good those of Sir Frederick Leighton, P.R.A.; Mr. George Lewis, the well-known lawyer, and Sir Morell Mackenzie, whose name is at present on so many lips. "Our Celebrities" will be welcomed by those who desire a more intimate acquaintance with the habits and appearance of our great men.



THE PLAYHOUSES.

After considerable and unprecedented delay the Savoy management permitted the public to know what name had been fixed on for the new comic opera. It had been rumoured that the subject had something to do with the Tower and executions in the days of Henry VIII., and that the daughter of a Tower warder had fallen in love with a political prisoner, and the grand chorus was to consist of Beefeaters in their gorgeous mediæval apparel, and that, warned by recent experience, Mr. Gilbert had resolved to give us a serious libretto. So one fine morning, within a few hours of the first performance, it was announced that "The Yeomen of the Guard; or The Merryman and his Maid" would be the title of the last contribution to Savoy comic literature. In a very few hours the result was known, and spread far and wide all over London. An emphatic success was secured. There was no doubt about that. Number after number was heartily encored. The excitement of the house never flagged. No doubt everyone present was prejudiced in favour of the authors of so many delightful works, and they were inclined to overemphasise their enthusiasm; but when all was said and done no one could doubt that the union of these two brilliant minds had resulted in one more fanciful work, ingenious in idea, delightful in melody, soothing to the senses, and harmless in every scene and detail. This is a recommendation that is often lost sight of when the Gilbert-Sullivan operas are critically examined. These careful and conscientious artists have ever given us an innocuous and wholesome entertainment absolutely devoid of offence. To the Savoy, people can turn without fear, and lead there the young and old alike. The young will not be awakened into curiosity, nor will the old be shocked with levity. These Savoy operas have travelled all over the civilised world, their jokes have been quoted, their songs have been sung in drawing-room, parlour, and humble cabin; yet never yet have words been construed in an evil sense, or music defiled with that false excitement and sensuous allurement, that can do as much harm as the most suggestive words that were ever written. In degrading his art the musician is often quite as much at fault as the poet; but to the honour of Sir Arthur Sullivan it must be said that he has elevated everything that he has touched. Wild and extravagant as have been Mr. Gilbert's jests, the musician has invested them with a fancy peculiarly his own, and there will be possibly only one regret in connection with "The Yeomen of the Guard," and that is that Mr. Gilbert has not cast his "Bab Ballad" manner wholly away and resolved to work up to Sir Arthur's high aims and imaginative fancies. Mr. Gilbert has been guilty of a compromise. He has not abandoned his theory of surprise, nor has he come out altogether in a new suit of raiment. In the new book there is an evident trace of the old Gilbert still. He cannot divest himself of his accustomed manners even in deference to Sir Arthur Sullivan's mute but silent appeal. One would have thought that the author of "Broken Hearts," of "Charity," of "Gretchen," and many another work, could have been serious for more than five minutes together. But it is only in his lyrics that he has surpassed himself, and that he is found superior to anything he has ever attempted before. One, at least, of his songs is a poem such as a Herrick, a Lovelace, or a Waller might have written. It is perfect in form and beautiful in fancy:—

Is life a thorn?	And I, war-worn,
Then court it not a whit;	Poor captured fugitive,
Man is well done with it.	My life most gladly give,
Soon as he 's born,	I might have had to live
He should all means essay	Another morn!
To put the plague away.	

Such a lyric as that—and there are plenty of the same pattern in Mr. Gilbert's book—does not belong to the nineteenth century. It is an imitation, and an admirable imitation, of the songs and love-lays of the period when Queen Elizabeth's lovers scratched odes in her honour with diamond rings on the Tower window-panes. If Mr. Gilbert can take the pains to write such verses as these, he can certainly look about him and some day give us a book relatively as good as Sir Arthur Sullivan's music. This he has not done. We feel the discrepancy. The musician seems struggling to rise superior to Gilbertian jingles and jokes; but it is only at odd times that his companion will allow him to soar. It is after all immaterial from what source Mr. Gilbert has derived his inspiration. If his new book were as good as "Don Cæsar de Bazan," or even that of the "Mariana" that was founded on it, no one would justly complain. In parts it is exquisitely finished; in parts it is feeble and commonplace. His verses were never better; but his subject-matter is often thin. He seems to struggle not to repeat himself, but breaks down in the attempt to be original. Still, for all that, this latest opera marks the recognised necessity of a change. The "Bab Ballad" days are over. They have been worn down to the last hair. Mr. Gilbert is wise not to attempt to force them any more on public attention in the form of comic opera. But he would be wiser still if he could see that he has a giant at his side who will no longer be forced into the narrow channels of Mr. Gilbert's ingenious conceits. Sir Arthur Sullivan has shown, times out of number, what he can do with his partner's muse. He has decked it out in gorgeous apparel. He has covered it with the garlands of musical fancy, and made the jesters and the clowns possible by means of imagination. The musician now stands firm to his ground, and asks for a loftier subject; and Mr. Gilbert will give it when he is persuaded—as he should be persuaded—that the time has come for him to put his shoulder to the wheel. No one can hear this new opera without a profound sense of satisfaction. The melodies may not be so "catchy" as of old, but the dignity of the score is most impressive. It is the kind of opera that cannot be appreciated at a sitting. We must hear it again and again in order to appreciate it. It is only by the thoughtless and the vulgar that such music should be condemned, because the gallery boy only finds one air that he can go home whistling or because the bandmaster, the quadrille-seller, and the valse-monger are at a loss where to turn for a convenient subject. Sir Arthur Sullivan has not written for the music-shop, the promenade, or the ball-room; but he has thrown into his score his ripe experience, his faultless taste, and his curious knowledge of the styles of past periods. There is not one bar that is not interesting, and in "The Yeomen of the Guard" the composer has done himself ample justice. Next time he will insist on a book that will lift his muse even higher and higher to success. In a word, then, in "The Yeomen of the Guard" Sir Arthur Sullivan has given us his best music and Mr. Gilbert infinitely his best lyrics. The book alone is trivial, and, in certain respects, unworthy of both.

But all serious criticism apart, the new Savoy opera is a delightful entertainment. The splendid stage picture of the old Tower of London, the brilliant costumes of the scarlet Beefeaters, the dresses, accurate to a girdle and a button, of the gallants and apprentices of London in the days of Henry VIII., the groupings, and the perfect order of the *mise-en-scène*, would attract attention even if the new story were thinner than it really is. Good taste and stage discipline can do no more in these realistic and extravagant days. The company, that has had some new recruits added to it, has seldom worked better together. The good services of Mr. Rutland Barrington have been lost to this popular theatre, where he has been well known for many a long year; but his place is admirably filled by Mr. Denny, a young comedian who made the acting success of the evening. Few who remember Mr. Denny as the stolid policeman in Mr. Pinero's "Dandy Dick" had any idea that he is the possessor of an excellent voice, and could be safely used for comic opera. His performance of the jailer in "The Yeomen of the Guard" is an admirable and conscientious rendering of a difficult character. Mr. Denny is an admirable foil to the quaint funniments of Mr. George Grossmith, the jester, who does his utmost to lighten and brighten the text. Mr. Courtice Pounds has not only a sweet tenor voice, but he acts without that wooden self-consciousness that belongs to operatic tenors in general. A tenor in a dramatic sense is only another name for pardonable stupidity. But Mr. Pounds does not bring to the stage the airs and affectations of the concert-room. He is cast for a sentimental gallant of a past era, and he well represents the man he is intended to be. Both Mr. Denny and Mr. Courtice

CATCHING DEER IN WINDSOR PARK FOR THE QUEEN'S BUCKHOUNDS.

Pounds are a great acquisition to the company. Miss Ulmar has never to our recollection sung or acted so well. Her voice has improved in quality, and her dramatic rendering of the wedding scene was admirable. Many could have wished that Miss Rosina Brandram had a better part, or, at least, one song to enable her to show her taste and finish in simple vocalisation. Mr. Temple is as useful as ever, and the chorus is the finest that has been assembled at the Savoy for some considerable time. In fact, only the very critical will find fault. The musician will be more than delighted with all he hears; the mere playgoer will find it difficult to complain; the lover of delicate and dainty verse will be loud in praise of Mr. Gilbert's lyrics; and the opera will grow upon the public ear. Few who have seen it once will hesitate to seize an early occasion for hearing it again.

Some interesting dramatic events are looming in the future. Mr. Rutland Barrington opens the St. James's Theatre with "The Dean and his Daughter," dramatised by Mr. Sidney Grundy, from the novel by Mr. Philips; Miss Caroline Hill, Miss Olga Nethersole, and Mr. Lewis Waller will be in the cast. On the following week the new Shaftesbury-Avenue Theatre will be opened with a grand performance of "As You Like It," cast with great care. Miss Wallis will be Rosalind, Miss Annie Rose, Celia; Mr. Arthur Stirling, Jaques; and Mr. Forbes Robertson, Orlando. Great pains will be taken with the music and the general scenery. The new theatre is a very large one, and will hold about 3000 persons. It is isolated, and can be emptied by innumerable doors in three minutes.

Captain Albers, of the Hamburg-American Company's steam-ship Wieland, has been made a Chevalier of the Dannebrog by the King of Denmark, for saving the lives of the passengers and crew of the Thingvalla, which foundered recently, after collision with the Geiser near New York.

The late Mr. Octavius Morgan, Lord Tredegar's uncle, who sat in Parliament for Monmouthshire for nearly fifty years, has bequeathed his collection of clocks and watches to the British Museum. There are between sixty and seventy clocks, many of them of great value.

An account of fish seized during the month of September by the fish-meters appointed by the Fishmongers' Company at and near Billingsgate Market and on board boats lying off that place shows that the total quantity of fish condemned was 59 tons 10 cwt. This included whelks, 9 tons, 2 cwt.; whiting, 23 tons 5 cwt.; mussels, 8 tons 13 cwt.; periwinkles, 5 tons 8 cwt. 3 qr.; haddocks, 3 tons 1 cwt.; shrimps, 3 tons 0 cwt. 3 qr.; sprats, 1 ton; and herrings, 1 ton 7 cwt. The weight of fish delivered at and near Billingsgate Market during the month was 13,368 tons.

THE QUEEN'S BUCKHOUNDS.

The Royal pack at Windsor, for the season now approaching has plenty of sport in store, as there are no less than sixteen of last year's stags now in Swindley Paddock, with the dozen deer captured recently in Windsor Great Park, not forgetting the one that was left out lying in Stoke Park, the seat of Mr. Wilberforce-Bryant. There is every prospect of Mr. John Harvey (the newly-appointed huntsman) opening a brilliant season; at any rate, he will be more successful than Mr. Frank Goodall, who has just retired, was last season. The forest runs will be continued through the month of October, the meets being every Tuesday and Friday at the Royal Hotel, Ascot Heath, each day at ten o'clock, previous to the regular hunting season, which will not be before the first Tuesday in November. On Tuesday, Oct. 2, they commenced forest-hunting. Although the morning was dull there was a capital field out. Mr. Harvey, with his whips, Cunnings, Bartlett, and Strickland, all well mounted, trotted over with the hounds from the Royal Kennels, where a number of sporting gentlemen and regular followers of the Queen's had assembled, amongst whom were many of the Guards' officers from Windsor. Shortly after ten o'clock a move was made to the Swindley Paddock, Windsor Forest, where a fine deer was let loose, and went away in excellent style towards Wokingham. It then doubled over a nice bit of hunting country right away to Surly Hall, by the side of the Thames, which it crossed near Windsor Racecourse, and was taken at Cippingham Farm, near Slough, after a first-class run. Everybody seemed to enjoy the day's sport.

OBITUARY.

THE RIGHT HON. SIR HENRY KEATING.

The Right Hon. Sir Henry Singer Keating, P.C., LL.D., died on Oct. 1. He was born in 1804, the third son of the late Lieutenant-General Sir Henry Sheehy Keating, K.C.B., Colonel 33rd Foot; was educated at Trinity College, Dublin; called to the Bar at the Inner Temple in 1832, and made a Queen's Counsel in 1849. He went the Oxford Circuit, and became M.P. for Reading, 1852 to 1859. He filled the office of Solicitor-General 1857, 1858, and 1859, and in the latter year succeeded Mr. Justice Crowder as one of the Justices of the Court of Common Pleas. He married, in 1843, Gertrude Marianne, daughter of Major-General Evans, R.A., and was left a widower in 1864. Sir Henry enjoyed the respect and esteem of his judicial confrères. His learning was considerable, used habitually without ostentation, and his gentle and courteous nature made him a universal favourite.

SIR A. MUSGRAVE.

Sir Anthony Musgrave, Governor of Queensland, died at Brisbane, suddenly, on Oct. 9. His Excellency, who was the third son of the late Dr. A. Musgrave, Treasurer of Antigua, was born in 1828. He was appointed Treasurer of Antigua in 1854, Administrator of Nevis in 1860, Lieutenant-Governor of St. Vincent 1862, and of Natal in 1872. In 1864 he became Governor of Newfoundland, and was made Governor of British Columbia in 1869. Sir Anthony went to South Australia in 1873 to occupy the position of Governor there, and in 1876 held a similar post in Jamaica. He had been Governor of Queensland since 1883. Sir Anthony was twice married.

We have also to record the deaths of—

Colonel Spencer Rimington, late Bombay Staff Corps, at Ealing, on Sept. 19.

Mr. Lewis Holland Thomas, of Caerffunon, Merionethshire, J.P., on Sept. 28, aged seventy-six.

Captain John Sumner Eaton, late of the Royal Navy, at Ryde, Isle of Wight, on Sept. 27, aged forty-eight.

Major-General Charles Pulley, late Madras Army, at Shanklin, Isle of Wight, on Sept. 28, aged sixty-four.

Mr. John Leighton Wade Dennett, of Woodmancote Place, Henfield, Sussex, on Sept. 29, in his forty-seventh year.

Rev. Andrew Veitch, late Rector of South Ferriby, Lincolnshire, at Harrogate, on Sept. 27, in his seventy-sixth year.

Mr. John Arthur Locke, of North Moor House, Somerset, on Oct. 2, aged seventy-three. He was educated at Eton, and was a Magistrate for Devon and Somerset.

Mr. Bartholomew Charles Gidley, M.A., suddenly, at his residence, Hoopern House, near Exeter, on Oct. 1, aged forty-nine. He was for fourteen years Town Clerk of Exeter.

Mr. George Stovin Venables, Q.C., on Oct. 6, at his residence in Curzon-street. He was called to the Bar at the Inner Temple in 1836, and took silk in 1863. He had been for many years a Bencher of his Inn.

Major-General Antonio Mattei, C.M.G., late Royal Malta Fencible Artillery, at his residence in Sliema, Malta, on Sept. 17, aged eighty-four. He was son of Mr. Francis Mattei, and entered the Army in 1825, from which he retired in 1877.

The Hon. Mrs. William Byron (Mary), youngest daughter of the Rev. John Burnside, of Lamcote House, Notts, late Rector of Plumtree, and wife of the Hon. and Rev. William Byron, M.A., uncle of the present Lord Byron, at 17, Portland-place, on Oct. 2, aged fifty-seven.

Lieutenant-General Charles Preston Molony, Madras Staff Corps, on Sept. 27, at Tenby. He was the third son of the late Rev. Weldon Molony, Rector of Dunleckney, county Carlow, and married, in 1855, Rosa Elizabeth, elder daughter of Sir Thomas Fetherston, fourth Baronet.

Admiral Augustus Henry Ingram, on Oct. 5, at 10, Chilworth-street, Westbourne-terrace, in the eighty-fifth year of his age. He entered the Navy as cadet in 1821, and received his Lieutenant's commission in the same year as her Majesty ascended the throne. He served in the war-ship Blonde as Lieutenant in the operations against Canton, receiving for his services a medal.

The Archbishop of Canterbury on Oct. 8 reopened the church of St. Alphege at Canterbury, which has recently undergone complete restoration.

WITH THE VIGILANCE COMMITTEE IN THE EAST-END.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Oct. 9.

President Carnot has been making another triumphal progress through his dominions, this time honouring Lyons with his presence. Now, Lyons is an independent Republican centre, where all opinions, even the most advanced, have their representatives—noisy representatives, too—ready to catch every war cry and word of order. Nevertheless, at Lyons, just as at Bordeaux and in Normandy, nobody says anything to President Carnot about the revision of the Constitution, but everybody says a great deal about local, industrial, commercial, and agricultural interests, and about the necessity of peace, stability, and steady labour. There is reason to believe that such is the true sentiment of the serious and laborious majority of Frenchmen. The cry of revision is that of the would-be disturbers of public order; it is the cry of the Extreme Left of the Chamber, raised purely in the interests of a Parliamentary and press campaign: it is the cry of the Boulangists. Such being the case, is it not astonishing to see M. Floquet—who is at the head of the Cabinet, and who assumes to be a statesman—joining in this revisionist clamour, hurrying on the movement, and depriving the legislative machine of its last counterpoise? M. Floquet thus lays himself open to charges of neglect of his duty towards his party and towards his country, and his fall becomes surer every day.

To make his situation still worse, M. Floquet has conceived the very inopportune idea of a decree obliging all foreigners residing or intending to reside on French territory to make a declaration at the police bureaux, and state their origin and means of existence, with documents to prove their identity. In France this decree has been most severely and unanimously blamed as being contrary to the spirit of French liberty and hospitality; it is also pronounced to be illegal, inapplicable, and useless, and its revocation by the Chamber is foretold to be inevitable. Meanwhile, since Oct. 4 the Prefecture of Police has been receiving the declarations of strangers at the rate of about four hundred a day; and, apart from the waste of time, the ordeal is not very terrible. Travellers, tourists, and passing visitors to France are not required to make any declaration; the decree, however, is silent as to the period of time during which a man may be considered to be a "passing visitor." That this decree is useless seems to be quite clear; that it is undignified and inopportune on the eve of the Universal Exhibition, and months after the German measures concerning Alsace-Lorraine, is also evident. That the Chamber will revoke the decree may be hoped. The number of foreigners resident in France amounts, according to recent statistics, to 1,100,000, of whom 36,000 are English. M. Floquet's decree is supposed to be directed against the Belgian and Italian workmen who abound in the French labour market; but, as has been pointed out by several, these foreign workmen are chiefly employed in work which the French workmen refuse.

The cold weather has set in here, and the beginning of winter has been notified to the observer of minute details by two phenomena—the appearance of furs in the Allée des Acacias, and the return of the Savoyards, who are now tranquilly roasting chestnuts in their familiar portable ovens at every street corner. A final and conclusive proof that the holidays are over is the fact that the terrible Boulanger has emerged from his summer hiding-place and resumed his cynical campaign. "We have no need of a political platform or programme," he said to an interviewer, the other day; "we have only to keep quiet and to take advantage of the mistakes of the Government."

The theatres continue to revive old pieces, as if there were really a diminution of creative energy in the dramatic world. At the Variétés we have a revival of Offenbach's "Barbe-Bleue," with Jeanne Granier in the rôle created by Schneider more than twenty years ago. At the Porte Saint-Martin, the old, old "Courrier de Lyon" has reappeared on the bill, with Paulin Menier in the rôle of Choppard, which he created, likewise, more than twenty years ago. Old as it is, the "Courrier de Lyon," with Paulin Menier, is one of the plays best worth seeing.

Paris has recently been gifted with a new public school for girls—the third, called Lycée Molière, and situated at Passy. These lycées, of which the idea dates only from 1880, are very popular, thanks to their healthy and joyous construction, and thanks also to their practical and unpretentious programme of study. The pupils, all out-students or day-boarders, aged from seven to seventeen, are taught morality, French language, literature, and history, general history and geography, natural history, physics, chemistry, arithmetic, drawing, vocal music, one modern language, English or German, gymnastics, and practical dressmaking. The cost of this course of study is £10 a year for the pupil from seven to twelve, £14 for the pupils from twelve to seventeen years of age, and £34 for the day-boarders. Each of these lycées has from sixteen to twenty professors, nearly all women. The new Lycée Molière has cost the Government to build £80,000.

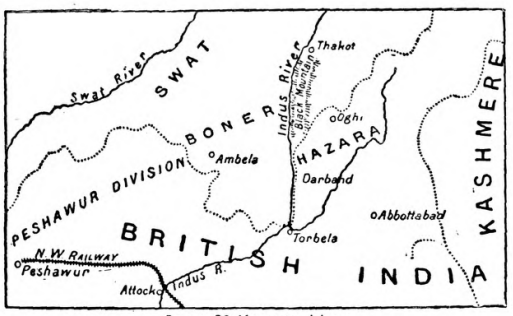
The newspaper statistics of Paris inform us that at the beginning of the present year there existed 1648 periodical publications, comprising 94 political journals, 56 literary, 66 illustrated, 16 diplomatic or economic, 17 assurance, 63 Catholic, 21 Protestant, 2 Israelite, 24 Freemasonry, 27 military, 25 sporting, 146 financial, 85 commercial, 20 theatrical, 84 legal, and 60 fashion journals. The reviews comprised 83 political and literary, 134 medical, 128 fine arts, engineering, and technology, 71 scientific, 72 pedagogic, 34 civil service and administration, 43 agriculture and horticulture, 32 bibliography. In 1887 there were created 493 new periodical publications, of which 243 perished before the end of the year.

Through the death of Gustave Boulanger there is a vacancy at the Institut de France in the fine-arts section. The candidates are the painters Henner, Jean Paul Laurens, Carolus Duran, Lefevre, and Puvis de Chavannes.

T. C.

The King of Portugal arrived on Oct. 7 at Barcelona, where he stayed for a few days; his Majesty afterwards visiting Madrid.

A banquet in honour of Mr. De Keyser, the Lord Mayor of London, was given on Oct. 9 in the Townhall, Brussels. Among those present were the Belgian Minister of Public Works and Lord Vivian, the British Minister in Belgium.



The Czar and Czarina have received several deputations from the Caucasian tribes, and have made several excursions to surrounding districts. Their Majesties have paid a visit to Batoum, being present at the ceremony of laying the foundation-stone of a new orthodox cathedral. They afterwards left for Tiflis.—The Grand Duke and Grand Duchess Sergius and the Grand Duke Paul of Russia and suite have arrived at Beyrout, and are travelling in Syria, the arrangements being under the superintendence of Mr. T. A. Cook.

THE BLACK MOUNTAIN EXPEDITION.

It will be remembered that we published the Portrait of Captain H. B. Urmston, of the 6th Punjaub Infantry, who was killed, with Major Battye, of the 5th Ghoorkas, on June 18, in the Agror valley, near the Oghi outpost beyond Abbotabad, in a conflict with the revolted Akhalzai tribe of the Black Mountain. Abbotabad is the frontier military station in the Hazara district, which is situated to the north of Rawul Pindi, in the Punjaub, and to the east of Peshawur. The mountain range overlooking this district, and called "the Black Mountain," is infested by fanatical and hostile tribes, whose incursions have often given some trouble to the British Indian Government. An expedition to punish the enemy, commanded by General M'Queen, set forth in the first days of October; the first column to move up the Kairkat Ridge and on to Chittabut; the second column to Barachar and Bampur Gali, throwing out a regiment to Nimla, and thus connecting itself with General M'Queen, commanding the third column, which would move up the Sumbalbut spur, and thence across the ridge to Seri. The fourth, or river column, the objective of which was Kotkai, advanced eight miles along the Indus, driving off the enemy from the intervening ridge with shells, and the enemy lost five killed. On Oct. 5 the first three columns occupied the ridge and the fourth seized Kotkai. The first column lost two men killed and two wounded; the third column lost five wounded. The fourth met with the severest opposition. After the Royal Irish Regiment had carried the enemy's position, about two miles from Kotkai, some Ghazi fanatics delivered a counter-charge, but were repulsed and killed to a man. Captain Beley, D.S.O., of the staff (a most promising officer), one native officer, two privates of the Royal Irish Regiment, and one Sepoy were killed; and Captain Radford, Lieutenant Cleeve, eleven European privates, and one Sepoy were wounded. The enemy's loss amounted to about 200. The advance of the third column was delayed by the non-arrival of the baggage. Colonel Crookshank, C.B., commanding the fourth, or river, column, was wounded on the 5th while making a reconnaissance. On the 9th, the first column was five miles to the north of Chittabut, while the third column had burnt the enemy's villages on the western side of the mountains.

THE LATE CAPT. C. H. H. BELEY, 25TH BENGAL LIGHT INFANTRY,
Killed on the Black Mountain, North-west Frontier of India.

SCALE 32 MILES TO 1 INCH

MAP OF THE BLACK MOUNTAIN, HAZARA DISTRICT, NORTH-WEST FRONTIER OF INDIA.

The Portrait of Captain Beley, of the 25th Bengal Light Infantry, appears on this page. Charles Harold Hepworth Beley, a near relative of the Rev. C. Beley, Vicar of Manningtree, Essex, was educated at Blundell's School, Tiverton, in Devonshire; as a boy he was always bright and cheery, full of pluck and animal spirits, but thoroughly steady and reliable. He was one of the most promising young officers of the Indian Army, had served in the Afghan War, taking part in the famous march from Cabul to Candahar, and in the battle of Candahar, when he was mentioned in despatches. He had passed the Staff College, and had certificates of proficiency in Pushtu (the language of the Afghans), Punjaubi, and Russian. He was for some time attached to the Indian Intelligence Department, where his attainments were fully recognised both by Sir Charles MacGregor and Sir Frederick Roberts. He accompanied Sir Frederick Roberts to Mandalay, and was in 1887 appointed Deputy Assistant Quartermaster-General in the Punjaub Frontier Force. A private letter received from him at the time says, "Am I not lucky to get the post? It suits me admirably, and General M'Queen is a first-rate man to serve under." He was busily engaged, amongst other things, in sorting a collection of General MacGregor's papers, when he was posted to the Black Mountain Expedition.

Colonel A. C. W. Crookshank, C.B., who has been severely wounded, served many years at army headquarters, and since May, 1887, has been in command of the 34th Pioneers. He commands a column of the Hazara Expeditionary Force. Colonel Crookshank served in the Jowaki Expedition and in the Afghan War, for which he was made a brevet Lieutenant-Colonel.

In connection with the affair of June 18, when Captain Urmston and Major Battye were killed, the name of the brave native officer, a Subahdar of a Ghoorka regiment, who behaved with conspicuous gallantry on that occasion, was incorrectly spelt in our notice accompanying his Portrait. It should have been printed "Kishenbir Nagarkoti." For this correction, and for other interesting information, we are indebted to Colonel W. T. Stuart, of Balmoral Lodge, a retired officer of the Bengal Staff Corps, who was military interpreter to the Sappers and Miners during sixteen years, and held important posts on the staff in the Afghan Campaign.

COLONEL THOMAS GRAHAM, R.A.,
Commanding the Sikkim Force in the War with Thibet.

THE SIKKIM FIELD-FORCE.

Some account of the hostilities which have arisen between the Government of British India and the singularly sequestered nation of Thibet, on the mountain frontier of Sikkim, to the north of Darjeeling and Bhotan, within a few hundred miles of Calcutta, has been given in this Journal. The officer commanding the field-force engaged in these operations, Brigadier-General Graham, who has returned to the new fort of Gnatong, in Sikkim, after his advance with little opposition into the Chumbi valley, merits further notice, and we are enabled this week to present a Portrait of him. Colonel Thomas Graham, of the Royal Artillery, is the youngest surviving son of the late General Joseph Graham, of the Bengal Army. He entered the Service in the year 1858. He served on the North-west Frontier at the last Black Mountain Campaign, for which he has the medal; and throughout the Afghan Campaign, including the capture of Cabul and the march to Candahar, receiving the medal and bronze cross. He has recently served in Burmah, whence he had hardly returned when he was selected for the command of the Sikkim Expeditionary Force. He is brother of Vice-Admiral Graham, R.N., now residing at Kingston, Surrey.

OUTCASTS AT THE EAST-END.

The repeated horrible murders and mutilations of the dead, perpetrated in the dark nooks and corners of a wretched quarter in the vicinity of Whitechapel and Spitalfields, with the failure of the police either to detect the criminal or to guard against the commission of these atrocities, have excited much alarm. Various suggestions have been offered in the correspondence of the daily newspapers, or submitted to Sir Charles Warren, the Chief Commissioner of Police; and it has even been proposed that the keen scent of bloodhounds should be employed to track the retreating path of the murderer. A local "Vigilance Committee" has been formed to watch the neighbourhood of low lodging-houses, and the lonely courts and alleys, where the miserable female victims of the indescribable cruelties that have shocked the public mind are stated to have been accustomed nightly to resort. One of our Artists, having accompanied such an exploration of the dismal haunts of a degraded class of the city population, amongst whom, it may be charitably hoped, not a few are comparatively innocent of crime or vice, presents Sketches of the figures and groups that he has seen, which, in any case, must appeal to humane feelings of regret and earnest desire to check the downward course of so many of our fellow-creatures in the foul places of great and mighty London.

The Chapel Royal, St. James's Palace, which has been closed for several weeks, will be reopened on Sunday, Oct. 14.

A Papal Bull has reached Dublin, appointing the Very Rev. Michael Comerford, Monasterevan, Coadjutor Bishop of Kildare and Leighlin.

The King of the Hellenes, accompanied by the Crown Prince of Denmark, arrived on Oct. 8 at Athens, where they were heartily welcomed by the inhabitants.

A reconnaissance in force was made at Souakim on Oct. 8. The Egyptians lost two men killed and twenty-five wounded. It is believed that the enemy suffered severely.

On Oct. 9 the thirteenth annual show of the British Dairy Farmers' Association was commenced at the Agricultural Hall, Islington, and was a decided success. Her Majesty carried off two first-class prizes.

A shelter capable of accommodating three hundred homeless waifs was opened on Oct. 8 at 39, Mile End-road, Whitechapel. This is an important addition to the vast system of charitable relief for which the East-End of London is becoming quite as remarkable as for its poverty.

THE EMIN PASHA RELIEF EXPEDITION UP THE CONGO AND ARUWIMI.

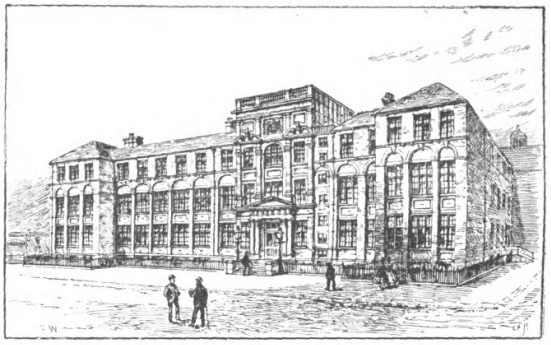
This present contribution of notes and Illustrations of a deeply-interesting subject brings us up to the time when Mr. Herbert Ward came down to the coast with news and despatches for the London chiefs of the Emin Bey Expedition. On Feb. 4, this year, at the Aruwimi Camp, he writes: "Jameson's third anniversary of his marriage. We were not able to do much in the celebration line. The Arabs started firing at early dawn, and then set on fire the village they attacked. It was a pretty, if sad, sight to see the place burning; I have sketched it (No. 1) for you. The Arabs killed eight men, and brought in the head of one who must have been a fine fellow. Jameson and I sketched it, and we shall pickle, salt, and preserve it, so that the head can be mounted. Another head they lost—dropped it in the river. The unhappy natives in hundreds took to their canoes and made for up-stream, but are being slaughtered by the Arabs, who occupy an island in the midst of almost impassable rapids."

Looking over Ward's letters and notes at about this date, I am increasingly impressed with the difficulties Major Barttelot had to surmount in the management of his camp. The scarcity of food and the demoralisation of a long-delayed advance, together with the slave-hunting raids of neighbouring Arabs, made the maintenance of discipline less easy as it became more important. Mr. Stanley's military officer in command at Aruwimi seems to have been forced into severely punishing his insubordinate followers. "Bangari" writes Ward, "who stole some goat-meat, and who had 200 lashes with a chicotte, and who has to parade daily in heavy chains for punishment, has grown tired of it, and succeeded in getting away with his guard's gun and twelve rounds of ammunition. He is a very hardened scoundrel, and I should not be surprised if he has concealed himself near by in the forest, so as to have a shot at one of us as we walk up and down in the evening outside the fort. A search-party is being sent out after him."

The Arabs in their raids do not have it all their own way. They fall now and then, and after the fighting are used to furnish forth cannibalistic feasts. Providence, however, is most frequently, it would seem, on their side. There are no incidents more pathetic in the history of slave-dealing than the inhuman huntings and burnings, and human captures of the Arabs in Central Africa. But once in a way the slave-catchers meet with their deserts. "Feb. 5, Sunday," Ward writes: "This morning some of the raiders came down from up-river, with news of a defeat of ten of their number, cut to pieces by the natives, who sought refuge in their canoes above the rapids. Selim and his men started off, some by the bank and some in canoes, to continue their awful work up-river; they returned in the evening, having only killed two natives." On the next day Selim informed Ward that the natives, 200 and more, had escaped in the darkness down the river. Two canoes had not got away, and he was able to kill two of their occupants. Arriving at the spot where his ten men had fallen, he found their fingers tied in strings to the scrub of the river-bank, and some cooking-pots containing portions of their limbs and bones. Selim's men were of the Manyema tribe, referred to in previous notes. It was a Manyema, according to the telegrams, who shot Barttelot. The Illustration No. 11 is a portrait of one of Tippoo Tib's slave-catchers. I gather, here and there, in the letters from Ward, suggestions something in the nature of surprise at the delay of the advance on the ground that the Manyema men, having taken Barttelot and the rest on to a given point, might have raided and hunted in new ground, and, no doubt, have obtained much spoil of slaves and ivory. All the more does this, by inference, lay the blame of the delay on Tippoo Tib, who could, one cannot help thinking, have compelled a forward march within a reasonable time. Major Barttelot went on, at last, beset with many unexpected difficulties.

The horrors of the Arab slave-trade have been described with a powerful and sympathetic pen by Stanley in all his books on the Congo. It was his first revelations in this direction that stimulated General Gordon's desire to go to the Congo country and "serve with and under" Stanley. My friend Ward frequently refers to the ghastly trade in his letters, and one of his latest drawings (No. 16) gives gruesome and pathetic point to the subject. "There are many slave women," Ward says, "with the Manyema people." The entire country seems to be more or less in a continual ferment of warlike trouble, largely the result of the Arab raids. There are tribal wars, of course; but the diplomatic skill and kindly influences of capable and experienced Englishmen would, in many cases, be able to make peace and, in time, to establish friendship on mutual conditions of self-interest. That there are millions of natives in Central Africa capable of the ameliorating influences of civilisation has been sufficiently shown by Livingstone, Speke, Grant, Stanley, and others; and the Illustrations of what may almost be called their art industries show that many of the tribes possess both instinct and capacity of a high order in this direction. I have in my possession many very remarkable examples of Congo carpentry, basketwork, wood-carving, and pottery. Some of them were illustrated in my first series of papers founded upon the letters of my Congo correspondent. The page of pictures in this week's *Illustrated London News* gives further and very notable examples of native work, chiefly from the Aruwimi and in the neighbourhood of the camp where Stanley left his followers to collect fresh supplies and men. Even the bloodthirsty Manyemas, it appears, are adepts in weaving, and one pauses to remark that their ferocity has been stimulated by their Arab associations. Free from Arab attack, they, more or less, pay for this immunity from persecution by becoming persecutors and murderers on their own account: they carry on an active slave-hunting business for the Arabs. "I send you," says Ward (Feb. 25), "a sketch of a Manyema making grass-cloth (No. 7), showing the hand-loom process. This Manyema was one of my visitors, and he and others were much amused with a jumping-jack I had made out of cardboard."

During the first few weeks of March, Ward appears to have occupied most of his leisure ("and how we all hate this nothing-to-do, and want to get on," he says) in securing examples of "native utensils, chairs, pots, jars, &c.," many of which are engraved in the Illustrations accompanying these present notes. Among them it is curious to note a pair of "lemon-squeezers" (Group 13), used for pressing the juice from the mtúngŭ fruit, which is about 3 inches long, has a thick scarlet skin, is transparent, and has black seeds. A "toilet-case" is another notable suggestion of civilisation, not to mention a salt-strainer, and many pieces of daintily decorated pottery (14). The curious knife (shaped rather like the head of a large hornbill) was 19 inches long down to the goat-horn handle; its greatest width 1½ inches from point to point. It came from a native tribe somewhere on the Congo above Monungeri. A Soudanese sergeant told Ward that he had seen the same kind of knife among a tribe in the Soudan and that the weapon is "thrown somewhat on the principle of the boomerang." The Babulu knife taken from a village two hours below Yambuya, on the Aruwimi, by the Arabs, is no doubt purely an agricultural or jungle implement. The bowl (No. 15) was bought by Ward from the Manyema men at Yambuya, Feb. 2, 1888. It is 8 inches long and 8 inches wide, and is carved from a solid piece of soft wood.



On March 24 Major Barttelot decided to send Ward to the coast with despatches and cable messages for the committee in London. "I am to start in five days," Ward writes to me in notes and letters which he himself carried to the coast with his official despatches. On this same March 24 he writes:—"Barttelot returned from the Falls, Jameson gone to Kanongo. Both have been very ill at the Falls, and, indeed, Barttelot looks awfully bad; very sorry for him." Five days later, Ward started, and made a remarkably quick journey to Boma, where he arrived April 28. His adventures by the way were numerous and occasionally full of peril, one incident of which is suggested (No. 10) in a sketch-reminiscence of the N'Iombo River, Bangala. In a letter posted to me at the end of his journey he has a sad note of reflection:—"What fatality there seems to be connected with all the Europeans who have had to go to the Falls!—1st, Bruny shot himself; 2nd, a Belgian officer died on his way up; 3rd, Werter, who went home very ill; 4th, Deane, who underwent awful perils; 5th, Dubois, who was drowned; 6th, Vanderwelde, who died the other day at Leopoldville, en route for the Falls; 7th, Spelmann, his companion, got sick and had to go home to save his life; 8th, Amelot, who died on his way to Zanzibar."

Since Ward jotted down these sorrowful notes, his friend Deane (who came out of a quiet retreat to shake hands with him en route to the coast) has died; Barttelot has been assassinated; and his genial, clever comrade Jameson has succumbed to fever, brought on, no doubt, by anxiety, scarcity of food, and hard work.

JOSEPH HATTON.

THE PEOPLE'S PALACE TECHNICAL SCHOOLS.

We gladly hail a fresh occasion to congratulate Sir Edmund Hay Currie and the other Beaumont Trustees—among whom are Mr. Spencer Charrington, M.P., the Rev. S. A. Barnett, Mr. Walter Besant, Mr. T. Dyer Edwardes, the Hon. C. W. Fremantle, Mr. Henry Green, Mr. E. S. Norris, M.P., the Rev. Harry Jones, Mr. S. Montagu, M.P., Mr. Albert Spicer, and Mr. F. Young—on the progress of this noble institution. In addition to the grand Queen's Hall and Concert-room, the Art Gallery and Exhibitions, the admirable Library and reading-rooms, the Gymnasium, the swimming-bath, the various classes for instruction and clubs for recreation freely organised in connection with the People's Palace, its founders have, by the liberality of the Drapers' Company, been enabled to establish Technical Schools, where thousands in that populous district will be able to improve their minds and perfect themselves in arts, sciences, and handicrafts. The formal ceremony of opening the new schools was performed on Oct. 5, by the Master (Mr. J. H. Daniell), assisted by the Wardens and Court of Assistants of the Company. The object of the school is to develop a boy's whole faculties by means of a systematic course of technical and manual training. It is not intended to teach a trade, but simply to provide for each boy an education for both head and hand. The instruction that will be imparted is not of a theoretical character only, but will be accompanied by daily systematic practice in the school workshops, five in number, which are well fitted with benches, iron and wood-turning lathes, drilling and planing machines, and other needful tools and appliances. There are nine class-rooms, which are well ventilated and lighted, in which instruction can be received in the various handicrafts at the rate of 6d. per week, or 5s. a quarter. In addition to these there is the lecture theatre, which will be utilised every evening throughout the winter months. A special feature of the schools is the photographic studio, where every branch of the art will be taught. The schools will be equal to the wants of 5000 evening students in the present winter session, which began on Monday, Oct. 8. The classes are open to both sexes and all ages.

NEW TECHNICAL SCHOOLS AT THE PEOPLE'S PALACE, MILE END-ROAD.

The following enumeration of the subjects taught will show, better than further general remarks, the wide scope and diversity of instruction. The Industrial, or practical trade classes, are those of tailors' cutting, upholstery, cutting and drapery, cabinet-making, plumbing, filing, fitting, turning, pattern-making, moulding, carpentry and joinery, plumbing, wood-carving, hand-rail and staircase work, boot and shoe-making, mechanical engineering, tool and instrument making, electrical engineering, laboratory, printing, etching, photography, telegraphy, metal-chasing and repoussé work. The Science classes teach mathematics, in two stages, plane and solid geometry, theoretical mechanics, elementary and advanced, physics, sound, light, and heat, inorganic chemistry, theoretic and practical, magnetism and electricity, steam and the steam-engine, building construction and drawing, machine construction and drawing. The Art and Design classes are those of freehand and model drawing, perspective drawing, geometrical drawing, and drawing from the antique, decorative designing, modelling in clay, wood-carving, chasing, and etching. The geometry class is open at half-fee to students of any other science, art, or technical classes. The commercial classes teach arithmetic of several grades, and book-keeping; while for a sound general education, and for language and literature, there are writing classes, with the addition of Pitman's shorthand, grammar and composition, elocution, Shakspeare, French and German, each with a special department of commercial correspondence, and classes of preparation for the Civil Service examinations, and for matriculation at the London University. It cannot be denied that a diligent course of study in a few of these general, literary, science and art classes, judiciously proportioned, might give a far better education than is to be obtained for £200 a year at certain great public schools resorted to by the sons of gentlemen and noblemen; the schoolmaster is now at the East-End, and the West-End must keep up with the improving standard of popular instruction. There are music classes, also, in which singing, elementary, advanced, and choral, is taught; the pianoforte, the violin, and the instruments of an orchestra, and those of a military band in concert. The special classes for females only are occupied with plain needlework, garment-making, dressmaking, millinery, art needlework, and cookery; and there is a separate class for Jewesses. Besides the above classes, forming what may be styled the People's Palace College, there is a day school of technical and handicraft preparatory teaching for boys, twelve years of age, who have passed the Fifth Standard in any elementary school. We would draw public attention to a neat little volume, compiled by Mr. Robert Mitchell, the "Calendar and Syllabus" of the People's Palace Technical Schools, published by Messrs. Thomas Poulter and Sons, which may be had also at the office of the People's Palace in Mile End-road. It sets forth with minute exactness all the details of school construction and subsequent examination, and the subjects of popular lectures to be delivered in the coming winter. This volume contains a series of plans of the apartments in the different floors of the new buildings erected for the Technical Schools, on the east side of the Queen's Hall. They do much credit to the architect of the People's Palace, Mr. E. R. Robson, of Palace-chambers, Bridge-street, Westminster, who also designed the Queen's Hall and the Library. The cost of the buildings hitherto erected by the Beaumont Trustees has been paid; but an appeal is made for additional funds to complete the whole scheme of the People's Palace.

TILTING AT THE RING.

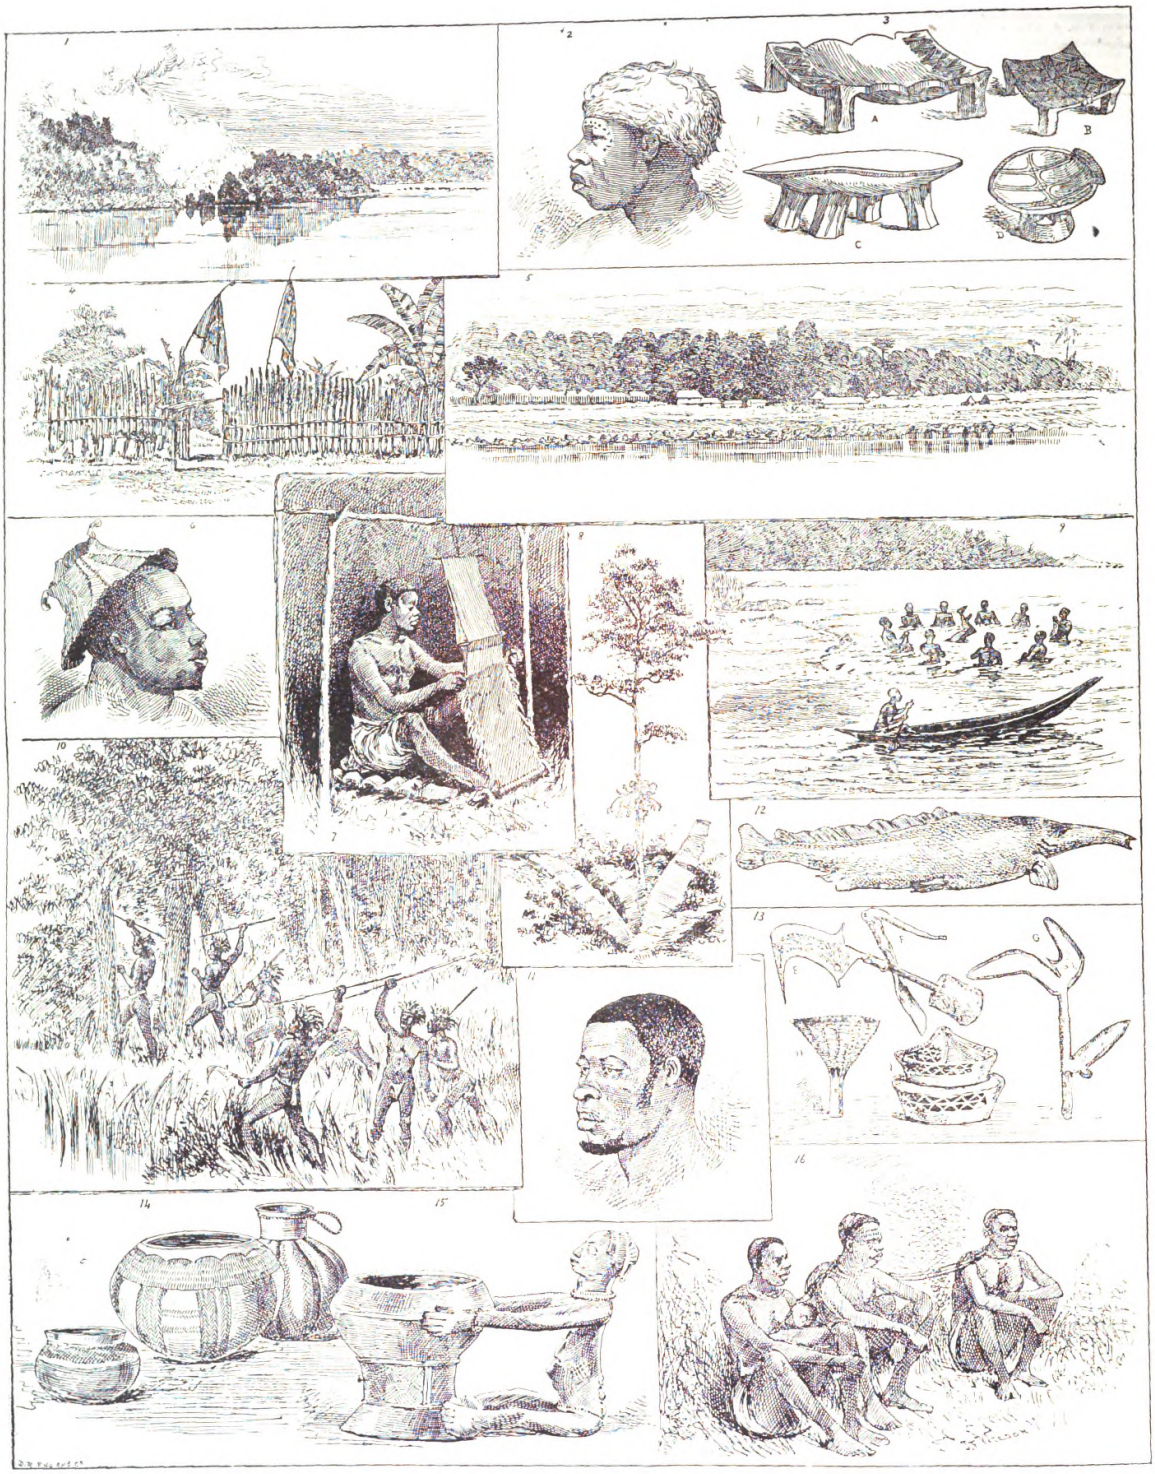
The picture by Mr. Louis Gunnis, called "A Moment of Interest," which represents a trooper on horseback, displaying his skill, at a roadside inn, in the feat of tilting at the ring, is a work of considerable merit. It has this year won the prize given, by the late Mr. Cressy, for the best study for a picture, to be competed for by the members of the Lambeth Sketching Club. The artist is to be congratulated on a success which was deserved, as Mr. Seymour Lucas, A.R.A., kindly acted as judge.

"DISCRETION THE BETTER PART OF VALOUR."

The humorous representation of animals in a mood of excitement is one of Mr. Briton Rivière's special gifts of talent. This little girl, as the nursery proverb says, is too timid "to say Bo to a goose"; and she may well be terrified by the fierce attack of half-a-dozen of those strong birds, each nearly as big as herself, angrily hissing and menacing with their formidable beaks her plump and naked legs. The cause of their displeasure seems to have been some indiscretion of her pet dog, which has no doubt been chasing them, and barking at them, in the adjacent field, where the grave elders of the flock are seen awaiting the infliction of a judicial sentence of severe punishment on the canine offender. We cannot deny that the affectionate child has acted bravely in snatching up her favourite to carry him away to a place of safety. She is unfortunately not tall enough to reach the latch of the door; but it is to be hoped that somebody, aroused by the clamour of the geese, will open the door to her from within.

The old Theatre Royal, Dundee (which had been renovated and was to be opened on Monday, Oct. 8), was destroyed by fire on the morning of Oct. 6.

Mr. Corney Grain's new musical sketch, at St. George's Hall, advertised for production on Monday, Oct. 8, has been unavoidably postponed to Monday, Oct. 15.

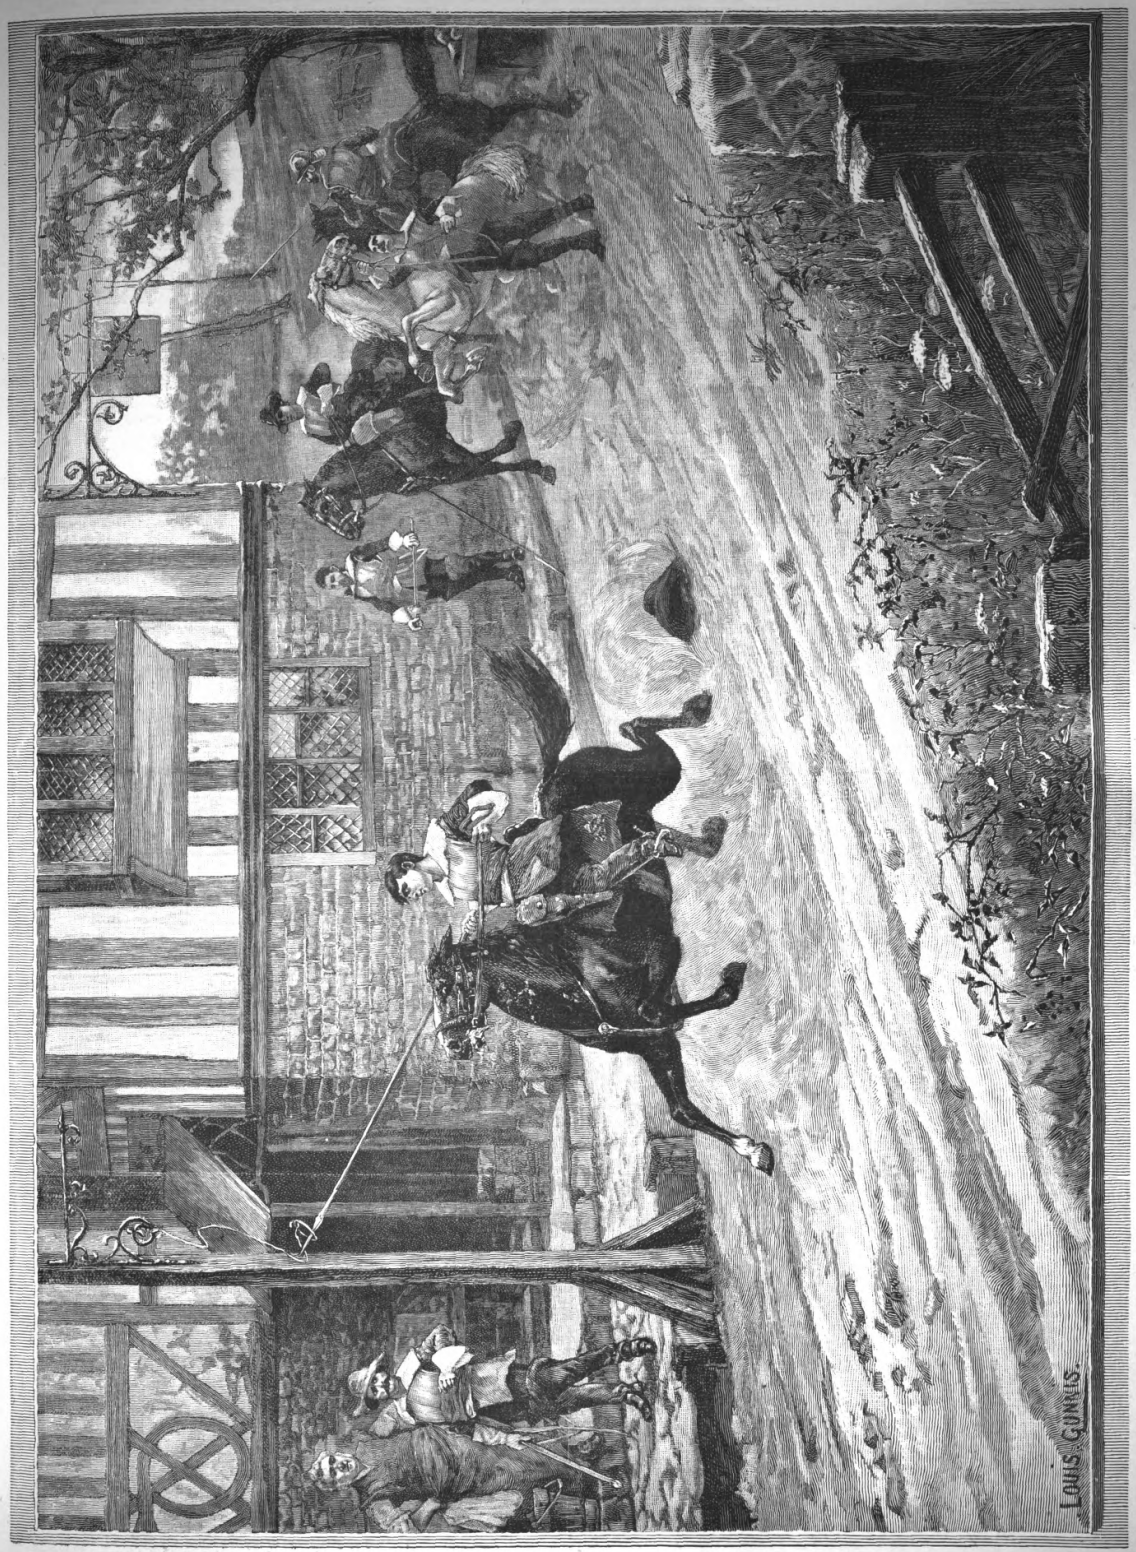


Mr. Alderman Whitehead, the Lord Mayor-Elect, has stated that, while he desires that the procession on Nov. 9 shall be worthy of the Corporation, he is opposed to circus displays, "which neither accord with his tastes nor with the dignity of the City." Should the cost be less than usual he proposes to give the surplus to the poor.

The Governors of Christ's Hospital have given notice that during the month of October they are prepared to pay 700 pensions of £10 each to blind persons. Persons who have never occupied a higher position in life than labourers or journeymen, or domestic and menial servants, or who have been common beggars, or who have at any time received parish relief, will not be eligible for the benefits of the charity.

The autumnal meetings of the Congregational Union of England and Wales were opened at Nottingham on Oct. 8 by a devotional service conducted in Castle-gate Chapel by the Rev. T. Morley Wright, of Lewisham. A sermon was preached by Dr. Elmslie. About a thousand ministers and delegates have attended the meetings extending over the week. Delegates have been entertained by the Mayor, who on the 12th unveiled the statue of the late Mr. Samuel Morley in the town.

The Goldsmiths' Company have made a proposal to the Charity Commissioners for the foundation and endowment of an Industrial and Recreative Institute at New-cross. From the surplus of the City charities it is intended that the Commissioners shall set apart £2500 a year, to which the Company will add an endowment of a similar amount. Subject to the approval of Parliament, the Commissioners have accepted the scheme. Mr. Spicer estimates the value of the Company's gift at £85,000.



The Registrar-General's returns for the week ending Oct. 6 show that in London 2413 births and 1352 deaths were registered. Allowing for increase of population, the births were 300, and the deaths 106, below the average numbers in the corresponding weeks of the last ten years. The deaths included 39 from measles, 24 from scarlet fever, 35 from diphtheria, 5 from whooping-cough, 1 from typhus, 8 from enteric fever, 72 from diarrhœa and dysentery. Deaths referred to diseases of the respiratory organs, which had increased in the five preceding weeks from 130 to 213, further rose last week to 239, but were 11 below the corrected average. Eight cases of suicide were registered.

1. Burning of M'Gunga's village by the Arab slave-raiders.
2. A native of Yangambi (brown monkey-skin hat, streaked with patches of light yellow).
3. Native chairs on the Aruwimi Rapids (Babulu's): A. 18 inches long, soft wood, light colour. B. 18 inches square, hard red wood. C. 16 inches square, light soft wood. D. 9 inches diameter.
4. Gateway in stockade of camp.
5. Site of Old Stanley Falls station.
6. Juna Makengeza, our cook.
7. Grass-cloth-making by hand-loom.
8. Staghorn-fern on tree at Yambuya camp.
9. Fishing.
10. Hostile natives, N'Iombo River, Bangala (Ward's canoe-voyage).
11. Kalema, of Banga, near Nyangwe (one of Tippoo Tib's slave-catchers).
12. Fish of Upper Congo, resembling elephant fish of Lower Congo.
13. E. Babulu knife. F. Adze, 5 inches long. G. Native knife, 19 inches long. H. Strainer, 4-inch high, used in salt-making. I. Lemon-squeezer used for pressing mtúngúú.
14. Native pottery, Aruwimi Rapids.
15. Bowl bought from Manyema men at Yambuya.
16. Slaves tied together.

THE EMIN PASHA RELIEF EXPEDITION UP THE CONGO AND ARUWIMI.

SKETCHES BY MR. HERBERT WARD, A COMPANION OF MR. H. M. STANLEY.

TILTING AT THE RING: "A MOMENT OF INTEREST."
CRESSY PRIZE DRAWING AT THE LAMBETH SCHOOL OF ART.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXVII.

BEFORE THE ASSIZE.

Then we sat down and waited. 'Twas all that we could do. Day after day we went to the prison, where my mother sat by my father, whose condition never changed in the least, being always that of one who slept, or, if his eyes were open, was unconscious, and, though he might utter a few rambling words, had no command of his mind or of his speech. Wherefore we hoped that he suffered nothing. "'Twas a musket ball had struck," the surgeon said, "in his backbone between the shoulders, whereby his powers of motion and of thought were suspended." I know not whether anyone attempted to remove the ball, or whether it was lodged there at all, because I am ignorant of such matters; and to me, whether he had been struck in the back or no, it was to my mind sure and certain that the Lord had granted my father's earnest prayer that he should again be permitted to deliver openly the message that was upon his soul; nay, had given him three weeks of continual and faithful preaching, the fruits of which, could we perceive them, should be abundant. That prayer granted, the Lord, I thought, was calling him to rest. Therefore, I looked for no improvement.

One other letter came from Robin, inclosing one for me, with which (because I could not leave my mother at such a time) I was forced to stay my soul, as the lover in the Canticle stayeth his soul with apples. I have that letter still; it hath been with me always: it lay hanging from my neck in the little leathern bag in which I carried the Duke's ring; I read it again and again, until I knew it by heart; yet still I read it again, because even to look at my lover's writing had in it something of comfort even when things were at their worst, and Egyptian darkness lay upon my soul. But this letter I cannot endure to copy out or suffer others to read it, because it was written for mine own eye in such a time of trouble. "Oh! my love!" he said. "Oh, my tender heart!" and then a hundred prayers for my happiness, and tears for my tears, and hopes for the future (which would be not the earthly life but the future reserved by merciful Heaven for those who have been called and chosen). As for the sharp and painful passage by which we must travel from this world to the next, Robin bade me take no thought of that at all, but to think of him either as my lover walking with me as of old beside the stream at home, or as a spirit waiting for me to join him in the heavenly choir. And so ending with as many farewells (the letter being written when he expected the Judges to arrive and the Assize to begin) as showed his tender love for me. No—I cannot write down this letter for the eyes of all to read. There are things which must be kept hidden in our own hearts; and, without doubt, every woman to whom good fortune hath given a lover such as Robin, with a heart as fond and a pen as ready (though he could never, like Humphrey, write sweet verses) hath received an epistle or two like unto mine for its love and tenderness, but (I hope) without the sadness of impending death.

It was four weeks after we were brought to Ilminster that the news came to us of the coming trials. There were five Judges—but the world knows but of one, namely, George, Lord Jeffreys, Chief Justice of England—and now, indeed, we began to understand the true misery of our situation. For everyone knew the character of the Judge, who, though a young man still, was already the terror alike of prisoners, witnesses, and juries. It promised to be a black and bloody Assize indeed, since this man was to be the Judge.

The aspect of the prison by this time was changed. The songs and merriment, the horseplay, and loud laughter by which the men had at first endeavoured to keep up their hearts were gone. The country lads pined and languished in confinement; their cheeks grew pale and their eyes heavy. Then, the prison was so crowded that there was barely room for all to lie at night, and the yard was too small for all to walk therein by day. In the morning, though they opened all the shutters, the air was so foul that in going into it from the open, one felt sick and giddy, and was sometimes fain to run out and drink cold water. Oh! the terrible place for an old man such as Sir Christopher! Yet he endured without murmuring the foulness and the hardness, comforting the sick, still reproving blasphemies, and setting an example of cheerfulness. The wounded men all died, I believe; which, as the event proved, was lucky for them. It would have saved the rest much suffering had they all died as well. And to think that this was only one of many prisons thus crowded with poor captives! At Wells, Philip's Norton, Shepton Mallet, Bath, Bridgwater, Taunton, Ilchester, Somerton, Langport, Bristol, and Exeter, there was a like assemblage of poor wretches thus awaiting their trials.

I said that there was now little singing. There was, however, drinking enough, and more than enough. They drank to drown their sorrows, and to forget the horrid place in which they lay and the future which awaited them. When they were drunk, they would bellow some of their old songs; but the bawling of a drunkard will not communicate to his companions the same joy as the music of a merry heart.

While we were expecting to hear that the Judge had arrived at Salisbury, the fever broke out in the prison of Ilminster. At Wells they were afflicted with the small-pox, but at Ilminster it was jail-fever which fell upon the poor prisoners. Everybody hath heard of this terrible disorder, which is communicated by those who have it to those who go among them—namely, to the warders and turnkeys, and even to the judges and the juries. On the first day after it broke out—which was with an extraordinary virulence—four poor men died and were buried the next morning. After this, no day passed but there were funerals at the churchyard, and the mounds of their graves—the graves of these poor country-men who thought to fight the battles of the Lord—stood side by side in a long row, growing continually longer. We—that is, good Mrs. Prior and myself—sat at the window and watched the funerals, praying for the safety of those we loved.

So great was the fear of infection in the town that no one was henceforth allowed within the prison, nor were the warders allowed to come out of it. This was a sad order for me, because my mother chose to remain within the prison, finding a garret at the house of the Chief Constable, and I could no longer visit that good old man, Sir Christopher, whose only pleasure left had been to converse with me daily, and, as I now understand, by the refreshment the society of youth brings to age, to lighten the tedium of his imprisonment.

Henceforth, therefore, I went to the prison-door every morning and sent in my basket of provisions, but was not suffered to enter; and though I could have speech with my mother or with Barnaby, they were on one side the bars and I on the other.

It was at this time that I made the acquaintance of Mr. George Penne. This creature—a villain, as I afterwards discovered, of the deepest dye—was to external appearance a grave and sober merchant. He was dressed in brown cloth and laced shirt, and carried a gold-headed stick in his hand. He came to Ilminster about the end of August or the beginning of September, and began to inquire particularly into the names and the circumstances of the prisoners, pretending (such was his craftiness) a great tenderness for their welfare. He did the same thing, we heard afterwards, wherever the Monmouth prisoners were confined. At Ilminster, the fever being in the jail, he did not venture within, but stood outside and asked of any who seemed to know, who were the prisoners within, and what were their circumstances.

He accosted me one morning when I was standing at the wicket waiting for my basket to be taken in.

"Madam," he said, "you are doubtless a friend of some poor prisoner. Your father or your brother may unhappily be lying within?"

Now I was grown somewhat cautious by this time. Wherefore, fearing some kind of snare or trap, I replied gravely, that such, indeed, might be the case.

"Then, Madam," he said, speaking in a soft voice and looking full of compassion, "if that be so, suffer me, I pray you, to wish him a happy deliverance; and this, indeed, from the bottom of my heart."

"Sir," I said, moved by the earnestness of his manner, "I know not who you may be, but I thank you. Such a wish, I hope, will not procure you the reward of a prison. Sir, I wish you a good day."

So he bowed and left me, and passed on.

But next day I found him in the same place. And his eyes were more filled with compassion than before and his voice was softer.

"I cannot sleep, Madam," he said, "for thinking of these poor prisoners; I hear that among them is none other than Sir Christopher Challis, a gentleman of great esteem and well stricken in years. And there is also the pious and learned—but most unfortunate—Dr. Comfort Eykin, who rode with the army and preached daily, and is now, I hear, grievously wounded and bedridden."

"Sir," I said, "Dr. Comfort Eykin is my father. It is most true that he is a prisoner, and that he is wounded."

He heaved a deep sigh and wiped a tear from his eyes.

"It is now certain," he said, "that Lord Jeffreys will come down to conduct the trials. Nay, it is reported that he has already arrived at Salisbury, breathing fire and revenge, and that he hath with him four other Judges and a troop of horse. What they will do with so many prisoners I know not. I fear that it will go hard with all; but, as happens in such cases, those who have money, and know how to spend it, may speedily get their liberty."

"How are they to spend it?"

"Why, Madam, it is not indeed to be looked for that you should know. But when the time comes for the trial, should I, as will very likely happen, be in the way, send for me, and whatever the sentence I warrant we shall find a way to 'scape it—even if it be a sentence of death. Send for me—my name is George Penne, and I am a well-known merchant of Bristol."

It was then that Barnaby came to the other side of the wicket. We could talk, but could not touch each other.

"All is well, Sis," he said; "Dad is neither better nor worse, and Sir Christopher is hearty, though the prison is like the 'tween decks of a ship with Yellow Jack aboard—just as sweet and pleasant for the air and just as merry for the crew."

"Barnaby," I said, "the Judges are now at Salisbury."

"Ay, ay; I thought they would have been there before. We shall be tried, they tell me, at Wells, which it is thought will be taken after other towns. So there is still a tidy length of rope. Sis, this continual smoking of tobacco to keep off infection doth keep a body dry. Cider will serve, but let it be a runlet, at least."

"He called you 'Sister,' Madam," said Mr. Penne, curiously. "Have you brother as well as father in this place?"

"Alas! Sir, I have not only my father, my mother, and my brother in this place, but my father-in-law (as I hoped soon to call him); and in Exeter Jail is my lover and his cousin. Oh! Sir, if you mean honestly"——

"Madam"—he laid his hand upon his breast—"I assure you I am all honesty. I have no other thought, I swear to you, than to save, if possible, the lives of these poor men."

He walked with me to my lodging, and I there told him not only concerning our own people, but also all that I knew of the prisoners in this jail—they were for the most part poor and humble men. He made notes in a book which caused me some misgivings; but he assured me again and again that all he desired was to save their lives. And I now understand that he spoke the truth indeed, but not the whole truth.

"Your brother, for instance," he said. "Oh! Madam, 'twere a thousand pities that so brave a young man, so stout withal, should be hanged, drawn, and quartered. And your lover at Exeter, doubtless a tall and proper youth; and the other whom you have named, Dr. Humphrey Challis, and your grandfather (as I hope he will be) Sir Christopher; and your own father—why, Madam," he grew quite warm upon it, "if you will but furnish some honest merchant—I say not myself, because I know not yet if you would trust me—but some honest merchant with the necessary moneys, I will engage that they shall all be saved from hanging. To be sure, these are all captains and officers, and to get their absolute pardon will be a great matter—perhaps above your means. Yet, Sir Christopher hath a good estate, I am told."

This George Penne was, it is true, a Bristol merchant, engaged in the West India trade; that is to say, he bought sugar and tobacco, and had shares in ships which sailed to and from Bristol and the West Indies, and sometimes made voyages to the Guinea Coast for negroes. But, in common with many Bristol merchants, he had another trade, and a very profitable trade it is, namely, what is called kidnapping: that is, buying or otherwise securing criminals who have been pardoned or reprieved on condition of going to the plantations. They sell these wretches for a term of years to the planters, and make a great profit by the transaction. And, foreseeing that there would presently be a rare abundance of such prisoners, the honest Mr. George Penne was going from prison to prison finding out what persons of substance there were who would willingly pay for their sentence to be thus mitigated. In the event, though things were not ordered exactly as he could have wished, this worthy man (his true worth you shall presently hear) made a pretty penny, as the saying is, out of the prisoners. What he made out of us, and by what lies, you shall learn; but, by ill-fortune for him, he got not the fingering of the great sums which he hoped of us.

And now the news—from Winchester first, and from Dorchester afterwards—filled the hearts of all with a dismay which it is beyond all power of words to tell. For if an ancient lady of good repute (though the widow of a regicide), such a woman as Lady Lisle, seventy years of age, could be condemned to be burned—and was, in fact, beheaded—for no greater offence than harbouring two rebels, herself ignorant of who they were or whence they came, what could any hope who had actually borne arms? And, again, at Dorchester, thirty who pleaded not guilty were found guilty and condemned to be hanged, and nearly three hundred who pleaded guilty were sentenced to be hanged at the same time. It was not an idle threat intended to terrify the rest, because thirteen of the number were executed on the following Monday and eighty afterwards. Among those who were first hanged were many whom we knew. The aged and pious Mr. Sampson Larke, the Baptist Minister of Lynn, for instance, was one; Colonel Holmes (whom the King had actually pardoned) was another; and young Mr. Hewling—whose case was like that of Robin. This terrible news caused great despondency and choking in the prison, where also the fever daily carried off one or two.

Oh! my poor heart fell, and I almost lost the power of prayer, when I heard that from Dorchester the Judge was riding in great state, driving his prisoners before him to Exeter, where there were two hundred waiting their trial. And among them Robin—Alas! alas!—my Robin!

CHAPTER XXVIII.

BENJAMIN.

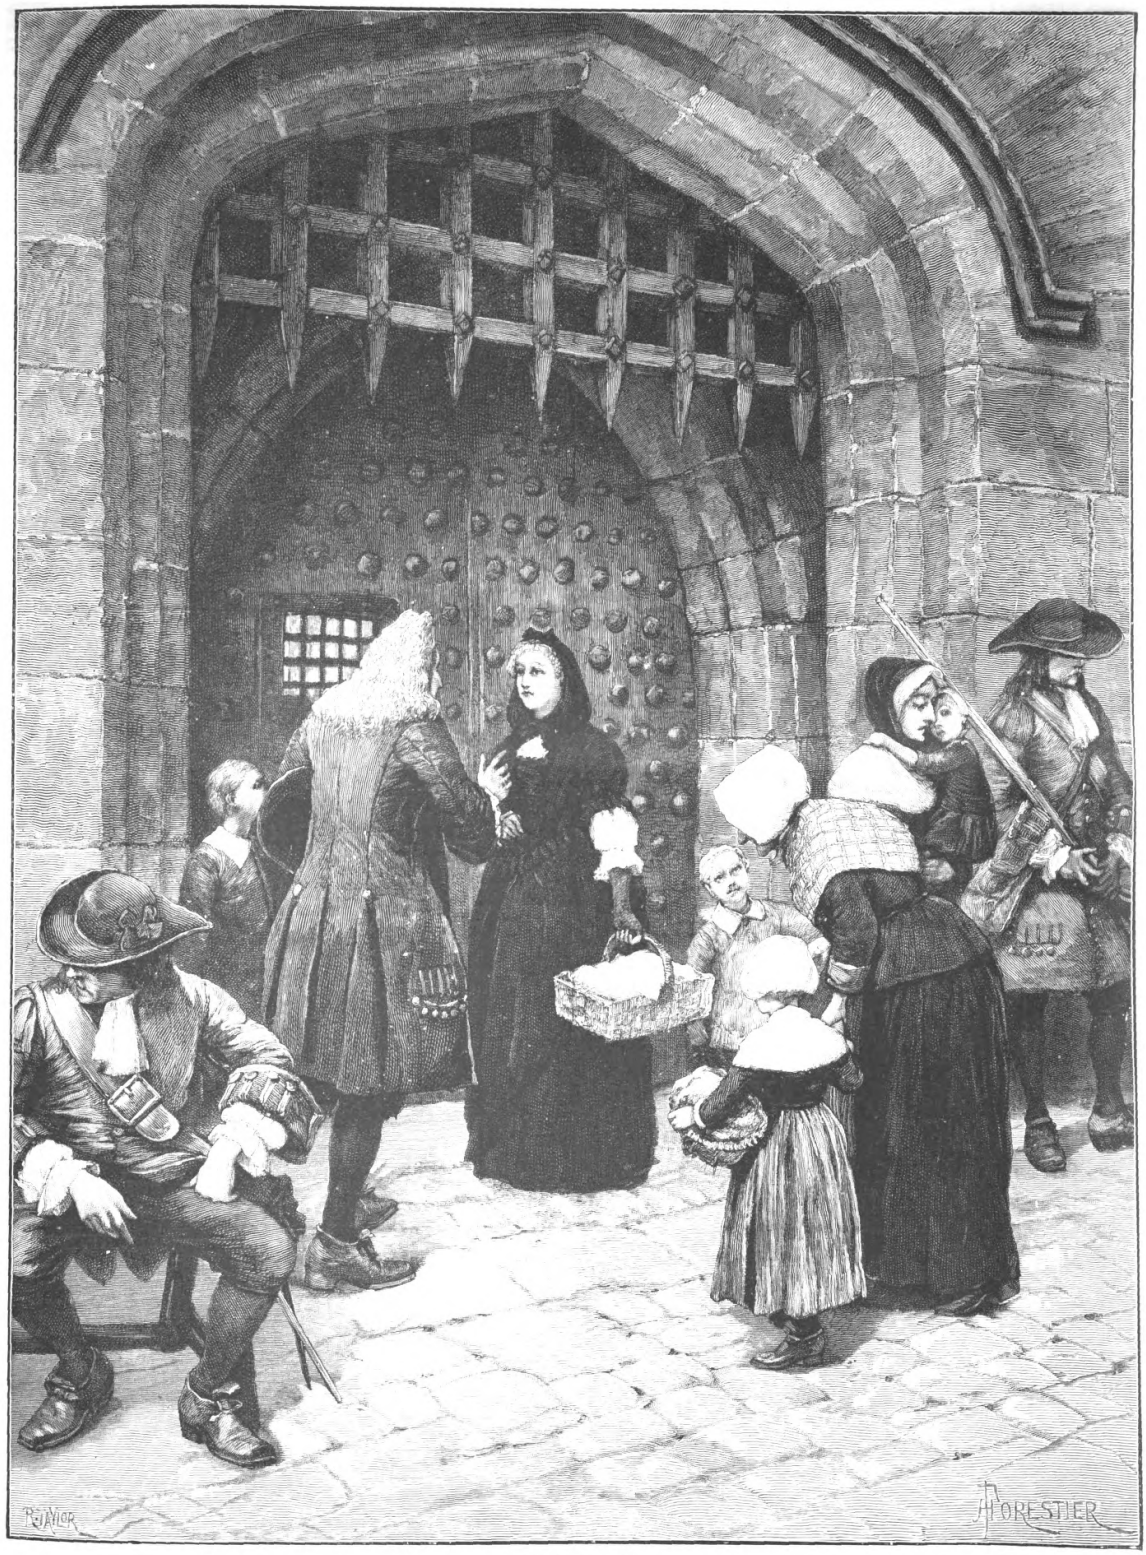
It was the evening of September the Sixteenth, about nine of the clock. I was sitting alone in my lodging. Down-stairs I heard the voice of the poor widow, Mrs. Prior, who had received us. She was praying aloud with some godly friends for the safety of her sons. These young men, as I have said, were never more heard of, and were therefore already, doubtless, past praying for. I, who ought to have been praying with them, held Robin's last letter in my hands. I knew it by heart; but I must still be reading it again and again: thinking it was his voice which was indeed speaking to me, trying to feel his presence near me, to hear his breath, to see his very eyes. In the night, waking or sleeping, I still would hear him calling to me aloud. "My heart! my life! my love!" he would cry. I heard him, I say, quite plainly. By special mercy and grace this power was accorded to me; because I have no doubt that in his mind, while lying in his noisome prison, he did turn his thoughts, yea, and the yearnings of his fond heart, to the maid he loved. But now the merciless Judge who had sentenced three hundred men to one common doom—three hundred men!—was such a sentence ever known?—had left Dorchester, and was already, perhaps, at Exeter. Oh!—perhaps Robin had by this time stood his trial: what place was left for prayer? For if the poor, ignorant clowns were condemned to death, how much more the gentlemen, the officers of Monmouth's army! Perhaps he was already executed—my lover, my boy, my Robin!—taken out and hanged, and now a cold and senseless corpse! Then the wailings and prayers of the poor woman below, added to the distraction of these thoughts, made me feel as if I was indeed losing my senses. At this time, it was blow upon blow—line upon line. The sky was black—the Heavens were deaf. Is there—can there be—a more miserable thing than to feel that the very Heavens are deaf? The mercy of the Lord—His kindly hearkening to our cries and prayers—these we believe as we look for the light of day and the warmth of the sun. Nay, this belief is the very breath of our life; so that there is none but the most hardened and abandoned sinner who doth not still feel that he hath in the Lord a Father as well as a Judge. To lose that belief—'twere better to be a lump of senseless clay. The greatest misery of the lost soul, even greater than his continual torment of fire, and his never-ending thirst, and the gnawing of remorse, must be to feel that the Heavens are deaf to his prayers—deaf for ever and for ever!

At this time, my prayers were all for safety. "Safety, Good Lord! give them safety! Save them from the executioner! Give them safety!" Thus, as Barnaby said, the shipwrecked mariner clinging to the mast asks not for a green, pleasant, and fertile shore, but for land—only for land. I sat there, musing sadly, the Bible on the table and a lighted candle. I read not in the Bible, but listened to the wailing of the poor soul below, and looked at the churchyard without, the moonlight falling upon the fresh mounds which covered the graves of the poor dead prisoners. Suddenly I heard a voice—a loud and harsh voice—and footsteps. I knew both footsteps and voice, and I sprang to my feet trembling, because I was certain that some new disaster had befallen us.

Then the steps mounted the stairs: the door was opened, and Benjamin—none other than Benjamin—appeared. What did he here? He was so big, with so red a face, that his presence seemed to fill the room. And with him—what did this mean?—came Madam herself, who I thought to have been at Exeter. Alas! her eyes were red with weeping; her cheeks were thin and wasted with sorrow; her lips were trembling.

"Alice," she cried, holding out her hands, "Child, these terrible things are done and yet we live! Alas! we live! Are our hearts made of stone that we still live? As for me, I cannot die, though I lose all—all—all!"

"Dear Madam, what hath happened? More misery! More disaster! Oh! tell me!—tell me!"



"Oh! my dear, they have been tried—they have been tried and they are condemned to die—both Robin—my son Robin—and with him Humphrey, who dragged him into the business and alone ought to suffer for both. But there is now no justice in the land. No—no more justice can be had. Else Humphrey should have suffered for all."

There was something strange in her eyes—she did not look like a mother robbed of her children; she gazed upon me as if there was something else upon her mind. As if the condemnation of her son was not enough!

"Robin will be hanged," she went on. "He hath been the only comfort of my life since my husband was taken from me, when he was left an infant in my arms. Robin will be hanged like any common gipsy caught stealing a sheep. He will be hanged, and drawn and quartered, and those goodly limbs of his will be stuck upon poles for all to see!"

Truly I looked for nothing less. Barnaby bade me look for nothing less than this; but at the news I fell into a swoon. So one who knoweth beforehand that he is to feel the surgeon's knife, and thinks to endure the agony without a cry, is fain to shriek and scream when the moment comes.

*All Rights Reserved.

DRAWN BY A. FORESTIER.

He accosted me one morning when I was standing at the wicket waiting for my basket to be taken in.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

When I recovered I was sitting at the open window, Madam applying a wet cloth to my forehead.

"Have no fear," Benjamin was saying. "She will do what you command her, so only that he may go free."

"Is there no way but that?" she asked.

"None!" And then he swore a great oath.

My eyes being open and my sense returned, I perceived that Mrs. Prior was also in the room. And I wondered (in such moments the mind finds relief in trifles) that Benjamin's face should have grown so red and his cheeks so fat.

"Thou hast been in a swoon, my dear," said Madam. "But 'tis past."

"Why is Benjamin here?" I asked.

He looked at Madam, who cast down her eyes, I knew not why.

"Benjamin is now our only friend," she replied, without looking up. "It is out of his kindness—yes—his kindness of heart that he hath come."

"I do not understand. If Robin is to die what kindness can he show?"

"Tell her, Benjamin," said Madam, "tell her of the trials at Exeter."

"His Lordship came to Exeter," Benjamin began, "on the evening of September the Thirteenth, escorted by many country gentlemen and a troop of horse. I had the honour of riding with him. The trials began the day before yesterday, the Fourteenth."

"Pray, good Sir," asked the poor woman who had lost her son, "did you observe my boye among the prisoners?"

"How the devil should I know your boys?" he replied, turning upon her roughly, so that she asked no more questions. "If they were rebels they deserve hanging"—here she shrieked aloud, and fled the room. "The trials began with two fellows who pleaded 'Not guilty,' but were quickly proved to have been in arms, and were condemned to death, one of them being sent out to instant execution. The rest who were brought up that day—among whom were Robin and Humphrey—pleaded 'Guilty,' being partly terrified and partly persuaded that it was their only chance of escape. So they, too, were condemned—two hundred and forty in all—every man Jack of them, to be hanged, drawn, and quartered, and their limbs to be afterwards stuck on poles for the greater terror of evildoers"—he said these words with such a fire in his eyes, and in such a dreadful threatening voice, as made me tremble. "Then they were all taken back to jail, where they will lie until the day of execution, and the Lord have mercy upon their souls!"

The terrible Judge Jeffreys himself could not look more terrible than Benjamin when he uttered the prayer with which a sentence to death is concluded.

"Benjamin, were you in the court to see and hear the condemnation of your own cousins?"

"I was. I sat in the body of the court, in the place reserved for counsel."

"Could you say nothing that would help them?"

"Nothing. Not a word from anyone could help them. Consider—one of them was an officer, and one a surgeon, in the army. The ignorant rustics whom they led may some of them escape, but the officers can look for no mercy."

"Madam," I cried, "I must see Robin before he dies; though, God knows, there are those here who want my services daily. Yet I must see Robin. He will not die easy unless he can see me and kiss me once."

Madam made no reply.

"For a week," said Benjamin, "they are safe. I do not think they will be executed for a week, at least. But it is not wise to reckon on a reprieve even for an hour: the Judge may at any time order their execution."

"I will go to-morrow."

"That will be seen," said Benjamin.

"My dear," said Madam, "my nephew Benjamin is a friend of the Judge, Lord Jeffreys."

"Say rather a follower and admirer of that great, learned, and religious man. One who is yet but a member of the Outer Bar must not assume the style and title of friend to a man whose next step must be the Woolsack."

Heavens! He called the inhuman wretch who had sentenced an innocent old woman of seventy to be burned alive, and five hundred persons to be hanged, and one knows not how many to be inhumanly flogged—great and religious!

"If interest can save any," Madam said softly, "Benjamin can command that interest, and he is on the side of mercy, especially where his cousins are concerned."

I now observed that Madam, who had not formerly been wont to regard her nephew with much affection, behaved towards him with the greatest respect and submission.

"Madam," he replied, "you know the goodness of my heart. What man can do shall be done by me, not only for Robin, but for the others who are involved with him in common ruin. But there are conditions with which I have taken pains to acquaint you."

Madam sighed heavily, and looked as if she would speak, but refrained; and I saw the tears rolling down her cheeks.

"What conditions, Benjamin?" I asked him. "Conditions for trying to save your own cousins and your own grandfather! Conditions? Why, you should be moving Heaven and Earth for them instead of making conditions."

"It needs not so much exertion," he replied, with an unbecoming grin. "First, Alice, I must own, Child, that the two years or thereabouts since I saw thee last have added greatly to thy charms; at which I rejoice."

"Oh! what have my charms to do with the business?"

"Much; as thou will presently discover. But let me remind you both that there threaten—nay, there are actually overhanging—disasters, the like of which never happen save in time of civil war and of rebellion. My grandfather is in prison, and will be tried on a charge of sending men and horses to join Monmouth. Nay; the Duke's Proclamation was found in his house: he will be certainly condemned and his estates confiscated. So there will be an end of as old a family as lives in Somerset. Then there is thy father, Child, who was Preacher to the army, and did make mischief in stirring up the fanatical zeal of many. Think you that he can escape? Then there is thy brother, Barnaby, who was such a fool as to meddle in what concerned him not, and now will hang therefor. What can we expect? Are men to go unpunished who thus rebel against the Lord's Anointed? Is treason—rank treason—the setting up of a Pretender Prince (who is now lying headless in his coffin) as the rightful heir, to be forgiven? We must not look for it. Alas! Madam, had I been with you instead of that conceited, fanatical, crookback Humphrey, whom I did ever detest, none of these things should have happened."

"Humphrey," I said, "has more worth in one finger than you in all your great body, Benjamin."

"My dear, my dear, do not anger Benjamin! Oh! do not anger our only friend!"

"She may say what she pleases. My time will come. Listen, then. They must all be hanged unless I can succeed in getting them pardoned."

"Nay—but—forgive my rudeness, Benjamin: they are your own cousins—it is your own grandfather. What need of conditions? Oh! what does this mean? Are you a man of flesh and blood?"

"My conditions, Child,"—why did he laugh?—"will assure you that such is truly the nature of my composition."

"If money is wanted"—I thought of my bag of gold and of Mr. Penne's hints—"how much will suffice?"

"I know not. If it comes to buying them off, more thousands than could be raised on the Bradford Orcas estates. Put money out of mind."

"Then, Benjamin, save them if thou canst."

"His Lordship knows that I have near relations concerned in the Rebellion. Yet, he assured me if his own brothers were among the prisoners he would hang them all."

"Nay, then, Benjamin; I say no more. Tell me what are these conditions, and, if we can grant or contrive them, we will comply." I had no thought of what was meant by his conditions, nor did I even guess until the morning, when Madam told me. "Oh! Madam, is there anything in the world—anything that we would not do to save them?"

Madam looked at me with so much pity in her eyes that I wondered. It was pity for me and not for her son that I read in that look. Why did she pity me?

I understood not.

"My dear," she said, "there are times when women are called upon to make sacrifices which they never thought to make, which seem impossible to be even asked——"

"Oh! there are no sacrifices which we would not gladly make. What can Benjamin require that we should not gladly do for him? Nay, he is Robin's cousin, and your nephew, and Sir Christopher's grandson. He will, if need be, join us in making these sacrifices."

"I will," said Benjamin—again, why did he laugh?—"I will join you in making one sacrifice at least, with a willing heart."

"I will tell her to-morrow," said Madam. "No, I cannot tell her to-night. Let us first rest. Go, Sir; leave us to our sorrow. It may be that we may yet think the sacrifice too great even for the lives and the safety of those we love. Go, Sir, for to-night, and return to-morrow."

"Surely, Child," said Madam presently, when he was gone, and we were alone, "we are the most unhappy women in the world."

"Nay," I replied. "There have been other women before us who have been ruined and widowed by civil wars and rebellions. If it be any comfort to think that others have suffered like ourselves, then we may comfort ourselves. But the thought brings no consolation to me."

"Hagar," said Madam, "was a miserable woman because she was cast out by the man she loved, even the father of her son; but she saved her son. Rachel was unhappy until the Lord gave her a son. Jephthah's daughter was unhappy—my dear, there is no case except hers which may be compared with ours—and Jephthah's daughter was happy in one circumstance: that she was permitted to die. Ah! happy girl, she died! That was all her sacrifice—to die for the sake of her father! But what is ours?"

So she spoke in riddles or dark sayings, of which I understood nothing. Nevertheless, before lying down, I did solemnly and, in her presence and hearing, aloud, upon my knees, offer unto Almighty God myself—my very life—if so that Robin could be saved. And then, with lighter heart than I had known for long, I lay down and slept.

At midnight, or thereabouts, Madam woke me up.

"Child," she said, "I cannot sleep. Tell me truly: is there nothing that thou wouldest refuse for Robin's sake?"

"Nothing, verily! Ah, Madam, can you doubt it?"

"Even if it were a sacrifice of which he would not approve?"

"Believe me, Madam, there is nothing that I would not do for Robin's safety."

"Child, if we were living in the days of persecution wouldest thou hear the Mass and adopt the Catholic religion to save thy lover's life?"

"Oh, Madam, the Lord will never try us above our strength!"

"Sleep, my child, sleep; and pray that, as thy temptation, so may be thy strength!"

(To be continued.)

New colours were presented on Oct. 4 to the 1st Battalion Royal Warwick Regiment by Prince Edward of Saxe-Weimar, Commander of the Forces in Ireland.

The Rifle Championship of the Westminster Volunteers has been won this year by Captain G. D. Rose, who takes the gold badge; the silver badge being won by Sergeant Wilson, and the bronze by Private C. F. Lowe.

An open scholarship in natural science, of the value of 125 guineas, has been awarded to Mr. E. M. Hainworth, and one of the value of £60 to Mr. Edwin Smith. These gentlemen were students attending the preliminary scientific classes held at St. Thomas's Medical School.

At the annual festival of the Otter Swimming Club the Secretary presented, on behalf of the Royal Humane Society, a bronze medal to Algernon Sidney Graves, the grandson of Mr. Henry Graves, the art-publisher of Pall-mall, for having assisted in saving life from drowning in a very rough sea at Ventnor on Aug. 28. Sidney Graves is only fifteen, and is the youngest member of the Otter Club.

The Chancellor of the Exchequer will preside and give an address, on Oct. 15, at the first lecture of a course of eleven on "Early English Literature," to be given at Gresham College, in connection with the London Society for the Extension of University Teaching. The society has also arranged for forty-two courses of lectures in various branches of Science, History, Literature, and Art, to be delivered during the coming term at several centres in and near London.

Professor Baldwin, the aeronaut, met with a narrow escape at the Alexandra Palace on Oct. 4. The wind, being gusty, swayed the balloon into dangerous proximity to some trees, and Mr. Baldwin was compelled to jump off just as it was rising, sustaining a slight sprain to one of his wrists.—At a meeting of the Middlesex Magistrates, on the same day, the application for a license for the Alexandra Palace was adjourned for a week, the chairman, Sir Francis Morley, making some comments upon the dangerous character of Professor Baldwin's performance.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

OCTOBER 13, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (via United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (via Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

OLD-FASHIONED OCTOBER.

The title of this paper is by no means a mere *façon de parler*, but accentuates a difference. In some remote and quiet counties, rich in pasture, woodland, and villages of most placid life, an October exists which is, for the lover of field sports, and rural sights and sounds, essentially the same in some respects as that which our grandfathers enjoyed while Trafalgar was being fought and won. October has ever had a special charm for the English ear—its old ale, its pheasant, its silvery grayling, which is so much less known than other members of the *salmonidæ*, its sound of hound and horn, and the fullness of its autumn fruitage—all these associations have made the keen, bright days and starlight nights of the month, whose air, if it be a dry one, is, champagnelike, a general favourite. Farmer, shooter, angler, courser, and tourist, alike love October. But none more than he who enjoys an old-fashioned October, and on its opening day pursues the wild pheasants as was done in that Trafalgar October—for ever after to be memorable. And we venture to say that he who has not shot wild pheasants in the early part of the month has never known what real partridge-shooting is.

This is a sweeping assertion in face of the fact that fashion so rules even the breechloader now that many men think it "bad form" to shoot pheasants till November and December—and then for the sake of making a bag which shall be enormous. Therefore, it follows that, according to our view, there are many who have *not* known what real pheasant-shooting is. Consider for a moment the diverse scenes. The fashionable battue takes place in the short winter days in copses bare of leaf and amid a wilderness of branches waving skeleton-like in rides cut for the purpose, to which the shooter, as a mere machine, is confined, and last and worst of all, with the absence of dogs.

Now scan the other picture. Our grandfathers thought the First of October a day of days, and one most fitted to begin the shooting of the pheasant. Try it, and see from the surroundings how good their taste was. It is a bright October morning, the keen air sweet with turf-reek from the cottages, the dew sparkles on the grass, the copses are thick with leafage—which the modern fashionable shooter detests, but which to the simpler taste of the old-fashioned one is admirably in consonance with the day. Every tint and shade of autumnal beauty in decay is there in exquisite combination and gradation; and as the woods themselves, in such shooting as we purpose to-day, are not to be explored, the leafage so obnoxious to the battue-man need not offend our susceptibilities or interfere with the line of fire. In the clear air the rooks diving and tumbling, the starlings wheeling and turning, a sheet of swift wings, betoken the season. The gardens of the cottages load the air with fragrance, for in these quiet, old-world regions the old-world gardens still exist unvexed by modern utilitarianism. Stocks, wallflowers, mignonette, and lavender commingle their odours in unstudied profusion, and the hedges blaze with hips and haws, with briony, and here and there blush with the last pale wild roses. Around, a Virgilian quiet broods over the farming life. Steam puffs and frets not here, but the ancient ways go on placidly as for centuries.

And now the outskirts of the beat are reached, and your host slips the brace of clever spaniels who supply the place of the noisy beaters. No yard-reared pheasants are here counted by dozens, whistled to be fed by the keeper, and turned into the woods just long enough to give them an idea of wild life. Every bird here has been hatched in the mother's self-made nest in the spinney, amid ferns and hazels; has foraged for itself since chickenhood, and taken its chance as to stoat, weasel, and fox's enmity. Wild birds, they have grown strong on the wing, beautiful in plumage, rocketers in flight, and thinking nothing of going a mile off to another manor if disturbed. All the better for real sport. These broad double hedgerows, studded with great elms and oaks, are like that historic one in which unhappy Monmouth lay hiding; in such places they are small domains of themselves. No beaters could be of any use here; and there is no chance of picking shots or of hot corners. But you and your host stand on the opposite sides. By him stands, alert and attentive but quiet and watchful, the old retriever, who in the battue would be voted an impertinent nuisance. The eager spaniels, loosed by their attendant—some honest rustic who enjoys the sport as much as they—rush into the brambles, their long ears tearing against the prickles without in any way daunting their high courage. The twigs crack, leaves rustle, the eager scamper and panting of the dogs are alone heard, till a chorus of shrill yelps announces something is on foot and close before them. Not to appear directly; such hedge bottoms are veritable fastnesses, and once in them a wild cock pheasant is *cunning* as a fox. But the spaniels press him hard.

You and your host slowly advance abreast; the eager dogs, mad with excitement, continually give tongue, till, where the thinner vegetation makes the concealment less good, there is a sudden heart-shaking, to borrow De Quincey's word; whirr! and a magnificent old cock pheasant, followed by a brace of obedient hens, rises in his full splendour of wing. He shoots straight up in the air, tops the young oaks, and goes off like a steam-engine across country. Now test your shooting! A sovereign to a penny the first barrel misses, for what nerves are proof against the first bird of the season—and so it is. But the second, more deliberately fired, does the trick, and the beautiful victim drops like a plummet among the hazel bushes. A wave of your host's hand sends the old retriever in, and he knows his work. A few minutes' expectation, and he returns, pride in his honest countenance, and the unruffled pheasant in his tender mouth, and you exchange reciprocal congratulations over the first pheasant of the season. So onwards. Round the hedgerows lies the scene; the little spaniels, never tiring, twisting round every stub and tree, and passing nothing. More wild pheasants are found. Some fall, some go off to far distant copses, becoming, ungrudged, in this unsophisticated region, the property *pro tem.* of other landowners. Rabbits pop out and are bagged. A big hare—rather scarce since the Act—canters out of a grass tuft and is cleverly stopped. Leisurely enjoyment outside the woods makes up for any amount of drilled shooting inside them, though the number of slain be in modern eyes ridiculous. Then comes the luncheon, under the hedge, of some simple fare which needs no raised pie or champagne. Sylvan viands of modest pretension, washed down with real old October such as is still brewed here and there, and specially *here* where lies your beat, are followed by that soothing and incomparable pipe which every shooter and angler knows as the after-luncheon one, unique of its kind. The scream of jay and coo of stockdove from the recesses of the unentered wood and the sweep of the wind through the hazels which screen your repose beneath a giant oak, alone are heard for the half-hour's rest. Then follows the afternoon's work, as the shadows lengthen and the outlying pheasants wander into the stubbles under the copse hedges. And the afternoon hours are of the pleasantest as the shadows lengthen, for the *fusee que roulera le faisant* of the old-fashioned order of the day makes up the unfailing delight of a quiet old-fashioned October.

FERN-TREE GULLY IN VICTORIA.

Fern-tree gullies are frequent enough in Australia, and are favourite places for wandering artists, who love solitude and picturesque wildness. Up in the Dandenong mountains, where the kangaroo and wallaby find their hiding-places, are sylvan nooks, in which rock and water, timber and foliage, make scenes of charming variety; gigantic ferns and tiny little ferns are massed together with heath and mosses, and gum-trees of different shapes—some stately and straight, some twisted and angular—push their way at all angles through the dense undergrowth. The sketch is from a gully about a three-hours' drive from Melbourne, a well-known water track ascending to One-Tree Hill. Climbing up through the gully is toilsome work, and it is desirable that the artist should wear his stoutest boots, his oldest or strongest clothes, and carry a stout pole.

STUDLEY PARK, MELBOURNE.

The glimpses of Australian woodland scenery preserved in Studley Park, to refresh the eyes of the busy citizens of Melbourne, is but one incidental feature of the liberal provision made by the public authorities for the wholesome recreation of all classes, in a population almost equal to that of any of our largest provincial towns, Liverpool, Manchester, or Glasgow. There is the Royal Park, with a good zoological collection; the Fitzroy Park, a beautiful garden; the Fawkner Park, bearing the name of one of the earliest settlers; the Botanical Gardens, on the south side of the Yarra, a mile from the centre of the city, where every plant and shrub is labelled with exact particulars of its scientific order and of signation, and of the region in which it grows; the Treasury Gardens; the Fitzroy Gardens, and others, affording delightful places of refuge from the crowded streets and bustle of town. The sea, at least the shore of Hobson's Bay and Port Phillip, is within easy reach; and, by the Gippsland Railway, it is not a long journey to the Dandenong mountains and forests. Life in Melbourne, under a bright sky, with a salubrious and stimulating climate, in spite of occasional "brick-fielders" or dry, sultry winds from the sandy plains of Central Australia, is felt to be so enjoyable that those accustomed to it, when we meet them in London, usually confess their desire to return to the Southern Colonies. A million of English people, living in Victoria, are tolerably unanimous in liking it better than England. Mr. Anthony Trollope was much impressed with the proofs of their cheerful prosperity. "It is to be seen," he says, "in the daily lives of the colonists, in the clothes which they wear, in the food which they eat, in the wages they receive, in the education of their children, and in the general comfort of the people." Though industrious, they never seem anxious, and always have spirit, as well as leisure, to take an ample share of healthy amusements in the open air, with fine summer weather during the greater part of the year.

IN THE FERN-TREE GULLY, VICTORIA.

SCIENCE JOTTINGS.

THE TOAD IN THE ROCK.

In the *Times* of a recent date appeared, under the title of "A Prehistoric Toad," the following communication signed "Amelia B. Edwards":—

The following extract from a letter which I have this day received from a gentleman well known for his archæological and scientific tastes is so remarkable that I think it will be read with interest by your readers:—

"I suppose you have often heard of toads being found in pieces of rock, coal, &c., when broken open by the workmen's pick. I have to-day just seen one taken out of a bed of clay on Tuesday last (the 18th inst.), in a new railway cutting at present being made here. It is alive, but very inactive and semi-torpid. It seems to have no bones, it is so limp, and its legs bend any way. It has two beautiful eyes, but does not seem to see. Its mouth is sealed up; but it seems to breathe very slightly through its nostrils, though how it breathed embedded in clay it is hard to say. If it is 20,000 to 30,000 years since the Glacial period when the clay was deposited, this toad goes a long way back into hoary antiquity, and was probably contemporaneous with the progenitors of Moses himself. But the toad lives still."

I should add that the writer is Mr. T. L. Patterson, of Greenock, who will, I trust, forgive me for giving publicity to this much of his letter.

The story of the toad in the rock is a very old one, and although it has a "dying fall" strain about it, well deserves mention and criticism once again. Miss Edwards being only the intermediary writer, I may deal with the statements of Mr. Patterson himself. Let us subject his narrative to the ordinary tests whereby we are accustomed to judge of the value of evidence. In the first place, then, Mr. Patterson's evidence is of "hearsay" character, and as such might be rejected altogether if it were offered to us seriously in proof of the actual discovery of a live toad in a bed of clay. All that Mr. Patterson can tell us is to the effect that he saw a toad (species unknown or undescribed) which he was told had been taken out of a bed of clay, in which, presumably, it had been immured for ages. I cannot admit that on such bare testimony any scientist would be justified in assuming for a moment that the ordinary laws of animal life at large, and of toad-life in particular, could be set aside or suspended altogether. What is wanted, and what never has been in my experience forthcoming, is the sworn testimony—accurately, and on the spot recorded (for after-impressions are highly-deceitful things), by skilled and intelligent observers—of the individuals who have split the rock or clay asunder and found the living toad or frog embedded therein. Nothing less direct or accurate in the shape of evidence can possibly satisfy any rational mind, when the issue, to science, at least, is of such momentous character.

The other points in Mr. Patterson's narrative will bear a brief criticism. His description applies simply to a state of torpor. You may see toads and frogs in this state during the winter by the dozen in any locality they frequent. The limp, thin body, the shut mouth (by-the-way these animals are not given to gaping much), and the glassy eyes, are all quite familiar to every naturalist in a toad which has spent the cold season under nutritive and other difficulties. Naturally, Mr. Patterson's toad breathed through its nostrils, because toads and frogs always respire in this way. As breathing is a necessary condition of animal life—largely assisted in the frog class by the skin, I admit—Mr. Patterson might well be puzzled to know how this toad contrived to respire embedded in clay, which, by-the-way, is just as solid as a rock in so far as permeation by air is concerned. As for its bones, I will guarantee that if Mr. Patterson will feel his toad—I presume it is still in the flesh, either as a living animal or preserved among "the wine of the country"—he will soon discover that it has a skeleton. Possibly bony development has not proceeded in a thoroughly natural fashion in the animal for reasons connected with absence of food; but bones it must have, otherwise it would not be a toad.

If science utterly rejects the foolishness of the ordinary newspaper story, repeated as heard from the lips of ignorant and often superstitious workmen, unverified in one single particular by independent testimony, what, it may be asked, has science to say about the matter at all? I reply, a good deal that serves to put such stories in their proper place. First of all, there is never any proof offered that the rock or clay was *solid*. The animal is never seen until the rock is broken up or the clay disintegrated; hence it is a pure assumption to allege that the animal was immured in a solid formation.

A story was once submitted to me in which it was recounted that, after a rock was blasted in a quarry, a lively frog was found hopping about among the débris. Instantly arose the cry of "A frog in the solid rock!"—that is to say, because the animal, disturbed by the explosion, had appeared among the rock fragments, the workmen concluded that it must have come out of the rock, and from nowhere else. Again, I say, this is not evidence. It is a piece of sheer gratuitous assumption. We know that frogs and toads can live, under rigorous conditions, for lengthy periods of time—more of this anon.

But I can appeal to direct evidence which vitiates entirely the "toad-in-the-rock" stories. Dean Buckland, troubled in his day by like narratives, caused in 1825 two blocks of stone to be prepared so as to contain twelve cells each. The cells were 12in. deep by 5in. diameter in one block, and 6in. deep by 5in. diameter in the other. Each cell was fitted with two covers—a glass one below and a slate one above; so that by removing the latter, the interior of the cell could be seen without removing the glass, and without admitting air. Both lids were firmly secured by clay. On Nov. 26, 1825, a live toad was placed in each of the twenty-four cells, and firmly fastened in by the covers. Each animal was weighed on entering upon its imprisonment, and on the date just named, the two blocks of stone were buried in Dr. Buckland's garden at a depth of three feet. On Dec. 10, 1826, the blocks were disinterred. All the toads in the smaller cells were dead, and from the progress decay had made, had evidently died long before the date of their disinterment. The majority of the toads in the bigger block were alive. Save in two cases—in which cracked lids explained a cause of the increase in weight by the admission of air, and possibly insect food also—the toads in the larger cells had decreased in weight. The living toads were again buried; but on being disinterred at the end of another year were found to be dead, without a single survivor. Again, four toads were confined in holes cut in trees, and were found dead at the end of a year; and of four enclosed in plaster-of-Paris basins, two died within the year, the other two being starved and meagre, and evidently fast hastening onwards to a fatal end of their confinement.

Here, then, are exact experiments which, be it noted, in their conditions were not nearly so hard and rigorous as are those of the toad in solid clay or solid rock. If Dr. Buckland's toads succumbed so soon, how comes it that the antediluvian frogs and the prehistoric toads are reputed as surviving through "the long ages of the prime"? The real explanation of these stories, I believe, is founded on a very simple fact. Toads and frogs undergo a metamorphosis from the tadpole stage to that of adult life. Now, a toad or frog which has just left the water is a very small animal. Suppose it creeps into the crevice of a rock or into a crack in clay: it may there remain growing larger, receiving air and food, and is thus unable to escape from its domicile. Then the apparently solid rock is broken up, and out leaps the toad—credited with being a prehistoric creature, but in reality only the friend and companion of those which hopabout freely in the adjacent country.

VIEW IN STUDLEY PARK, MELBOURNE.

A meeting of the London School Board was held on Oct. 4, at which the Rev. J. R. Diggle, the chairman, made his annual statement, showing that the two notable features of the administration of the present board were the steady and continuous increase in the efficiency of the schools and the equally steady and continuous diminution of the amount of the rate.—The Rev. J. R. Diggle presided on Oct. 3 at a meeting held in the Shillington-street Board School, Battersea, to celebrate the opening of a new wing, by which additional accommodation for 600 children has been provided. There is now room in these schools for 1600 children, which, the chairman said, was the fullest extent to which any school should be fitted.

A BULGARIAN PEASANT WOMAN.

FROM A PICTURE BY PAUL THUMANN.

BLACKBERRYING.

The children never grow old. Whatever changes the intellectual expansion of the ages may bring about in youth and manhood, the childhood of the nineteenth century remains, in all essentials, the childhood of the centuries preceding it—just as buoyant and adventurous, as simple and as sportive. The bramble is as dear to the children now as it was to the Tudor or the Stuart children; and no sooner do its berries begin to ripen with the autumn suns and absorb their characteristic flavour from the autumn mists, than the little folk swarm out into the lanes to forage among the hedges—seeking the sunniest places, where the fruit always matures the soonest and grows the largest—or they spread over the furzy common, or force their way, heedless of torn garments and scratched fingers, into the shaws, holts, coppices, or thickets, where, it is true, the fruit is not so plentiful nor so ripe as in the more open ground, but is ever so much more palatable on account of the difficulty experienced in securing it. You may hear their shouts and laughter afar off—as spontaneous and as joyous as the shouts and laughter in which you yourself bore your share right heartily some thirty, or forty, or—shall we say!—fifty years agone. Therefore, I say, the children never grow old. They are what they have ever been; though the Public School Primer has dispossessed the Eton Latin Grammar and the "High School" risen on the ruins of the old "Academy" and "Seminary for Young Ladies." All the brand-new educational systems have left the spirit of childhood unaffected—as you may assure yourself if you will follow in the steps of the children when they go a-blackberrying.

There is a fine catholicity about the blackberry which commends it to me hugely. The peach and the nectarine are not for all—not even in "tins"! The mangosteen is still harder of access, and the luscious durian one only reads of in the pages of Mr. Wallace; but the blackberry, like the poor, is always with us. It is specially the fruit of the poor. There is no tax upon it—no charge; the broad bosom of Nature yields it unstintedly and ubiquitously, so that round about our manufacturing towns you will see the hollow-cheeked, sad-eyed offspring of the slums ever on the watch for the earliest berries, which, indeed, in their haste, they hardly allow to ripen. But, if specially the fruit of the poor, it is also everybody's fruit: Dives and Lazarus touch hands over the blackberry! Observe, that to enjoy it wisely, you must feast upon it when freshly gathered—fresh picked from the thorny and involved stems on which it grows in such reckless profusion that hundreds and thousands never come to maturity. 'Tis best with the dew upon it—the dew of the cool October morning, when the rising sun gently brushes away the first light footprints of the autumnal frost. There are abandoned creatures, I believe, who make this most admirable fruit into *jam*; just as there are people who will botanise on their grandmother's—or, for the matter of that, on their mother's—grave. The blackberry, however, before all things is *an open-air fruit*, and he who would taste it aright, should eat it where and when it is plucked. That it should be boiled up, or boiled down—which is it!—with sugar, deprived of its natural savour, and reduced to the level of the currant or the gooseberry, is a degradation unworthy of the fruit which, I doubt not, often refreshed Robin Hood and his merry men in the glades of Sherwood, and moistened the laughing lips of the boy Shakspeare in the green fields of Avon. Consider, too, the "reserve of force" which lies in this tiny, sun-purpled fruit. Why, like the magic carpet in the old fairy story, it can carry you over the wide tracts of the past to the bold, blithe days of boyhood—"ere you were old, ah, woeful ere!"—when, as one of a merry company, you rose betimes, in a mood of natural gaiety, and tramped it merrily up and down the green, green lanes, where the first-fallen leaves, shining with diamond dew-drops, strewed the sward all about, and the cobwebs sparkled in the sun, and the thistle-down fluttered to and fro, and the rime still clung—like a network of silver—to the windward edges of the deep ruts ploughed by the wheels of the harvest-wain. Autumn comes as of old, and with it the blackberry; but never again come those fresh young energies, that elasticity of spirit, that boundlessness of hope, that fond ambition, which then crowded a life of action into every hour! But shall we not be grateful to the modest little low-born berry which recalls for us the joys of that unequalled time!

Something of the lively interest—I had almost said affection—with which we regard the blackberry may be due, perhaps, to the fact that it is the last offspring of the fruitful year—its latest-born. The spoils of the orchard and the garden have all been collected; the wild raspberry, the cloudberry, and the dewberry—which are all members, like the bramble, of the great Rosacea family—have sunk into the dust; but still in its angular, prickly, and convoluted spray, which trails hither and thither in the very abandonment of license, lingers the hardy fruit of the bramble. It is one of the signs of the waning seasons. Sloe, bullace, and crab have had their day; but among the old grey hawthorns and the furze, among the yellowing hazels and the wildwood, the blackberries still tempt the fingers of the wayfarer; and, mayhap, even a tuft or two of the satiny, roselike blossoms are loitering in beech-shaded hollows and unthought-of nooks, where the pools lie dark and silent. The hop-grounds have been despoiled of their capricious produce; and the tall poles which, a few weeks ago, were as gay with the garlanded bines as an admiral's mast with pennons, lie in dull heaps in the corners of the fields. The foliage of the woods betrays the presence of the autumn. The oak is fast assuming its rich tints of burnished bronze; the orange of the beech glows in sunny masses; the "keys" of the ash rattle in the lightest breeze; the pale yellow leaves of the elm are falling fast; and the lindens are nearly bare already. But the long wreaths of the bramble are still fresh and vigorous.

With much winnowing of wings, and loud, twittering cries, the swallows gathered some weeks ago by pool and stream, to settle among themselves the order of their going, and the hour of their departure, on their league-long journey to the genial regions of the South; but a few stragglers are tarrying with us yet; and yesterday I saw a couple in hot pursuit of prey, unconscious, apparently, of the near approach of winter. Most of the singing-birds have left us, and the redwing and the fieldfare have come to take their places. With "treble soft," the familiar redbreast whistles from the garden-croft; the blackbird and the thrush have not deserted us wholly; while in the hedge you may find, perhaps, the rare crested wren—"that shadow of a bird," as White of Selborne calls it. Yes; there is no mistaking the presence of the autumn. The wind comes up in little gusts, which make themselves felt by sudden showers of leaves dropping fast around us—leaves yellow and red, and bronze and ruddy brown, and scarlet brown and brownish yellow—leaves spotted, streaked, and tinted—leaves of every hue and shade, as if Nature had been trying upon them her pencils dipped in magical colours. The odour sent up from all this fallen foliage is peculiar, but not unpleasant; if you penetrate into a coppice, you are sensible of it immediately. But there is a stronger odour from the fungi which now, in blackberry time, thrive in our woods and orchards and meadows, rivalling the leaves in variety of colouring and surpassing them in variety of shape and in size, from the slender scarlet thread or bright yellow filament on some decaying stump to the broad bold agaric, twelve inches in diameter, in the heart of the wood—where, for aught I know, Titania and her fairies use it as their hospitable board on nights of sylvan revelry. There are pearly-white fungi, and fungi striped with brown, and fungi dipped in rose-bloom; there are reddish-yellow gingery mushrooms and snowy mushrooms (these grow under the trees); there are fungi shaped like the moon when near her full, and fungi which remind one of a balloon; in short, the diversity is almost endless in what Cowper calls "the fungous fruits of earth."

To the children, as with song and shout they tear through wild tangles of brier, briony, and bitter-sweet, in search of the coveted berries, all these sights and sounds will be as to the blind and deaf: for childhood is not perceptive, but keeps its gaze fixed on the one aim and object that for the time concentrates its desires. Not so should it be with their elders; though there are men and women (God help them!) who will travel from Dan to Beersheba, and in the vanity of their ignorance, pronounce that all is barren. And there are others who go about the world dismally wringing their hands, sighing over lost illusions and the weariness of life, and refusing to see the bright and consoling things around them. Ah, if they would but go a-blackberrying! In mid-autumn there are often days when the sun kindles in the air a warmth like that of summer; when the dome of blue overhead is not stained in its purity by a single cloud; when the soft mist hanging about the hills and the woodlands seems to blend earth and sky together in a vision of delight; when the warble of the late-lingering chiff-chaff may still be heard in the lane, and the chirp of the sparrows in the stubble-fields, and in the mossy apple-tree the thrush again takes up his parable. On such a day it is good to throw the burden of the world off one's shoulders, lay hold of one's staff, and, like the children, go a-blackberrying. The signs and voices of the autumn are multiplying around us, it is true; but keep your eyes on the alert and your heart open and you will see many beautiful gifts of Nature and receive her inspiring influences. The wild bank, with its tufts of furze and clumps of rich-berried thorn, the flowers, mostly yellow, that still bloom among the grasses; the hedgerows wreathed with bramble in every variety of purplish red—these, and a hundred other curious, wonderful, charming, or lovely objects, invite examination. Nature is never barren, never silent, not even in the declining days of sober-suited Autumn. There are birds on the wing, life and health in the breeze, a green growth still in unfrequented byways, the sward still springs to the feet—as you will find, my friend, if, like the children, you will go a-blackberrying.

W. H. D.-A.

NEW SURREY CHAPEL.

Old Surrey Chapel, a conspicuous octagonal building in Blackfriars-road, is familiar to most Londoners. Its history is

NEW SURREY CHAPEL AND SCHOOL, BLACKFRIARS-ROAD.

associated with the famous ministry of the Rev. Rowland Hill during half a century, and, since that, with the Rev. James Sherman and the Rev. Newman Hall, whose congregation, being unable to get the lease renewed on terms convenient to them, latterly erected their handsome Christ Church in Westminster Bridge-road, a mile away. The chapel was handed over to the Primitive Methodists, and the work of founding and organising a church was entrusted to the Rev. Benjamin Senior, whose labours have been successful. The old building has, for some years past, been given up to its owners, and has been converted into a warehouse for machine-manufacturers. A "New Surrey Chapel," of which we give an Illustration, has been erected on a very good site in Blackfriars-road, only forty yards distant from the old chapel. It is nearly the largest, and is considered the handsomest, of the chapels belonging to the Primitive Methodists. The architect is Mr. James Weir, of 9, Victoria-chambers, Westminster. The interior is so arranged that the minister in the pulpit has his congregation compactly around him; the wide oval gallery narrowing, behind the pulpit, into two rows of seats for the choir, with a corner left for the organ. The decoration of the pulpit, white and gilded, is in harmony with that of the gallery front. The large latticed windows are filled with tinted glass. The ceiling is divided artistically into geometrical squares. The pews are wide apart, and have wide seats and sloping backs. There are sittings for 700, which can be increased to a thousand. Below the chapel, a lecture-hall, with a good platform, will accommodate 400. On each floor are convenient rooms—a church parlour for social meetings, pastor's and stewards' vestries, a large room for the meetings of the committee of conference, a Sunday-school library, and caretaker's rooms. £4000 of the £12,000 the site and building have cost yet remain to be raised, and it is hoped that the chapel will not be hampered by debt.

The Bank of England has advanced its rate of discount to 5 per cent. So high a rate has not been in force since January of last year.

WILLS AND BEQUESTS.

The will (dated Jan. 11, 1865), with a codicil (dated Dec. 11, 1880), of General Lord Alfred Paget, for many years Chief Equerry and Clerk Marshal to the Queen, and M.P. for Lichfield from 1837 to 1865, late of No. 56, Queen Anne-street, who died on Aug. 24 last, was proved on Oct. 1 by the Earl of Listowel, Frederick Cox, William Vivian, and Thomas Henry Bolton, the executors, the value of the personal estate exceeding £107,000. The testator bequeaths £1000, all stocks and shares standing in her name or in their joint names, his household furniture and effects, and the use, for life, of his pictures and plate, to his wife, Lady Alfred Paget, and other legacies. The residue of his property he leaves, upon trust, to pay the income thereof to his wife, for life, and at her death he gives £10,000 each to his daughters, Evelyn, Amy, Alberta, Alice Alexandra, Violet, and Guinevere; £5000 each to his sons, Arthur, Alfred, George, Gerald, Sydney, and Almeric; and the ultimate residue between his children, with the exception of his eldest son, who under his marriage settlement inherits his real estate, and his third son, who is otherwise provided for.

The will (dated July 12, 1887) of the Rev. Robert Colby, late of Ansford Rectory, Somerset, who died on July 20 last, was proved on Sept. 29 by John Donald George Higgon, one of the executors, the value of the personal estate amounting to upwards of £107,000. The testator gives £1000, and an annuity of £1000, to his wife, Mrs. Jane Colby, and a further sum of £500 per year upon the death of his brother's widow; £400 each to Archibald and Colin Edward Boyd; £200 each to his cousins, Anna Colby, Cordelia Colby, Maria Colby, and John Colby; and a legacy to his executor. The residue of his property, including his estates in the counties of Cardigan, Pembroke, and Carmarthen, he leaves to his son, Captain John Vaughan Colby, absolutely.

The will (dated Jan. 14, 1888) of Mr. Walter Holland, J.P., late of Rose Hill, Worcester, proprietor of the Vulcan Ironworks, and twice Mayor of the city of Worcester, who died on July 28 last, was proved on Sept. 12 at the Worcester District Registry by Mrs. Mary Holland, the widow, William Griffiths, and Jacob Wait, the executors, the value of the personal estate amounting to upwards of £104,000. The testator bequeaths £12,000 and the gold watch presented to him by the West Midland Provident Association to his son Walter; £10,000 each to his children, Mrs. Charlotte Alice Smith, Mrs. Mary Jane Cock, Hubert Holland, William John Holland, and Alfred Valentine Holland; £1000 to his grandson Walter Smith, and £250 to each of his other grandchildren; £500 to Jacob Wait; £350 to William Griffiths; and numerous other legacies to relatives and servants. He gives and devises his freehold messuage known as Rose Hill, with the outbuildings, gardens, and pleasure grounds, the furniture, plate, &c., therein, carriages and horses, and £25,000 to his wife, Mrs. Mary Holland, absolutely. The residue of his real and personal estate he leaves between his children in equal shares.

The will (dated April 6, 1883) of Mr. Henry Charles Churchman, late of Paget House, Ipswich, tobacco manufacturer, who died on Aug. 7, has been proved by Henry Eade Churchman, the son, Frank Turner and William Turner, the executors, the value of the personal estate exceeding £54,000. The testator gives £200, all his furniture and household effects, the use, for life, of Paget House, and an annuity of £700 to his wife, Mrs. Mary Anna Churchman. Subject thereto he leaves all his property to his four children, Henry Eade, Mrs. Ellen Elizabeth Turner, William Alfred, and Arthur Charles, in equal shares, his sons William and Arthur to have the option of purchasing his business at Ipswich, the goodwill thereof not to be taken into account.

The will (dated May 13, 1888) of the Hon. and Rev. William Whitworth Chetwynd Talbot, B.A., one of the sons of the second Earl Talbot, late of The Rectory, Hatfield, Herts, who died on July 3 last, was proved on Oct. 3 by the Hon. Eleanor Julia Talbot, the widow and sole executrix, the value of the personal estate exceeding £36,000. The testator bequeaths his "Post Synopsis Commentatorum," in five vols., to Lord William Cecil; and a small souvenir or memento to each of his grandchildren and to his granduiece, Muriel Talbot. He desires to express his gratitude and thanks to Lord and Lady Salisbury and Lord and Lady Shrewsbury for the great acts of kindness received from them. The residue of his real and personal estate he leaves to his wife, absolutely.

The will of Mr. William Mitchell, late of No. 16, Carlton-hill, St. John's Wood, who died on Sept. 1, was proved on Sept. 26 by Mr. James MacLellan Mitchell, the nephew, and Mr. Thomas Homans Cooke, the executors, the value of the personal estate exceeding £13,000. The testator bequeaths £50 each to the "Homes of Hope," for the restoration of fallen women and the protection of friendless young women, the Metropolitan Drinking-Fountain and Cattle-Trough Association, the Royal Society for the Prevention of Cruelty to Animals, and the Victoria-street Society in connection with the International Society for the Total Suppression of Vivisection; £500, and the income of a sum of £2600, to his niece, Anna Jacques; and other legacies. The residue of his real and personal estate he leaves to his nephew, James MacLellan Mitchell, absolutely.

A BULGARIAN PEASANT WOMAN.

The picture by a German artist, Paul Thumann, which is reproduced in our Engraving, is the portrait of a handsome woman of the laborious rustic class, who was met with among a troop of her hardworking countrywomen, travelling in company on the road from Bulgaria and Servia to the commercial seaport and city of Salonica, as hundreds of them do every summer, in quest of employment and wages. These women, poor as they are, inured to the rudest toil, and living on the simplest food, contrive to indulge their natural taste for dress with a graceful costume, the materials of which, however, are not inordinately costly. She wears a white robe of coarse linen, with sleeves of elegant shape embroidered by her own skilful needle, with a broad sash of green cloth tied round her waist, from which hangs an apron of deep crimson, fringed at the bottom; a narrow, sleeveless jacket, striped with bright colours, is put over her shoulders, leaving the bosom open; the head-dress is a gay kerchief, to which are fastened several coins of glittering copper, or perhaps of silver. This fashion of attire, for which she owes nothing to the milliner and dressmaker, having purchased the materials, which are of durable stuff, at the nearest village fair, is well adapted to set off the robust beauty of her face and figure; the brown complexion, the sunburnt face, neck, and breast, freely exposed to the summer air, the large, dark eyes, and the classic features, which are frequently admired in the female youth of that nation. M. Emile de Laveleye, in his instructive book on "The Balkan Peninsula," an English translation of which was recently published by Mr. T. Fisher Unwin, repeatedly notices the beauty of some of the Bulgarian women, especially among the population of the south-eastern districts, towards the Macedonian frontier. The great majority of the inhabitants of Macedonia, still left under Turkish rule, are of the same fine race, and are members of the Eastern Christian Church. They are intensely desirous of independent self-government.

THE LADIES' COLUMN.

Everybody interested in artistic decoration, or, indeed, in art at all in the wider sense and not in the limited one of painted pictures, should make a point of seeing, if possible, the Arts and Crafts Society's exhibition at the New Gallery. It includes designs as well as finished work, and all classes of decorative materials and objects are amongst the collection. There is a quantity of very beautiful needlework, designed (amongst other things) for curtains, table-covers, screens, panels, portières, and grand-piano tops. Mrs. Walter Crane appears to be an embroideress of rare skill; there are several beautiful pieces of her work: one being a series of panels in an ebonised cabinet designed by Mr. Crane, and another a couple of pretty and quaint wall-pockets. There are also all manner of sumptuous and beautiful woven and printed materials, from art-muslins to velvets, and from curtain-stuffs to carpets; beaten and engraved brass, copper, and iron work; glass, tiles, and mosaics; book-illustrations and bindings; and cartoons and designs for stained glass, frescoes, wall-papers, and tapestries.

There is a good deal of decorative work (amongst it a grand-piano top) "in gesso." This consists of a raised device in a solid substance, which is, it appears, composed of plaster of Paris, glue, and cotton-wool. This stuff, being worked in while soft, is modelled to the design, and can either be white (as it is all over this particular piano) or coloured to taste. There is a large casket—it is called a "cassone," after the marriage coffers of ancient Italian custom—almost big enough for a tomb, and executed "in gesso," by Mr. Burne-Jones; the bulk of this is gilded, with a certain relief in colour—the subject being the mystic tree in the garden of the Hesperides, with the dragon encircling the trunk, and the guardian women standing round. There are many other specimens of this work, but that of Mr. Burne-Jones holds the attention no less by the brilliant appearance given it by the gilding and by its size than by its more "artistic merits." "Gesso" has many of the qualities of fresco painting, while at the same time it can be applied to movable panels, friezes, &c. It must be most interesting work to do, and is not, I understand, difficult, though in this, as in everything else, artistic capacity must reveal its existence. Some of the gesso work looks very like Japanese leather paper.

The theory of the exhibition is that only by the introduction of the personal element of art into craftsmanship—the individual feeling of responsibility in the craftsman, and the varying, living influence of the hand and brain of the worker—can decorative work be made truly artistic. The modern plan (on which sweating is based) of calling articles, whether it be of clothing or of furniture and decoration, by the name of some tradesman, who has absolutely nothing to do with the workmanship, but is only the middleman between producer and purchaser, and of concealing behind him the true artist and craftsman, is charged by the promoters of the society with causing slovenly work and deterioration of design. Certainly, this exhibition cannot but be to the seeing eye a most impressive lesson in that painstaking about work which the society desires to foster. The careful, detailed perfection of much of what has been judged worthy a place here is so obviously the result of conscientious, unstinted, and protracted pains that the hasty and impatient can hardly fail to perceive the lesson. The sort of work shown is of a kind to display particularly the evidence of effort. This is very striking (to single out one where nearly all might be spoken of) in the cartoons by Mr. Burne-Jones. That great artist's oil-painting impresses by its colour and by its beauty of design; but here, without such distractions, in the plain black and white, one sees more clearly the serious care and strenuous effort which has given the perfection to the work. The trouble of drawing with perfect accuracy countless circles and squares to represent the wood-carving above the throne of David in a "A Design for Windows" (No. 170), the labour of making an infinite number of tiny strokes to represent the carving on certain coffers and frames that stand round the King's feet, is so easily to be appreciated in these cartoons that one feels as though one had received a revelation of the meaning of "To labour is to pray." There is here a reverence for truth and a struggle after perfectness that mean moral rather than merely intellectual qualities.

I doubt not that the promoters of the exhibition are right when they say that it is precisely a moral stimulus that is wanting when the most faithful and loving work is ascribed, not to the artist, but only to the man who sells the completed article to the public. However, what I want to refer to specially is the lesson which such evidence of painstaking on the part of successful and eminent men should convey to beginners in any art, and especially to women. I do not think that careless finish and slap-dash haste and incompleteness are essentially part of the feminine nature. Quite on the contrary: when women have the conviction of its being their duty to be careful and thorough, they are surpassingly patient and painstaking, as so much old lace and old embroidery exist to prove. But I do think that our domestic training is not conducive to such qualities: first one trivial task to perform, then another, no real rest and no real settling down to deep and intense labour all day long, is the story of a housemother's existence. The faculty of "sticking at" one piece of work, and lavishing thought and patience on it, is not developed, but diminished, by such an everyday series of small and incessant distractions as women have in their homes. Yet one who would do good work in any art must somehow find the time and the power for concentration and slow, earnest labour.

It is not in the arts of painting or decoration alone that, whenever we are able to observe the efforts of a master, we find them to be based on painstaking and patience. In literature it is so, emphatically. Never did anything appear more like a gift of Nature than Macaulay's fluent style. Yet in the British Museum may be seen sheets of his manuscript, interlined and corrected and re-written with unwearied industry. There is yet preserved in an Italian museum a piece of paper on which Ariosto wrote one of his finest stanzas with sixteen variations of word and phrase. Dickens's notes and memoranda prove his unwearying effort after accuracy and finish. Jane Austen ended "Persuasion" in three different methods; while Hawthorne was found to have written in no fewer than five different ways one chapter of the novel that he left unfinished.

"If I fail, it will not be because I have shrunk from labour. I have *worked* at poetry—it has not been with me reverie, but art. As the physician and lawyer work at their several professions, so have I, and so do I apply to mine." These are the words of the greatest of English poetesses, as quoted in "The Life of Mrs. Browning," by John H. Ingram, just published in the "Eminent Women Series." What a contrast to the girls who scribble novels as fast as their hands can write, or dash off poems between afternoon tea and dinner, and consider it a token of literary jealousy if their works are not accepted by editors and praised by critics! I am compelled to say that of the young authoresses who have from time to time sought my opinion on their first published work, the majority sent hopelessly slovenly performances.

FLORENCE FENWICK-MILLER.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

ARTHUR W.—A position so heavily encumbered with pieces should have, as a redeeming feature, a difficult key-move. Your solution is simple in the extreme. Start another, and employ fewer pieces.

R WORTERS, J D TUCKER, and Others.—Quite true; Problem No. 2321 admits of a simple solution in two moves.

E HOLT (Rawtenstall).—Both problems are defective; No. 1 by 1. R to B 2nd, or 1. R to B sq; No. 2 by 1. P to R 4th, &c.

HEREWARD.—The three-move problem is too easy of solution. The other is clever in idea, but it unfortunately admits of a second solution by 1. K to Kt 3rd. Can you rectify this flaw?

J RYDER.—Problem No. 2319 is quite sound; there is no mate as you suggest. See solution in our present Number.

MARVIN F.—Any work on the game will contain the matter you require.

DELTA.—Many thanks for game, which is extremely welcome.

MRS KELLY.—We have complied with your request. Your solution is the author's intention.

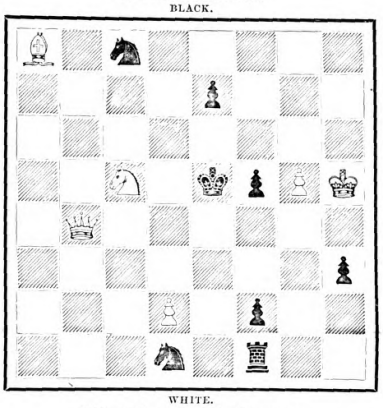
E LUCAS.—Look at the position again, and you will discover it cannot be accomplished under four moves.

PROBLEMS received, with thanks, from B G Laws, F Healey, and J P Taylor.

CORRECT SOLUTIONS OF PROBLEM No. 2317 received from C R Bramley-Moore (South Pails, Canada); of No. 2318 from E Bohnstedt (Berne), and C E P; of No. 2319 from J Bryden, Shuttforth, A Wheeler, and Joseph T Pullen; of No. 2320 from A Wheeler, P C (The Hague), H S B (Ben Rhydding), D P (Ben Rhydding), E G Boys, J Bryden, J Christie (Cheltenham), J G Hankin, Quidnunc, G P Nicolet, M B, and C Ethernington.

CORRECT SOLUTIONS OF PROBLEM No. 2321 received from A Wheeler, J G Hankin, Bohun Penwarne, E Phillips, E Casella (Paris), W Hillier, Dawn, A A Harris, New Forest, H F N Banks, J Dixon, F O N H (Liverpool), Hereward, Ruby Rook, J C M, T G (Ware), Jupiter Junior, Alpin, D M'Coy, Mrs Kelly, W R Raillem, Columbus, Joseph T Pullen, Shuttforth, W M Curtis, R F A, C E P, C Goverts, F W Eisser (Cardiff), Rev. Winfield Cooper, Lieut.-Col. Lemaire, J D Tucker (Leeds), W P Turnbull, H Worters (Canterbury), G Saint, jun., W H Heyton, Dr Waltz (Heidelberg), C Etherington, Anglice (Lowe Regis), T Roberts, J Bryden, E G Boys, G W (Brentwood), John Short, Grange-over-Sands, Canobus, B H Brooks, Brutus (Chislehurst), T Chown (Brighton), B Dav (Plymouth), Alquis, T T (Totteridge), Howard A, J Coad, E Lucas, and Martin Folwell.

SOLUTION OF PROBLEM No. 2319.



WHITE.	BLACK.
1. Kt to B 3rd	Kt to Kt 3rd
2. B to R 4th	K to Q 5th
3. Q to K 4th (ch)	K takes Kt, or moves
4. R to Kt sq, or takes P. Mate.	

If Black play 1. K to R 4th, then 2. R takes P, K to Kt 5th; 3. Q to Kt 2nd (ch), &c.; if 1. K to Q 5th; 2. K to Kt 2nd, &c.

PROBLEM No. 2323.

By GODFREY HEATHCOTE.

BLACK.

WHITE.

White to play, and mate in three moves.

CHESS IN SCOTLAND.

Game played in the major tournament of the Scottish Chess Association last July between Mr. G. E. BARBIER and Captain MACKENZIE.

(*Ruy Lopez.*)

WHITE (Mr. B.)	BLACK (Capt. M.)
1. P to K 4th	P to K 4th
2. Kt to K B 3rd	Kt to Q B 3rd
3. B to Kt 5th	Kt to B 3rd
4. Castles	Kt takes P
5. R to K sq	

Adopted by Steinitz against Zukertort in their great match.

5.	Kt to Q 3rd
6. Kt takes P	Kt takes Kt

This defence is, to our thinking, less satisfactory than B to K 2nd. Zukertort adopted the latter move in the earlier game, but discarded it later on.

7. R takes Kt (ch)	B to K 2nd
8. B to Q 3rd	

Kt to B 3rd was played here by Steinitz, who must have carefully analysed the resources of the position. Mr. Barbier no doubt wanted to avoid the more complicated play resulting from Black taking the B with Kt.

8.	Castles
9. Kt to B 3rd	P to K B 4th
10. Q to B 3rd	B to B 3rd
11. R to K 3rd	P to K Kt 3rd
12. P to Q Kt 3rd	Kt to B 2nd
13. B to B 4th	P to B 3rd
14. B takes Kt (ch)	R takes B
15. B to B 3rd	P to Q 4th
16. Q R to K sq	

White has managed to get, so far, the better development.

16.	B to Q 2nd
17. K R to K 2nd	K to Kt 2nd
18. Kt to Kt sq	

Fearing Q to R 4th, followed by B takes Kt. The move was also intended to strengthen his centre by advancing the Pawns.

18.	P to Kt 3rd

With a view to shutting out the Bishop.

19. B to Q 6th	Q R to B sq
20. R to K 5th	B takes B
21. R takes B	Q to B 3rd

The exchange of B for B opens Black's game on the left, but White retains the better game notwithstanding.

22. P to Q 4th	R to B 2nd
23. Kt to B 3rd	

P to Q B 4th seems better, followed by the text-move.

WHITE (Mr. B.)	BLACK (Capt. M.)
23.	B to B sq
24. Kt to K 2nd	
A lost move.	
24.	P to B 5th
25. P to B 4th	
Gives up a Pawn for an attack.	
25.	P takes P
26. Kt to B 3rd	P takes P
27. Kt to K 5th	Q to Q sq
28. P takes P	P to K R 3rd

He could not have taken Q P with safety.

29. Q to B 3rd	B to B 4th
30. P to B 3rd	K to R 2nd

An error, evidently; as thereby White gets a strong attack.

31. R to K 8th	Q to Q 4th
32. R to K 5th	Q to Q 2nd
33. R to K 8th	B takes Kt
34. Q R takes B	Q to Q 4th

White threatens to push the Pawn.

35. Q R to K 5th	Q to Q 3rd
36. Q R to K 6th	Q to Q 4th
37. R to K 5th	Q to Q 2nd
38. P to Q 5th	

The position is now one of difficulty for both players. The move in the text is an embarrassing one for Black, and compels him to play the best move the board affords.

38.	P takes P
39. Q to Q 4th	

White should have adopted the strongest continuation here, viz.:—39. R to R 8th (ch), K to Kt 2nd (best); 40. Q to Q 4th, R to B 3rd; 41. R to K 8th, and draws by perpetual check.

39.	R to Q B sq
40. R takes R	

White could have won Q for two Rooks, but Black's Pawns looked too dangerous.

40.	Q takes R
41. Q takes P	R to Q 2nd
42. Q to Kt 5th	

And Black managed, by attacking the exposed King, to exchange the pieces and win through his extra Pawn on Queen's side. Though Mr. Barbier lost the game, he played with great skill against his dangerous antagonist.

We are requested to announce that the Commissioners of her Majesty's Works and Public Buildings intend to distribute this autumn among the working classes and the poor inhabitants of London the surplus bedding-out plants in Hyde and the Regent's Parks, and in the Royal Gardens, Kew, and the Pleasure Gardens, Hampton Court. If the clergy, school committees, and others interested will make application to the superintendent of the park nearest to their respective parishes, or to the Director of the Royal Gardens, Kew, or to the Superintendent of Hampton Court Gardens, in the cases of persons residing in those neighbourhoods, they will receive early intimation of the number of plants that can be allotted to each applicant, and of the time and manner of their distribution.

A TEA-TASTER IN CHINA.

The amusing Sketches, by Mr. H. W. G. Hayter, of Shanghai, which appear in a page of our Engravings, represent some incidents of the ordinary life and business of one of the agents of British commerce in an article which perhaps contributes more to the household comfort of English families than all other foreign commodities, except wheat and flesh-meat, and which is first in importance among Chinese exports to Great Britain, altogether reaching a yearly value of nine or ten millions sterling. The English mercantile agent, whose special mission is that of tasting, pricing, and buying the teas suitable for our market, is seen on board the steam-ship approaching the end of his long voyage; next, on the morning of his first day in China, aroused at six o'clock by the native servant boy, who brings a cup of the refreshing beverage to his bedside, and who has filled his bath with cold water; then we see him in conference with a plump and spectacled Chinese vendor of teas, whose samples are tasted, but not swallowed, from cups of the steaming infusion. Our friend offers a moderate price, reckoned in the Chinese money of "taels," which the Chinaman, one of the shrewdest of bargainers, will decline as insufficient, with "Hi-yah! truly no can; my wantchee 55 taelee; Kee-hing!" in a mixture of "pigeon" or "business" English with Chinese ejaculations, declaring that he wants fifty-five taels as the lowest possible price. The chests are supposed each to contain a certain weight of tea, and when sold are brought to be weighed in the buyer's presence, while the Chinaman, anxious to create a favourable opinion of his honesty, repeats the assuring remark, "You catchee chancee this time," meaning that his customer is very fortunate in getting such an ample quantity for his money. The laborious coolies, each laden with a couple of tea-chests suspended from the ends of a bamboo-pole laid over his shoulder, march in procession to the "go-down" or wharf, and deliver this merchandise to the boatmen who take it on board the steamship. On the eve of the ship's departure from the port, our English friend is hard at work in his office, as the clock shows, until half-an-hour after midnight, finishing his letters for the homeward mail, and reporting to his employers in London the particulars of his recent transactions. Such is the business life of many of our countrymen residing at Shanghai, relieved, however, by social hospitalities and amusements congenial to Englishmen, and practicable in a commercial colony where the climate is tolerable and wits are sharpened by active vigilance in the affairs of trade. The native processes of manufacturing teas of various qualities, from the leaves of different varieties of the plant, grown in the districts specially favourable to their cultivation, with the distinctions, not merely of "black" and "green," but of many sorts and subjected to peculiar manipulation, are worthy of study. They were described, twenty years ago, in an instructive book written by Mr. Robert Fortune, a scientific botanist sent by our Indian Government, in the East India Company's time, to procure seeds of tea and skilled Chinese manufacturers for the Assam plantations. Since that period, the tea produce of Assam and other Indian provinces has attained a yearly value of £3,700,000, and that of Ceylon, rapidly superseding coffee, is increasing at a great rate; we may expect also that Queensland and Northern Australia will hereafter become tea-growing colonies, with the aid of Chinese or Hindoo labour, to a considerable extent.

The freedom of the city of Dublin has been conferred upon Cardinal Moran.

Miss Driver, of Tittenhurst, Sunninghill, has given £1000 to the Royal Holloway College, Egham, as a fund for prizes.

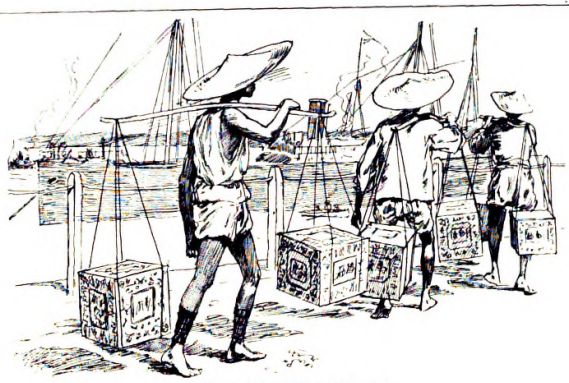
The Marquis of Ripon, at a crowded meeting in the Rochdale Townhall on Oct. 4, distributed the prizes to the science and art students who had been successful in the examinations.

Lady Penrhyn opened, on Oct. 3, the new hall of residence for lady students at the University College of North Wales, at Bangor. Accommodation is provided for forty students.

The Leeds Permanent Fine-Art Gallery, which forms a portion of the municipal buildings erected by the Corporation at a cost of £133,000, was opened on Oct. 3 by the Mayor, in the presence of the members of the Town Council, several Bishops, and members of Parliament, and the majority of Mayors representing the West Riding of Yorkshire.

A return of the numbers, nationalities, and destinations of emigrants who left the United Kingdom in September has been issued from the commercial department of the Board of Trade: 38,186 emigrants left these shores during the month, as compared with 43,402 in 1887. The total for the last nine months was 336,042, as against 325,765 in the corresponding period last year.

Lord Hartington was, on Oct. 3, presented with the freedom of the burgh of Inverness, "in recognition of his long and eminent services to the State." In the evening, the youngest burgess addressed a great gathering of Liberal Unionists in the Free Assembly Hall, which is capable of containing 3500 persons, and was crowded in every part. He dealt mainly with the position of the Liberal Unionist party—first by way of vindication from the assaults of the Gladstonians, and afterwards from a more positive and constructive standpoint.



At St. Paul's Cathedral on Sunday, Oct. 7, the Rev. Prebendary Hodson preached in the morning, and the Rev. W. J. S. Simpson, Curate of Christ Church, Albany-street, in the evening. The following will be the preachers for the rest of the month: Mornings—on the 14th, the Rev. Minor Canon Coward; 21st, the Rev. Prebendary Moore; 28th, the Rev. W. J. Hall. Evenings—14th, the Rev. H. L. Paget, Vicar of St. Pancras; 21st, the Rev. G. W. Dent, Principal of St. Mark's College, Chelsea; 28th, the Rev. W. A. Moberly, Vicar of the Church of the Ascension, Blackheath. The Archdeacon of London is the Canon in Residence for the month.

The School of Art Wood-Carving, City and Guilds' Institute, Exhibition-road, South Kensington, has been reopened after the usual summer vacation, and we are requested to state that one or two of the free studentships in the evening classes maintained by means of funds granted to the school by the Institute are vacant. To bring the benefits of the school within the reach of artisans a remission of half-fees for the evening class is made to artisan students connected with the wood-carving trade. Forms of application for the free studentships and any further particulars relating to the school may be obtained from the manager.

The following scholarships and prizes were distributed at St. George's Hospital by Professor Humphry, of Cambridge, on Oct. 1: £125 scholarship, to Mr. R. G. Turner; £65 scholarship, to Mr. J. S. Edkins; £50 scholarship, to Mr. C. S. Berry; William Brown £100 exhibition, to Mr. A. H. Ward; the Brackenbury prize in medicine, to Mr. B. V. Sortain; the Brackenbury prize in surgery and the Brodie prize in clinical surgery, to Mr. H. Higgins; the Acland prize in clinical medicine, to Mr. W. M. Davidson; Sir Charles Clarke's prize, to Mr. C. Truman; the Johnson prize in anatomy, to Mr. R. M. H. Walford; general proficiency prizes, to Messrs. H. S. Barkworth and R. M. H. Walford.

A TEA-TASTER'S LIFE AND WORK IN CHINA.

THE BISHOP OF MANCHESTER'S PASTORAL STAFF.

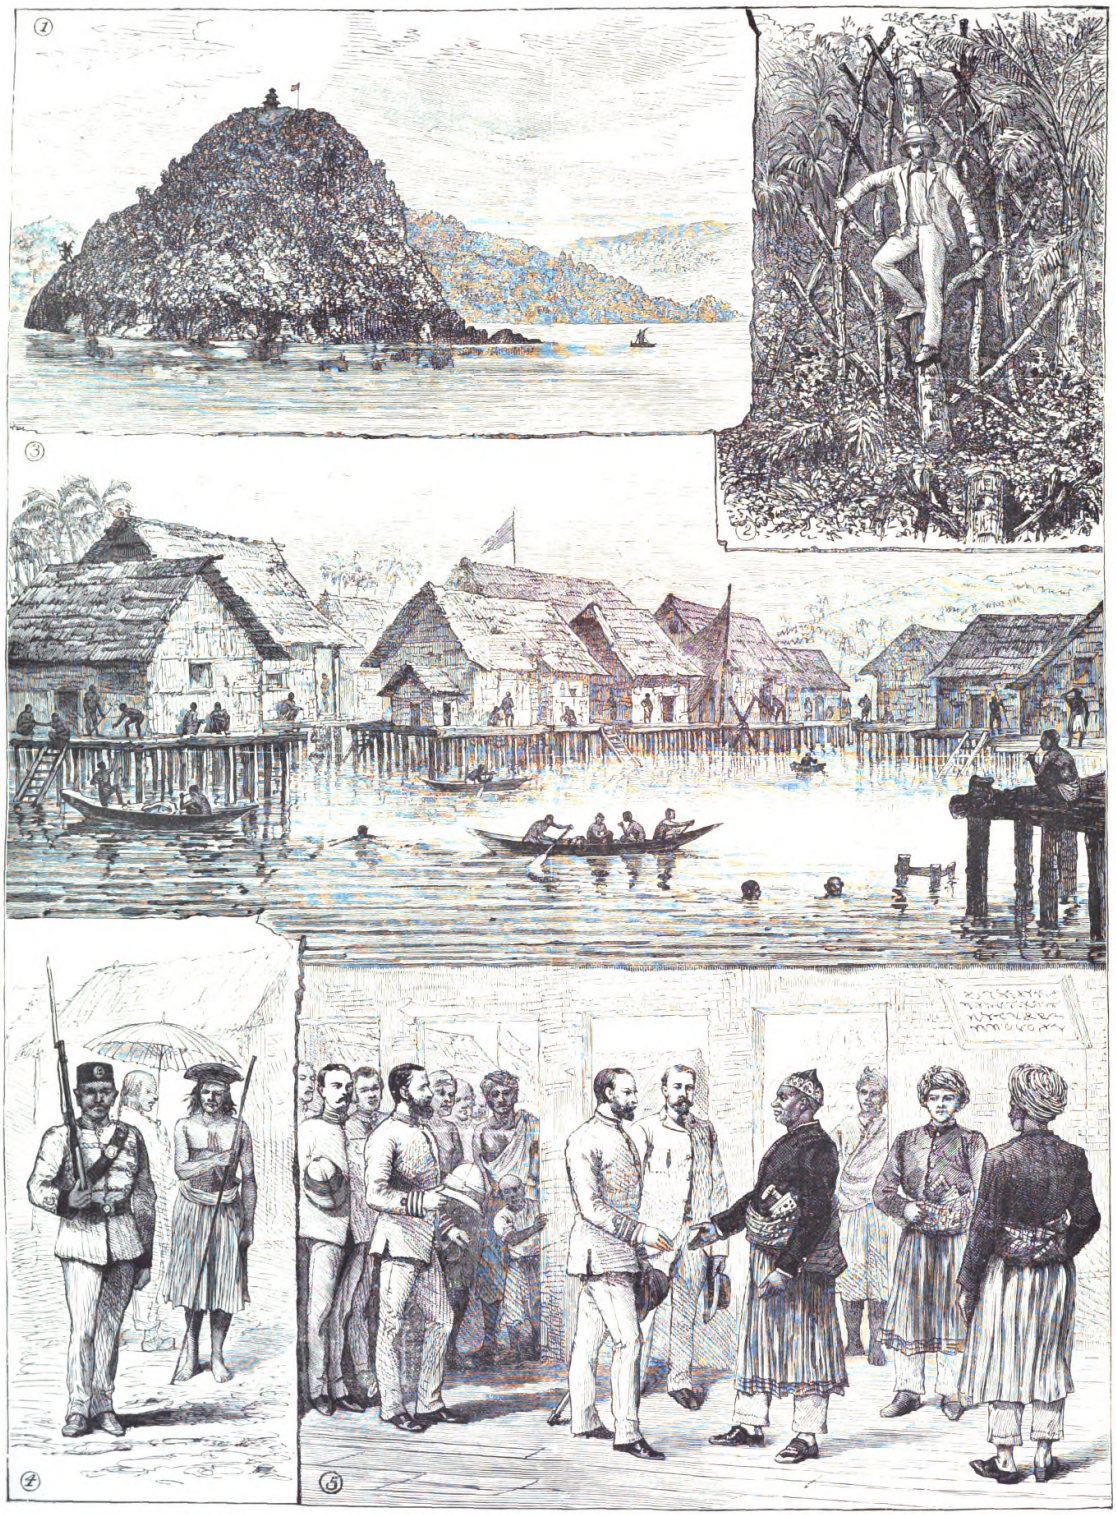
The pastoral staff presented to the Bishop of Manchester by the clergy and laity of the diocese is formed of a shaft of ivory, relieved by mounts of silver richly embossed, gilded, and embellished with sixty-eight precious stones. The shaft terminates in a capital of silver ornamented with foliage, surmounted by eight enamelled medallions representing the Four Evangelists, with the Sacred Monogram, the Cross, and Alpha and Omega. Above is a series of turrets or pinnacles, enriched with enamels, each pinnacle terminating with a jewel. The shaft is continued and falls over to form the crook. The outer edge of the shaft is decorated with silver crockets or foliage, secured by silver bands enriched with gems. The inside curve of the shaft encircles a carved ivory group representing "The Good Shepherd." The staff, for design and workmanship, reflects great credit upon Messrs. Thomason and Co., of Manchester.

NEW CROSIER FOR THE BISHOP OF MANCHESTER.

NEW BOOKS.

The Mapleson Memoirs, 1848 to 1888. Two vols. (Remington and Co.).—The manifest decline of Italian Opera permits us to review the past incidents of its management and performance, in the series of fashionable entertainments remembered by the elders of this generation, with cool historical interest. Colonel James Henry Mapleson—his military rank, as commander of a regiment of Volunteers, may here be recognised once for all—relates his varied experiences as lessee and manager, both in England and in the United States, with an engaging air of frankness, and with a good-humoured vivacity that is always amusing. Having been trained in the Royal Academy of Music, and in the Conservatorio of Milan, both as a violinist and as a vocalist, the loss of his voice, which was a promising tenor, induced him to resort to the business of an agent for the musical profession. In 1858 he gave his services as manager to an Italian Opera Company formed by Mr. E. T. Smith at Drury-Lane Theatre; and in 1861, when that omnivorous "entrepreneur" was obliged to quit these speculations, Mr. Mapleson took the Lyceum on his own account; but soon obtained from Lord Dudley a lease of Her Majesty's Theatre, which he opened in 1862. His company then included Mademoiselle Titiens, a great lyric and dramatic artist, Giuglini the tenor, Albani, Trebelli, M. Gassier, and Signor delle Sedie, with Arditi as conductor. He narrowly missed securing Adelina Patti, "a little lady from America," who had just arrived; she was captured by Mr. Frederick Gye, for the Royal Italian Opera, Covent-Garden, by the timely loan of £50, being then actually in need of money. The first experiment at the Lyceum resulted in a loss of £18,000. The eminent artists we have named were zealous and industrious; sometimes, after performing such an opera as the "Huguenots," "Lucrezia Borgia," or "Norma," they would sup together at midnight, and then rehearse the "Ballo in Maschera," from half-past one in the morning till long hours after daylight! Of Mademoiselle Titiens, especially, whose professional conduct was most honourable, and who was a brave, generous woman, Mr. Mapleson speaks in the highest terms. Signor Giuglini's childish petulance and vehement caprices occasioned much trouble; and many ridiculous stories are told of him. By an unlucky accident, one night in playing "Norma," Titiens, as the Druid priestess, threw back her drumstick, with which she struck the gong, so as to hit Giuglini on the nose; and he swore that he would never play "Pollio" with her again. These whims and tricks of Giuglini, which fill some pages of this narrative, were, however, surpassed in vexatious absurdity by those of Mario, in 1879, and of another tenor, Ravelli, in Mr. Mapleson's American tour of 1882. It should not be inferred that any psychological cause, even peculiar to the Italian race, disposes tenors to behave unreasonably more than baritones; for Mario was the most obliging and agreeable of men; but he was a thorough Italian gentleman. We should rather say that Italians of low birth, and ill-educated, are of all mankind the most quickly spoilt by personal success in a public calling; though in pecuniary greediness, and in apparent unfaithfulness to contracts, some ladies not of Italian birth have far outdone the prima donnas from the classic land of songsters. With Madame Grisi, whose goodness in such respects is gratefully acknowledged, Mr. Mapleson was associated only in 1866, at the close of her admirable career. His introduction of Christine Nilsson to the London audience, in 1867, was an event of much importance; but he found her "somewhat exacting" in after years. The great disaster that befell him in December, 1867, by the conflagration of Her Majesty's Theatre, causing him a loss of £30,000 on properties which he was arranging the day before to insure, would have crushed a less energetic and courageous man. But he re-opened at Drury-Lane in the following season; and in the autumn, by a temporary compact with Mr. Gye, who then considered the rivalry of the two houses likely to be ruinous to both, had the use of the "Royal Italian" building in Covent-Garden, with Costa in the orchestra. The season of 1869 yielded a joint clear profit of £36,000, from Mr. Mapleson's share of which, however, £3000 must be deducted for insurance and rates. They soon disagreed, as to the terms of a proposed continuance of partnership, when Her Majesty's Theatre was rebuilt; and Mr. Gye was involved in litigation, both with Lord Dudley and with Colonel Brownlow-Knox, concerning the two leading houses. We do not care to make any remark on the statements of Mr. Mapleson, which are temperately, even drily, set forth, concerning Mr. Gye's repeated acts of hostility down to 1877; it is possible that something might have been said on the other side. A wider field of action, with more exciting adventures, is presented by his American operatic tours, the first of which began in October, 1878, with Madame Etelka Gerster for prima donna, giving 164 performances of opera and forty-seven concerts, and going westward as far as Chicago and Cincinnati. In the following year, after the London season, he again went to the United States, and his prima donna was Marimon, who won high favour at New York and Boston, till her voice suddenly failed. The fatigues of long travelling in America seem to have tried the ladies most severely; and there were also trials of temper among them, in some instances, from professional jealousy carried to extreme lengths. Hereby hang several amusing little stories. Mr. Mapleson's American triumphs in 1881, 1882, and 1883, especially in the Grand Opera Festivals at Cincinnati, were the culminating success of his management; and the overwhelming popular enthusiasm is forcibly described. He was then acting, conjointly with Mr. Ernest Gye, for the directors of the Royal Italian Opera Company of London. He was opposed at New York by Mr. Abbey, the lessee of the new Metropolitan Opera-house, from which competition, it appears, came the enormous price that was subsequently paid for the services of Madame Patti. No singer had ever before received £1000 a night, which was first offered to her by Mr. Abbey, backed by the millionaire Vanderbilt. Mr. Mapleson thought fit to promise as much, while Madame Nilsson was content with £300 a night. Whether any individual human talent or accomplishment can ever be worth such an extravagant hire, let the world consider at leisure. The London directors would not ratify the engagement to pay those terms; and Mr. Mapleson, supported by the stockholders of the New York Academy of Music, had to bind himself to do so. From 1883 to 1885, his relations with Madame Patti, during a series of marvellously popular performances all over America, were magnificent but not profitable to himself; and, without reference to personal interests, it can scarcely be wished, for the sake of true art, that such an example had proved successful. Madame Patti, at this time, would attend no rehearsals, in which Titiens and other great artists had been punctually diligent. Not disparaging the attractions of this very expensive vocalist, or the competent judgment of her sincere admirers, it may be suggested that American providers of stage novelties have a shrewd insight into the weak points for attack on the purses of the vulgar rich, a class largely prevailing in the great cities of the United States. Every device of newspaper interviewing and incessant reporting was employed to advertise the prodigious costliness of Patti's appearances: discussion of the pecuniary negotiations was kept up for weeks by journalists set on to promote the intended "boom;" the price of her dresses, of her saloon railway carriage, with its decorations and furniture, and even her hotel bills, stimulated that characteristic American sentiment, the glory of spending more money than any other people do. It supplies the want of true taste in the United States, and is the national substitute for a genuine appreciation of the exalted, the beautiful, and the harmonious, in which Mr. Matthew Arnold found the American mind sadly wanting. When the reporters had interviewed Patti "in her gorgeous palace car," and had noted the items of various expenses totalling many thousands of dollars, the victory of her Western campaign was assured in advance; that is the American secret of a public success. With some understanding of the circumstances, we read Mr. Mapleson's narrative of the extraordinary doings at San Francisco, where the streets were blocked, all through the night, with people crowding to be first at the sale of tickets next morning; where seats in the dress circle were bought at £4 to £10 each; where the top gallery was invaded by men dropping in from holes broken in the roof; and the receipts for one performance were nearly £5000, besides which the purchasers of boxes could sell them at an immense premium. But Mr. Mapleson lost money, in that tour, at the rate of £1200 a week, and his property was repeatedly in the clutches of the Sheriffs for manifold debts. Nevertheless, the farewell visit of Patti to America, in 1885, with a Grand Operatic Festival at Chicago, realised a net profit of £30,000. In 1886, not having Patti with him, the American expedition proved a disastrous failure; and his retreat from California, encumbered with a hundred and sixty helpless followers, whose personal baggage was often detained for hotel-bills, is a tale of thrilling adventure. Without dwelling on particulars of more recent date, we cordially wish Mr. Mapleson, in future, as much prosperity as he can fairly earn, while thanking him for a pleasant account of his labours and fortunes in the past.

The Mediation of Ralph Hardelot. By William Minto. Three vols. (Macmillan).—To do full justice to the special merits of this book it should be considered not so much as a novel or romance, but as an exposition of English history and the state of society five centuries ago. It presents, with some admixture of imaginative fiction, a very good account of the notable insurrection of the peasantry, led by Wat Tyler, the famous Man of Kent: John Ball, the clerical demagogue of Cambridge: Jack Straw, and others, who besieged London for several days in June, 1381, when the Tower was stormed, the Duke of Lancaster's Palace in the Savoy was burnt, and Archbishop Sudbury, the Lord High Chancellor, was put to death. The hero of the story, Ralph Hardelot, is a kinsman of that unpopular prelate and Minister of State; and his brother Reginald is in the confidential service of the Archbishop. But Ralph, a scholar and soldier, having been educated at Cambridge, and having served a year or two in the French wars, became one of the disciples of Wycliffe, and then put on the russet garb of those zealous lay missionaries, called "Wycliffe's poor priests," who went about England preaching a new era of religious, moral, and social reform. He is not, however, legally or ecclesiastically bound to celibacy: and the early mutual attachment between this young man and Clara Roos, with whom he was brought up as a boy in the family of Sir John Cavendish, guardian also to this girl, is the only feature of the story that concerns the tender passion. Clara, being an orphan heiress, was forced into a marriage, never consummated, with a ruffianly knight, Sir Richard Rainham, from whom she escaped on the wedding-day, and took refuge in Dartford Priory. The immediate action of the present narrative begins with a journey on horseback through Essex, by way of the town of Sudbury, where the populace are rising in anger to oppose the new poll-tax. Two strangers, disguised as Flemish merchants, one calling himself Simon d'Ypres, but whose real name is John Kirby, and who is a chief manager of the political conspiracy, are there quietly watching events. Ralph Hardelot is invited to join their party on the road to Stourbridge fair. In passing Sturmere Castle, the stronghold of Sir Richard Rainham, who is a privileged highway robber, these travellers are attacked and plundered; and Ralph, whom the brutal tyrant especially hates as the lover of Clara, is cast into a dungeon. To our surprise, not less than to his, Clara is found there in the dark, half mad with terror; she has been captured by Sir Richard's emissaries, while taking the air outside Dartford Priory in Kent, has been carried off to Sturmere, and is apparently consigned to a lingering death in the dungeon, along with her unlucky lover. We do not remember any precedent for this fantastic method of marital vengeance in other romantic tales: but we have often read something very like Ralph's feat of overpowering and tying up the wicked lord of the castle, followed by the deliverance of Ralph and Clara when Wat Tyler's band of insurgents easily break into the castle by a sudden assault. Professor Minto, indeed, cannot describe this kind of exploit and adventure so well as Mr. R. L. Stevenson does in "The Black Arrow," or Sir Walter Scott in "Ivanhoe." Delivered, anyhow, from his first dire peril, Ralph seeks the King, Richard II., then a generous boy of fifteen, sojourning at Castle Hedingham in that neighbourhood; frankly and faithfully declaring the grievances of the peasants, who are oppressed by serfdom and illegal exactions under their local tyrants, he is authorised to go forth and promise redress in the King's name. This proceeding, his "Mediation," is loyally undertaken by Ralph Hardelot, and he goes on to the great Fair at Stourbridge, the description of which is the best chapter in the book. He addresses the people there, urging them to abstain from violence, but is misreported by malignant spies, and is again imprisoned, this time by the Sheriff of Cambridge. It should be mentioned that he has already, in the King's presence at Castle Hedingham, creditably passed through "the ordeal of battle" in a formal tilting-match with his enemy, Sir Richard Rainham, who disgraces himself by foul behaviour in the combat. Meanwhile, Clara becomes lady-in-waiting to the King's mother, the widow of the Black Prince, a wise and amiable lady, with whom she lives at the Wardrobe in Blackfriars, London. She exerts herself successfully to convince the Princess and young Richard of the innocence of Ralph Hardelot; he is released from prison, but goes to warn the Archbishop of impending danger from the popular wrath, and is not only contemned, but is a third time imprisoned at Lambeth. The formidable insurrection, for which the feeble Government in the minority of Richard II. was utterly unprepared, breaks out in the third volume. It is narrated with historical fidelity; the simultaneous well-organised march of the Kentish men and the Essex men to London; the encampment of Wat Tyler on Blackheath, while Jack Straw's force encamped on Hampstead-heath; the alarm and confusion prevailing in London, King Richard's attempt to parley with the leaders on board the Royal barge at Rotherhithe, his subsequent interview with them at Mile-End, the irruption of the mob into the Tower, the murder of the Archbishop and other high officials, and the scenes of outrage in the City streets, are described with no exaggeration. It is evidently the author's deliberate opinion that all these atrocious outrages were perpetrated by the town rabble, without the assent or knowledge of Wat Tyler and the other leaders of the rustic host outside the walls of London; and he sympathises with the latter as honest men preferring just and moderate demands. He also believes young King Richard to have acted in perfect good faith; but surely it cannot be supposed that the entire abolition of serfdom, a complete change in the whole system of feudal law, could be effected with validity by any King's mere proclamation. The final catastrophe, the last day's meeting at Smithfield, the killing of Wat Tyler by the Lord Mayor, Sir William Walworth, and the dispersing of the terrified peasantry, might have been related with better dramatic effect. In that concluding scene of turmoil, Ralph Hardelot, the martyr of loyal and Christian patriotism, falls by the cruel hand of his old enemy Rainham, but his death is instantly avenged; and Clara, when she hears of it, dies in a moment of a broken heart. The author has not written a good romance, for it is wanting in likelihood and artistic shape. But he has treated an important passage of real history with much originality, and with an accurate study of the circumstances known to have existed at the time. It may be advantageously compared with Mr. C. Edmund Maurice's account, in his "English Popular Leaders of the Middle Ages."



SKETCHES IN BORNEO.

The British naval squadron on the China station, under the command of Vice-Admiral Sir Nowell Salmon, V.C., K.C.B., was cruising in March last off the coasts of Borneo. That large island, 850 miles long and 600 miles broad, situated in the Equatorial region, in the centre of the Malay Archipelago, having Sumatra and Java for its neighbours to the west and south, and the Philippines to the north-east, has not yet been thoroughly explored. Its northern parts, however, from Sarawak, where Sir James Brooke, the first "Rajah Brooke," formed an English settlement forty or fifty years ago, when the Malay pirates were subdued by the aid of Admiral Keppel, to the small British colony of Labuan, established by our Government in 1847, and to the north-eastern peninsula, called Sabah, now occupied by the British North Borneo Company under their charter of 1881, with the ports and harbours of Sandakan, Kudat, Gaya Bay, and Ambong Bay—are tolerably familiar to our maritime trade. The ruling Malay race in the greater portion of this northern region, being Mohammedans, own the sovereignty of the Sultan of Brunei, who in 1877 agreed, for a certain pecuniary revenue to be paid yearly, to grant the territories now occupied by the British North Borneo Company, and this arrangement was ratified by our Government four years afterwards, together with one of a similar nature which had been concluded with the Sultan of Sulu, on the eastern coast. The Dutch Government has formed settlements in the southern and western parts of Borneo, which are administered in connection with Java; but the interior, with its primitive tribes of natives, called Muruts, Dusuns, or Ida'an, chiefly of the Dyak race, is pretty much left to itself.

The town of Brunei, where the Sultan resides, is situated at the head of the Gulf of Labuan, only thirty miles from the little island of Labuan, with its British official residents, and is regularly visited by steamers from Singapore. The inhabitants of the town, numbering 12,000, are Malays, with some Dyaks, and there are no Europeans living there. Our correspondent, the Rev. O'Donnell Ross Lewin, naval chaplain to H.M.S. Audacious, who has favoured us with Sketches of Borneo, describes Brunei as a town actually built in the water, the houses being erected on piles. It stands in the estuary of a river, and can be approached only by small vessels. The Sultan's palace is entered by a ladder. The Sultan is a stout old Malay, of a reddish-brown complexion. He wore a blue jacket, a very large girdle, with an ornamental creese stuck in it; a sarong or short gown, and white trousers. His velvet cap was worked with gold embroidery to resemble a crown. His Prime Minister attended him. The Admiral was introduced by the Governor of Labuan, Mr. Hamilton. The English guests afterwards sat at a long table, and cigars of huge size were handed to them with very sweet coffee.

Sarawak is now governed by the nephew of the original Rajah Brooke (Sir James Brooke). It is the most prosperous State in Borneo, having a revenue in excess of expenditure. It appears to be well and wisely governed, and the Rajah's soldiers are well drilled. The old Malay cannon at Sarawak are very curious. One is double-barrelled; another has the figure of a man at the breech, and that of a dog at the muzzle. On the steep hill-sides the natives use notched tree-trunks to ascend and descend; and as some of these are often broken, and with no supports, walking down becomes rather risky, as it appears in one of the Sketches.

A three-light window, from the studio of Mr. Taylor, of Berners-street, has been erected in the church of Furneaux-Pelham, Hertfordshire, with the surplus fund, on the occasion of the Jubilee of her Majesty.

ARTS AND CRAFTS EXHIBITION.

It is greatly to be regretted that the managers of this important exhibition should have allowed it to be opened prematurely. In every way, and in the interest of exhibitors and visitors, a fortnight's delay would have added to its attractions without compromising its success. Even now many vacant spaces are to be found on the walls, and the catalogue is in need of careful revision. Moreover, as a first venture in a new direction it would have been more prudent to have awaited the return to town of those who set the fashion even in exhibition-going—and more especially in the case of an exhibition which appeals almost exclusively to the fashionable and would-be taste dictators of the country.

Having said this much, we willingly pass on to speak in a very different tone of the contents of the New Gallery, which, for a brief period, passes under the management of Mr. Walter Crane, Mr. William Morris, and Mr. Cobden-Sanderson. The aim proposed by the society of which these gentlemen are the guiding spirits is to bring into greater prominence "the personal element" of our industrial system. In other words, they wish to show how much of the undoubted advance in taste and workmanship which modern house-decoration displays is due to the individual workman; and they believe that a fuller recognition of the craftsman will tend more than anything to raise handicrafts to the level of true art. We have no desire to dispute this hopeful anticipation, but the first survey of the exhibits on the present occasion suggests rather a struggle between two conflicting influences in the designers' minds, than that harmony between art and craft which it is the aim of Mr. Walter Crane's society to establish. In other words, there is too patent an effort on the part of the majority of the artists to produce what they regard as useful, and an equal effort on the part of the craftsmen to disguise, under a decorative exterior, the direct purpose of their work. Designs for stained glass or mural decorations do not come under limitations of this sort, and consequently the works contributed by Mr. Burne-Jones, Mr. Holiday, Mr. Ford-Madox Browne, and Mr. Walter Crane do not suffer from the conflicting influences. Of the first-named artist the most important works are the cartoons for two windows for St. Philip's Church, Birmingham—"The Crucifixion" (181) and "The Nativity" (173). We place them in this order because the former work seems to show the artist at his best, although in the treatment of the Saviour's birth he has been able to give fuller play to fancy and imagination—a group of angels above guiding the steps of the shepherds to the grotto beneath, where another group watches over the new-born child. In the still larger and more complicated work, "David's Exhortation to Solomon" (170), the shrivelled King is not a pleasant subject for contemplation; whilst Solomon is represented as far too boyish to wield the sceptre and the sword in a kingdom beset by foes on all sides; but the group of girls who stand round the foot of the throne is conceived with Mr. Burne-Jones's consummate skill, and arranged with exquisite grace. Mr. Holiday's designs for the Cavendish Memorial (163 and 164, 167 and 168) are fine renderings of the Passion, and are as strongly marked by dignity and pathos as the plaster bas-relief, "Jacob's Ladder" (165), is by delicacy and refinement. In the same category of successful works we must mention Mr. Walter Crane's sketches for a painted frieze, illustrating Longfellow's story of "The Skeleton in Armour" (194), in which the artist has an admirable opportunity for the display of his real genius in the invention of imaginary beasts; and Mr. Selwyn Image's crayon designs for glass windows, "Raphael" and "Michael" (210), of which the latter shows the greater power. The Century Guild of Artists is represented by some spirited designs by Mr. B. Creswick, of which the "Village Smith" (193) series is perhaps the most characteristic; but without knowing whether these casts in high-relief are intended for indoor or outdoor ornament, it is difficult to say how far they are adaptable to our climate. Amongst the other objects of interest in the North Gallery—to which we confine our remarks on the present occasion—is a "Cassone in Gesso" (229), with a design by Mr. Burne-Jones, "The Garden of the Hesperides." This chest, which is made after the Italian fashion of the sixteenth century, is ablaze with gold, and bears on its surface in low relief a long-necked hideous monster twining round the mystic tree, and taking food from a bowl which a very modern-looking, self-possessed young lady holds in her hands. In Mr. Spencer Stanhope's "Hanging Cupboard" (230) the colours are even more brilliant, and the contrast of the blue dresses of the girls with the green foliage above them is somewhat startling. In much more refined style are Mr. Walter Crane's frieze panel "St. George and the Dragon" (239), Mr. Heywood Sumner's painted Gesso panel "Judith" (243), and Miss Faulkner's piano of green-stained wood, decorated in Gesso with gold and silver arabesques—Gesso, it may be explained, is composed of plaster of Paris, glue, and cotton wool, and is admirably suited for decorations in relief, whether in colour or gilded. In our next notice we shall refer to the metal and glass work, the pottery, and the bookbinding, and to various textiles, of which there is a very remarkable display. Meanwhile, we cordially echo the regrets expressed by Mr. Walter Crane in his admirable preface to the catalogue, that a large number of the manufacturers of artistic products have refused to take part in the present exhibition in consequence of the condition imposed by the society that the name of the responsible designer or artificer should be furnished, in order that the credit due to him should be fairly and fully recognised.

ST. DUNSTAN'S COLLEGE, CATFORD.

Under the scheme approved by the Charity Commissioners, part of the funds belonging to the parish authorities of St. Dunstan-in-the-East, in the City of London, were directed to be applied to founding a school for the education of 400 boys. The appointed Governors of this school are Alderman and Sheriff Gray; Mr. A. J. Capel; the Rev. J. L. Ross, Rector of the parish; Sir Reginald Hanson; Sir Owen Roberts; the Hon. and Rev. Augustus Legge and the Rev. B. Rhodes Bristow, of Lewisham; and Messrs. R. B. Portal, W. Marten Smith, W. J. Thompson, F. H. Mitchell, G. C. Edwards, H. Spicer, and W. R. Portal, gentlemen connected with the parish of St. Dunstan. A large and well-arranged group of buildings, with schoolrooms, dormitories, masters' residences, and chapel, has been

ST. DUNSTAN'S COLLEGE, CATFORD-BRIDGE, LEWISHAM.

erected at Catford-bridge, adjacent to Lewisham, in one of the most improving and prosperous suburban districts of Kent. The architect is Mr. E. N. Clifton, of 7, East India-avenue, City. We present a View of these buildings, which were formally opened by Sir Henry Roscoe, M.P., assisted by Mr. Alderman and Sheriff Gray, and the other Governors, on Monday, Oct. 1, in the presence of the Bishop of Rochester; the Vice-Chancellor of Cambridge University; Sir George Young, Charity Commissioner; and the Master of the Clothworkers' Company. This college will accommodate sixty boarders and above three hundred day-scholars; the whole will be under the head master, Mr. C. M. Stuart, M.A. (non-resident); two house masters (resident), Mr. R. P. Roscveare and Mr. H. A. P. Sawyer; and Messrs. Allpress and Pugh (assistants). It will provide a modern education suitable for boys entering upon commercial, technical, and professional pursuits, special attention being paid to natural science, modern languages, and drawing. The college has been fitted with laboratories and workshops, arranged with the latest approved appliances, and twelve acres of ground have been laid out for school games.

Under the title of "The Emperor's Diary," Messrs. Routledge and Sons publish in a shilling volume the diary attributed to the late Emperor Frederick, concerning which there has been so much discussion. Prince Bismarck's memorandum in regard to it is also given.

During the quarter ending Sept. 30, as appears from Lloyd's returns, there was an immense increase in the number and tonnage of vessels in course of construction in the shipbuilding yards of this kingdom. The comparison is favourable whether applied to the immediately preceding quarter or to the corresponding period of last year.

Information has been received in Newcastle that the Wiggins Expedition that went out from the Tyne in July last, with a view of opening up a trade between this country and Siberia, has been a failure. The Labrador reached Vardoe early in August and proceeded on her journey through the Kara Sea. This year there has been an unusual quantity of ice in the straits; and a telegram, dated Oct. 3, states that the Labrador has returned to Vardoe, without having reached Yenesei, bringing with her four shipwrecked crews from the Kara Sea.

THE COURT.

On the morning of Oct. 5 the Queen drove out, accompanied by Princess Alice of Hesse. Her Majesty again drove out in the afternoon, accompanied by Princess Alice of Hesse and attended by the Hon. Evelyn Moore. Lord Rowton arrived at the castle, and, with Viscount Cross, had the honour of being invited to dine with the Queen and the Royal family. In the evening the Queen, with the Princess of Wales and the Duchess of Albany, witnessed a representation of tableaux vivants, in which Prince and Princess Henry of Battenberg, Prince Albert Victor and Princesses Louise, Victoria, and Maud of Wales, Princess Frederica, Baroness von Pawel Rammingen, Princess Alice of Hesse, Princess Margaret and Prince Arthur of Connaught, together with members of the Royal household and other ladies and gentlemen, took part. The following had the honour of being invited:—Sir Algernon and Lady Borthwick, Sir Dighton and Lady Probyn, Lady and Miss Cochrane, Miss Knollys, Fräulein Von Riedel, Miss Trotter, the Earl of Fife (who was unavoidably prevented from coming), the Rev. Archibald and Mrs. Campbell, Madame Albani-Gye and Mr. Gye, Mr. and Mrs. Allan Mackenzie, Mdlle. La Jeunesse, Viscount Cross, Lord Rowton, Sir Robert Collins, and Mr. Walter Campbell. The Queen went out on the morning of the 6th, attended by the Dowager Marchioness of Ely; and in the afternoon her Majesty drove out, attended by Lady Ampthill. Prince Albert Victor and Princesses Louise, Victoria, and Maud of Wales lunched with the Queen and the Royal family. The Duchess of Albany dined with her Majesty. Fräulein Von Riedel, Viscount Cross, and Lord Rowton had the honour of being invited. In the evening, the Queen, with the Princess of Wales and the Duchess of Albany, witnessed a continuation of the tableaux vivants, in which the same members of the Royal family, members of the Royal household, and other ladies and gentlemen, took part. The following had the honour of being invited:—Sir Algernon and Lady Borthwick, Sir Dighton and Lady Probyn, Lady and Miss Cochrane, Miss Knollys, Fräulein Von Riedel, Miss Trotter, the Earl of Fife, the Rev. Archibald and Mrs. Campell, Colonel and Mrs. Russell, Madame Albani-Gye and Mr. Gye, Mr. and Mrs. Allan Mackenzie, Mdlle. La Jeunesse, Viscount Cross, Lord Rowton, Sir Robert Collins, the Rev. Professor Story, D.D., and Mr. Walter Campbell. On both evenings the music was furnished by Mr. M'Farland's band from the Aberdeen Theatre, and by Mr. Adlington. The servants, tenants, and gillies of the Queen's Balmoral, Abergeldie, and Birkhall estates were present on each occasion. Divine service was performed on Sunday morning, the 7th, in the presence of the Queen, the Royal family, and the Royal household. The Rev. Professor Story, D.D., of the Glasgow University, one of her Majesty's chaplains, officiated. The Princess of Wales, Prince Albert Victor, and Princesses Louise, Victoria, and Maude of Wales, attended by Sir Dighton Probyn and Miss Knollys, drove over from Abergeldie and attended. In the afternoon the Queen drove out, accompanied by Princess Beatrice, and attended by Lady Ampthill, and visited Princess Frederica at Abergeldie Mains. Viscount Cross, Lord Rowton, and the Rev. Dr. Story had the honour of dining with the Queen and the Royal family. The Queen went out on Monday morning, the 8th, attended by the Dowager Marchioness of Ely; and in the afternoon her Majesty, accompanied by Princess Alice of Hesse, drove to the Glassalt Shiel. Captain Arthur W. Moore, R.N., had the honour of being received by the Queen. Princess Frederica and Baron von Pawel Rammingen dined with the Queen and the Royal family; and Viscount Cross and Lord Rowton had the honour of being invited.

The Prince of Wales met with a magnificent reception at Bucharest on Oct. 4, the whole town being *en fête*. King Charles welcomed his Royal Highness in the most cordial manner, and conducted him to the palace. At the Castle of Pelesh the Queen of Roumania organised a series of brilliant fêtes in honour of the Prince's visit. The Prince of Wales has been disappointed in his hunting expedition, the dry weather having caused the bears to retreat to the upper recesses of the mountains.

The Duchess of Edinburgh arrived at Rome on Oct. 7 with her children, and was received at the railway station by Baron Mayendorff and Mr. Kennedy, the Chargés d'Affaires to Russia and England respectively.

Mr. J. H. A. Macdonald, the Lord Advocate, has received the appointment of Lord Justice Clerk, in succession to Lord Moncrieff; and it is announced that Mr. J. P. B. Robertson, the present Solicitor-General, will succeed Mr. Macdonald.

On Oct. 8 the President (the Marquis of Bristol) and Council of the British Dairy Farmers' Association entertained about one hundred gentlemen at the Freemasons' Tavern, in connection with the thirteenth annual Dairy Show. The chair was filled by Mr. Walter S. B. McLaren, M.P.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately-flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that

EPPS'S (GRATEFUL, COMFORTING) COCOA

a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

COPIES OF THE ABOVE PICTURE, SUITABLE FOR FRAMING, MAY BE HAD GRATIS AND POST-FREE BY SENDING ADDRESS TO ELLIMAN, SONS, & CO., SLOUGH, ENGLAND.

MUSIC.

Symptoms of reviving musical activity are now appearing; among the most important being the resumption of the Crystal Palace Saturday afternoon concerts, which enter on their thirty-third series on Oct. 13. A performance of "Carmen" by Mr. Augustus Harris's Royal Italian Opera Company, was given at the Crystal Palace on Saturday afternoon, Oct 6, when Mdlle. Rolla sustained the title-character with much success. Signor D'Andrade as the Toreador, and Madame Bauermeister, Signori Runcio, De Vaschetti, and Ciampi, and others contributed to the general effect; sudden changes in other portions of the cast having been made in consequence of the indisposition of Madame Trebelli and Miss Macintyre.

The performances of the Russian National Opera Company at the Royal Albert Hall—to which we have previously drawn attention—began on Oct. 8. The vocal performers (the choristers habited in picturesque national costume) gave a selection which was not exclusively Russian; having, however, included selections from Glinka's opera, "Life for the Czar," which has been given in an Italian version at our Covent-Garden opera-house. Other Russian pieces were comprised in the programme, which, however, was of a somewhat mixed character. In addition to choral music, solos were effectively sung by Madame Olga Pouskowa, and MM. Vinogradoff and Lubimoff. Besides the band, twenty-four pianofortes were employed, played on by forty-eight young ladies, who executed two pieces. The performances were ably conducted by Mr. J. Truffi. The well-trained company has recently been heard to greater advantage in stage representations in some of our provincial towns, and it is to be regretted that their London appearances should not be made under similar theatrical surroundings. The last concert was announced for Oct. 13.

Madame De Lhna (pianist) gave a concert at Prince's Hall on Oct. 8, with an interesting programme, including her own performances in concerted and solo pieces; and other features.

The inaugural address of the new session of Trinity College, London, was announced to be delivered by the Rev. H. G. Bonavia Hunt, on Oct. 9, the same date having been fixed for the students' concert.

We have previously drawn attention to the arrangements made for the one day's festival at Hanley, on Oct. 11, conducted by Dr. C. Swinnerton Heap, of Birmingham.

The recurrence of the Bristol Triennial Festival (the sixth occasion) will take place on Oct. 16 and three following days. The programme does not offer any absolute novelty, but several grand works of permanent interest will be given, all the performances taking place in the Colston Hall. The first morning (the Tuesday) will be devoted to "Elijah," the evening concert of the same date including a selection from Gluck's "Iphigénie en Tauride," Schumann's Pianoforte Concerto in A minor, and other items. On the following morning, Cherubini's fourth mass (in C) and Dr. Mackenzie's dramatic cantata "The Rose of Sharon" will be given, Berlioz's "Romeo and Juliet" symphony, and a miscellaneous selection being included in the programme of the evening concert. The morning of Oct. 18 will be appropriated to Sir Arthur Sullivan's dramatic cantata "The Golden Legend," and Mendelssohn's "Walpurgis-Night" music; the following evening's concert including Beethoven's pastoral symphony, other orchestral works, pianoforte solos, and vocal pieces. The festival will terminate on Friday morning, Oct. 19, with a performance of "The Messiah." The orchestra will be the fine band organised by Sir Charles Hallé, who will be the conductor and pianist. The original list of solo vocalists comprised the names of Madame Albani, Miss Anna Williams, Mesdames Patey, Trebelli, and Belle Cole, Mr. E. Lloyd, Mr. C. Banks, Mr. Santley, Mr. W. Mills, and Mr. M. Worlock; but it is feared that illness will prevent Madame Trebelli from appearing.

Mr. William Carter will begin a new series of eight concerts at the Royal Albert Hall on Oct. 31; the co-operation of his well-trained choir being again an important feature.

Mr. Freeman Thomas's Promenade Concerts at Covent-Garden Theatre will close (with his benefit) on Oct. 15, after an especially successful season; a result fully merited by the general excellence of the performances, and the varied attractions of the programmes.

The eighteenth season of the Royal Albert Hall Choral Society, conducted by Mr. Barnby, will open on Nov. 7 under its altered title of the "Royal Choral Society." The opening performances will consist of Mozart's "Requiem" and Rossini's "Stabat Mater." Two more concerts will be given this year—on Nov. 28 and Dec. 15—and the remaining seven on Jan. 1 and 16, Feb. 2 and 20, March 6 and 30, and April 19. Some of our most eminent solo vocalists are engaged, and a band and chorus of about a thousand performers will give effect to works by past and present masters, among these being Mr. Cowen's oratorio, "Ruth"; an oratorio entitled "Lucifer," by M. Benoit; and Signor Mancinelli's "Isaias." Mr. W. Hodge has been appointed organist on the retirement of Sir John Stainer.

The Monday Popular Concerts will open their thirty-first season on Nov. 12.

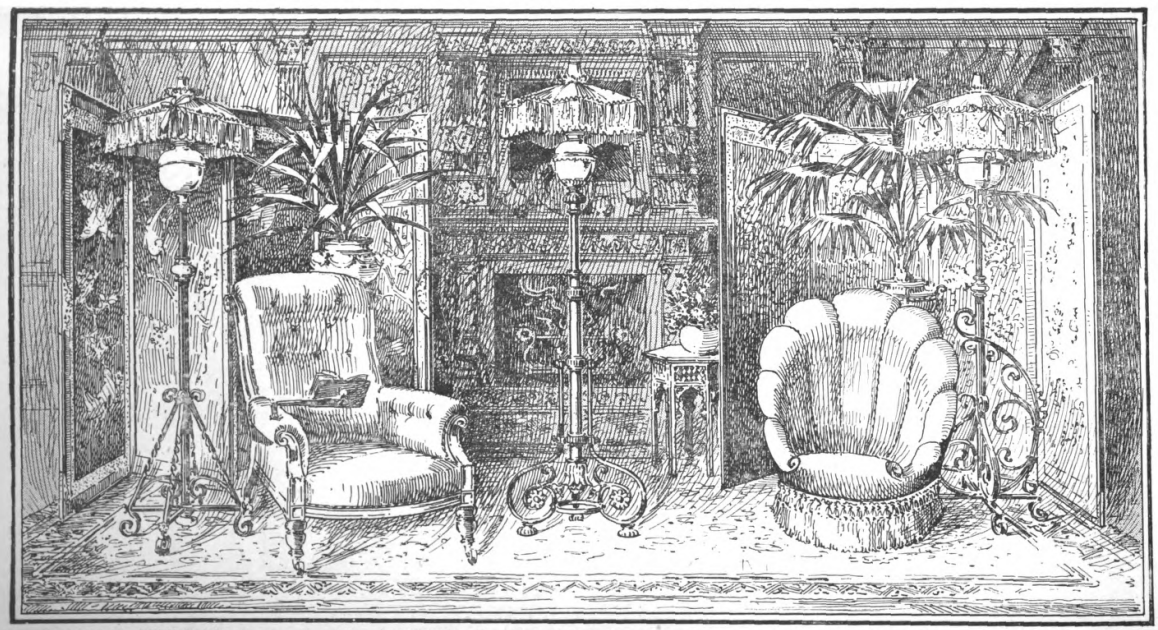
Those excellent orchestral performances, the London Symphony Concerts at St. James's Hall, will be resumed with the first concert of a new series, on Nov. 20, conducted by Mr. Henschel, as before.

A new series of Ballad Concerts will begin towards the latter end of November.

Another important accession to London music will be the renewal of Novello's Oratorio Concerts, which will begin their new season, at St. James's Hall, on Dec. 6 (conducted, as before, by Dr. Mackenzie), with Dr. Parry's "Judith." Engagements have been made with several eminent solo vocalists.

Among the suburban musical institutions that are preparing for renewed activity, the Finsbury Choral Association (conducted by Mr. C. J. Dale) will open its tenth season with the first of four concerts, on Nov. 22; and the Highbury Philharmonic Society (conducted by Mr. G. H. Betjemann) will begin its eleventh season on Nov. 26.—The South London Choral Association has issued the prospectus of its twenty-first season. Classes for instruction in various branches of music and public concerts are included in the scheme; Mr. L. C. Venables being principal of the educational department and conductor of the performances. Among the works to be given, this year and next, are Mr. Gaul's "Ruth" and a selection of part-songs; Sir John Stainer's "St. Mary Magdalen"; Gade's cantata "The Crusaders"; Handel's "Messiah" (a Christmas performance on Dec. 21), "Israel in Egypt;" and at St. James's Hall on Good Friday Rossini's "Stabat Mater," and a selection from oratorios.—Eastern London will be well supplied with musical performances by the Borough of Hackney Choral Association, conducted by Mr. E. Prout, and the Bow and Bromley Institute. The first-named institution will give four concerts (beginning on Nov. 19) in the Shoreditch Townhall, where Handel's "Joshua," Haydn's "Seasons," Mendelssohn's "St. Paul," Brahms's "German Requiem," and Schubert's "Rosamunde" music will be given during the series: the scheme of the other association including Haydn's "Creation," miscellaneous concerts, and organ recitals.

Among forthcoming provincial arrangements the Blackburn Philharmonic Society announces three concerts, beginning on Nov. 7; when Sir Arthur Sullivan's dramatic cantata "The Golden Legend" will be performed; and the Bournemouth Philharmonic Society will give an afternoon and an evening performance of Dr. Mackenzie's oratorio "The Rose of Sharon" on Nov. 21.



Provincial tours will be made by Mr. Santley and Mr. and Mrs. Henschel during October and November; pianoforte recitals by Madame Essipoff in November; and performances by the Heckmann quartet party, in November and December, being arranged for.

Professor John Ella (who died recently aged nearly eighty-six) began his musical career, when very young, as a violinist at the opera-house in the Haymarket, then called the King's Theatre. He became widely known as founder and director of the Musical Union, which for many years furnished instrumental performances of a very high class, in which many of the most distinguished artists were first heard in this country. Professor Ella was also known as a lecturer on music, was a member of several musical societies, and had the personal acquaintance of some of the most eminent composers and performers of his time.

The movement to collect funds for the erection of a memorial in the new cemetery at Evére, Brussels, over the remains of the officers and men who fell in the Waterloo Campaign has resulted in the collection of £2400, of which the Government have contributed £500. The fund is closed.

The first meeting of the council of the Sanitary Institute, which has recently been incorporated, was held at the Parkes Museum on Oct. 5. Sir Douglas Galton was unanimously appointed chairman of the council, and Mr. G. J. Symons the registrar. The institute is founded to carry on the objects of the Amalgamated Sanitary Institute of Great Britain and the Parkes Museum, and it was decided to hold the institute's first examination for local surveyors and inspectors of nuisances on Nov. 8 and 9. A programme of lectures for the winter session is in course of preparation. A letter was read from the Charity Commissioners saying that they considered that the new institute was likely to prove a powerful means for the diffusion of sanitary knowledge, and promising to grant facilities to the institute to deliver lectures in the various buildings which the Commissioners proposed to establish in different parts of London.

HAMPTON & SONS.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

MAPLE & CO.

TABLE LINENS.

TABLE LINENS.
During the long-continued depression in trade, many of the best Irish manufacturers have still kept their most skilful weavers employed, with the result that stocks have accumulated, till of necessity they must be realised, even at a serious sacrifice.

TABLE LINENS.—MAPLE and CO. having been consulted by several manufacturers so situated, have bought out for cash, on most exceptional terms, an immense assortment of pure hand-made, all-flax CLOTHS and NAPKINS, which they are now offering at a very large percentage under value.

TABLE LINENS.—The cases are now being opened out, and comprise a large variety of CLOTHS of a substantial character, fit for everyday family use, and which, being pure flax, will wear well and retain their natural bloom till the last. The Cloths are mostly of medium sizes—2 yards by 2½ yards, from 5s. 11d.; better quality, 8s. 11d.; extra quality, 14s. 9d.

TABLE LINENS.

TABLE LINENS.

TABLE LINENS.—Amongst the stocks are a number of CLOTHS, in both medium and large sizes, of altogether exceptional quality; in fact, some of the finest and most beautiful productions of the Irish looms. These are suitable for best use and special occasions, and should certainly be seen. The prices will be found but little more than usually asked for goods of ordinary character.

TABLE LINENS.—Included in the stocks will also be found a large variety of both CLOTHS and NAPKINS suitable for use in Hotels, Clubs, Boarding-houses, &c., and proprietors contemplating renewing these items should certainly make an early inspection, or write for samples or quotations. A great saving may be effected by purchasing at once.

TABLE LINENS.—The Stocks also include piles upon piles of DAMASK NAPKINS, as follows:—Fish Napkins, from 2s. 2d. per dozen; Breakfast ditto, from 4s. 6d. per dozen; Dinner Napkins, all fine flax, from 6s. 11d. per dozen, extra large French size, 9s. 11d. per dozen. These goods will be found of remarkably good value, and are sure to please in use.

SHEETINGS.

SHEETINGS.

SHEETINGS.
MAPLE and CO.'S Stock of pure-finish and hand-made Irish, Scotch, and Barnsley LINEN SHEETINGS, as well as plain and twilled COTTON SHEETINGS, is now completely assorted, and prices are ruling unusually low. Housekeepers would therefore do well to replenish their stores. Patterns free. A special quality Cotton Sheets, very strong, at 6s. 9d. per pair.

HOUSEHOLD LINENS.

HOUSEHOLD LINENS.

LINENS.—A Complete Set for £8 13s. 9d., consisting of Blankets, Quilts, Table Linen Sheets, &c., suitable for a house of eight rooms.—MAPLE and CO., London, Paris, and Smyrna.

LINENS.—A Complete Set for £17 3s., suitable for a house of ten rooms. See special Catalogue.—MAPLE and CO., Tottenham-court-road.

LINENS.—A Complete Set for £28 12s. 10d., suitable for a house of twelve rooms. See special Catalogue.

MONTE CARLO
A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monaco and Monte Carlo, or in its special fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous resources, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY,
SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Railway Carriages, Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's Offices.

THE HIGHLANDS OF BRAZIL
SANATORIUM, in one of the finest all-the-year-round climates known. Inland, bracing, 2300 ft. above sea-level, just within the Southern Temperate Zone; good summer and winter alike; no change of residence forced on the invalid by the advance of the seasons. English society, English church. The voyage from England or the United States is a favourite fair-weather ocean trip. Terms, 10s. to 12s. per diem. Circular, with further particulars, from CHARLES WILLIAM JONES, Esq., 36, Drury-buildings, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

AIX-LES-BAINS.—Grand Hôtel Europe, One of the most renowned and best conducted in Europe, Patronised by Royal Family. 300 sunny chambers. Refined table. Large gardens; lawn-tennis.—BERNASCON, Proprietor.

DIEPPE.—Hôtel Royal, facing the sea. Superior first-class house, worthily recommended. Nearest the sea, the casino, and bathing establishment. Table d'hôte. Open all the year. LARSONNEUX, Propt.

LUCERNE.—Hôtels Schweizerhof and Lucernerhof. An extra floor and two new lifts added to the Schweizerhof. The electric light is supplied in the 500 rooms; no charge for lighting or service.
HAUSER FRERES, Proprietors.

WINTER RESIDENCE in the ENGADINE. Pontresina, Kurhaus (6000 ft. above sea-level), open for the whole Winter. New ice rink and sun gallery. Music by band, snow-shoeing, skating, tobogganing, and sleighing. Vide "Alpine Winter in its Medical Aspects" (Churchill).

VALUABLE DISCOVERY for the HAIR.
If your hair is turning grey, or white, or falling off, use "The Mexican Hair Renewer," for it will positively restore in every case Grey or White Hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair charmingly beautiful, as well as promoting the growth of the hair on bald spots, where the glands are not decayed. "The Mexican Hair Renewer" is sold by Chemists and Perfumers everywhere, at 3s. 6d. per Bottle.

THE RECESS.

The return of Lord Salisbury from Nice to Hatfield on the Sixth of October signalises the commencement in earnest of the autumn campaign. Whilst the Prime Minister, strengthened by his long holiday in France, was girding on his armour, to be ready at a fitting moment to join in the fray, his Lordship may well have proceeded leisurely. The noble Marquis knew the Ministerial cause had just been championed by two of his doughtiest colleagues, Mr. Balfour and Lord Hartington, who continues to support the Ministry so stanchly that he might consistently accept a seat in the Cabinet itself.

The war of words has shown that our Parliamentary gladiators are quite as keen in debate, in retort, and in the art of delaying reform outside St. Stephen's, as they are within its walls. *Cui bono?* might be asked after each speech. Neither Mr. Balfour's lively defence in Glasgow of his Irish administration, nor the Marquis of Hartington's resolute stand in Inverness at the beginning of October against Gladstonian Home Rule for Ireland, contributed one atom to the solution of the Irish Difficulty. The Leader of the Liberal Unionist party is content to act as buttress to the Salisbury Government, as he still regards the alliance as the most effective obstacle to the triumph of Mr. Parnell in Ireland. But this policy does not hold out any hope of the removal of the existing deadlock.

Precisely the same rigid attitude is adopted by Mr. Gladstone and his lieutenants on their side. From Mr. Herbert Gladstone at Leeds on the Sixth of October came nothing newer than wholesale denunciation of Mr. Balfour and all his works in Ireland. Similarly, speaking at Newtown, Montgomeryshire, on the Eighth, Mr. John Morley, who was enthusiastically received, indulged in animated criticism of the "Coercion" practised in vain by Mr. Balfour, and also coquetted with Home Rule for Wales. Mr. Morley renewed the attack the following day, at the Newtown meeting of the Welsh National Council, whose members will in future bestir themselves more actively in the House of Commons. Addressing the Manchester meeting of the United Kingdom Alliance, the same day, Sir William Harcourt confined himself to the appropriate topic of Local Option; but Sir George Trevelyan, in Hull, returned to the thrice-told tale of Mr. Balfour's alleged rule of iron in Ireland—a theme on which Mr. William O'Brien also naturally waxed eloquent at Blaenau, Festiniog. There was a more statesmanlike tone in the Earl of Rosebery's admirable speech at Leeds on the Ninth of October in favour of a separate legislative body for purely Irish affairs. But the distinguishing feature of the speeches of both parties is that there is no approximation of views whatever. Settlement of a vexed question seems as far off as ever. Nor does anyone expect Mr. Gladstone, when he delivers battle to the Liberal Unionists at their Birmingham head-quarters on the Fifth of November, to mend matters in the least with respect to the Irish Question.

Lord Salisbury's Government, meantime, as Mr. W. H. Smith declared in an effective and pointed speech at Gloucester, on the Eighth of October, will rest contented with maintaining the integrity of the United Kingdom, with the solid aid of the Liberal Unionists, and with passing through Parliament such serviceable Acts as that which has so greatly reformed the municipal administration of the Metropolis and of the counties.

The Church Congress, which was opened at Manchester on Oct. 2, with an address from the Bishop of the diocese to an audience of 4000 persons, in the Free Trade Hall, continued its meetings daily.—Among the subjects discussed at the second meeting were the missions of the Church of England in the United States and our Colonies, Philosophic Doubt and Agnosticism, and the Burial Laws, and in the evening the Mayor, Sir J. Harwood, held a conversazione in the Townhall, which was numerously attended.—The principal subjects discussed on the third day had reference to the desirability of revising the Prayer Book, the bearing of Democracy on Church life and work, the influence of the reserved-seat system upon attendance at church, and the future of voluntary elementary schools.—Interest was well sustained during the concluding day; the morning at the principal meeting being devoted to Christian service, and the afternoon to Church finance. In the sections the increase of the episcopate, the religious life for men, eschatology, and lay help were the topics considered.

BIRTH.

On Sept. 27, at Wallfield, Stand, Manchester, the wife of Edgar Watkin, of a son.

MARRIAGE.

On Oct. 3, at Central Hill Chapel, Upper Norwood, by the Rev. S. A. Tipple, Arthur, eldest son of Joseph Leete, Esq., South Norwood Park, to Lilian Frances, second daughter of Henry Hodsoll Heath, Esq., J.P., The Rylands, Upper Norwood.

DEATH.

On Oct. 5, at Park Hall, Mansfield, Francis Hall, Esq., J.P., in his 83rd year.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

THE ROYAL NATIONAL LIFE-BOAT INSTITUTION.

At the monthly meeting of the Royal National Life-Boat Institution, held on Thursday, Oct. 11, at its house, Johnstreet, Adelphi, rewards amounting to £77 were granted to the crews of life-boats belonging to the institution for services rendered during September. The Winterton No. 2 life-boat rescued the crew, consisting of seven men, of the brig Catherine, of Whitby, which was waterlogged and sank during a whole gale from the N.N.W. and a very heavy sea; the Peterhead life-boat rendered assistance to the stranded fishing-boat Aurora, of Pittallie, during a strong E.N.E. wind and misty weather; the Llanddwyn life-boat rendered assistance to the schooner George, of Liverpool, which was in danger during a fresh gale from the N.W. and squally weather; and the Llanddulas life-boat assisted the distressed ss. Tolfaen, of Liverpool. Payments amounting to £5523 were ordered to be made on the 293 life-boat establishments of the institution. Among the contributions recently received were £390 from the Misses Macrae, balance of their gift for the Southport new life-boat; £100 additional from Mrs. E. A. Symes, Bangor; and £4 13s., collected at the harvest festival at Aldringham, Suffolk, per the Rev. J. C. Stewart Mathias. New life-boats have been sent during September to Milford Haven, Mevagissey, and Porthdinllaen.

Mr. Mackenzie, the representative of the British East African Association, has had an audience of the Sultan of Zanzibar, who has signed the concession which has been granted to the association.

On the opening day of the Newmarket Second October Meeting Braw Lass won the Trial Plate, Peck o' Pepper the Visitors' Plate, Paloma the Second October Nursery Stakes, Red Palmer the First Welter Handicap, El Dorado the Clearwell Stakes, Poem the Hundred Guinea Plate, Noble Chieftain the Cadogan Plate, and Ormuz the Post Produce Stakes.—On Oct. 9 the Cesarewitch was contested by twenty-three runners, of whom Mr. M. P. Aumont's Ténébreuse was first, Mr. G. Lambert's Mill Stream second, Mr. Warren de la Rue's Trayles third, and Mr. C. Perkins's Matin Bell fourth. The Heath Stakes fell to Master Mason, the Maiden Plate to Blue Peter, the Stand Nursery Plate to Lady Barefoot, the Selling Plate to Dartmouth, the Flying Welter Handicap to The Tyke, the Severals Plate to Gulbeyaz, and the Royal Stakes to Ossory. On the 10th the Middle Park Plate was won by the Duke of Portland's Donovan; Mr. Rose's Gulliver being second, and Mr. Blanc's Clover third.

Ready Oct. 29.

THE KING OF ITALY GREETING THE GERMAN EMPEROR AT THE RAILWAY STATION ON HIS ARRIVAL IN ROME.

OUR NOTE BOOK.

BY JAMES PAYN.

There has lately been some painful discussion about the refusal of a pension to the widow of a man of undoubted genius. Questions wholly apart from the merits of the case have been imported into it; but if some unnecessarily hard things have been said of those who shut their ears to what was generally held to be a justifiable appeal, there is little that can be put down to their credit. What has caused most dissatisfaction, however, is the conviction that, of late years, Literature, Science, and Art have been deprived of the very small provision that is annually made for their professors by persons who have no claim to it, and who also stand in no such need of help. To the widows of distinguished soldiers no one would grudge a fitting maintenance, but it should not be drawn from a source intended for quite other recipients; and still less, however much the aristocracy in the abstract may have done for us, should the relatives of its scions (themselves often utterly unknown to fame) have two or three hundred a-year given to them for maintaining extra manservants, while the men of Science, of Letters, or of Art have not a third of that dole from a fund that was intended for them only. It is not a question of politics, for Liberal and Tory Governments have alike sinned in this respect. The sympathy of Premiers from Lord Palmerston's time, who could "see no difference between the cases of Poet Close and that of Poet Burns, except in degree," to the present day, have been singularly wanting to the Arts and Sciences.

It was not so at one time, as is made apparent from Mr. Montague's late memoir of Sir Robert Peel. That statesman who bore the character of "coldness," and had certainly not the faculty of attracting personal attachment possessed by some of his successors, was always mindful of men of letters, and did not misdirect the slender stream of benefits intended for their needs to alien channels. The names of Airey, of Somerville, of Southey, of Sharon Turner, of James Montgomery, and of Crabbe (to whom he gave a living) will be always pleasantly associated with him; and it is to be noticed that in no case did he offer them a less sum than £150 per annum. To Hood's widow, indeed, he gave only £100, but it was the sum which he was asked to give, and the manner of presenting it must have seemed to the poet's sensitive spirit to double its value. He wrote from his deathbed, in great poverty, to beg that the pension in question should be settled on his wife after his demise, and Peel, being at Brighton on the Sunday, sent him the required promise by special messenger, so that the sick man should learn the good news a day earlier. There is no record of this in the Peel memoir, which is a pity, since it is so admirably characteristic. Hood's letter of thanks is, of course, delightful; he hopes Peel will set it against the next instance of political ingratitude. "As for me, I am," he writes, "so totally unconnected with party that my favourite theory of government is an angel from heaven and a despotism."

A great French critic has been placing on record his views of cruelty, and a still greater English one (if I recognise his Roman—and Grecian—hand) has been commenting on them. They are neither of them in favour of cruelty, which, considering their profession, is very creditable to them; but the former states his hatred of it to be so extreme that he "cannot be cruel even to the cruel." If he means that he prefers someone else instead of himself to hang them, I sympathise with him; but if he means that he would not have them hanged at all, I differ from him. There is a vaulting Philanthropy that overleaps itself and falls on the other side, and in its hatred of brutality encourages the Brutal. I have no doubt that there are people who would find excuses for Mary's Chancellor, who, history tells us, incensed by the obstinacy of Anne Askew, cast off his mantle, and, "plying the rack with his own hands, almost tore her asunder": but such apologists while imagining themselves charitable are in reality callous. Moreover, really tender-hearted persons are often ignorant of the worst attributes of human nature. Without at all agreeing with Dr. Bain, in his recent assertion that the sentiment of Malignity is universal, it is much more wide-spread than is imagined. I remember a speech made by Michael Davitt, much to his honour, denouncing in the most scathing terms the practice, then only too prevalent, of the mutilation of dumb animals, which was listened to by a large audience without a single expression of sympathy. About the same time a "Lady" wrote a letter, and got a newspaper to publish it, pointing out that there were still cows with their tails on. The existence of such persons would probably be incredible to the French critic, who could not read the martyrdoms in the "Lives of the Saints" without his heart seeming to be "crushed in a vice"; but "shut the book, and dared not open it again."

The English critic, with the remembrance, no doubt, in his mind of how he had himself occasionally disembowelled an author—though with as much tenderness and much more grace than old Izaak treated his worm—denounces this as a sign of weakness, and then goes on to inquire whether we have gained much, or even have not lost more than we have gained, by the discontinuance of torture for the extraction of evidence, and of the good old customs of bull-baiting, badger-drawing, and cock-fighting. "Does not all our loathing of the Terrible arise," he asks, "from the failure of the national nerve?" I answer, "No. In the whole history of our nation I do not believe nobler or more disinterested acts of heroism are recorded than have happened within the last half-century." Moreover, I venture to differ from him in his bringing forward, apparently as evidence of brutality, such an incident as that of Walter Scott making one of a party to see Burke hanged. Why should he not have made sure with his own eyes of the extinction of one of the most cruel wretches that ever disgraced human form? What sentiment of tenderness or pity could such a spectacle have evoked? Our critic cannot imagine any man of letters in the present day attending a similar spectacle. Yet Charles Dickens, one of the kindest hearted of men, went to see an execution. I feel this rather a personal matter, for I myself went—in the interests of literature, of course, and not like your Lord Tom Noddy, but still I *went*—to see the Malay crew of the Flowery Land hanged at Newgate; they had thrown their captain and officers (with whom they had no fault to find) into the sea, and pelted them as they were drowning with champagne bottles. Two of the mildest of these ruffians had been reprieved, of whom the Sheriff told me this story: "When the Governor came to break the news to them, expecting the usual expressions of gratitude and penitence, one of them observed, 'Since Antonio is to be put away, I hope you will let me have his shoes, as they exactly fit me.'" I trust my nature is not brutal, but I cannot say that the spectacle of Antonio and the rest being removed from the world deeply affected me. I am now too old for sensational experiences, but I believe I could still see the Whitechapel murderer hanged, without one tributary tear.

Mr. Furness, though he makes such excellent fun of portrait-painters, seems to take the art himself more seriously than most people. From my own experience of it, I have always thought that it was more serious for the sitter than for the painter; but this is not, it seems, at all the case. "To paint a man rightly," he says, "you should live with him as a Japanese artist lives with the flower he sketches, and watch him when utterly unconscious." This reminds me of a still more æsthetic person, who has informed us that "to properly paint a tree it is necessary that we should become a tree"—with, I suppose, a bark. It does not seem to have occurred to Mr. Furness that it is not everybody who could stand a portrait-painter always at his elbow looking out for characteristic expressions. For my part, if I am to believe a distinguished artist who once did me the honour of painting me, I lose, after a sitting of five minutes, all resemblance to humanity. "My good Sir," he used to remonstrate, "you are completely gone: you have no face!" As to watching me "when I was utterly unconscious," if that was the opportunity he desired, he had plenty of them. If his price was high, on the other hand, I cost him a good deal in cigarettes, coffee, and liqueurs-restoratives.

At the Church Congress it was objected by a Divine, who, unless very unselfish, must look forward to being a Bishop, that candidates for Confirmation are apt to put a great deal of grease on their heads, to the inconvenience of the officiating Prelate. It is not, of course, an agreeable custom, but it is well intended; in the country especially, young people would as soon think of attending church in their workaday clothes as without some capillary ointment, though it may not be a capillary attraction to others. The rite in question, albeit imperfectly understood, and even prized as a remedy for other than spiritual complaints, is thought highly of by the agricultural class. I once saw a Berkshire carter boy insist upon its being conferred upon him, in spite of the most strenuous ecclesiastical opposition. As he was making his way to join the kneeling line, the Bishop's chaplain stopped him, with silvery voice—"Stay, my lad; you have been Confirmed already." "No, I hasn't." "But indeed I think you have." To make sure he went up to the Bishop, who thought he remembered the boy's face. "Yes, my lad, you are mistaken; his Lordship says he has already Confirmed you." "He lies," was the confident reply; and, indeed, so far as it was possible for a Bishop to be in error, it turned out that his Lordship was so. In old times it was not bear's grease that the Fathers of the Church objected to, but false hair. "If you will not fling away your false hair, as hateful to Heaven," says Tertullian, "cannot I make it hateful to yourselves by reminding you that the false hair you wear may have come from the head of one already damned?" Clemens of Alexandria was more judicious, if less vehement, in his denunciation:—"When you kneel to receive the blessing, my brethren, you must be good enough to remember that the benediction remains on the wig, and does not pass through to the wearer." Perhaps there was a trade in wigs that had been blessed!

It was not concerning false but grey hair that Russell of the *Scotsman* made his famous saying. A contemporary had remarked to him that, though it was true he was growing grey, he had not grown bald, as Russell had done. "That's true," admitted the latter, "my hair preferred death to dishonour." Of course there may be too much of a good thing; but it is generally admitted that partial baldness gives the appearance of intelligence. In a recent description of the great swindler Allmayer, I read that he had "that slight tendency to baldness which often goes with elegant manners." I am afraid this observation was caused by some confusion in the writer's mind between elegant manners and "polish." A head on the road to baldness may be rough enough, but when it has reached maturity—when its proprietor brushes it with his hat on, for instance, which is a sure sign—it almost always presents a smooth and brilliant surface, on which the eye lights yet does not linger, but, like "the bird, o'er lustrous woodland" slides away. But as for temper, if elegant manners have anything to do with *that*, I confess that I have no confidence in baldness. On the stage, too, which is supposed to hold the mirror up to Nature, the most irascible of grumpy uncles, the most peppery of Indian Colonels, are always bald. It is not generally known that baldness lends itself to caricature of a very peculiar kind. I was once staying in a country house, where an eminent portrait-painter, the late Sir George Hayter, came down to paint the host and hostess. One evening, after dinner, the Knight, who was a humourist in his way, persuaded a good-natured fellow-guest, who was very bald, to submit himself to his pencil. On the back of his head he drew a human countenance, which what hair there was there set off charmingly as whiskers. He became literally a double-faced man; and when we put his coat on hindside before, and led him into the drawing-room backwards, he made a more striking impression on the ladies than he had ever done before, that is, previously.

A clergyman who took up the case of Father Damiens, the priest who in ministering to the lepers has become a leper himself, has written to the papers to complain how small have been the sums subscribed by the class which calls itself "Society." He is surprised at this, he says, because he has so constantly heard rich people express their opinion that the poor leper priest was the "greatest saint living." This, however, he ought to have known, is a very different thing from their subscribing to him. The simplicity of this good clergyman is, indeed, almost as touching as his appeal itself. "Society so-called," he writes, "subscribed almost *nil*, but bigotry was entirely absent" (by which he means that it was present enough but gave no contributions); "both these facts are instructive." Certainly they are, but only to one who has never studied human nature. Whenever I see one of those severe leading articles against money given in charity I welcome it, for it bestows happiness on the greatest number—the people that never give anything to anybody, and are delighted to find their parsimony defended. "Among the people who in the sixth century," writes a well-known philosopher, "were converted to the Christian faith were two tribes called the Lazi and the Zani. Methinks it would have been better if they had been left unconverted, for they have multiplied prodigiously."

THE GERMAN EMPEROR IN ROME.

The grandest and happiest features of the marvellous political transformation of Continental Europe, in the last thirty years, are the creation of Italian national unity and independence, and that of German national unity; but not less happily, and by an equally satisfactory recognition of the ancient rights of the Hungarian nation, the Austrian Empire, at whose expense, as it seemed in 1859 and in 1866, both those changes were accomplished by force of arms, when they had failed to be effected by mere popular insurrection in 1848, has assumed a sounder and juster basis, allowing the Sovereign of Austria and of Hungary, as a liberal and constitutional ruler, to be the friend and ally both of the kingdom of Italy and of the King of Prussia, holding the office of German Emperor. This relative situation of the principal Monarchies and leading nations of Central Europe, between the Baltic and the Adriatic, is the main security for the general peace; and there could be no more agreeable token of it than the visits of the Emperor William II., within a few days, successively to the Emperor Francis Joseph at Vienna, and to King Humbert I. at Rome, welcomed in both instances, not only by sincere personal courtesies, but also by cordial expressions of public goodwill, which prove that the Austrians and other South Germans, the Hungarians and other subjects of Francis Joseph, are fully reconciled to the accomplishment of German unity, and of Italian freedom and independence.

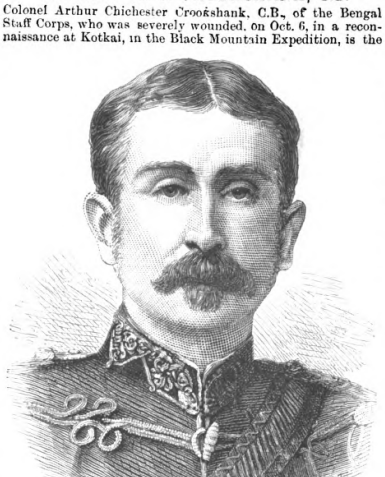
The arrival of the German Emperor in the city of Rome—where German Princes, on their election to the supreme dignity, that of King of the Romans and Emperor of the Holy Roman Empire, used to receive consecration at the hands of the Pope—was an event of great historical interest. His Majesty came from Austria (from Neuberg, in Styria), and was not the less welcome in the capital of Italy. It was on Thursday, Oct. 11, at ten minutes past four in the afternoon, that the special railway-train brought him into the station on the Piazza dei Termini, accompanied by Prince Henry of Prussia, and attended by Count Herbert Bismarck, General Liebenau, Count Solms, and other German Staff or Court officials. The Emperor wore the uniform of the Prussian Red Hussars, with the collar of the Italian Royal Order of the Annunziata. On the platform of the railway-station, where a pavilion had been erected, stood the King of Italy, in full uniform and wearing several German Orders, with the Prince of Naples, Crown Prince of Italy, the Duke of Aosta and the Duke of Genoa, Signor Crispi (the Italian Prime Minister), the Prefect of the province of Rome, the Syndic or Mayor of the city, and General Pallavicini di Priola, commanding the Ninth Army Corps, with some of the Italian Court officials. King Humbert eagerly pressed forward to shake hands with the Emperor William as he alighted from the train; the guard of honour saluted; the military bands outside played the German National Anthem; and the cheers of a vast assemblage of people on the Piazza, where the members of various clubs and guilds were ranged about their banners, mingled with bursts of music from every side.

After the two Sovereigns had mutually introduced to each other a few of the persons in their company, they took their seats together in an open carriage of State, drawn by six horses. It had an escort of Cuirassiers, under the military commander in Rome, and was followed by ten other carriages, the first of which conveyed the Prince of Naples and Prince Henry of Prussia; the second, the Dukes of Aosta and Genoa; the third, Signor Crispi, Count Herbert Bismarck, and the two German officers in attendance. Our correspondent in Rome furnishes, besides a Sketch of the scene at the railway station, one of the scene in the Via Nazionale when their Royal and Imperial Majesties passed on their way to the Quirinal Palace. There, having entered, the German Emperor was received by the Grand Master of the Ceremonies, and was conducted to the reception saloon, where Queen Margherita of Italy awaited him, with the ladies of her Court. After a courteous greeting from his Royal hostess, the Court dignitaries, the Ministers of State, the Knights of the Order of the Annunziata, the President of the Italian Senate, and the President of the Italian Chamber of Deputies, were presented to his Imperial Majesty, who conversed with the Minister of War, General Bertole Viale, and Admiral Brin, the Minister of Marine. The Emperor then gave his arm to the Queen, and, with the King of Italy and the Royal Princes, showed himself on the central balcony, in sight of fifty thousand people, who greeted him with enthusiastic cheering. At six o'clock his Majesty came out and paid visits to the Duke and Duchess of Aosta, and the Duke and Duchess of Genoa. The King and Queen gave a family banquet.

On the next day, Oct. 12, the Emperor went to luncheon at the Palazzo Caprarica, the residence of the Prussian Diplomatic Envoy to the Pope, who had invited Cardinal Rampolla, the Pontifical Secretary of State, Cardinal Von Hohenlohe, and two Monsignori of the Papal Court to meet his Majesty; after which, in a German State equipage, he went to the Vatican Palace on a visit to Pope Leo XIII. The Emperor was received by the Papal Court and household with every mark of attention, and had a private interview with his Holiness; he was afterwards conducted through the Vatican Galleries of Art, and visited the Pontifical Secretary of State.

The Emperor and the King of Italy, on the 13th, witnessed a review of troops of the Italian army at Centocelle; on the 15th his Majesty viewed the ruins of ancient Rome; and next day, accompanied by King Humbert, proceeded to Naples.

THE PLAYHOUSES.



The great popularity of Mr. Rutland Barrington as an actor was sufficiently proved by the reception awarded to him on his assuming the management of the St. James's Theatre. The public has not forgotten his good services in many a comic opera at the Savoy Theatre, or how closely he has been identified with the unbroken run of success obtained by the great triumvirate of Gilbert, Sullivan, and Carte. It required some courage to sever from old friends and associations and to abandon modern opera for still more modern comedy; it needed even greater confidence to follow such a successful management as that identified with the names of Mr. and Mrs. Kendal and Mr. John Hare. Mr. Rutland Barrington evidently belongs to the new school. He is all for progressive liberalism in art. He hates convention, and is opposed to dramatic dogma. Calling to his assistance a powerful mind like that of Mr. Sidney Grundy and a popular novelist like Mr. F. C. Philips, he gives them *carte blanche*, and bids them fire away at what others call prejudice, but some are still inclined to consider commonsense. The result is "The Dean's Daughter," a play that, with all its cleverness, cannot be pronounced an agreeable or satisfying work—a protest against the old-fashioned theory that people go to the play for pleasure rather than surprise; a work that, with its extraordinary characters, its unusual views, its smart cynicism, and its boldness of utterance may possibly delight the radical section of the dramatic community, but will as certainly be received with amazement by such as study life as a whole and not by its exceptions. To select a Dean of the Established Church of England as a type of all that is degraded, base, mean and contemptible in manhood, to choose a dignitary of this kind to illustrate selfishness, cowardice, hypocrisy, and unnatural conduct in what purports to be a serious play, is, in our humble opinion, as utterly untrue to life as it is wholly false to art. In his inverted studies, in his topsy-turvy dramas, in his daring deeds in saying exactly what is not, and in putting vicious sentiments into virtuous mouths, or vice versâ, we can all laugh with Mr. W. S. Gilbert. He means to deal in extravagance and he does so. But it is as false to nature, as wholly untrue to common experience, as utterly opposed to general opinion to select the soberest of clergymen as an example of positively abnormal turpitude as it would be boldly to paint an English Catholic priest as an example of viciousness, or an English rabbi as a type of all that is uncharitable, irreligious, and mean in man. On the stage we cannot make the exception the rule. It will not do. There are exceptions to every rule, and the accepted rule is that the priest is blameless, the rabbi devout and earnest, the English clergyman a man of upright character and sober life. In a comic play we may laugh when a Dean befuddles himself with whisky and water, when he is brutal and inhuman to his children, when he connives at their dishonour, when he denounces their depravity before assembled society, and when his education, his training, his taste, and his refinement only seem to accentuate his natural depravity. But when the Dean, who is of all clergymen the most respected and discreet, is put up as the villain of a serious play, the contrast to all that is noble and pure in human nature, the archetype of the most degraded features in human nature—well, the few may applaud this kind of cynicism as extremely clever, but the many will, we fear, only recognise it as very foolish. We are aware that the new school has many earnest advocates. An earnest endeavour is being made to free the stage from the fetters of conventionality and from the errors of commonplace. We are frequently told that a spade ought to be called a spade. There are cries for the deposition of the upholders of goody-goody, for the extinction of grandmotherly critics, and so on; and there may be much to be said in favour of advance and enlightenment. The stage has seen extraordinary changes in a dozen years. Plays are now passed, and things are now said on the stage, that would not be tolerated, say, twenty years ago. All this is natural. The radical dramatist cannot complain of any very violent restriction to the practice of his new-fangled theories. He writes what plays he likes, and says pretty much what he cares to say. There never yet was a more liberal licenser than Mr. E. F. S. Pigott. But the question is whether *in his own interest* the dramatic iconoclast is not going too far. Plays that leave a nasty taste in the mouth never have, and we trust never will, find favour with the vast majority. At the theatre we like to see life painted better than it is, and not worse. If there is to be any exaggeration, let it be on the side of virtue, not of vice. There would be little purpose in following the details of this most unpleasant story. The authors may be congratulated on their skilful manipulation of a novel sufficiently well known, and, from their own point of view, on some smart and telling dialogue. We see a clergyman selling his daughter and bartering her comfort for worldly preferment: we see him hurrying her to destruction at the moment he could save her; we observe him cruel enough to shut his ears to her cries, and callous enough to denounce her for the infamy he has caused; we are presented with the picture of a lonely woman struggling to resist temptation, and with her only woman friend tempting her to her fall. Much that is clever is contrasted with much more that is callous and crude. The picture of the degraded Dean may be a new one; the sketch of the vicious Russian Count is as old as the very hills of cheap transpontine drama. In a word, it is an unpleasant play, view it how we will.

Mr. Rutland Barrington can only attack the Dean in a half-hearted manner. He dare not play him as a melodramatic villain, so he slightly suggests a trace of the old Gilbertian humour. He makes us laugh at the old scoundrel; not hiss him. There is so much exaggeration in what he says and does that we cannot dissociate him from farce. The actor showed remarkable tact with a character as difficult to personate as to understand. Another extremely difficult character, a callow lordling, was as excellently acted as it was understood by Mr. Aynesworth, a new actor, but one of great promise. Miss Olga Nethersole, a clever girl who will do great things one day if she studies and is not spoiled, was awarded a reception that a Rachel or a Bernhardt might have envied. We could see in the performance much rough power, but little subtlety. One love scene—the very best moment in the play—she understood as little as her companion, Mr. Lewis Waller, who had, however, a difficult task to perform. Miss Nethersole has certainly as yet no sympathy with the natural school; but her tragedy airs seemed to suit her enthusiastic admirers. With two performances, at least, no fault whatever could be found, namely: the diplomatist of Mr. John Beauchamp, an admirably-finished sketch of character, and the French waiting-maid of Miss Dairolles; and Miss Caroline Hill easily delivered the cynical utterances of the female Mephistopheles, Mrs. Fortescue, attired magnificently, but injudiciously, as we believe is the custom on the American stage, to which Miss Hill has been devoted for many years. But Miss Hill cannot have been as long away from England as to forget how English ladies dress at country houses before luncheon. She has heard, no doubt, of tailor-made dresses which would be more suitable for visits to the vicarage than gowns that would look startling at a Botanic Fête. But the modern tendency is to overdress and overdecorate. It is not realism that we see, but excess. The play is beautifully mounted, but many of the scenes are out of character. The seedy bankrupt Devonshire Vicar could not have lived in a house full of furniture, spick-and-span restored, that would be the envy of a Wardour-street dealer. There is not a sign of poverty about the place. When next "Caste" is revived, the Polly Eccles' home in Stangate will be represented by a baronial hall. But it is all applauded—dress, decoration, acting, and all—by the young gentlemen who sway our dramatic destinies and decide for us disputed questions of taste.

The old French Abbé Constantin is certainly a more loveable and human a person than the St. James's Dean. He is surrounded by good, pure people, and he is well worth studying at the French Plays in Dean-street, Soho. A clever version in dramatic form is presented of Ludovic Halévy's delightful story; and the main character is rendered to perfection by M. Lafontaine, an actor of the old school, who was once a celebrated member of the Comédie Française. Anything more perfect than Lafontaine's old French parish priest has not been seen since Lafont left the stage. And the play is wholly delightful. We contemplate pure scenes, and mix with delightful people. Our sympathies are aroused; our better feelings are awakened. The unselfishness of men and women is given us as a theme for reflection, and not their meanness; we think men nobler and women purer for such plays, and we candidly own that to us this gives more pleasure, more genuine delight than wearying ourselves over scenes of depravity, debauchery, and idle conduct. The good priest who lives for his poor and longs for the time when he can rest from his labours, the charitable woman who brings sunshine into the village, the young soldier who is brave enough to defend a woman's honour, the girl who confesses that she is ready to endow devotion with her worldly goods—are these not pleasanter companions than drunken Deans and scandal-loving widows and rapacious Counts and the whole of the disreputable army of vicious and irreligious people? At any rate, people can take their choice. When they feel stifled with the oppressive heat of "The Dean's Daughter" they can breathe the wholesome atmosphere of "L'Abbé Constantin."

COLONEL A. C. CROOKSHANK, C.B.

Colonel Arthur Chichester Crookshank, C.B., of the Bengal Staff Corps, who was severely wounded, on Oct. 6, in a reconnaissance at Kotkai, in the Black Mountain Expedition, is the

Wounded in the Black Mountain Expedition.

eldest son of the late Captain Chichester Crookshank (51st King's Own), and grandson of the late Colonel Chichester Crookshank (33rd Duke's Own), a distinguished Peninsular officer. He joined the 35th Regiment (Royal Sussex), as an Ensign, in 1859, and since that date has been employed continuously in India. He served in the Jowaki Expedition of 1877-8, against the Afreedees, and was in the various actions in the Bori Valley, for which he has the medal and clasp. He served also in the Afghan War from 1878 to 1880, in the operations in Southern Afghanistan, the advance on the Helmund, and the reconnaissance of Thul-Chotiali. In Northern Afghanistan he commanded the 32nd Punjaub Pioneers in the occupation of the Jellalabad Valley, and at the action of Meezina; he was mentioned in despatches, and obtained the medal, with the brevet rank of Lieutenant-Colonel. He was for some time Military Secretary to Lord Lytton, when Viceroy of India, and for several years one of the Secretaries in the Military Department. For services rendered in the latter capacity he was made a Companion of the Military Division of the Bath. The 34th Punjaub Pioneers, of which he is Commandant, is a new regiment, recently raised by him for the Indian Government. Colonel Crookshank commands the river column of the Black Mountain Expedition. The Portrait is from a photograph by Mr. Bassano, Old Bond-street.

The Queen has approved of the appointment of the Lord Advocate, the Right Hon. J. H. A. Macdonald, Q.C., C.B., to the office of Lord Justice Clerk in Scotland, vacant by the resignation of Lord Moncrieff.

The statue of General Gordon, which was voted by the House of Commons in 1885, has now been completed, and placed in the position selected for it in the centre of Trafalgar-square. It was uncovered on Oct. 16, but, as in the cases of the neighbouring monuments to Sir Charles Napier and Sir Henry Havelock, without any formal ceremony. The statue is the work of Mr. Hamo Thornycroft, A.R.A.

The Brighton Race Stand Trustees have made a handsome present to the town. For some time past negotiations have proceeded between the Marquis of Bristol and the Corporation for the purpose of purchasing the Tenantry Down, which comprises the racecourse. This has been completed at a cost of £3000, and the Race Stand Trustees have sent a cheque for the purchase-money, so that they might have the satisfaction of handing the Corporation the valuable property for the benefit and enjoyment of the inhabitants.

THE IMPERIAL HUNTING PARTY IN AUSTRIA.

The visits of the German Emperor William, of the King of Saxony, and of the Prince of Wales, to the Emperor Francis Joseph of Austria, during the month of October, have been varied by excursions to different mountain and forest regions of Croatia, Styria, and Hungary, for the sake of hunting or shooting large game, the chamois or the bear: unluckily, the game was not always to be found, and the weather did not often favour these Imperial and Royal sportsmen. On Oct. 5, leaving the Palace of Schönbrunn, near Vienna, and travelling by railway, the Emperor of Austria, the German Emperor, the King of Saxony, Crown Prince Rudolph, Prince Leopold of Bavaria, and Archduke Ferdinand of Tuscany, with their suites, went to Neuberg in Styria, a romantic neighbourhood, where the chamois find shelter among precipitous rocks. In one of the most lonely valleys of the district, which is rarely visited by tourists, near the little village of Mürzsteg, stands in the shade of a large pine forest the Imperial hunting-box which during a few days was inhabited by the illustrious sportsmen. It is a pretty structure of red brick, and contains a dining-room, a reading-room, and a number of small bed-rooms. The entrance-hall is profusely decorated with antlers and stuffed animals, and the alpenstocks leaning in the corners remind the visitor that for shooting over the Imperial preserves near Mürzsteg these mountaineering implements are indispensable. The German Emperor has often been shooting there in former years with the Crown Prince Rudolph. Far away from the hunting-box, at a place which ordinary tourists can only reach on mules, is a little hut of refuge, where the sportsman overtaken by the night may find shelter, and rest on a bed of straw in a blanket. The furniture is of the simplest kind. On a table lies a visitors' book, which, among other inscriptions, contains the following entry by the Empress of Austria:—"Elizabeth, Sept. 16, 1883. On the mountains there is freedom"—this is a quotation from the poet Schiller.

THE BLACK MOUNTAIN EXPEDITION.

The military operations under command of General M'Queen, against the Akazais, Hassanzais, and other hostile tribes of the Black Mountain, adjacent to the Hazara district in the north of the Punjaub, began in the first week of October. The Black Mountain range is about thirty miles long, with an average breadth of ten miles, and an average height of 8000 feet above sea-level. It is a long crest running at a little distance east of the Indus, from near Darband or Derbund on the south, to where the river takes a sharp turn eastward on the north, flowing through a deep gorge with lofty precipitous banks. The ridge is in general more rounded than sharp, sends up high peaks at intervals, is crossed here and there by deep passes, and shoots out great spurs east and west, with deep narrow glens lying between them, in which are the villages of the tribes. The hillsides are for the most part rocky and stony. When uncultivated, the lower slopes are covered with thorny bushes and grass; further up, forest replaces these, and the whole of the upper portion of the spurs and crest is thickly wooded. Along the crest frequent open glades occur in the forest, which, with the exposed slopes of higher peaks, are covered with short grass. The Indus in this part is deep and rapid, from 70 yards to 150 yards wide, and crossed at eleven different points by ferries, the boats accommodating from twenty to thirty passengers. The natives also cross the river at nearly every point on inflated skins, which they can do with rapidity and in great numbers. The climate of the Black Mountain is fine in spring, summer, and autumn, but severe in the winter, when snow falls in sufficient quantity to stop communications over the crests. Kotkai, where the severe fighting was on Oct. 6, lies on the Indus, between mountain spurs, about fifteen miles north from Darband. It was destroyed in the expedition of 1852-3. Oghi, where we have maintained an outpost for some time—an attack on which led to the present expedition—is about fifteen miles east of Kotkai, lying in a mountain region with peaks rising to a height of 18,000 ft. It is the starting point of three of the columns which form the present expedition.

We are indebted to Major-General G. N. Cave (Retired), for two Sketches of the scenery of the Black Mountain, drawn by him when he served there in the campaign of 1868. One represents the position of Derbund (Darband) on the Indus, fifty miles higher up the river than Attock; it was at Darband that the river column of the present expedition, under Colonel Crookshank, assembled to advance to Kotkai. The other Sketch is that of the approach to Oghi, in the Agror valley, from Abbotabad. Starting from Oghi, the other three columns ascended the range from the east side. Colonel Sym's column went up the Koongali Spur; Colonel Sunderland's column up the Sambul Put Spur, and reached the crest of the range; while another column, under Colonel Haly, took a different route. These columns have advanced over the Black Mountain, under the command of General Channer. Several villages have been burnt, and the tribes are preparing to submit. General Galbraith commands the troops on the Indus.

The Hassanzais reside on both sides of the Indus, those on the Black Mountain side occupying the southern portion of its western slopes. They are divided into ten sub-divisions, and can command about 1500 fighting men; some of their neighbours would no doubt be willing to send contingents. Every man possesses his sword and shield, and there are said to be 1100 matchlocks in the tribe. They both manufacture swords and import them, and know how to make gunpowder. They are independent of supplies from British territory, and though at feud among themselves, can unite against a common attack. To the north and east of the Hassanzais are the Akazais, their near relations, who muster 500 fighting men, and command the help of other tribes living on their territory. To the north of these again are the Chagarzais, also Yusufzai Pathans; those on the Black Mountain side of the Indus are able to muster 2300 fighting men. These are the principal tribes with whom we have immediately to deal.

The Queen has approved of the appointment of the Rev. Francis Pigou, D.D., Vicar of Halifax, to the deanery of Chichester, vacant by the death of the Very Rev. J. W. Burgon.

On Oct. 13 the Maori football-players met the Moseley Club on the latter's ground, and after some rough but spirited play the visitors suffered their first defeat, being beaten by two goals to a goal and a try.—The Canadian football team played their first match in London on the same day, having the Swifts as their opponents. There was some excellent play, and the result was a draw of two goals each.

In London 2588 births and 1536 deaths were registered, during the week ending Oct. 13. Allowing for increase of population, the births were 122 below, while the deaths exceeded by 13, the average numbers in the corresponding weeks of the last ten years. The deaths included 50 from measles, 30 from scarlet fever, 26 from diphtheria, 18 from whooping-cough, 13 from enteric fever, 1 from an undefined form of continued fever, 43 from diarrhœa and dysentery, 2 from cholera, and not one from small-pox or from typhus. In Greater London 3438 births and 1896 deaths were registered.

THE WAR ON THE SIKKIM FRONTIER OF THIBET: SKETCHES BY COLONEL C. J. CRAMER ROBERTS.

The Himalayan mountain territory and small native State of Sikkim, adjacent to Darjeeling and Bhotan, on the north-eastern frontier of India, was recently described as the scene of military operations conducted by Colonel Thomas Graham, Brigadier-General, to repress the Thibetan incursions. It was explained that the Rajah of Sikkim, whose feudal allegiance is divided between the British Imperial Government and the Dalai Lama or Buddhist ecclesiastical sovereign of Thibet, has a Thibetan residence at Chumbi, on the farther side of the frontier mountain range, and a Sikkim capital at Tumlong. We are favoured by Colonel C. J. Cramer Roberts with a few Sketches of Tumlong and the peculiar establishments maintained there, which have some interest from their Thibetan origin and character, and of which he writes to us as follows:—

Tumlong, on the occasion of my visiting the capital of Sikkim, a few years back, I was much surprised to find a mere scattered collection of Lamaseries or Buddhist monasteries on the hillside; among which the Rajah's palace was distinguished by a copper-gilt cupola on the top of its heavy thatched roof. It was surrounded by a more pretentious mud-wall, enclosing the servants' or lay brothers' dormitories, the stables, and outbuildings. The main building consisted of the usual two-storeyed temple, the lower apartment forming a strange combination for devotional and secular purposes, as prayers and receptions are equally carried on here by the Rajah and his head Lamas. The upper room was almost a duplicate of the one below, except that it formed also a library, in which every volume of their sacred books had a pigeon-hole to itself. The rest of the building consisted of dark passages and small dormitories, redolent of strange and powerful smells. I was fortunate in getting the Head Lama of one of the leading monasteries to have his portrait sketched, to which he willingly consented, on the distinct understanding he should be drawn in the attitude of prayer or blessing, being most particular that all his fingers were correctly represented, and that his acolytes or heralds should also be drawn in their picturesque caps and vestments, blowing conches, by which the faithful Buddhist far away on the mountain-side is reminded of the hour of prayer. Occasionally they exchange these sea-conches for human thigh-bones, which are equally adapted as trumpets, and can be heard at a great distance. The last Sketch of this series represents the great cane suspension-bridge over the Teesta river, which on its way collects most of the tributary streams ever rushing down from the great glaciers of the Kinchinjunga range, and is even here a powerful stream, sweeping down everything before it—boulders, giant forest-trees—in its headlong course. This fragile fabric of a bridge, which appears as if the very winds could blow it away, is the only means of communication that the natives of this part of the country possess. It consists chiefly of tough wattles or small bamboos, closely interlaced, and capable of supporting two or three ordinary coolies with good heavy loads on their backs. But these bridges require a cool head to cross over them, as the footway is seldom more than six inches wide; in fact, were it not for the slender bamboo handrails, it would require the nerve of a Blondin to venture on such a spider-webbed concern, swayed about by the breeze over the torrent roaring below.

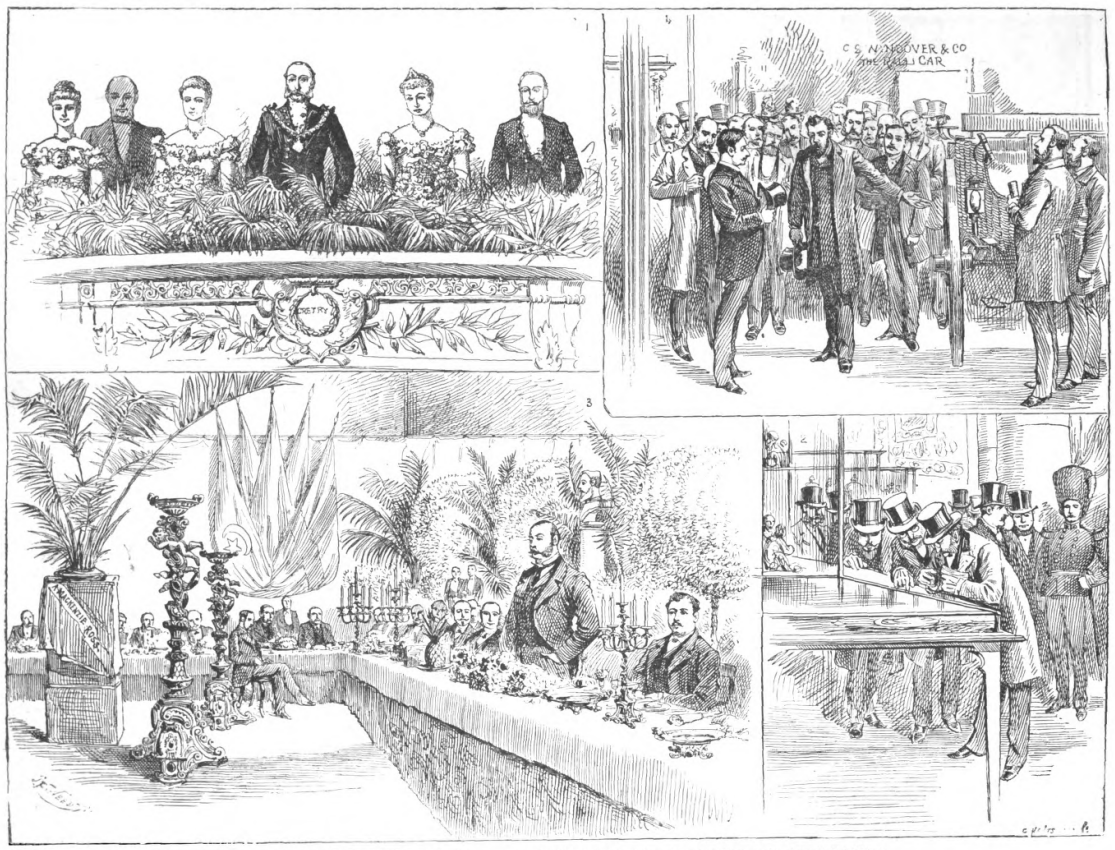
PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Oct. 16.

The political circus has reopened with a revival of the old pantomime of overthrowing the Cabinet. This time the Cabinet won, but the battle produced two important results—firstly, the official recognition of the necessity of revising the Constitution; and, secondly, the abdication and disappearance of the Left Centre, or Moderate Republican party. Hitherto the cry of revision has been simply a subject of manifestations both in and out of Parliament; now it has acquired a sort of official consecration, since it is the Prime Minister in person who demands the modification of the Constitution of 1875, makes it a Cabinet question, and obtains on the issue of confidence a majority of 307 votes, against 181. M. Floquet's project of revision, about which we are likely to hear much comment for months to come, consists in an improvement of the present Constitution: a Chamber of Representatives elected by direct universal suffrage and renewable by thirds every two years, thus avoiding dissolution and adjournment; a Senate elected by universal suffrage of two degrees, renewable by thirds every two years, and having control over the general body of laws; Ministers appointed by the President of the Republic for a period of two years, responsible before the Chamber, and capable of being maintained in their functions by the President; a Conseil d'Etat appointed by the Chamber and the Senate to exercise a consulting and judicial rôle.

In reality, the situation amounts to this: the Moderate Republicans are opposed to revision because they think it will be the ruin of the Republic; in the course of the debate these Moderate men raised their voices, whereupon Floquet thundered, and the Moderates and the Opportunists joined hands with the Radicals, and voted for the Radical Cabinet, preferring to sacrifice the Republic rather than to sacrifice Floquet. The question of revision having now been posed by the Cabinet, it remains to be seen whether the present Chamber has sufficient authority to revise the Constitution.



The presence of General Boulanger at the Chamber, and the passage of his carriage as he came and went, attracted crowds of manifestants, and necessitated the bringing out of a large force of police. There were reports current that bombs were to be thrown at the General. These demonstrations of enthusiasm, these triumphal promenades through Paris, have an air of being not quite spontaneous. On the other hand, it is regrettable that circulation should be interrupted every time the General goes to the Chamber.

On the last day of the present month, Mdlle. Marcelle Boulanger, eldest daughter of the irrepressible "brav' général," will be married to Captain Driant, formerly her father's aide-de-camp. The Boulangists are, of course, planning a grand manifestation on the occasion, with their new war-cries of "Vive Boulanger!" and "A bas les voleurs!" the thieves referred to being the anti-Boulangist Deputies.

At the intersection of the Avenue de Messine and of the Boulevard Haussmann there has been erected a pedestal surmounted by a bronze figure. On one face of the pedestal are the words "William Shakespeare," and on the other, "Presented to the City of Paris by William Knighton." The statue is a very poor production; the pedestal is paltry; the gift is uncalled for and not welcome to the Parisians; the whole affair is mediocre, as was amply proved by the ceremony of the inauguration, at which the abstention of the literary element was remarkable. The Academy refused to have anything to do with the matter; and the only man who could be found to write some occasional verses, which were recited by M. Mounet Sully, was a miserable mediocrity, M. de Bornier. As for the donor of the statue, Mr. Knighton, a name quite unknown to fame, it appears that he lives in the vicinity of the Avenue de Messine, and possesses a superabundance of wealth. These titles are not sufficient to excuse him for having inflicted upon the Parisians this fifth-rate monument of a poet whom they do not understand.

M. Emile Zola's new novel, "Le Rêve," has just been published, and promises to have a greater success even than his most successful novels, for the simple reason that it is utterly unlike them, except so far as the questions of grand conception and literary art are concerned. There is not a page, not a line, not a word in "Le Rêve" which may not be read by the purest maiden; it is an exquisite, graceful, and touching story—an idyll of virgin love in a framework of absolute purity and innocence, related by a prose poet of rare powers.

In the amusements of Paris the novelties are an opera, "Jocelyn," by Benjamin Godard, represented with small

2. An Object of Interest in the Art Gallery of the Brussels Exhibition.
3. Luncheon in the Salle de Fête.
4. Mr. Lee Bapty, English Commissioner, with M. L. Souzée, President of Executive Committee.

THE LORD MAYOR OF LONDON (ALDERMAN POLYDORE DE KEYSER) AT BRUSSELS.

success at the Théâtre Lyrique. One of the authors of the libretto of this piece is Victor Capoul, the celebrated tenor, who also sings the leading rôle. Unfortunately, Capoul is no longer young and handsome, and his voice cannot be said to exist now-a-days, so that Capoul on the stage as a tenor is a sad spectacle. At the Eden Théâtre the old fairy piece "Le Pied de Mouton" has been revived and made the pretext for a series of splendid ballets. Finally, the Nouveau Cirque has reopened with a pantomime, "Lulu," and a number of acrobatic and equestrian attractions. The programme of winter amusements is thus complete and Paris hopes that the foreign visitors will continue to come in spite of stupid decrees and police vexations.

The painter Eugène Feyen-Perrin died suddenly of paralysis on Oct. 14, at the age of fifty-nine. Chevalier of the Legion of Honour, bearer of the three medals which the hierarchy of the Salon awards, member of the jury and a constant exhibitor, Feyen-Perrin was, nevertheless, by no means a great artist. His best work is a combination of genre and marine, like the "Cancale Fisherwomen," in the Luxembourg Museum. Léon Longepied died, at the age of thirty-nine. He obtained a first-class medal and the Prix du Salon in 1882; his group, "Immortality," figures in the Luxembourg. T. C.

Monday brought with it a change of no small importance to the trading interests of Hamburg. On that day the city made a final surrender of its old historical privilege as a free port, and will henceforth be included, by its own consent, in the general German Zollverein.

LORD MAYOR OF LONDON IN BRUSSELS.

The Right Hon. Alderman Polydore De Keyser, this year Lord Mayor of London, is a native of Belgium; and in revisiting his birthplace, Termonde, and more recently in the capital city, where the International Exhibition has attracted many English visitors, our Lord Mayor has enjoyed the hearty congratulations of the Belgian people. On Tuesday, Oct. 9, a banquet was given in his honour, in the Gothic hall of the Hôtel de Ville, by the burgomasters, aldermen, and councillors of Belgian cities and towns, whom the Lord Mayor entertained in London last May. The principal guests were the Lord Mayor and the Lady Mayoress, ex-Sheriff and Mrs. Davies, ex-Sheriff and Miss Higgs, Lord Vivian, the Belgian Minister of Public Works, and Mr. Soulsby, the Lord Mayor's secretary. The Burgomaster of Brussels first proposed the health of Queen Victoria and the King and Queen of the Belgians. He next drank to the health of the Lord Mayor, whom the Belgians were proud to see occupying his high position, of the Lady Mayoress, and of the ex-Sheriffs.

Next day, Oct. 10, the Lord Mayor and the ex-Sheriffs were received at the Exhibition by the Executive Committee and the English Commissioners, and visited all the sections. Afterwards a lunch was given in the Salle de Fête. Next to M. Souzée, President of the Exhibition, sat the Lord Mayor; the United States Minister, the Belgian Minister of Public Works, the Roumanian Minister, and the Burgomaster and Aldermen of Brussels were present. M. Souzée proposed the health of the King, the Queen, and the Royal family, and of Queen Victoria. He referred to the splendid success of the British section, and to the services which the Lord Mayor, who was "an honour to both Belgium and England," had rendered to the Exhibition. The Lord Mayor returned thanks, in the name of the Corporation of London, for the honour done him in Brussels, Dendermonde, and Ghent.

A brilliant audience assembled at the Opera at night, for the gala performance of "Faust" in honour of the Lord Mayor, who, with his party, occupied the central box, which was beautifully decorated. The orchestra played "God save the Queen," amid great enthusiasm.

An address has been sent to the Lord Mayor by the presidents, vice-presidents, and jurors who represented the British Empire at the Brussels Exhibition (Messrs. Oldham Chambers, E. Bush, Emmerson, Deverell, Wadsworth, Kendrick, Pyne, MacNaught, Kent, Delacre, and Ladee), in which they express to him, as the president of the British Committee, their appreciation of the services rendered by Mr. Lee-Bapty as British Commissioner-General. While nearly all the other sections in the Exhibition have been subsidised by their respective Governments, Mr. Lee-Bapty has, at his own personal expense and without any hope of remuneration, carried out the work of his department in such a manner as to make the section contrast favourably with all the other courts. The British was the only section which was completed at the opening of the Exhibition.

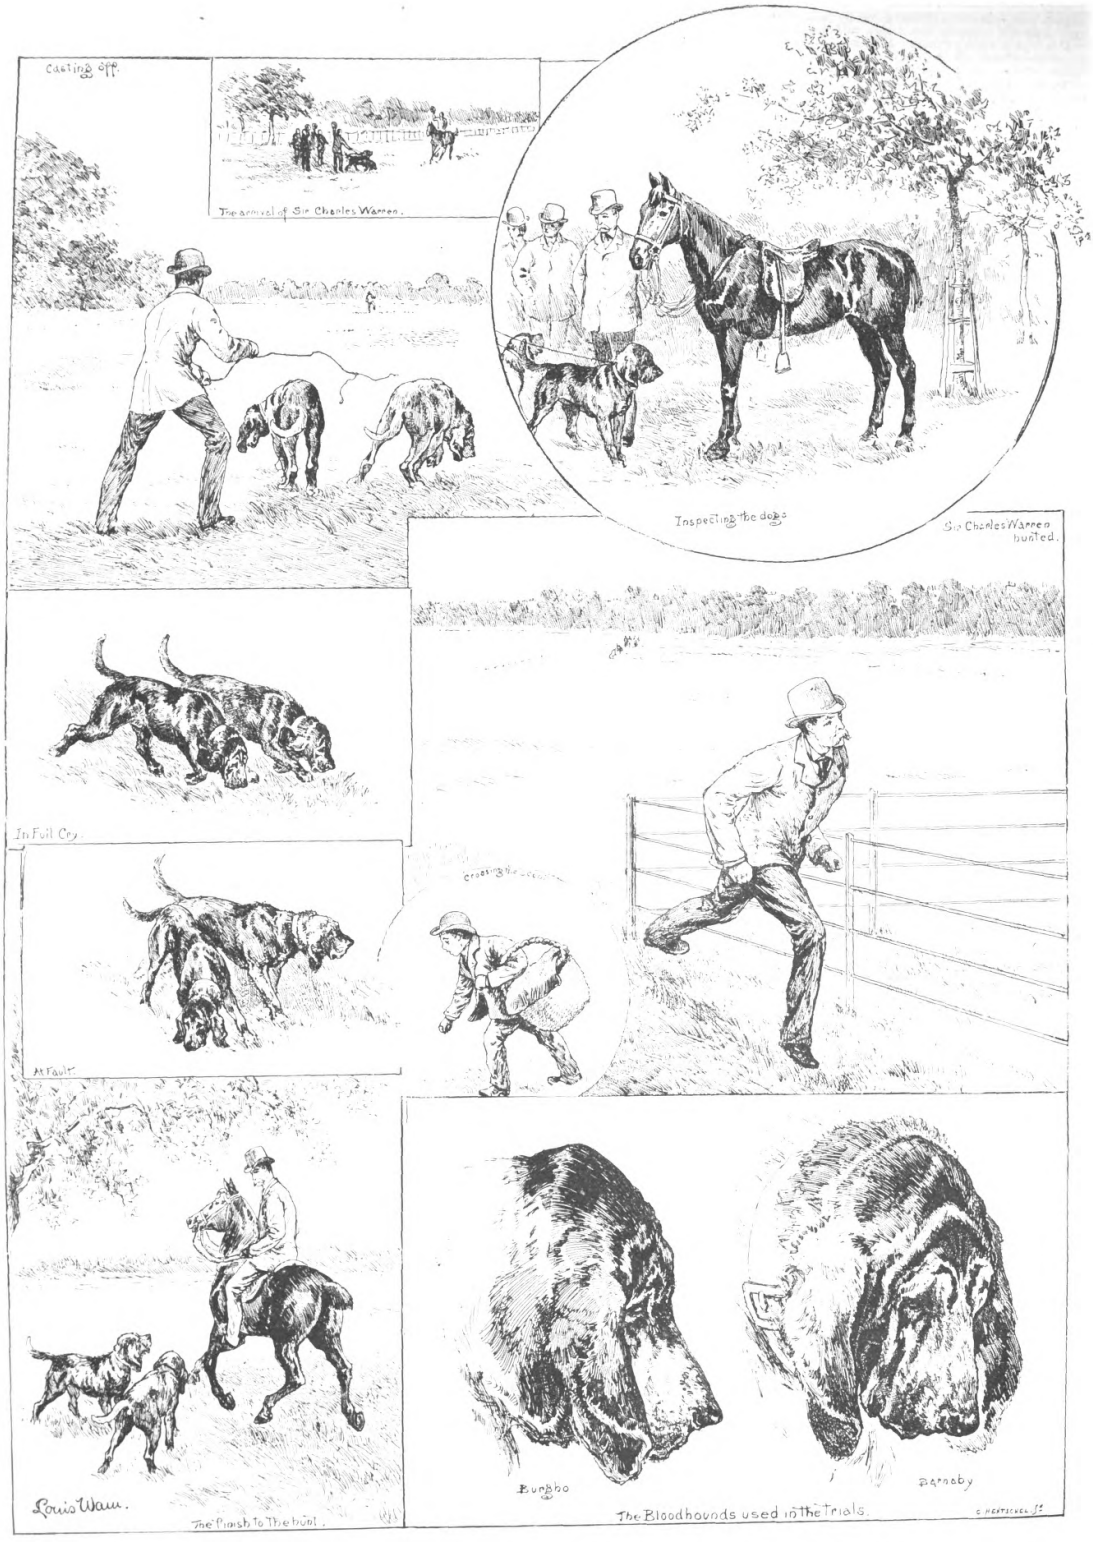
The church Barton-le-Cley, Beds, has received a beautiful three-light east window from the studios of Messrs. Mayer and Co.

THE COURT.

The Queen, during her stay in Scotland, has enjoyed excellent health. It is stated that the Court will leave Balmoral for Windsor about Nov. 14. On the afternoon of Oct. 10 her Majesty, accompanied by Princess Frederica, and attended by Lady Ampthill, drove to Mar Lodge, and honoured the Earl of Fife with a visit. Princess Alice of Hesse took leave of her Majesty, and left the castle for Germany. Prince and Princess Henry of Battenberg accompanied the Princess to Ballater station. Viscount Cross had the honour of dining with the Queen and the Royal family. On the following morning the Queen, accompanied by Princess Beatrice, went out; and her Majesty, with Princess Beatrice, Prince Arthur and Princess Margaret of Connaught, drove to Birkhall in the afternoon to visit her Royal Highness the Duchess of Albany. Viscount Cross had again the honour of dining with the Queen and Royal family. On the morning of the 12th the Queen went out with Princess Beatrice; and in the afternoon her Majesty, accompanied by Princess Beatrice and attended by Lady Ampthill, drove through Ballater to Pannanich Wells. The Princess of Wales, with Princesses Louise, Victoria, and Maud of Wales, dined with the Queen. Sir Dighton Probyn, in attendance on her Royal Highness the Princess of Wales, and Viscount Cross had the honour of being invited. The Queen went out on the morning of the 13th, accompanied by Princess Beatrice. The Duchess of Albany, with the young Duke and Princess Alice of Albany, visited her Majesty, and remained at Balmoral Castle to luncheon. In the afternoon the Queen, with the Princess of Wales, Princess Beatrice, and Princesses Louise and Maud of Wales, drove out. The Very Rev. James Cameron Lees, D.D., Dean of the Thistle and of the Chapel Royal, Chaplain to the Queen, arrived at the castle. Viscount Cross and the Very Rev. Dr. Lees had the honour of dining with the Queen and the Royal family. Divine service was performed at Balmoral Castle on Sunday morning, the 14th, in the presence of the Queen and Royal family and the Royal household. The Very Rev. James Cameron Lees, D.D., Dean of the Thistle and of the Chapel Royal, Chaplain to the Queen, officiated. The Princess of Wales, Prince Albert Victor, and Princesses Louise and Maud of Wales, attended by Sir Dighton and Lady Probyn and Miss Knollys, drove from Abergeldie and attended Divine service at the castle. Their Royal Highnesses afterwards came over, and lunched with the Queen. Prince and Princess Henry of Battenberg lunched at Abergeldie Mains. In the afternoon her Majesty drove to Abergeldie, accompanied by Princess Beatrice and attended by Lady Ampthill, and visited the Princess of Wales. The Earl of Fife, K.T., arrived at Balmoral Castle, and, with Viscount Cross and the Very Rev. Dr. Cameron Lees, had the honour of dining with the Queen and Royal family in the evening. The Queen went out on the morning of the 15th with Princess Beatrice; and in the afternoon her Majesty drove out, accompanied by Princess Beatrice, and attended by Lady Ampthill and the Dowager Marchioness of Ely. Viscount Cross and the Very Rev. Dr. Cameron Lees had the honour of dining with the Queen and the Royal family. The Earl of Fife has left the castle.

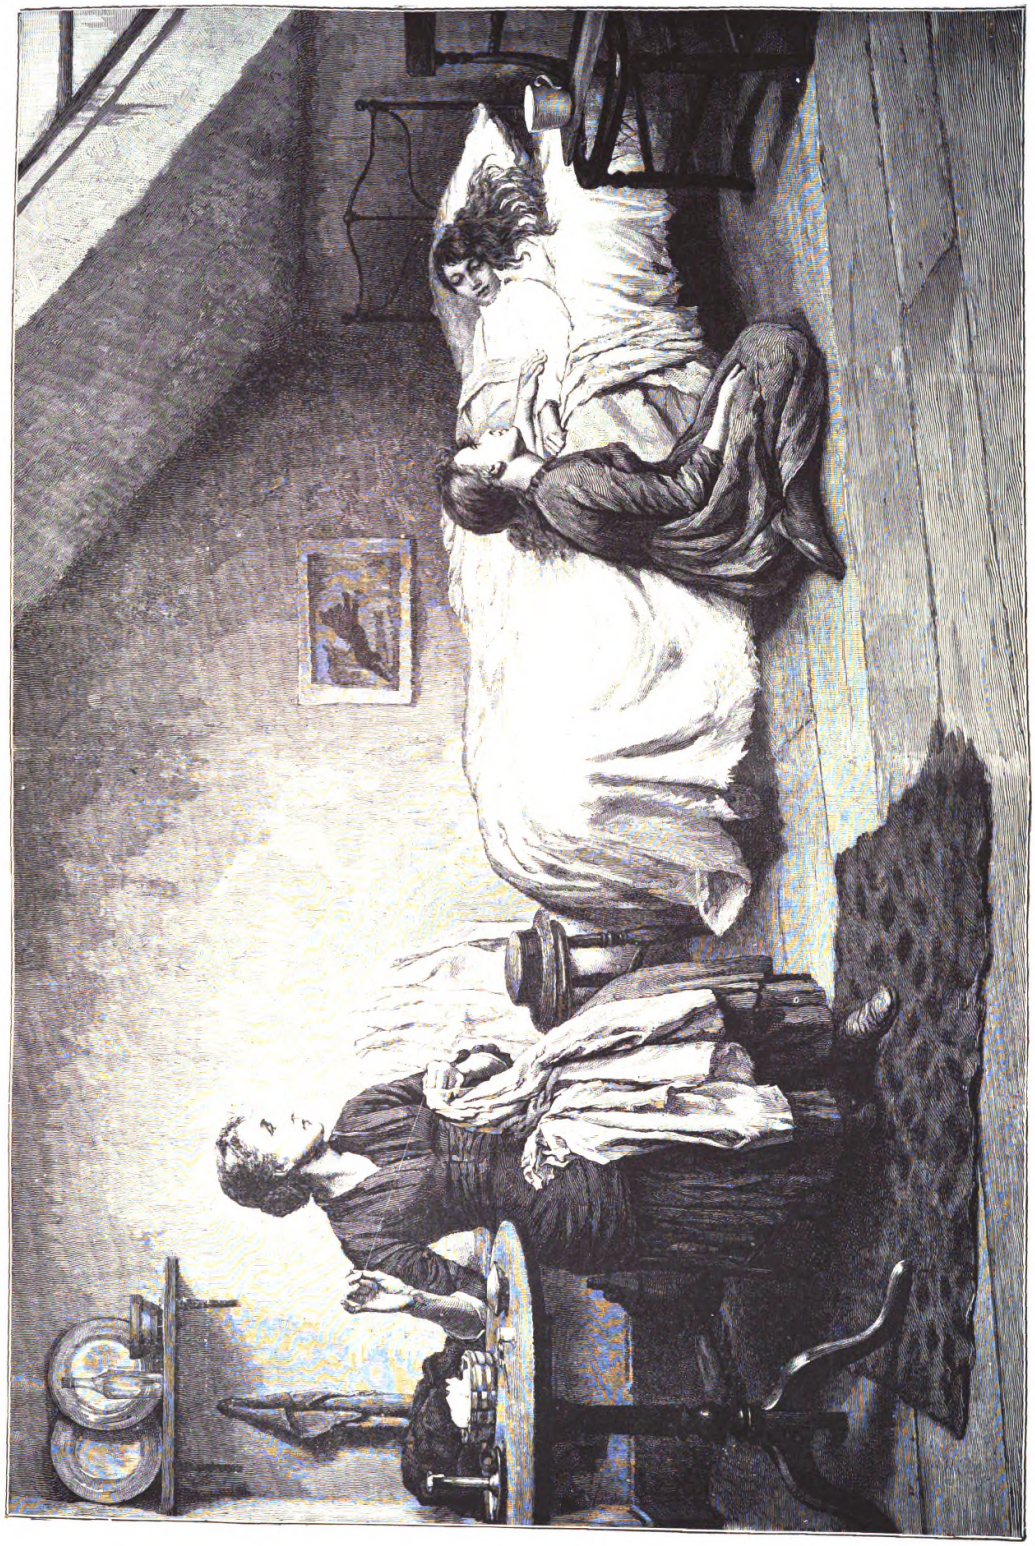
The Prince of Wales and the Crown Prince Rudolph returned to Vienna on Oct. 12 from Transylvania; and in the evening witnessed, with the Emperor and other members of the Imperial family, the last performance in the Old Burg Theatre. On the 13th the Prince of Wales gave a luncheon at the Grand Hotel, the guests at which included Sir A. Paget, the British Ambassador, and Lady Paget, Mr. E. Phipps, First Secretary of Embassy, General Keith Fraser, the Military Attaché, and Mrs. Fraser, the members of his Royal Highness's suite, and the Austrian officers in attendance on the Prince. At three o'clock the Prince proceeded to Laxenburg, to be present at a dinner given in his honour by the Crown Prince Rudolph and the Crown Princess. In the course of the afternoon cards were left on his Royal Highness by the King of Servia and the Archdukes Charles Louis and Ferdinand. On the 14th the Prince of Wales was the guest of the Emperor, who entertained him, together with King Milan, at the Hofburg, at Vienna. After the Court dinner the Emperor and his guests drove to the new Burg Theatre, to attend the first performance. On Sunday, the 15th, the Prince of Wales visited the International Exhibition of Amateur Photographers. His Royal Highness remained nearly an hour, and greatly commended the English section. The Prince was present for a few minutes at the soirée given at the Grand Hotel, Vienna, by the Intendant-General of the Court theatres. The Prince of Wales slept in a saloon-carriage at the Southern Railway Station at night, and left early on the 15th with the Crown Prince for Neuberg, in Styria, returning to Vienna in the evening. The Prince received a farewell visit from the Emperor of Austria on the 16th, and left Vienna for Paris by the Orient express at five o'clock. Crown Prince Rudolph attended at the station to wish his Royal Highness "Good-bye." There were also present Sir Augustus and Lady Paget, the members of the Embassy, and Mr. Gustav Nathan, Consul-General. His Royal Highness has left a sum of money with the Ambassador for distribution among the charities of Vienna and Buda-Pesth.

SCENE FROM THE NEW COMEDY OF "MAMMA" AT THE COURT THEATRE.



DETECTIVE POLICE BLOODHOUNDS.

Sir Charles Warren, the Chief Commissioner of the Metropolitan Police, on Tuesday, Oct. 9, witnessed in the park a private trial of two bloodhounds, the property of Mr. Edwin Brough, of Wyndyate, near Scarborough. That gentleman had been communicated with by the Metropolitan Police as to the utility of employing bloodhounds to track criminals, and came to London, bringing with him the fine animals named Champion Barnaby and Burgho. Burgho is nearly two years younger than his kennel companion; he is a black-and-tan, powerful, well-formed, and well-grown; his head measures 12 in. in length, and he is one of the fastest hounds Mr. Brough has ever bred. Burgho has been trained from a puppy to hunt "the clean shoe"—that is to say, follow the trail of a man whose shoes have not been prepared in any way by the application of blood or aniseed, so as to leave a strongly-marked trail. Barnaby has been similarly taught; but his training was not commenced until he was twelve months old. The hounds have been accustomed to working together, which is a considerable advantage in following a trail. Mr. Brough stated that his system of training the hounds is as follows:—When they are puppies, four or five months old, he gives them short runs of about 100 yards to begin with on grass and up wind. To encourage the young dogs, everything is made as easy for them as possible. The man whom they are going to run is always someone whom they know, and he caresses and fondles the puppies before he starts. The dogs are allowed to see him start, and the quarry gets out of sight as quickly as possible and conceals himself. The trainer, who must know the exact course the man has taken, puts the puppies on the line, and encourages them by voice and gesture to follow up the trail. It is quite likely at first that some of the litter, perhaps all of them, will not put their noses down or understand what is required of them; but the trainer takes them along until they reach the man, and he rewards them with some dainty. This is repeated, until very soon the hounds know what is required of them, and once started on the trail work for themselves. The difficulties are gradually increased, but not until they are twelve months old can the animals be taught to go across country. Eventually, they can be trained to cross roads and brooks, and when they are at fault, say by overrunning the line, they will make their own casts and recover the track. Mr. Brough tried Barnaby and Burgho in Regent's Park early on Monday morning, Oct. 8. The ground was thickly coated with hoar frost, but they did their work well, successfully tracking for nearly a mile a young man, who was given about fifteen minutes start. They were tried again in Hyde Park at night, when it was dark, and the dogs were hunted on a leash. They were again successful in performing their task. At seven o'clock next morning a trial took place before Sir Charles Warren, when half a dozen runs were made. Sir Charles Warren in two instances acting as the hunted man. In every instance the dogs hunted persons who were complete strangers to them, and occasionally the trail would be crossed. When this happened the hounds were temporarily checked, but either one or the other would pick up the trail again. In one of the longest courses the hounds were checked at half the distance: Burgho ran back, but Barnaby, making a fresh cast forward, recovered the trail and ran the quarry home. The hound did this entirely unaided by his master. In consequence of the coldness of the scent, the hounds worked very slowly, but they demonstrated the possibility of tracking complete strangers on whose trail they had been laid.



Mr. George Short, solicitor, assistant to the late Town Clerk, has been appointed Town Clerk of Exeter.

"MAMMA," AT THE NEW COURT.

Mrs. John Wood has secured a diverting, if not wholly pleasant, opening piece for the new Court Theatre in Mr. Sydney Grundy's smart English version of the amusing French comedy, "Les Surprises du Divorce." This new play might suitably have been entitled, to paraphrase a recent newspaper controversy, "Is Divorce a Failure?" so palpably does it demonstrate that complications and relationships of the most awkward nature may possibly arise from the process of untying and retying the matrimonial knot. How confusion becomes worse confounded in the family circles Mrs. John Wood invades as the ruthless "Mamma"-in-law, Mrs. Jannaway, is indicated in our Artist's Illustration of "Mamma." Mrs. Jannaway, formerly a star of the ballet, first drives her son-in-law, Jack Pontifex, into such a rage that he gladly welcomes divorce from his wife to rid himself of Mrs. J.'s reign of terror. Jack re-enters the married state only to find he is again related to the redoubtable Mrs. Jannaway, inasmuch as that lady's divorced daughter espouses his new father-in-law, Miles Henniker! Much merriment is provoked by a succession of complications and perplexing situations of the type sketched. Here the astonished dramatis personæ are Mrs. John Wood herself, Mr. Charles Groves, and Mr. John Hare in the parts of Mrs. Jannaway, Uncle Cochrane, and troubled Jack Pontifex. When it is added that Mr. John Hare and Mr. Arthur Cecil are humorous in the extreme as Jack Pontifex and the well-preserved beau Miles Henniker; that Mr. Eric Lewis makes a good character-study of the susceptible Tom Shadbolt; and that both Miss Filippi and Miss Annie Hughes are captivating as Jack's first and second wives, enough is said to indicate it may be some time yet before Mr. Pinero's new comedy is required for the new little playhouse adjoining Sloane-square Station. The new Court nightly resounds with laughter.

SIR CHARLES WARREN, CHIEF COMMISSIONER OF METROPOLITAN POLICE, TRYING BLOODHOUNDS IN HYDE PARK.

WIDOWED AND FATHERLESS.

FROM THE PICTURE BY T. B. KENNINGTON, EXHIBITED IN THE ROYAL ACADEMY.

NEW BOOKS.

Sims Reeves: His Life and Recollections, written by Himself (Simpkin, Marshall, and Co.).—This eminent vocal artist, who during forty-five years has enjoyed more celebrity than any other Englishman in his profession, should command our serious attention in expressing any decided opinions with regard to the prospects of musical entertainments, especially of the opera and of the oratorio, which just now seem in this country to be rather uncertain. His book, which is far from being a complete autobiography, though it relates many detached anecdotes of his long and successful public career, does not give so much light on those subjects as might be desired. But some of his incidental remarks confirm the views recently set forth by Mr. Sutherland Edwards and by Mr. Mapleson concerning the baneful effects, in operatic representation, of inordinate favour bestowed on the "prima donna." It came to such a pass that the combined execution of a musical drama, in which both the singing and the acting of the several leading parts ought to be of justly proportioned excellence and importance, bearing a vital relation to one another, and to be in harmony with the general design of the whole composition, is sacrificed to a single female vocalist, monopolising attention for the display of her individual talent. Madame Patti's voice might be worth paying for, in America, at the rate of nearly half a dollar for every note that it uttered; but if little care was taken, and if the manager could no longer afford, to bring upon the stage, with such a soprano, corresponding voices and figures of adequate distinction in the tenor, baritone, bass, and secondary female parts, there was not an effective representation. The opera is a concerted play, as well in the musical as in the dramatic sense; and the singing of every air and chorus, and every passage of recitative, should be considered as having an organic relation to all the other music, from first to last; so, in acting a play of Shakspeare's, every scene, every speech or piece of dialogue, every movement or gesture, should be studied as bearing on the whole action. It is confessed that the lyric theatre, at least in England, has of late years been prevented, by causes which need not again be specified, from complying with this essential condition of its noble artistic mission. We fear that the remedy cannot be supplied without a reform of the public taste which as yet makes no signs of its approach. Mr. Sims Reeves, as a great tenor, an accomplished musician, and in former times admired for his interpretation of dramatic music on the stage, is entitled to record his protest against the existing custom in operatic performance. It is to be hoped that he will deal more largely with this question in a second volume which he intends to publish next year. He must not take it amiss that we cannot, from a literary point of view, award much praise to the volume he has put before us. There are chapters in which he simply notes the particulars of his chief engagements. These extend from 1839, when, in his eighteenth year, he first appeared on the stage at Newcastle-on-Tyne, and through his early experiences at Drury-Lane, at the La Scala Theatre at Milan, again at Drury-Lane with M. Jullien's company, in December, 1847, and in oratorio at Exeter Hall, afterwards at Her Majesty's Theatre under Mr. Lumley, and in 1849 at Covent-Garden, also in Paris at the Théâtre des Italiens, and here again in Macfarren's English opera of "Robin Hood." We are told likewise of his services to the Sacred Harmonic Society, and to the Handel Festivals at the Crystal Palace, and of some later incidents. Those who can personally remember the entire course of his performances in London, and his reception in other large towns of the United Kingdom, may not unwillingly read once more, in these pages, extracts from the public journals of the day, appreciating his merits with eulogy that was scarcely beyond his desert. These notices, however, do not materially contribute to the information required for a thorough understanding of the history of musical art in England during the past forty or fifty years. They are unhappily intermixed, not with details of his private life, which the judicious reader certainly would not expect, but with sketchy little tales, apparently of a fictitious character, only fit for the *Penny Weekly Novelette*. Mr. Sims Reeves, like many other excellent persons, who are clever and have proved their masterly skill in their own profession, indulges the whim of writing stories for public reading, but with a crudeness of conception, an ineffective resort to sensational topics, in a tone of sentimentalism that is not impressive, and in the stale, worn-out verbiage of a second-hand romantic style, which no cultivated mind can endure. "A Dark Record," "An Astral Double," "The Bishop's Daughter," "A Railway Tragedy," "A Political Vivien," "Willard O'Neill," "Norah Leslie," "A Star of Bethlehem," "The Ring," and one or two more of such fantastic tales, were not worth printing anywhere; and their omission from the autobiography of Mr. Sims Reeves would be a great improvement.

The Life and Adventures of Edmund Kean, Tragedian. By J. Fitzgerald Molloy. Two vols. (Ward and Downey).—The criticism of theatrical performances, and the average standard of taste and judgment in a London audience, in the early part of the nineteenth century, would appear to have been quite as good as it is now. When such writers as Hazlitt, Coleridge, and Charles Lamb were devoting much of their study to appreciate the excellence of dramatic representations, while in the pit of Drury-Lane or Covent-Garden the front benches were often filled with men of education and cultivated minds, belonging to the professional and mercantile classes, the merits of an actor might perhaps be as justly estimated as at the present day. It was in those days, from the beginning of the year 1814, continuing about ten years, that Edmund Kean was hailed as the greatest of impersonators of Shakspeare's tragic characters; and we are disposed to believe in the truth of this verdict. Not that he was the greatest of all actors of Shakspeare; for that dignity was awarded to Garrick in a preceding age of highly-refined criticism, and Garrick's versatility had the widest range over the diverse moods and phases of human character. Edmund Kean was no humourist, but an absolute tragedian of extraordinary power and depth, whose "Richard III.," "Macbeth," "Othello," and "Sir Giles Overreach" have perhaps never been surpassed, though one can scarcely believe in him as a representative of the balancing, wavering resolve of "Hamlet." In expressing the persistency of intense passion and ruthless ambition, and the reaction of despair hurrying its victim to death, he seems to have been unequalled. This personal biography, though not a work of remarkable insight or literary finish, has great interest as the narrative of an adventurous life—a very sad story, at the end, for Kean was disgraced and prematurely destroyed by the consequences of his gross misconduct—and as affording lively views of the kind of society in which he lived, with the figures of other notable actors and actresses, managers, and patrons of the drama, from eighty to sixty years ago. The childhood of Edmund Kean, born in 1787, the illegitimate son of an obscure actress, Nance Carey, and brought up by the kindness of Miss Tidswell and Mrs. Clarke, who encouraged his precocious genius, is related in a sympathetic manner, with a certain foretaste of the moral and social perils that must beset his future life. With a frank, ardent, generous and aspiring temper, he probably inherited a tendency to intoxication, and liability to fits of violence from offended pride, and to wild impulses defying social restraints; yet he was affectionate, confiding, and generally benevolent, and had a high sense of honour. The early struggles, the sudden rise to fame and prosperity, the ruinous errors, and the melancholy fall of such a man, hurled at last by his own infatuation from the summit of fortune and renown, present an instructive theme of contemplation. In his sixteenth year, in 1806, he first joined a regular theatrical company, and wandered about England, Wales, and Ireland, precariously earning a wretched pittance, with a young wife and children to support. He was at length engaged by Elliston, at what is now called the Olympic Theatre, for three guineas a week; but having, through the friendly efforts of the Rev. Dr. Drury, head-master of Harrow School, obtained a much better engagement at Drury-Lane, with a salary of eight guineas, he broke his promise to Elliston. His performance as Shylock, on Jan. 26, 1814, was declared by Hazlitt, in the *Morning Chronicle*, to be "the first gleam of genius breaking over the gloom of the stage." Kean had, in its utmost force, the keenness—no pun intended—but the intense significance of purpose, the vehemence of feeling, that John Kemble lacked, with all his statuesque dignity. Public opinion was stormed by the spontaneous, heartfelt applause of his audience; the Drury-Lane treasury received £4921 for fourteen nights of his Shylock; and the managing committee of amateurs, with just liberality, instantly raised his salary to £20 a week. His Richard III., produced in February, was not less applauded; the *Examiner*, probably Leigh Hunt, described it as "a piece of noble poetry expressed by action." Among the Drury-Lane committee, with the Earl of Essex, Mr. Douglas Kinnaird, and Mr. Whitbread, M.P., was Lord Byron, who wrote of Kean in his diary, "By Jove! he is a soul, he is a man; life, nature, truth, without exaggeration or diminution." Byron, till he again went abroad, made efforts to draw this great actor into a personal intimacy; their minds were congenial, and, if Kean had had the breeding and manners of a gentleman, they might have become intimate friends. The strong dramatic capabilities of some characters in Byron's plays, to which the stage has never yet done justice, might have been exhibited by Kean. But Kean unhappily preferred low society, and was shy, dull, and rudely negligent in meeting persons of rank and fashion. He ran away from select dinner-parties arranged for his sake, and drank to excess with noisy revellers in disorderly clubs and taverns. There is a glimpse of such a meeting, "the Wolves," at the Coal Hole, in Fountain-court, Strand, for which he would abruptly leave the supper company of peers, gentlemen, and scholars, while he shunned the drawing-rooms of admiring ladies. In the account of his theatrical contemporaries at this period, Mr. Fitzgerald Molloy introduces several famous personages; Kemble and his far more gifted sister, Mrs. Siddons; the precocious juvenile actor, Master Betty, who had, however, been withdrawn from the stage a few years before; Elliston, the comedian, a manager of commanding impudence and of unscrupulous audacity, but a man of considerable talent; Miss O'Neill, whose appearance as Juliet was irresistibly charming; and Junius Brutus Booth, the imitator of Kean, ultimately a settler in America, whose descendant was the author of a great political tragedy in recent history. The characters, performances, and private fortunes of all these notable members of the profession are well described; and so are the early experiences of Macready, who first came before a London audience in September, 1816, at Covent-Garden Theatre, after several years of great success in the provinces. Some of us, who can remember Macready on the stage, as well as Phelps, and who recognise their great services to dramatic art, and their excellence in certain parts—those sustained by Phelps being especially characteristic—will yet scarcely compare them with Edmund Kean in originality of genius. The decline of Drury-Lane, owing to mismanagement by its committee, and to the feeble administration of Stephen Kemble, threw it into the hands of Elliston, whose rash experiments soon ended in ruin. Kean went to America, and there, in the winter of 1820, won immediate success, but gave bitter offence at Boston by refusing to act when he happened to have a scanty audience. On his return to London next year, he was conducted to Drury-Lane by a grand procession of carriages, and enjoyed, for a brief period, the highest honours and largest emoluments of an actor's career. His income rose to £10,000 a year, but he indulged in the most prodigal extravagance, and his arrogance was unbounded. In 1825, the exposure of a disgraceful moral trespass, by a suit which was brought against him for his intrigue with the wife of a London Alderman, enabled his rivals and enemies to organise a sort of conspiracy with the aim of driving him from the stage. Riotous demonstrations were got up at Drury-Lane and at some provincial theatres; and in his visit to America, the same year, the scenes at New York, Boston, Philadelphia, and Baltimore were still more violent. Kean, who had already been separated from his faithful wife, and had renounced his son Charles, then a lad of sixteen, forbidding him to become an actor, was now completely demoralised; symptoms of insanity were apparent in his demeanour. One of his freaks in America was that of adopting the name and costume of an Indian savage chief, and he made himself ridiculous in many other ways. In 1827 he was again in England, and was re-engaged at Drury-Lane, but with body and mind fatally injured by habits of intemperance, so that he lost the power of memory, and sometimes broke down in stage performance. He lingered on, however, until May, 1833, in slow decline, physical and mental, held the lesseeship of the Richmond theatre, and on rare occasions played in London, but was only the wreck of what he had once been. It is satisfactory to observe that he was finally reconciled to his wife and son; and that in his last appearance, two months before his death, in "Othello" at Covent-Garden, Edmund Kean acted with Charles Kean, who belongs to the time of our own recollection. "O God, I am dying—speak to them, Charles!" broke from Othello's lips in the third act of the tragedy, and were the last words uttered by this great tragedian on the public stage.

Knight's Pictorial Shakspere. New Library Edition. Six vols. (J. S. Virtue and Co.).—One of the most grateful recollections of our childhood is that of the monthly arrival of "Parts" of the "Pictorial Shakspere," by which, and by the "Pictorial History of England," the late Mr. Charles Knight provided English families with reading best calculated to kindle a lifelong interest in the annals, the speech, and the literature of their own country. We have felt much pleasure at the reproduction of this excellent work, the concluding volume of which is now published by the firm of Messrs. J. S. Virtue and Co., Limited, with all the old and familiar engravings, mostly designed by the late Mr. William Harvey, but many by W. H. Prior, G. F. Sargent, and H. Anelay, and some by T. Creswick, J. R. Planché, Fairholt, Poynter, and others. Apart from the question of more or less successful attempts by an illustrative artist to depict the ideal figures, groups, and actions of dramatic poetry—a practice which may often disturb and embarrass, rather than assist, the reader's imagination—there is much utility in the subordinate delineation of accessories, costume, buildings, furniture, utensils, and weapons, views of places, towns, streets, and the interior of houses, castles, churches, battle-fields, and authentic portraits. It was a great merit of Mr. Charles Knight's publications that he first made abundant use of these means of illustrating the text of Shakspeare, as well as the narrative of English history compiled under his direction; and it had a good effect in supplying a thousand visible links of association between the actual scenes and incidents of past national life and the conceptions of our chief national poet. The minute and systematic investigations of the text of Shakspeare, and of all Elizabethan literature, which have been proceeding for some thirty years, may very probably have lessened the value of Mr. Knight's labours as a scholarly critic of the authenticity and purport of dubious phrases, the arrangement of words and syllables, the punctuation, or the rhythm and the verse. Great additions have also been made to the collection of materials for explanatory comment, and for exhibiting the manner in which Shakspeare's contemporaries or predecessors, and foreign or ancient authors, may have treated the same topics of fiction or reality, and may sometimes have chanced on similar fancies or reflections. As a branch of learning, which may even be carried to the excess of pedantry, this sort of collateral study of Shakspeare has been enormously developed since Charles Knight's time; but his notes and commentaries are still worthy of attention. In any case, the "Pictorial Shakspere" is a very pleasant one to read. It consists of the "Comedies," in two volumes; the "Historical Plays," in two volumes; "Tragedies" and "Poems," in one volume; and in the last volume, "Doubtful Plays," those of "Titus Andronicus," "Pericles," and "The Two Noble Kinsmen," with others which have been ascribed to Shakspeare; also with Mr. Knight's "History of Opinion on the Writings of Shakspeare," and some notice of the study of our great poet in Germany and France.

"WIDOWED AND FATHERLESS."

It is a touching scene of domestic life, under the depressing influence of an untimely bereavement, that is represented in this picture, which some of our readers may have noticed at the Royal Academy Exhibition. The death of the husband and father has left this woman and her two girls, one of them stricken with disease, in the straits of poverty; and we observe the scanty furniture of their attic-room, their humble attire, and the careworn look of the widow's face, as she stops for a moment in plying her industrious needle, to glance with tender anxiety at her suffering child. The latter, indeed, may only have closed her eyes, as some do, under the stress of pain, or may have dropped into brief slumber, guarded by sisterly affection. The family history must be a sad one; yet there will remain to these mourners, in future months or years, let us hope, the chances of a return of ordinary home comforts; but in any case, the reflection that they have not failed in love and duty to each other, in the trials which they now endure.

REGISTRATION OF FOREIGNERS IN PARIS.

The Government of the French Republic, by a simple administrative decree, has recently ordered that all foreigners who take up their settled residence in France, or who intend staying a long time in that country, shall undergo compulsory registration. This rule has long prevailed in most other great Continental States of Europe. It will not be enforced on those who merely visit Paris for pleasure or business, or mere tourists, or sojourners at such places as Boulogne or Dieppe in the summer, or at Pau or Biarritz, or Nice or Cannes, or Aix-les-Bains, at any time of the year. The order seems intended as a precaution against the continuous operations of cosmopolitan agents of the Communist and Anarchist factions, and may perhaps only be made applicable through special instructions to the Prefects of Departments in which large cities and manufacturing towns are situated, liable to become the scenes of subversive conspiracies or commotions. Paris and Lyons are named in the decree of President Carnot, which was signed on Oct. 2, and is accompanied by a report from M. Floquet, Prime Minister and Minister of the Interior, recommending the adoption of this measure. Every foreigner not legally domiciled in France, who intends to reside there, must now, within fifteen days of his arrival, present himself, if in Paris, to the Prefecture of Police, and, in other parts of the country, at the Mairie of the parish, to make a declaration of his name and those of his father and mother, his nationality, the place and date of his birth, the place where he last resided, his profession or trade or means of subsistence, and the names and ages of his wife and children accompanying him in France. We can well remember that, some thirty years ago, an Englishman staying for one night at an hotel in an Italian city was obliged to furnish the landlord of the hotel with all this information to be reported to the police; this was in Turin, the capital of the free kingdom of Sardinia, in 1857. In Paris, however, where passports have of late years no: been required, the new regulation has caused a little uneasiness among the numerous Belgian, German, and Italian immigrants. We refer to our Artist's Sketches of the scenes and individual figures daily describing themselves at the Prefecture of Police. They exhibit an odd collection of specimens of foreign nationalities, and a variety of classes and characters, over which it may be needful to exercise due supervision. No fee is imposed on applicants for this registration.

What a medley the Parisian population is may be judged from the classification of one day's registrations:—Germans, 321; Americans, 55; English, 111; Argentines, 2; Austrians, 101; Belgians, 510; Brazilians, 5; Bulgarians, 5; Chilians, 2; Colombians, 6; Danes, 7; Egyptian, 1; Spaniards, 24; Greeks, 5; Dutchmen, 66; Italians, 320; Japanese, 3; Luxemburgers, 139; Moor, 1; Norwegians, 4; Peruvians, 2; Roumanians, 18; Russians, 108; Servian, 1; Swedes, 14; Swiss, 438; Turks, 14; Uruguayan, 1; and native of Dahomey, 1.

A fountain, presented by Mr. John Aird, M.P., to the Queen's Park, Kilburn, was opened on Oct. 11 in the presence of members of the Corporation of the City of London, by whom the park is maintained.

The church of St. Stephen, Hounslow, has received an addition to its stained glass, of two windows, from the studio of Mr. Taylor, representing St. Thomas and St. James, studies from Leonardo Da Vinci's picture of "The Last Supper."

POSTAGE FOR FOREIGN PARTS THIS WEEK.

OCTOBER 20, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates: To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

1. A Sicilian. 2. A Spaniard. 3. A Negro. 4. A German Professor. 5. Italian Models. 6. Calling herself a "Governess." 7. Foreigners at the Palais de Justice, asking directions.

REGISTRATION OF FOREIGNERS IN PARIS AT THE PREFECTURE OF POLICE.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXIX.

ON WHAT CONDITIONS?

On the morning I awoke with a lighter heart than I had known for a long time. Benjamin was going to release our prisoners! I should go to meet Robin at the gate of his prison. All would be well, except that my father would never recover. We should return to the village and everything would go on as before. Oh! poor fond wretch! how was I deluded! and, oh! miserable day that ended with such shame and sadness, yet began with so much hope!

Madam was already dressed. She was sitting at the window looking into the churchyard. She had been crying. Alas! how many women in Somersetshire were then weeping all day long!

"Madam," I said, "we now have hope. We must not weep and lament any more. Oh! to have at last a little hope—when we have lived so long in despair—it makes one breathe again. Benjamin will save our prisoners for us. Oh! after all, it is Benjamin who will help us. We did not use to love Benjamin, because he was rude and masterful and wanted everything for himself and would never give up anything. Yet, you see, he had, after all, a good heart." Madam groaned. "And he cannot forget, though he followeth not his grandfather's opinions, that he is his Honour's grand-son—the son of his only daughter—and your nephew, and first cousin to Robin, and second cousin once removed to Humphrey and Barnaby; playfellows of old. Why, these are ties which bind him as if with ropes! He needs must bestir himself to save their lives. And since he says that he can save them, of course he must have bestirred himself to some purpose. Weep no more, dear Madam, your son will be restored to us! We shall be happy again—thanks to Benjamin!"

"Child," she replied, "my heart is broken! It is broken, I say! Oh, to be lying dead and at peace in yonder churchyard! Never before did I think that it must be a happy thing to be dead and at rest, and to feel nothing and to know nothing!"

"But, Madam, the dead are not in their graves. There lie only the bodies. Their souls are above."

"Then they still think and remember. Oh! can a time ever come when things can be forgotten? Will the dead ever cease to reproach themselves?"

She wrung her hands in an ecstacy of grief, though I knew not what should move her so. Indeed, she was commonly a woman of sober and contained disposition, entirely governed both in her temper and her words. What was in her mind that she should accuse herself? Then, while I was dressing, she went on talking, being still full of this strong passion.

"I shall have my boy back again," she said. "Yes; he will come back to me. And what will he say to me when I tell him all? Yet I *must* have him back. Oh! to think of the hangman tying the rope about his neck"—she shuddered and trembled—"and afterwards the cruel knife"—she clasped her hands and could not say the words—"I see the comely limbs of my boy. Oh! the thought tears my heart—it tears me through and through. I cannot think of anything else day or night. And yet in the prison he is so patient and so cheerful. I marvel that men can be so patient with this dreadful death before them." She broke out again into another passion of sobbing and crying. Then she became calmer, and tried to speak of things less dreadful.

"When first I visited my boy in prison," she said, "Humphrey came humbly to ask my pardon. Poor lad! I have had hard thoughts of him. It is certain that he was in the plot from the beginning. Yet had he not gone so far, should we have sat down when the rising began? But he doth still accuse himself of rashness and calls himself the cause of all our misfortunes. He fell upon his knees, in the sight of all, to ask forgiveness, saying that it was he and none other who had brought ruin upon us all. Then Robin begged me to raise him up and comfort him, which I did, putting aside my hard thoughts and telling him that, being such stubborn Protestants, our lads could not choose but join the Duke whether he advised it or whether he did not. Nay, I told him that Robin would have dragged him willy nilly. And so I kissed him, and Robin took him by the hand and solemnly assured him that his grandfather had no such thought in his mind."

"Nay," I said, "my father and Barnaby would certainly have joined the Duke, Humphrey or not. Never were any men more eager for rebellion,"

"I have been to London," she went on. "'Tis a long journey and I effected nothing; for the mind of the King, I was assured, is harder than the nether millstone. My brother-in-law, Philip Boscorel, went with me, and I left him there. But I have no hope that he will be able to help us, his old friends being much scattered and many of them dead, and some hostile to the Court and in ill-favour. So I returned, seeing that, if I could not save my son I could be with him until he died. The day before yesterday he was tried—if you call that a trial when hundreds together plead guilty and are all alike sentenced to death."

"Have you seen him since the trial?"

"I went to the prison as soon as they were brought back from court. Some of the people—for they were all condemned to death—every one—were crying and lamenting. And there were many women among them—their wives or their mothers—and these were shrieking and wringing their hands; so that it was a terrible spectacle. But some of the men called for drink, and began to carouse, so that they might drown the thought of impending death. My dear, I never thought to look upon a scene so full of horror. As for our own boys, Robin was patient and even cheerful; and Humphrey, leading us to the most quiet spot in that dreadful place, exhorted us to lose no time in weeping or vain laments, but to cheer and console our hearts with the thought that death—even violent death—is but a brief pang and life is but a short passage, and that heaven awaits us beyond. Humphrey should have been a godly minister, such is the natural piety and goodness of his heart. So he spoke of the happy meeting in that place of blessedness where earthly love would be purged of its grossness, and our souls shall be so glorified that we shall each admire the beauty and the excellence of the other. Then Robin talked of thee, my dear, and sent thee a loving message, bidding thee grieve for him, but not without hope—and that a sure and certain hope—of meeting again. There are other things he bade me tell thee; but now I cannot!—oh, I must not!"

"Nay, Madam; but if they are words that he wished me to hear"——

"Why, they were of his constant love and—and—no, I cannot tell them!"

"Well," I said, "fret not thy poor heart with thinking any more of the prison; for Benjamin will surely save him, and then we shall love Benjamin all our lives."

"He will, perhaps, save him. And yet"—she turned her head—"oh, how can I tell *her*!—we shall shed many more tears. How can I tell *her*? How can I tell *her*?"

So she broke off again, but presently recovered and went on talking. In time of great trouble the mind wanders backwards and forwards, and though one talks still, it is disjointedly. So she went back to the prison.

"The boys have been well, though the prison is full and the air is foul. Yet there hath been as yet no fever, for which they are thankful. They had no money, the soldiers who took them prisoners having robbed them of their money, and, indeed, stripped them as well to their shirts, telling them that shirts were good enough to be hanged in. Yet the people of Exeter have treated the prisoners with great humanity, bringing them daily food and drink, so that there has been nothing lacking. The time, however, doth hang upon hands in a place where there is nothing to do all day but to think of the past and to dread the future. One poor prisoner, I was told, had gone distracted with the terror of this thought. Child, every day that I visited my son, while he talked with me, always cheerful and smiling, my mind turned continually to the scaffold and the gibbet." Then she returned to the old subject from which she could in no way escape. "I saw the hangman. I saw my son hanging to the shameful tree—oh! my son! my son!—till I could bear it no longer and would hurry away from the prison and walk about the town over the fields—yea, all night long—to escape the dreadful thought. Oh! to be blessed with such a son and to have him torn from my arms for such a death! If he had been killed upon the field of battle 'twould have been easier to bear. But now he dies daily—he dies a thousand deaths in my mind. My child!"—she turned again to the churchyard—"the rooks are cawing in their nests; the sparrows and the robins hop among the graves; the dead hear nothing; all their troubles are over, all their sins are forgiven."

I comforted her as well as I could. Indeed, I understood not at all what she meant, thinking that perhaps all her trouble had caused her to be in that frame of mind when a woman doth not know whether to laugh or to cry. And then, taking my basket, I sallied forth to provide the day's provisions for my prisoners.

"Barnaby," I said, when he came to the wicket, "I have good news for thee."

"What good news? That I am to be flogged once a year in every market-town in Somersetshire, as will happen to young Tutchin?"

"No, no—not that kind of news. But freedom, Brother; hope for freedom."

He laughed. "Who is to give us freedom?"

"Benjamin hath found a way for the enlargement of all."

"Ben Boscorel? What? will he stir finger for the sake of anybody? Then, Sis, if I remember Ben aright there will be something for himself. But if it is upon Ben that we are to rely we are truly well sped. Oh Ben, quotha!"

"My Brother, he told me so himself."

"Ware hawks, Sister. If Ben is at one end of the rope and the hangman at the other, I think I know who will be stronger. Well, Child, believe Ben if thou wilt. Thy father looks strange this morning: he opened his eyes and seemed to know me. I wonder if there is a change. 'Tis wonderful how he lasts. There are six men sickened since yesterday of the fever: three of them brought in last week are already dead. As for the singing that we used to hear, it is all over, and if the men get drunk they are dumb drunk. Sir Christopher looks but poorly this morning. I hope he will not take the fever. He staggered when he arose, which is a bad sign."

"Tell mother, Barnaby, what Benjamin hath undertaken to do."

"Nay, that shall I not, because, look you, I believe it not. There is some trick or lie at the bottom, unless Ben hath repented and changed his disposition, which used to be two parts wolf, one part bear, and the rest fox. If there were anything left it was serpent. Well, Sister, I am no grumbler, but I expect this job to be over in a fortnight or so, when they say the Wells Assizes will be held. Then we shall all be swinging, and I only hope that we may carry with us into the court such a breath of jail fever as shall lay the Judge himself upon his back and end his days. In the next world he will meet the men whom he has sentenced, and it will fare worse for him in their hands than with fifty thousand devils."

So he took a drink of the beer, and departed within the prison. And for many months I saw him no more.

On my way home I met Benjamin.

"Hath Madam told you yet of my conditions?" he asked eagerly.

"Not yet; she will doubtless tell me presently. Oh! what matter for the conditions? It can only be something good for us, contrived by your kind heart, Ben. I have told Barnaby, who will not believe in our good fortune."

"It is, indeed, something very good for you, Alice, as you will find. Come with me and walk in the meadows beyond the reach of this doleful place, where the air reeks with jail fever and all day long they are reading the Funeral Service."

So he led me out upon the sloping sides of a hill, where we walked a while upon the grass very pleasantly, my mind being now at rest.

"You have heard of nothing," he said, "of late, but of the Rebellion and its consequences. Let us talk about London."

So he discoursed concerning his own profession and his prospects, which, he said, were better than those of any other young lawyer, in his own opinion. "For my practice," he said: "I already have one which gives me an income far beyond my wants, which are simple. Give me plain fare, and for the evening a bottle or two of good wine, with tobacco, and friends who love a cheerful glass. I ask no more. My course lies clear before me: I shall become a King's Counsel; I shall be made a Judge: presently, I shall become Lord Chancellor. What did I tell thee, Child, long ago? Well, that time has now arrived."

Still I was so foolish, being so happy, that I could not understand what he meant.

"I am sure, Benjamin," I said, "that we at home shall ever rejoice and be proud of your success. Nobody will be more happy to hear of it than Robin and I."

Here he turned very red and muttered something.

"You find your happiness in courts and clubs and London," I went on; "as for Robin and myself, we shall find ours in the peaceful place which we have always decided to have."

"What the Devil!" he cried; "she will not tell you the conditions? She came with me for no other purpose. I have borne with her company all the way from Exeter for this only. Go back to her, and ask what it is! Go back, I say, and make her tell! What? am I to take all this trouble for nothing?"

His face became purple with sudden rage; his eyes grew swiftly fierce, and he roared and bawled at me. Why, what had I said?

"Benjamin," I cried, "what is the matter? How have I angered you?"

"Go back!" he roared again. "Tell her that if I presently come and find thee still in ignorance 't will be the worse for all! Tell her that *I* say it. 'T will else be worse for all!"

CHAPTER XXX.

A SLIGHT THING AT THE BEST.

So I left Benjamin, much frightened, and marvelling, both at his violent passion and at the message which he sent to Madam.

She was waiting for me at the lodging.

"Madam," I said, "I have seen Benjamin. He is very angry. He bade me go home and ask you concerning his conditions. We must not anger our best friend, dear Madam."

She rose from her chair and began to walk about, wringing her hands as if torn by some violent emotion.

"Oh! my child," she cried; "Alice, come to my arms—if it is for the last time—my daughter. More than ever mine, though I must never call thee daughter."

She held me in her arms, kissing me tenderly. "My dear, we agreed that no sacrifice could be too great for the safety of our boy. Yes, we agreed to that. Let us kiss each other before we do a thing after which we can never kiss each other again. No, never again."

"Why not again, Madam?"

"Oh," she pushed me from her, "it is now eight of the clock; he will be here at ten! I promised I would tell thee before he came! And all is in readiness."

"For what, Madam?"

Why, even then I guessed not her meaning, though I might have done so; but I never thought that so great a wickedness was possible!

"No sacrifice should be too great for us!" she cried, clasping her head with her hands and looking wildly about. "None too great! Not even the sacrifice of my own son's love—no; not that! Why, let us think of the sacrifices men make for their country, for their religion. Abraham was ready to offer his son, Isaac; Jephthah sacrificed his daughter; King Mesha slew his eldest son for a burnt offering. Thousands of men die every year in battle for their country. What have we to offer? If we give ourselves it is but a slight thing that we offer at the best."

"Surely, Madam," I cried, "you know that we would willingly die for the sake of Robin!"

"Yes, Child; to die—to die were nothing. It is to live—we must live—for Robin."

"I understand not, Madam."

"Listen then—for the time presses, and if he arrives and find that I have not broken the thing to thee, he will perhaps ride back to Exeter in a rage. When I left my son after the trial, being very wretched and without hope, I found Benjamin waiting for me at the prison gates. He walked with me to my lodging, and on the way he talked of what was in my mind. First, he said, that for the better sort there was little hope, seeing that the King was revengeful and the Judge most wrathful, and in a mood which allowed of no mercy. Therefore, it would be best to dismiss all hopes of pardon or of safety either to these two or to the prisoners of Ilminster. Now, when he had said this a great many times, we being now arrived at my lodging, he told me that there was, in my case, a way out of the trouble—and one way only: that if we consented to follow that way, which, he said, would do no manner of harm to either of us or to our prisoners, he would undertake and faithfully engage to secure the safety of all our prisoners. I prayed him to point out this way, and after much entreaty, he consented."

"What is the way?" I asked, having not the least suspicion. And yet the look in her eyes should have told me what was coming.

"Is it true, Child, that long ago you were betrothed to Benjamin?"

"No, Madam. That is most untrue."

"He says that when you were quite a little child he informed you of his intention to marry you and none but you."

"Why, that is true, indeed." And now I began to understand the way that was proposed; and my heart sank within me. "That is true. But to tell a child such a thing is not a betrothal."

"He says that only three or four years ago he renewed that assurance."

"So he did; but I gave him no manner of encouragement."

"He says that he promised to return and marry you when he had arrived at some practice, and that he engaged to become Lord Chancellor and make you a Peeress of the Realm."

"All that he said, and more. Yet did I never give him the least encouragement, but quite the contrary, for always have I feared and disliked Benjamin. Never at any time was it possible for me to think of him in that way. That he knows, and cannot pretend otherwise. Madam, doth Benjamin wish evil to Robin because I am betrothed to him?"

"He also says, in his rude way—Benjamin was always a rude and coarse boy—that he had warned you, long ago, that if anyone else came in his way he would break the head of that man."

"Yes; I remember, now, that he threatened some violence."

"My dear"—Madam took my hand—"his time of revenge is come. He says that he has the life of the man whom you love in his own hands; and he will, he swears, break his head for him, and so keep the promise made to you by tying the rope round his neck. My dear, Benjamin has always been stubborn and obstinate from his birth. Stubborn and obstinate was he as a boy; stubborn and obstinate is he now. He cares for nobody in the world except himself; he has no heart; he has no tenderness; he has no scruples; if he wants a thing, he will trample on all the world to get it, and break all the laws of God. I know what manner of life he leads. He is the friend and companion of the dreadful Judge who goeth about like a raging lion. Every night do they drink together until they are speechless and cannot stand. Their delight it is to drink, and smoke tobacco, with unseemly jests and ribald songs which would disgrace the playhouse or the country fair. Oh! 't is the life of a hog that he delights in! Yet, for all that, he is, like his noble friend, full of ambition. Nothing will do but he must rise in the world. Therefore, he works hard at his profession—and"——

"Madam—the condition!—what is the condition? For

*All Rights Reserved.

DRAWN BY A. FORESTIER.

As I ran, Mr. Boscorel stood before his son and barred the way, raising his right hand.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

Heaven's sake tell me quickly! Is it?—is it?—oh! no—no—no! Anything but that!"

"My child—my daughter"—she laid her hand upon my head. "It is that condition—that, and none other. Oh! my dear, it is laid upon thee to save us!—it is to be thy work alone—and by such a sacrifice as, I think, no woman ever yet had to make! Nay, perhaps it is better not to make it, after all. Let all die together, and let us live out our allotted lives in sorrow. I thought of it all night, and it seemed better so—better even that thou wert lying in thy grave. His condition! Oh! he must be a devil thus to barter for the lives of his grandfather and his cousins—no human being, surely, would do such a thing: the condition, my dear, is that thou must marry him—now; this very morning—and this once done, he will at once take such steps—I know not what they may be, but I take it that his friend the Judge will grant him the favour—such steps, I say, as will release unto us all our prisoners."

At first I made no answer.

"If not," she added after a while, "they shall all be surely hanged."

I remained silent. It is not easy at such a moment to collect one's thoughts and understand what things mean. I asked her presently if there was no other way.

"None," she said; "there was no other way."

"What shall I do? What shall I do?" I asked. "God, it seems, hath granted my daily prayer; but how? Oh! what shall I do?"

"Think of what thou hast in thy power."

"But to marry him—to marry Benjamin—oh! to marry him! How should I live? How should I look the world in the face?"

"My dear, there are many other unhappy wives. There are other husbands brutal and selfish: there are other men as wicked as my nephew. Thou wilt swear in church to love, honour, and obey him. Thy love is already hate; thy honour is contempt; thy obedience will be the obedience of a slave. Yet death cometh at length, even to a slave and to the harsh task-master."

"Oh! Madam, miserable indeed is the lot of those whose only friend is death."

She was silent, leaving me to think of this terrible condition.

"What would Robin say? What would Humphrey say? Nay, what would his Honour himself say?"

"Why, Child," she replied, with a kind of laugh, "it needs not a wizard to tell what they would say. For one and all, they would rather go to the gallows than buy their lives at such a price. Thy brother Barnaby would mount the ladder with a cheerful heart rather than sell his sister to buy his life. That we know already. Nay, we know more. For Robin will never forgive his mother who suffered thee to do such a thing. So shall I lose what I value more than life—the love of my only son. Yet would I buy his life at such a price. My dear, if you lose your lover I lose my son. Yet we will save him, whether he will or no." She took my hands and pressed them in her own. "My dear, it will be worse for me than for you. You will have a husband, it is true, whom you will loathe; yet you will not see him, perhaps, for half the day at least; and, perhaps, he will leave thee to thyself for the other half. But for me, I shall have to endure the loss of my son's affections all my life, because I am very sure and certain that he can never forgive me. Think, my dear! Shall they all die?—all!—think of father and brother, and of your mother!—or will you willingly endure a life of misery with this man for husband in order that they may live?"

"Oh, Madam," I said, "as for the misery—any other kind of misery I would willingly endure; but it is *marriage*—marriage! Yet who am I that I should choose my sacrifice? Oh, if good works were of any avail, then would the way to heaven be opened wide for me by such an act and such a life! Oh, what will Robin say of me? What will he think of me? Will he curse me and loathe me for being able to do this thing? Should I do it? Is it right? *Doth God command it?* Yet to save their dear lives—only to set them free—to send that good old man back to his home—to suffer my father to die in peace!—I must do it—I must do it! Yet Robin could never forgive me. Oh! he told me that betrothal was a sacrament. I have sworn to be his. Yet, to save his life, I cannot hesitate. If it is wrong, I pray that Robin will forgive me. Tell him—oh, tell him that it is I who am to die instead of him. Perhaps the Lord will suffer me to die quickly. Tell him that I loved him, and only him; that I would rather have died; that for his life alone I would not have done this thing, because he would not have suffered it. But it is for all—it is for all! Oh; he must forgive me! Some day you will send me a message of forgiveness from him. But I must go away and live in London, far from all of you; never to see him or any one of you again—not even my own mother. It is too shameful a thing to do. And you will tell his Honour, who hath always loved me and would willingly have called me his grand-daughter. It was not that I loved not Robin—God knoweth that; but for all—for him and Robin and all—to save his grey hairs from the gallows, and to send him back to his home. Oh! tell him that"——

"My dear—my dear," she replied, but could say no more.

Then for a while we sat in silence, with beating hearts.

"I am to purchase the lives of five honest men," I said presently, "by my own dishonour. I know very well that it is by my dishonour and my sin that their lives are to be bought. It doth not save me from dishonour that I am first to stand in the church and be married according to the Prayer-Book. Nay, does it not make the sin greater and the dishonour more certain that I shall first swear what I cannot ever perform—to love and honour that man?"

"Yes, girl—yes!" said Madam. "But the sin is mine more than yours. Oh! let me bear the sin upon myself."

"You cannot, it is my sin and my dishonour; nay, it is a most dreadful wicked thing that I am to do. It is all the sins in one: I do not honour my parents in thus dishonouring myself; I kill myself—the woman that my Robin loved; I steal the outward form which belonged to Robin and give it to another; I live in a kind of adultery. It is truly a terrible sin in the sight of Heaven. Yet I will do it!—I must do it! I love him so that I cannot let him die; rather let me be overwhelmed with shame and reproach if only he can live!"

"Said I not, my dear, that we two could never kiss each other again? When two men have conspired together to commit a crime they convert no more together, it is said, but go apart and loathe each other. So it is now with us."

So I promised to do this thing. The temptation was beyond my strength. Yet had I possessed more faith I should have refused. And then great, indeed, would have been my reward. Alas! how was I punished for my want of faith! Well, it was to save my lover. Love makes us strong for evil as well as strong for good.

And all the time, to think that we never inquired or proved his promises! To think that we never thought of doubting or of asking how he, a young barrister, should be able to save the lives of four active rebels, and one who had been zealous in the cause! That two women should have been so simple is now astonishing.

When the clock struck ten I saw Benjamin walking across the churchyard. It was part of the brutal nature of the man that he should walk upon the graves, even those newly-made and not covered up with turf. He swung his great burly form, and looked up at the window with a grin which made Madam tremble and shrink back. But for me, I was not moved by the sight of him, for now I was strong in resolution. Suppose one who hath made up her mind to go to the stake for her religion, as would doubtless have happened unto many had King James been allowed to continue in his course, do you think that such a woman would begin to tremble at the sight of her executioner? Not so. She would arise and go forth to meet him, with pale face, perhaps (because the agony is sharp) but with a steady eye. Benjamin opened the door, and stood looking from one to the other.

"Well," he said to Madam, roughly, "you have by this time told her the condition?"

"I have told her—alas! I have told her, and already I repent me that I have told her."

"Doth she consent?"

"She does. It shall be as you desire."

"Ha!" Benjamin drew a long breath. "Said I not, Sweetheart"—he turned to me—"that I would break the head of any who came between us? What? Have I not broken the head of my cousin when I take away his girl? Very well, then. And that to good purpose. Very well, then. It remains to carry out the condition."

"The condition," I said, "I understand to be this. *If* I become your wife, Benjamin, you knowing full well that I love another man and am already promised to him"——

"Ta—ta—ta!" he said. "That you are promised to another man matters not one straw. That you love another man I care nothing. What! I promise, Sweetheart, that I will soon make thee forget that other man. And as for loving any other man after marrying me, that, d'ye see, my pretty, will be impossible, Oh! thou shalt be the fondest wife in the Three Kingdoms."

"Nay; if such a thing cannot move your heart, I say no more. If I marry you, then all our prisoners will be enlarged?"

"I swear"—he used a great round oath, very horrid from the lips of a Christian man—"I swear that, if you marry me, the three—Robin, Humphrey, and Barnaby—shall all save their lives. And as for Sir Christopher and my father, they also shall be enlarged. Can I say aught in addition?"

I suspected no deceit. I understood, and so did Madam, that this promise meant the full and free forgiveness of all. Yet there was something of mockery in his eyes, which should have made us suspicious. But I, for one, was young and ignorant, and Madam was country-bred and truthful.

"Benjamin," I cried, falling on my knees before him, "think what it is you ask! Think what a wicked thing you would have me do!—to break my vows, who am promised to your cousin! And would you leave your grandfather to perish all for a whim about a silly girl? Benjamin, you are playing with us. You cannot—you could not sell the lives—the very lives of your mother, father, and your cousins for such a price as this! The play has gone far enough, Benjamin. Tell us that it is over, and that you never meant to be taken seriously, and we will forgive you the anguish you have caused us."

"Get up," he said, "get up, I say, and stop this folly." He then began to curse and to swear. "Playing, is it? You shall quickly discover that it is no play, but serious enough to please you all, Puritans though you be. Playing! Get up, I say, and have done."

"Then," I said, "there is not in the whole world a more inhuman monster than yourself."

"Oh! my dear—my dear, do not anger him!" cried Madam.

"All is fair in love, my pretty," said Benjamin with a grin. "Before marriage call me what you please—inhuman monster—anything that you please. After marriage, my wife will have to sing a different tune."

"Oh! Benjamin, treat her kindly," Madam cried.

"I mean not otherwise. Kindness is my nature. I am too kind for my own interests. Obedience I expect, and good temper and a civil tongue, with such respect as is due to one who intends to be Lord Chancellor. Come, Child, no more hard words. Thou shalt be the happiest woman, I say, in the world. What? Monmouth's Rebellion was only contrived to make thy happiness. Instead of a dull country-house thou shalt have a house in London; instead of the meadows, thou shalt have the parks; instead of skylarks, the singers at the playhouse; in due course thou shalt be my lady"——

"Oh! stop—stop; I must marry you since you make me, but the partner in your ambitions will I never be."

"My dear," Madam whispered, "speak him fair. Be humble to him. Remember he holds in his hands the lives of all."

"Yes," Benjamin overheard her. "The lives of all. The man who dares to take my girl from me—mine—deserves to die. Yet so clement, so forgiving, so generous am I, that I am ready to pardon him. He shall actually save his life. If, therefore, it is true that (before marriage) you love that man and are promised to him, come to church with me, out of your great love to him, in order to save his life; but if you love him not, then you can love me, and, therefore, can come to please yourself, willy-nilly. What! am I to be thwarted in such a trifle? Willy-nilly, I say, I will marry thee. Come—we waste the time."

He seized my wrist as if he would have dragged me towards the door.

"Benjamin," cried Madam, "be merciful! she is but a girl, and she loves my poor boy—be merciful! Oh! it is not yet too late." She snatched me from his grasp and stood between us, her arms outstretched. "It is not too late; they may die and we will go in sorrow, but not in shame. They may die. Go! murderer of thy kith and kin. Go, send thy grandfather to die upon the scaffold; but, at least leave us in peace."

"No, Madam," I said. "With your permission, if there be no other way, I will save their lives."

"Well, then," Benjamin said sulkily, "there must be an end of this talk and no further delay; else, by the Lord! I know not what may happen. Will Tom Boilman delay to prepare his cauldron of hot pitch? If we wait much longer, Robin's arms and legs will be seething in that broth! Doth the Judge delay with his warrant? Already he signs it—already they are putting up the gibbet on which he will hang! Come! I say."

* * * * *

Benjamin was sure of his prey, I suppose, because we found the clergyman waiting for us in the church, ready with surplice and book. The clerk was standing beside him, also with his book, open at the Service for Marriage. While they read the service Madam threw herself prostrate on the communion steps, her head in her hands, as one who suffers the last extremities of remorse and despair for sin too grievous to be ever forgiven. Let us hope that sometimes we may judge ourselves more harshly than Heaven itself doth judge us.

The clerk gave me away, and was the only witness of the marriage beside that poor distracted mother.

'Twas a strange wedding. There had been no banns put up: the bride was pale and trembling; the bridegroom was gloomy; the only other person present wept upon her knees while the parson read through his ordered prayer and psalm and exhortation; there was no sign of rejoicing.

"So," said Benjamin, when all was over. "Now, thou art my wife. They shall not be hanged therefor. Come, wife, we will this day ride to Exeter, where thou shalt thyself bear the joyful news of thy marriage and their safety to my cousins. They will own that I am a loving and a careful cousin."

He led me, thus talking, out of church. Now, as we left the churchyard, there passed through the gates—oh! baleful omen!—four men carrying between them a bier. Upon it was the body of another poor prisoner, dead of jail fever. I think that even the hard heart of Benjamin—now my husband!—oh! merciful Heavens! he was my husband!—quailed, and was touched with fear at meeting this most sure and certain sign of coming woe, for he muttered something in his teeth and cursed the bearers aloud for not choosing another time.

My husband, then—I must needs call him my husband—told me, brutally, that I must ride with him to Exeter, where I should myself bear the joyful news of their safety to his cousins. I did not take that journey, nor did I bear the news, nor did I ever after that moment set eyes upon him again, nor did I ever speak to him again. His wife I remained, I suppose, because I was joined to him in church. But I never saw him after that morning. And the reason why you shall now hear.

At the door of our lodging, which was, you know, hard by the church, stood Mr. Boscorel himself.

"What means this?" he asked, with looks troubled and confused. "What doth it mean, Benjamin? What hath happened, in the name of God?"

"Sir," said Benjamin. "You know my character. You will acknowledge that I am not one of those who are easily turned from their purpose. Truly, the occasion is not favourable for a wedding, but yet I present to you my newly-married wife."

"*Thy* wife! Child, *he* thy husband? Why, thou art betrothed to Robin! Hath the world gone crazy? Do I hear aright? Is this—this—this—a time to be marrying? Hast thou not heard? Hast thou not heard, I say?"

"Brother-in-law," said Madam. "It is to save the lives of all that this is done."

"'To save the lives of all?'" Mr. Boscorel repeated. "Why—why—hath not Benjamin then, told what hath happened, and what hath been done?"

"No, Sir, I have not," said his son. "I had other fish to fry."

"Not told them? Is it possible?"

"Benjamin hath promised to save all their lives if this child would marry him. To save their lives hath Alice consented, and I with her. He will save them through his great friendship with Judge Jeffreys."

"Benjamin to save their lives? Sirrah"—he turned to his son with great wrath in his face—"what villainy is this? Thou hast promised to save their lives? What *villainy*, I say, is this? Sister-in-law, did he not tell you what hath been done?"

"He has told us nothing. Oh! is there new misery?"

"Child"—Mr. Boscorel spoke with the tears running down his cheeks—"thou art betrayed—alas! most cruelly and foully betrayed. My son—would to God that I had died before I should say so—is a villain! For, first, the lives of these young men are already saved, and he hath known it for a week and more. Learn, then, that, with the help of certain friends, I have used such interest at Court that for these three I have received the promise of safety. Yet they will not be pardoned. They are given, among other prisoners, to the courtiers and the ladies-in-waiting. One Mr. Jerome Nipho hath received and entered on his list the names of Robin and Humphrey Charles and Barnaby Eykin; they will be sold by him, and transported to Jamaica or elsewhere for a term of years."

"They were already saved!" cried Madam. "He knew, then, when they were tried and sentenced, that their lives were already spared. Oh! child! poor child! Oh! Alice! Oh! my daughter!—what misery have we brought upon thee!"

Benjamin said nothing. On his face lay a scowl of obstinacy. As for me, I was clinging to Madam's arm. This man was my husband—and Robin was already saved—and by lies and villainy he had cheated us!

"They were already saved," Mr. Boscorel continued. "Benjamin knew it—I sent him a letter, that he *might* tell his cousins. My son—alas!—I say again, my only son—my only son—my son is a villain!"

"No one shall take my girl," said Benjamin, sullenly. "What? All is fair in love."

"He has not told you, either, what hath happened in the prison? Thou hadst speech, I hear, with Barnaby, early this morning, Child. The other prisoners"—he lowered his voice and folded his hands, as in prayer—"they have since been enlarged."

"How?" Madam asked. "Is Sir Christopher free?"

"He hath received his freedom—from One who never fails to set poor prisoners free. My father-in-law fell dead in the courtyard at nine o'clock this morning—weep not for him. But Child, there is much more; about that same time thy father breathed his last. He, too, is dead; he, too, hath his freedom. Benjamin knew of this as well, Alice, my child"—the kindly tears of compassion rolled down his face. "I have loved thee always, my dear; and it is my son who hath wrought this wickedness—my own son—my only son"—he shook his cane in Benjamin's face. "Oh! villain," he cried; "Oh! villain!"

Benjamin made no reply; but his face was black and his eyes obstinate.

"There is yet more—oh! there is more. Alas! my child, there is more. Thou hast lost thy mother as well. For at the sight of her husband's death, his poor, patient wife could no longer bear the trouble, but she, too, fell dead—of a broken heart; yea, she fell dead upon his dead body—the Lord showed her this great and crowning mercy—so that they all died together. This, too, Benjamin knew. Oh! villain! villain!"

Benjamin heard unmoved, except that his scowl grew blacker.

"Go," his father continued, "I load thee not, my son, with a father's curse. Thy wickedness is so great that thy punishment will be exemplary. The judgments of God descend upon the most hardened. Get thee gone out of my sight. Let me never more behold thee until thou hast felt the intolerable pangs of remorse. Get thee hence, I say! Begone!"

"I go not," said Benjamin, "without my loving wife. I budge not, I say, without my tender and loving wife. Come, my dear."

He advanced with outstretched hands, but I broke away and fled shrieking. As I ran, Mr. Boscorel stood before his son and barred the way, raising his right hand.

"Back, boy! Back!" he said, solemnly. "Back, I say! Before thou reachest thy most unhappy wife, first shalt thou pass over thy father's body!"

(To be continued.)

BY THE DOWIE DENS O' YARROW.

The sunshine of late autumn falls warmly in the inn doorway here and on the road in front; and the sky, despite the ominous darkness of last night, is all but clear of cloud. No sound of rude traffic breaks upon the pastoral stillness of the spot. Only the river below, murmuring over its pebbles, seems recounting to itself the old-world memories of the banks between which it runs. Though it is not yet nine o'clock, yonder blithe lass in shepherd-tartan plaid, and with a basket on her arm, singing to herself as she comes up the road, has been down to Yarrow Fens already. She turns across the bridge twenty yards off, on her way, says the landlady, to Hogg's Farm of Altrive Lake. It lies only a few miles off, and the same road leads on through the hills to the ruined keep of Tushielaw on the Ettrick—a pleasant forenoon's ramble. It would surely be a mistake to pass through the most storied valley of the North without making a pilgrimage to the home of its sweet singer. A word, then, to "mine hostess," as to fare later on, a moment to pocket some temporary provender, and then away after yon gentle pioneer.

Hogg had dedicated his "Queen's Wake" to the Duchess of Buccleuch, and she on her deathbed besought her husband to "remember her poor poet." The Duke accordingly bestowed the little farm of Altrive Lake upon Hogg for life, without rent or fee; and, grateful to his patron, the Ettrick Shepherd came to live on the spot in 1815. Here, in 1819, he brought his lady wife, to make it "the dearest spot on earth to him"; here he reared the "flowers of the forest," as he called his children; and here, in 1835, he died, three years after Sir Walter Scott. A thousand times, one cannot help remembering, must the kind-eyed poet have strolled down this road, carrying in his heart, as Christopher North averred, the dream of Kilmeny, or, as is perhaps more likely, with the smile wreathing his lip at some remembered word of wife or child. Certain it is that upon many a morning he gathered inspiration from these quiet hills. A thousand times he has betaken himself, rod in hand, and in the company of some chosen guest, to angle in the rushing Yarrow; and as often has he returned at night with heavy basket, to instal his tired friend by the genial hearth at Altrive. For Hogg, with the narrow estate of a yeoman, had the hospitable heart of a prince.

All day might be spent lingering here amid the scenes of old Border memories—the ruined keep of Tushielaw on Ettrick bank, where, on a summer day in 1529, James V. executed swift, sharp justice by hanging the reiver Adam Scott over his own gate; Ettrick Kirk, where Thomas Boston spent the years of his ministry, writing the once famous "Fourfold State," "The Crook in the Lot," and other books, and where, far from the haunts of busy men, he raised himself to be one of the greatest scholars and theologians of his day; and Ettrick Kirkyard, where, close by the vault of the Scotts of Thirlstane, lie the remains of James Hogg and of his quondam hostess, Tibbie Shiels. But the countryside by Yarrow Water remains to be traversed yet, and already the hours are wearing on.

Below the Gordon Inn on Yarrow side stands the monument of one of the Ettrick Shepherd's many misfortunes—Mount Benger farm. In the famous "Noctes" he is made to speak with high hope of his new adventure here: but the leasing of the place tied a millstone round his neck which dragged upon him till his last day. Hogg, it is to be feared, was, like his master Burns, no great farmer. Under the windows of the house the river runs, growing in volume to the village of Yarrow itself; and here, in the heart of Border song-land, lies the scene of the fatal combat so far renowned in minstrelsy.

Hamilton of Bangour wove the story into his beautiful and tender lines "Pu'ing the birks on the braes of Yarrow," and Allan Ramsay into his well-known "Busk ye, busk ye, my bonnie, bonnie bride"; but it is the name of the ancient ballad attached to the spot which is best known, and which will ever remain in the heart of the North a synonym for sorrow. Here it was that—

> Late at evening, drinking the wine,
> On the dowie dens o' Yarrow,
> They set a combat them between
> To fight it on the morrow.

Annan's Treat (or more probably Annan-street), to the west of Yarrow Kirk, is the spot pointed out by tradition as the scene of the fight. Here, as far as the details and the names of the combatants can be made out, Walter Scott, third son of Robert of Thirlstane, was waylaid and slain by his brother-in-law, John Scott, of Tushielaw. It appears that they were to have met alone; but the young bridegroom, on riding up the strath, found himself confronted by nine enemies. Despite such odds, however, he seems to have made a gallant stand:—

> Four has he hurt and five has slain,
> On the bloody braes o' Yarrow;
> Till a coward knight came him behind
> And ran his body thorough.

Tradition has it that the feud had been caused by the lady's father allotting her a dowry larger than her grasping brother could approve. The ballad, on the other hand, makes the irate brother allege, as his pretext for quarrel, that some slight had been offered to his sister. The lady's grief over her fallen lover, however, makes the former the more probable source of enmity:—

> She kissed his cheek, she kaimed his hair,
> She searched his wounds all thorough;
> She kissed them till her lips grew red,
> On the dowie dens o' Yarrow.

Such is the pitiful story of the place as told by tradition and song—the story to which, most of all, perhaps, the quiet little valley owes its fame. A still more ancient, if less known, interest, however, exists about this spot; for the great stones standing here are not, as locally supposed, memorials of the conflict celebrated in the ballad. Previous to 1808 the ground was a low waste moor, with some twenty large cairns upon it, in which, when opened, were found some heaps of fine yellow dust and the head of an antique spear. About three hundred yards further to the west, when the strath was being broken in by the plough, a large flat stone was laid bare. It contained a Latin inscription, rudely engraved, and under it were discovered human bones and ashes. This block of greywacke is the famous Yarrow Stone, and the lettering upon it is said to be the only known inscription of the Cambrian Celts, who once held all Scotland south of the Forth. The first part of the lettering has been made out as "Hic memoria Cetiloi"; and an ingenious critic lately, by comparing the chronicles of Bede and Tighernæ, discovered in the spot the Denisesburn, and, according to Nennius, the Catscaul (the latter name remains transposed in "Catslack" burn close by), where in 632 A.D., in a great battle of rival races, Catlon, King of the Britons, was defeated and slain by Oswald, King of the Angles of Northumbria. Following this clue the same critic suggests, as the complete rendering of the inscription, "This stone is in memory of Cetilon and his son, Princes and Imperators of Dumnogenium." By this rendering, he concludes, "the Cetilon of the Yarrow Stone would be proved to be the Cadwalla of Bede and of the Saxon Chronicle, who was a more cruel and bitter enemy to the Angles than Arthur." A strange and terrible chapter of history to be turned up by the share of a peaceful plough!

Memories of many centuries, however, gather thickly in the little valley. At all times the Borderland has felt the stirring of the nation's tides, and the legends of Yarrow form a fair index to the history of the country at large. Thus, beside the relics of mediæval and prehistoric times, the history of the Covenanting struggle might be read by the light of its associations here. The manse of Yarrow Kirk, at hand, was the dwelling of John Brenner, the Mess John of a well-known ballad. One of the curates thrust upon the people by the prelatic acts of Charles II., he is famous as having played the unworthy part of spy upon his flock. By means of a certain "strange gaunt woman" he was wont to furnish the Government with tidings of conventicles about to be held among the hills, and in this way betrayed the lives of many of the people among whom he was placed, until at last they shot him through his own parlour window.

Point after point as the valley descends strikes a chord of old-world interest. After passing, perched among the trees on the river's opposite bank, the village of Yarrowford, with its lights twinkling through the dusk, its pleasant sound of voices, and the tinkle of the village smithy, the road plunges into the darkness under the heavy woods of Hangingshaw. Here, where the air is rich already with the night-scents, stands the ruined stronghold of the Outlaw Murray, prince of the Ishmaelites of the Border, whose famous "sang," or ballad, Scott says, has been popular for ages in Selkirkshire. Swift and dark, and with deep, cool gurgle, the river runs here below its bridge. A lonely and eerie spot it is at such an hour in the heart of the dark, still woods—the haunt, it well might be, of the ghosts of old marauders, booted and spurred. Yonder carriage lights, coming down under the trees in the blackness, might easily be the bright, flaming eyes of some devouring dragon, so weird are the place's memories. Somewhere on the south bank below rises "the shattered front of Newark's towers," reminiscent of James II. and of "the bold Buccleuch," and its courtyard stained with the blood of the Royalist prisoners slain there by the Covenanters after Philiphaugh. Though the shrub springs now upon its broken wall, to the fancy the place is peopled yet, by the wizard touch of Scott, with dame and squire and knight intent upon that heroic "Lay" chanted by the last of the minstrels. And the wanderer today about the spot may come upon a little mount, fir-clad, that seems waiting for its story. Said to have been part of the ancient garden of the castle, tradition runs that there the Outlaw Murray was slain by one of the Scotts. Carterhaugh, the woody tongue of land below, where Yarrow and Ettrick "rush into each other's arms," is the spot where Tamlane, according to the ballad which bears his name, was freed from enchantment by the "fair Janet." Here, they say—

> She has kilted her green kirtle
> A little abune her knee:
> And she has braided her yellow hair
> A little abune her bree.

And here, on Hallowe'en, she set the pails of water and milk with which to break the spell cast about her lover by the fairy queen. That, it is said, was the last appearance of the fairy-folk to mortal eyes, though on the grass are still pointed out the rings traced by their starlight revels.

Born amid such romantic and weird surroundings at the quiet farm-house of Foulshiels, close by, it is small marvel that Mungo Park was attracted to the adventurous life of an African explorer.

One more point of interest remains—the wood-hung battlefield of Philiphaugh, now the park about the seat of the Outlaw Murray's descendant. Here, by Lesley's surprise and defeat of Montrose, in 1645, the cause of the First Charles was lost in Scotland. By some strange oversight Montrose had left his infantry encamped on the field, while he himself with the cavalry quartered in Selkirk, a mile away. Lesley, coming up at dawn from Melrose, seized the opportunity, and cut the Royalist foot to pieces before the horse could come to their assistance; and dire and effectual was the work done here by the Covenanting broadswords on that misty September morning!

Presently, the lights of Selkirk appear, begemming, like fireflies, the darkness of the opposite hillside; and there, after the long day's ramble among the storied scenes of this quiet Border valley, will be found rest and refreshment amid the comforts of "mine inn."

G. E.-T.

LORD BRASSEY AND HASTINGS.

The Municipal Corporation of Hastings has presented Lord Brassey, formerly M.P. for Hastings, and a liberal benefactor of that town, with the honorary freedom of the borough. The

CASKET OF HASTINGS BOROUGH FREEDOM FOR LORD BRASSEY.

ceremony of presentation took place on Monday, Oct. 15, in the School of Art building at Claremont, which was the munificent gift of Lord Brassey to the town. The Mayor, Councillor Stubbs, afterwards entertained his Lordship and the members and officials of the Corporation with a banquet at the Queen's Hotel. The document setting forth the resolution of the Council, passed on Aug. 18, to confer the freedom of the borough on Lord Brassey, was placed in a casket of solid silver, manufactured to order of Mr. E. Dobell, jeweller, of Robertson-street, Hastings, of which we give an Illustration. It is surmounted by the arms and crest of Lord Brassey, in silver and enamel, with his Lordship's motto, "*Arduis sæpe, metu nunquam.*" On the front of the case are the borough arms, also in silver and enamel, with Lord Brassey's monogram, surrounded by oak and laurel wreaths. Introduced in the wreath, from which the borough shield protrudes, are anchors and tridents, symbolical of the British Navy. At each corner, the box is supported by a silver pillar, on which is a lion rampant gilt, and below is a silver dolphin. On the opposite side is a wreathed inscription, to the following effect:—"Presented to the Right Hon. Lord Brassey, K.C.B., by the Corporation of the Borough of Hastings, Oct. 15, 1888." The size of the casket is considerable, and its weight is about seventy ounces. It is inclosed in a large case, lined with light blue satin.

ARTS AND CRAFTS EXHIBITION.

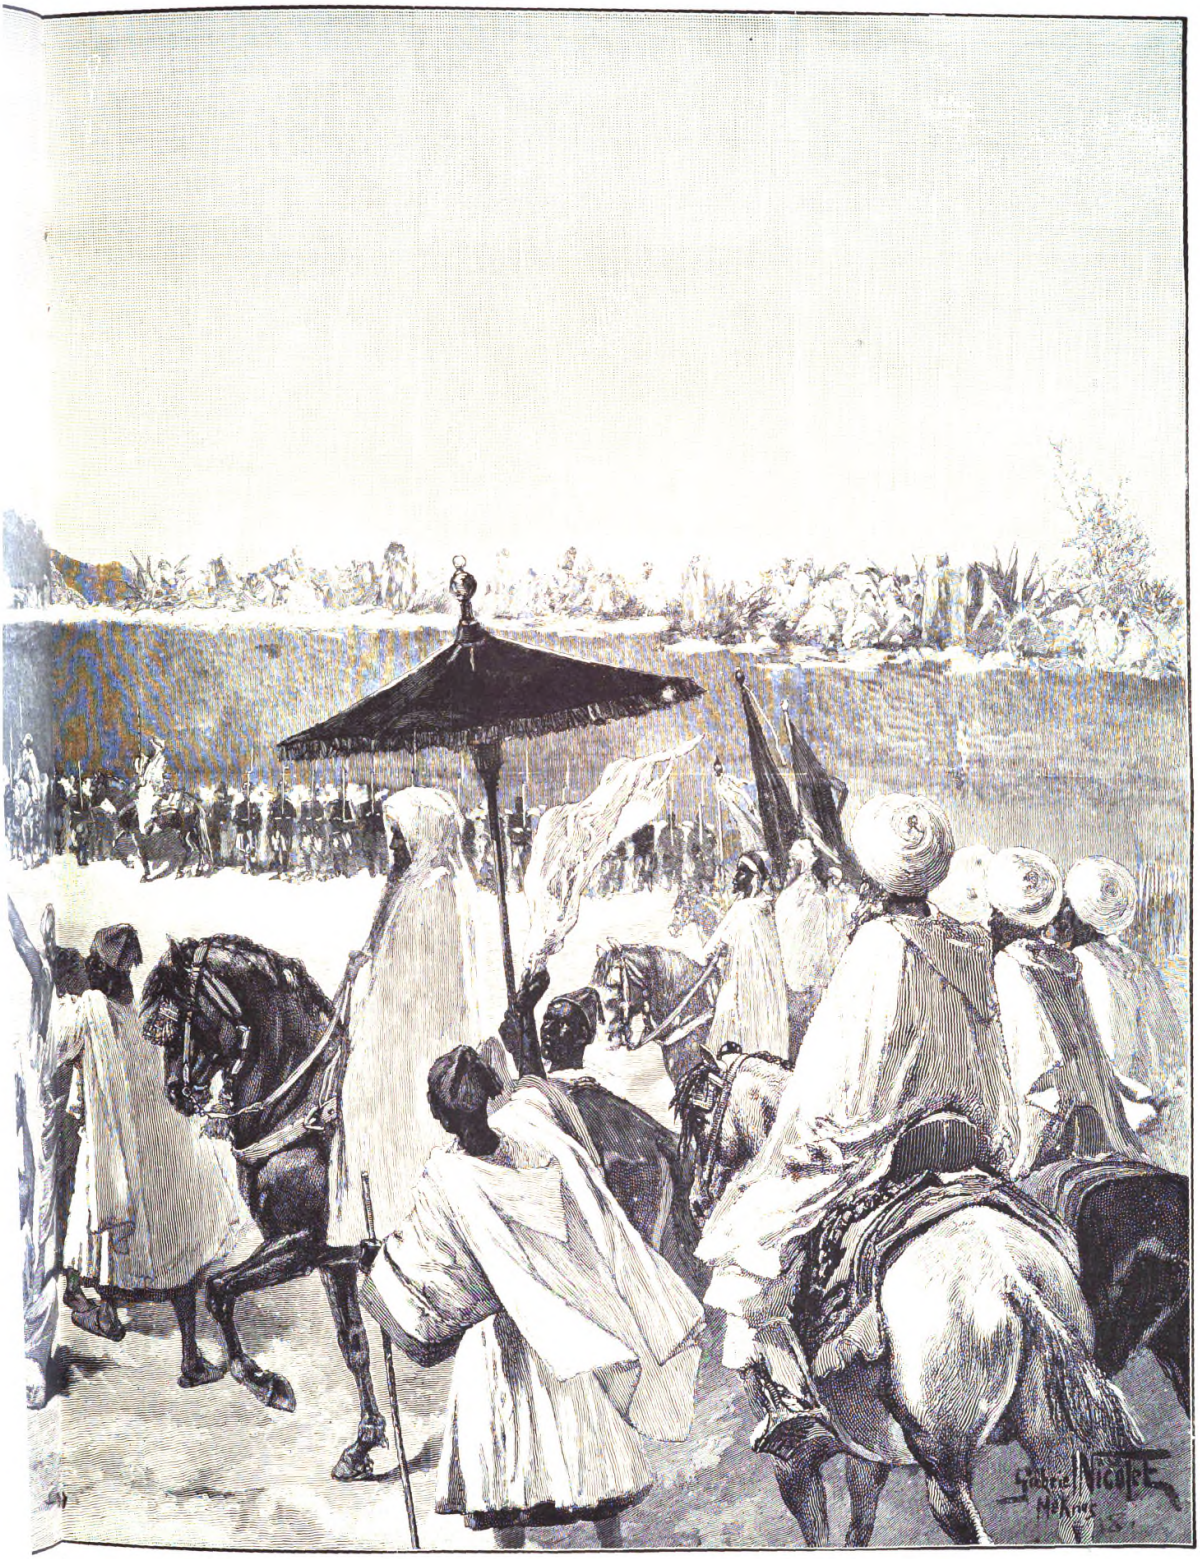
SECOND NOTICE.

Textile fabrics are but sparsely represented in the Exhibition, owing, probably, to the unwillingness of manufacturers to allow the names of their workmen and designers to appear. A Hammersmith Carpet (50), designed by Mr. William Morris, and executed at his works, is one of the most satisfactory specimens of the kind, and has at least more originality than Mr. J. A. Heaton's Axminster Carpet (37), of which the chief interest lies in its clever imitation of old Persian work. In purely handwork there is, however, greater variety; and one cannot fail to admire Mrs. Crane's Frieze for a Mantle Valance (20), worked in cotton on black merino; and the Hanging Memoranda Pockets (29 and 30), worked in wool and crewels on canvas. "Art in the House," as it is often euphemistically called, has not unfrequently an irritating effect upon those who watch the laborious patience with which some ladies execute certain pyrotechnic patterns under the impression that they are achieving arabesques of the most correct design. Such patient Penelopes will learn much of the limits of needlework from Mrs. Heaton's embroideries in "tram" silk (11 and 16), Mrs. Margaret Ashworth's Design for a Piano-Cover (26) in twilled linen, and Miss Una Taylor's (19) and Miss M. Buckle's (21) panels in silk and satin respectively. We should not leave this branch of the exhibition without mentioning a very interesting specimen of printed cotton hanging (93) by Mr. J. Lattimer—very delicate in colour and bold in design, although we scarcely think the subject, "Wheatear in Clover," altogether suitable for wall decoration, whilst we are still more doubtful as to the possible combination in Nature.

Of wall-papers there is a very fair show, Messrs. Woollams in many instances rivalling Messrs. Morris on their own ground. The former firm has in Mr. Geo. C. Haité a designer of no common skill and taste; his "Orchid" (95) paper and "Picotee" (91) frieze being especially noteworthy. In too many instances, however, both Messrs. Woollams, Morris, and a host of others, are tempted to make their wallpapers too "patterny." There are few English houses now where pictures or engravings are not hung; and the primary object of a wall-paper should be to set off what is displayed as an object of value or interest. Such a wall-decoration as that of "Woodnotes" (69), designed by Mr. Walter Crane, and printed in coloured flocks on flock ground, is sufficient of itself to make a room look furnished; and one is at a loss to guess what place it could adorn in an ordinary English house. The embossed leather-papers, of which we owe the introduction to the Japanese, are now fully equalled by our home manufactures. Of such there are some excellent specimens, designed by Mr. J. D. Sedding (63 and 64), Mr. Walter Crane (66 and 67), and others of which the painting and printing are, in most instances, due to Mr. Metford Warner. The generous rivalry between Mr. W. Morris and Messrs. De Morgan in the production of tiles and other potteries is seen to great advantage in this exhibition; but we are forced to say that nothing from the former comes up to the splendid display of red-lustre pottery (103) which Messrs. De Morgan contribute among many other pleasant works. On the other hand, we cannot but think that the Chimneypiece (53) designed by this firm is heavy and meaningless, whilst the blue tiles with which it is ornamented are so overcoloured as to render a retreat to such a fireside corner a penance rather than a pleasure. To Mr. W. A. Benson belongs the double credit of combining the artist and the craftsman in a common aim, and of producing work which is at once useful, tasteful, and beautiful. Nothing could be simpler in its design, more practical in its uses, or more ornamental in its appearance than the Ash Sideboard (99), and, what is more astonishing, it stands almost alone in an exhibition where one would have expected such work to abound. It is, however, in metal-work that Mr. Benson most displays his originality and delicate fancy. By his revival of an old art of combining brass and copper in his designs he has achieved a special reputation; but when one looks more carefully at such works as the Fountain in the Entrance-hall (283), and the Pendant (146) and Standard (147) Lamps, we see how much of the beauty is due to artistic modelling and proportions. The Toynbee Hall School Guild of Handicraft exhibit several interesting copper plaques in repoussé work; and Mr. Walter Crane, who seems as "polytechnic" as Mr. Hubert Herkomer, is also an exhibitor of works in brass and copper. Messrs. Langden and Co., Messrs. Thomas Godrey, Mr. J. W. Oddie are also among those who show how widely the taste for metal-work, chased and hammered, is reviving amongst us. Although there are a few specimens of the wrought-iron work of Messrs. Robinson and Robson, Messrs. Powell, Messrs. Starkie Gardner, and Messrs. Longden, the display hardly comes up to our expectations. Of late years especially, this industry has been pursued with considerable activity, and its results, as seen in various exhibitions, have been most creditable to our workmen. Another year, we should like to see a more special feature made of this thoroughly national art-industry. The sacrifice of usefulness to ornament shows itself even more strongly in bookbinding than elsewhere.

If it were the habit amongst Englishmen to use bound books as decorations, as is the case in France, or if our countrymen were in the habit of forming libraries of fifteen, twenty, or thirty volumes as our neighbours do, one could understand the object of *éditions de luxe* bound in the most recherché style. With the majority of Englishmen books are bought to be used, and even used in a rough homely fashion, seated before the fire or lying beneath the trees. For such readers the exquisite bindings of Mr. Cobden Sanderson, M. Roger de Coverley, Messrs. Rivière, Mr. Edward Watson have no meaning. If, however, we are content to look at bindings as works of art, reverently and through a glass, we are able to render justice to such exquisite skill and taste as are displayed in such works as Mr. Cobden Sanderson's "Memoir of D. Macmillan," "Unto this Last," "The Revolt of Islam," "Love is Enough," and a volume of Keats', which are perfect gems of morocco binding worked and tooled by hand. Mr. Edward Watson's specimens (117) of hand-coloured calf have a more solid appearance, but they are not less admirably finished; whilst the gems of Messrs. Rivière's collection are two copies of the "Marriage of Cupid and Psyche" (118, 120) in two shades of green morocco elaborately hand-tooled.

There are many other objects which well deserve a detailed notice, but we must break off here, expressing, however, our gratitude to the Arts and Crafts Society for its successful effort to bring before the public in so striking a way the artistic side of British industry.



The group of Shakspearian statuary which Lord Ronald Gower has presented to Stratford-on-Avon as a memorial to Shakspeare, was unveiled on Oct. 10 by Lady Hodgson, the wife of the Mayor, in the presence of a distinguished assembly.

The Orient Company announce that they will dispatch their large, full-powered steam-ship Garonne from Tilbury Docks, London, on Nov. 15 for a five weeks' cruise, visiting Lisbon, Gibraltar, Algiers, Palermo, Naples, Leghorn, Genoa, Nice, for Riviera, Malaga, and other places, returning to London on Dec. 22. The Garonne is fitted with the electric light, hot and cold baths, &c., and carries a surgeon.

THE SULTAN OF MOROCCO'S RETURN TO MEQUEZ FROM HIS

DRAWN BY [illegible]

MEQUINEZ FROM HIS PILGRIMAGE TO MULEY EDRIS.

DRAWN BY G. NICOLET.

THE LADIES' COLUMN.

As the autumn fashions declare themselves, it becomes apparent, notwithstanding prophecies to the contrary, that the period of sacrifice of the feathered tribe is not over. Wings or stuffed birds are used as trimmings on almost all millinery. Long ostrich feathers are, however, seen on some of the newest hats. The crowns of these hats are very low, and the brims very wide, and bent about to suit the face. The full long feathers surround the crown, the curly fronds of additional tips clustering becomingly up above the face, while one nice thick end of the longest feather hangs down behind, falling on the neck in the picturesque style of a Vandyke cavalier's hat. A "note" of the Directoire styles of costume which are still so popular is to have something hanging from the chapeau at the back. Such a drooping addition is becoming to many types of face, and the soft fluffiness of feathers is particularly so; far more pleasing than the two ends of handsome ribbon which are alternatively used in the same way.

Bonnets again, as well as hats, have low crowns (though the trimming on them is still placed rather high) and broad, tall brims. The brims are often completely covered outside with feathers matching the shape in colour; a sort of short, much-curled feather trimming being made on purpose for this use. Inside, the brims are lined with velvet, even when the bonnet itself is of felt. The lining may be put in with full folds, and then suffices for the trimming of under the brim; or it may be laid on quite plain, and a bow of ribbon, a tiny ostrich tip, or a little bird will then be added to rest on the front hair. In either case, the outside trimming of the bonnet rises high in front, so as to show to some extent above the tall brim. There is a decided tendency to trim the backs of bonnets more than has been usual for some time. A couple of birds' wings, or of bows lined with some brilliant colour, will come from the back of the shape, along either side of the crown, to meet in front the high cluster of trimmings, the upstanding loops of ribbon, the wings, the osprey or bird-of-paradise floating tail aigrettes, as the case may be. Strings or no strings is a matter of taste, but they decidedly add to the protection afforded by the headgear to the face and ears; it is there ore sensible to use them for the winter, and there are few faces, other than those still in their first bloom, that are not improved by being framed in some becoming tint. Velvet and satin reversible ribbon has returned to favour, moiré and fancy ribbons having grown common. Black and green is a favourite contrast; and black and brown, once the acmé of bad taste, is now quite "the thing." Of course, in winter red is always fashionable; the prevailing tone of the popular hue for the coming season is a somewhat bright yet brownish one, not far removed from chaudron.

The latest fancy is that the bonnet should match the mantle rather than the gown, if there is a diversity of colour between those portions of the attire. In the case of the popular long coats which almost conceal the dress this arrangement is obviously most desirable; and even short mantles are, without exception, made with long flat ends in front, so that the materials of which they are composed are much in evidence. Mantles which cover the whole dress are much more "possible" this season than ever before, as they are now made in the light and yet warm brocaded woollens in place of the heavy cloths and plushes under the burden of which it was difficult to walk. Matelassé and cloth velour are heavier than brocaded wool, but still are endurable. These figured fabrics are decidedly the most fashionable and the newest for mantles, but black and seal plush short jackets and cloaks seem to be selling very largely. Feather trimming and rich passementerie, either beaded or composed of bullion, are preferred to fur as garniture for fancy materials. For girls, short coats carry the day, and are nearly always made loose-fronted, either opening over a fitting vest of fur or contrasting material, or else "Battenberg" shape, buttoning on the left shoulder, and hanging loose thence, but cut off to a point in the middle.

The eighteenth volume of that interesting undertaking "The Eminent Women Series" of biographies, has just been issued. It is a "Life," from the pen of Mr. John H. Ingram, of Mrs. Elizabeth Barrett Browning, the one great woman-poet of England. None other of her sex since Sappho has attained to the fame of Mrs. Browning amongst poets. She stands not with the moderately eminent, the second rank, of verse-writers—with sweet Mrs. Hemans, sedate Joanna Baillie, passionate Mrs. Norton, sentimental "L. E. L." or earnest Adelaide Anne Proctor. Far beyond these, and claiming fellowship with the first, the masters of her art, and powerful to make her claim allowed as just by critics of the sterner sex, while yet her verse palpitates with a woman's heart, and her femininity is even aggressively displayed in reference and allusion—Elizabeth Browning matches with Tennyson, with Coleridge, with the poet-husband whose name she bears, with, in a word, the very greatest poets of her own era. She had classical culture rare for a woman at the time of her youth, yet she lived amid the early stirrings of that "woman movement" which has aroused so many women to give forth their best, and has encouraged so many to speak with their own voices. From this fortunate combination of external circumstances, no less than from inherent genius, came the greatness of Mrs. Browning's achievements, so far beyond those of her sweet-singing but feeble predecessors. She was, perhaps, the first woman to express for poetry what Charlotte Brontë so passionately urged for prose—that there cannot be a feminine and a masculine standard of excellence. It took great women like these to throw away the apparent prop and the protection of a critical chivalry that, after all, as they said, was only an elegant cloak for contempt of weakness. But having discarded such a lower standard, they were bound to work towards the highest levels of art; and well they both justified their temerity. "I, who love my art, would never wish it lowered to suit my stature," cried Elizabeth Browning; and, again, she protested against "That praise which men give women when they praise a book, not as mere work, but as mere woman's work, expressing that comparative respect which means the absolute scorn." It was not such applause that she sought; and as she placed her standard, so is her fame.

It is a strange circumstance that nothing worth calling a biography of Mrs. Browning has ever appeared before Mr. Ingram's work. This has been mainly due to the objection made by Mr. Browning to such a work being undertaken. But what reason there has been for the objection it is impossible to guess. The "Life" is admirably done now—perfect in taste, and vivid and interesting in a high degree. Yet this is due more to the skill with which the biographer has marshalled small details, and to the sweetness and charm of the woman as revealed in all her letters here printed and her sayings here recorded, than it is to the variety of incident in the life itself. There can seldom have been an existence more purely intellectual and emotional, and less one of action. It was a much without external incident as a life can be—bodily illness, literary work, marriage at thirty-seven, motherhood—there is the entire tale in a paragraph. Delicate health from her early girlhood kept Mrs. Browning a prisoner to her room, secluded from the world, and therefore from all the teaching as well as from the suffering of mixing in life. Doubtless something was lost by this to her art and to her powers; but what she might have gained by wider experiences and more varied study of mankind would have been more than compensated by the loss of the invalid's leisure, which brought with it opportunities both for rare mental culture and for steady uninterrupted work. Her letters are delightful reading; and we gain from the book the impression of a singularly sweet and noble soul, and learn to add reverence for the almost perfect woman to that warm admiration for the great literary artist and the inspired poet that everyone capable of judging poetry already feels.—FLORENCE FENWICK-MILLER.

THE ECCENTRICITIES OF CRITICISM.

Critics of literature should be the most modest of men, for the errors made in criticism, often by very able writers, are passing strange. Again and again it has happened that the finest works of a century have been disparaged, while books of ephemeral value have received the praise due to a country's classics. Sometimes the blunders made have been simply due to incompetence, sometimes to prejudice; and it may be added, that a man of great genius has to make his public, and that originality needs time to be recognised. Personal acquaintance may be also unfavourable to just criticism. A man who walks about the streets in a shabby coat, drinks heavily, like Porson, and imitates Sheridan in borrowing money and forgetting to repay it, does not prepossess us in his favour. Like Goldsmith's Ned Purdon, he may be "a bookseller's hack," and the critic who writes at ease in a comfortable study is in danger of despising his ability, because he is out at elbows. Genius is rarely clothed in purple, yet we are sometimes apt to think that it is despicable in fustian.

A score of prejudices stand in the way of a just estimate of authors, even when a critic labours to be honest; but all the reasons we have stated put together do but partially explain the aberrations of literary criticism. A book is sometimes disliked and discredited just as a man is disliked for no definite cause—

> I do not love thee, Doctor Fell,
> The reason why I cannot tell;
> But this alone I know full well
> I do not love thee, Doctor Fell.

This is unreasonable, of course; but human nature is unreasonable, and critics are but men. I wonder how many of the judgments passed upon contemporary authors will be ratified fifty years hence! The critical rashness that was taken for wit at the beginning of the century is not yet extinct, though we have no living critic, perhaps, of Lord Jeffrey's weight and cleverness to give credence to error. Happily, Bentley's saying is a true one that no author was ever written out of reputation but by himself, and there is comfort for every neglected writer, though it may not be in all cases well founded, when he remembers the way in which some of the greatest men of letters have been treated.

And now, before giving some striking illustrations of critical error or incapacity, let me say that the misjudgments of criticism afford no proof whatever that the art is a vain one. As well might you say that the mistakes of the medical profession prove the uselessness of doctors, or that an inconclusive argument shows the fallacy of logic. Like all other arts, criticism may become debased and ignoble; but, if it be, what Matthew Arnold has well defined it, "a disinterested endeavour to learn and propagate the best that is known and thought in the world," it cannot be a vain pursuit, and may be exercised—to quote the same author, himself one of the most masterly of critics—with "a joyful sense of creative activity."

An error of criticism at one time far too prominent is, happily, no longer in vogue. Milton's comments, in some of his prose writings, are as cruel as they are unjust; so are the brutal criticisms of Pope's arch-enemy, John Dennis; so, frequently, are Pope's own satires on books and men; so, too, are Dryden's; but then, satire seldom goes hand-in-hand with justice, and would miss the mark if it did not exaggerate. The critics who flourished at the beginning of this century had not the excuse of satirists for the brusqueness and personality of their literary reviews. Their language was blunt, and more than blunt; for they were not always content to call a spade a spade. Critics, now-a-days, know better; they do their spiriting gently, and, when finding fault, imitate Bottom, and "roar you as gently as any sucking dove." Their sting, however, is none the less severe; for it is possible to express contempt in the mildest language.

The modern critic is, in more than one respect, in advance of his predecessors. He is more reverent, more ready to acknowledge that genius is not to be gauged by pedantic rules, more willing to learn before he attempts to teach. No one could now write of Shakspeare's sonnets as Steevens wrote of them, or of "Lycidas" as Johnson wrote of it. And yet in spite of the larger views which enable us to judge of imaginative art through the emotions as well as by the intellect, the eccentricities of criticism are still numerous and startling.

One of the latest books I have opened is "The Correspondence of Sir Henry Taylor." In that pleasant volume the poet affirms that 99 per cent of what Burns wrote is worthless, and he adds: "I think nothing that he wrote was of such excellence as to found a poet's fame. Perhaps if he had written nothing but his best pieces I should think more highly of him, and with less liability to error; but no man's best lies buried under more of worse, worser, and worsest." Doubtless much rubbish has been shovelled into the works of Burns by the folly of his editors; but Sir Henry's estimate of one of the most genuine poets that ever lived—a poet whose very life-blood is in his songs—betrays a curious defect of vision. I suppose that poets, like smaller men, find it difficult to estimate work for which they have themselves no aptitude. Wordsworth cared little for Pope, called Voltaire dull, and declared in an oblivious moment that Shelley had as much imagination as a pint pot. Byron said that Cowper was no poet; and Landor apparently found Spenser wearisome, for in some lines addressed to Wordsworth he says:—

> Thee, gentle Spenser fondly kiss'd,
> But me he mostly sent to bed.

The vagaries of criticism are manifold. Was it not Hobbes who told Davenant that his "Gondibert" would last as long as the "Iliad"? didn't Horace Walpole call Darwin's "Botanic Garden" "the most delicious poem upon earth"? and was it not Alexander Smith, a writer with literary instincts, who made the astounding statement that Jane Austen was deficient in humour? It is a comfort to the ordinary critic who has only sincerity, knowledge, and perhaps some love to guide him, to know that poets and men of genius are as likely to blunder or to differ as ordinary writers. Mr. Lowell, for example, has said that the "Faerie Queene," which, by-the-way, John Wesley recommended to his divinity students, has a purity of thrice-bolted snow; but Dean Church, on the contrary, considers that, however innocently some of Spenser's scenes were produced, it is not easy to dwell upon them innocently now. The critical fallibility of a great writer was, however, never exemplified more strikingly than in Carlyle's estimate of Sir Walter Scott, and in his amazing depreciation of Charles Lamb. It was with pitying contempt that he wrote of the wealthiest imaginative writer since Shakspeare as "the novel-wright of his time, its favourite child, and therefore an almost worthless one"; it must have been with something like malignancy that he made his cruel comments on Lamb. And yet of all English writers these two are among the dearest and the most justly honoured. Only the other day Mr. Sidney Colvin gave a curious illustration of the different judgment passed by two distinguished poets upon a famous lyric of Keats. His "La Belle Dame sans Merci" is, in the opinion of Mr. Coventry Patmore, "probably the very finest lyric in the English language." Mr. Matthew Arnold, on the other hand, writing some time before his death to Mr. Colvin, said, "The value you attach to 'La Belle Dame sans Merci' is to me simply amazing." Mr. Arnold was one of the sanest of literary critics, yet he sometimes failed egregiously. I have no sympathy with the extravagant opinions expressed of Shelley by some of that poet's blatant admirers; but his exquisite genius as a lyric poet is incontestable; and it was surely fatuous of Mr. Arnold to doubt whether Shelley's essays and letters "will not resist the wear and tear of time better, and finally come to stand higher, than his poetry." Much of Shelley's verse will go, probably, and may deserve to go—already we can dispense with his "Witch of Atlas"—but is it possible to believe that such pure essence of song as "The Skylark" the "Ode to the West Wind," the "Invocation to the Spirit of Delight," and his divine love lyrics will ever be relegated to the upper shelf which holds our dead poets? That such a heresy would excite Mr. Swinburne's righteous anger might have been anticipated, for to him the memory of Shelley is almost as sacred as that of Victor Hugo; but in doing battle for Shelley against the perverse estimate of Arnold, Mr. Swinburne shows his own want of comprehensiveness by denying the gift of poetic or creative imagination to Lord Byron, and by placing him, in this respect, upon a level with Southey, giving Southey the credit—which is reasonable enough—of writing incomparably better English.

The truth is that a critic blessed with genius cannot always judge of poetry impartially. Either by the aid of imagination he gives to it a beauty that does not exist, or, to use a Coleridgean phrase, it does not "find" him, and, in either case, readers are apt to be startled by a paradoxical opinion. The eccentricities of criticism are inevitable, but it goes on its way rejoicing in spite of them; and other things being equal, he is the wisest critic who lays to heart the maxim of Dryden—that they mistake the nature of criticism who think its chief business is to find fault. J. D.

THE SULTAN OF MOROCCO.

In Morocco the performance of a pilgrimage to the sacred places, to ask the Moslem Saints' intercession for protection in warlike undertakings, is considered an act of duty and piety in the ruler. This year the Sultan went from Mequinez to the Marabout of Sidi Bouskri, to the mausoleum of Medjebouf, to the mosque and tomb of Muley Ismaël, to the Marabout of Sidi Aissa, and, lastly, to the "Saiouet" of Muley Edris, the burial-place of a famous apostle of the Mussulman religion in Morocco, who died at the end of the eighth century of the Christian era. The last-named place of pilgrimage, the most important of all, is situated in the Zerhoun mountains, five hours' ride from Mequinez. The Sultan started during the night in state, with all the Court and a large display of troops. He came back to the city in the middle of next day. At the city gate thousands of people were waiting his Majesty's arrival. Many of them, when he arrived, made their way through the soldiers, rushing forward and throwing themselves at his horse's feet, to beg him to listen to their grievances, or to hand him letters asking for justice. A French artist, M. Gabriel Nicolet, sends us a Sketch of this exciting scene.

SAVINGS BANKS.

A fresh return of Savings Banks, other than the Post Office Savings Bank, has been issued, by which we learn that on Nov. 20, 1887, the total amount due to depositors was £47,262,222. The number of the banks was 400, and the number of officers employed 1936. The monthly return, dated Oct. 6, showed that there has been a reduction of about a million sterling in the deposits in non-Government savings banks since November 1887. The Post Office deposits now exceed the deposits in the other savings banks by 12,000,000, and the total shown this month to be deposited in all the savings banks of the kingdom is £104,282,508, an increase of 4 per cent for the year. An abstract at the end of the return shows that over £3,000,000 sterling were transferred to the Post Office Savings Bank up to Nov. 20, 1887, besides which it is estimated that £360,489 was also paid in cash by depositors in closed savings banks to the Post Office Savings Bank. Thus the rate of accumulation is satisfactory, and it also appears that the saving public are discriminating between the banks guaranteed by Government and non-guaranteed banks.

The Queen has forwarded her annual subscription of £50 to the Army and Navy Pensioners' Employment Society, of which her Majesty is patron.

At the licensing session of the Middlesex Magistrates on Oct. 11 the question of Professor Baldwin's parachute feat at the Alexandra Palace was again discussed. Mr. Baldwin was examined at some length, and ultimately the license was renewed.—An application for a music license in the grounds of Olympia was refused, mainly on the ground of the noise of switchback railways, toboggan slides, and rifle galleries being an annoyance to the neighbourhood.

Lord Herschell, presiding at a meeting of the Organising Committee of the Imperial Institute, on Oct. 11, reported that, as the result of a conference with the principal Chambers of Commerce and technical associations of the kingdom, it had been ascertained that there was a general consensus of opinion among these bodies in favour of the establishment of a Department of Commercial Intelligence. The report was unanimously approved.

It was unanimously resolved, at a largely-attended conference held at the Crystal Palace on Oct. 11, to form an association of British fruit-growers, and the meeting further decided to invite the Duke of Bedford to become president. The annual fruit and vegetable show has been held in the north nave. The season has not been altogether favourable for the development of fruit, yet the exhibits were of very fine quality. In the vegetable department the exhibits were unusually fine.—The National Apple and Pear Conference arranged for the display of collections and specimens and the discussion of questions pertaining to the production, distribution, and improvement of hardy fruits, was opened on Oct. 16 and continued throughout the week in the gardens of the Royal Horticultural Society, Chiswick. The order of procedure included a series of conferences on subjects of the first importance.

CRUISE OF H.M.S. RUBY.

THE SOUTHERN ARCHIPELAGO OF SOUTH AMERICA.

The large island of Tierra del Fuego, the "Land of Fire," as it was called by early Spanish or Portuguese navigators who saw its volcanoes flaming in the distance, lies to the south of Patagonia at the extremity of the American continent, with smaller islands around it, one of which is known to all mariners from the Pacific to the Atlantic ocean by the name of Cape Horn; another is Staten Island. Readers of the "Life of Darwin" have lately had their memories refreshed concerning the voyage of H.M.S. Beagle, fifty years ago, under command of Captain Fitzroy, R.N., accompanied by the great naturalist, then in his youth, and the observations that Darwin made on the shores of Tierra del Fuego, of which he gave an account in his first published book. That ship gave her name to the "Beagle Channel"; and a recent cruise to this channel, in H.M.S. Ruby, to visit the Tierra del Fuego Mission, has given opportunities for a few sketches, by Mr. Herbert Canton, Surgeon, R.N., of the strange region and its inhabitants.

After leaving the Falkland Islands, the first port of call was St. John's Harbour, in Staten Island. This island, which belongs to the Argentine or River Plate Government, is at the eastern entrance to the Straits of Le Maire. It presents to the eye a rugged and fantastic appearance, with pinnacled mountains, often snow-capped, rising abruptly to a height of over 3000 ft., but the lower land covered with dense forests to the water's edge, making a wild and picturesque scene.

The only inhabitants of this lonely spot are some twenty or more persons, chiefly English and Norwegian sailors, under an Argentine officer, whose duty it is to attend to the light-house, situated at the western entrance of the harbour, and to make periodical visits round the island, generally after a storm, in search of shipwrecked crews. These people, who are very industrious, have made a clearing, and formed a small but comfortable settlement at the head of the bay. A path about half a mile long connects it with the light-house, which may be said to be the only walk in the whole island. The sailors told some awful tales of shipwreck, and how they had picked up crews, after many days of terrible suffering and exposure. Two unfortunate vessels, the Colorado and the Dunbraig, were wrecked last year on this island. The survivors fell in with one another, at the western end of the island, whilst attempting to reach the light-house, some twenty miles distant. Then one half of them set forth in an open boat, while the others endeavoured to cross the mountains. The boat's crew, however, was never again heard of; and the other party was picked up, some months afterwards, in an exhausted condition. They had utterly failed in their endeavour to reach the settlement, hindered by the dense forests and precipitous mountain ranges.

We present a View of the Beagle Channel, with snow-capped mountains on each hand, and dense gloomy forests down to the sea, but in many places opening into lovely parklike scenery. The channel, which varies from two to three miles in breadth, is interspersed with numerous treeless islands, covered with emerald-green pasture-like herbage. These, and the panoramic views constantly opened up along the shore, with the varied tints of the dense foliage, were delightful to see.

"Shortly after anchoring," writes Mr. Herbert Canton, "we were soon surrounded by native canoes—frail, leaky-looking craft, made simply of pieces of bark sewn together, over a rough frame, with whalebone. These were paddled each by two or more women, who, in spite of the inclement weather, wore but scanty clothing. They squatted at the bottom of the boat, presenting a very miserable appearance. They employed themselves in bailing out the leaky craft, and endeavoured to warm themselves from a small, smoky fire burning at the bottom of the boat. Some of the men ventured on board ship to look round and pick up what they could, clothing especially being in great demand. It is a curious fact that nearly all the women, but only a few of the men, are able to swim, so that when a canoe is upset, which is not unfrequent in these stormy latitudes, the women generally reach the shore, whilst the men are invariably drowned.

"The Yahgan, or canoe Indian, is a square-built, miserable-looking figure, stunted in growth, with coarse, straight, black hair, with dark eyes, obliquely set, and with a dirty-looking copper-coloured skin. He usually spends a considerable part of his time in his canoe, hunting for seals and sea-birds, which he spears with great ease and skill. He builds his wigwam near the water's edge wherever shell-fish abound, his food principally consisting of these and of blubber, whenever a whale chances to be washed up. But he seldom remains any length of time in one place; for when the supply of shell-fish is exhausted, he migrates to another spot, so that along the shore of the channel many piles of shells may be seen, which at one time or another surrounded a wigwam.

"The Ona tribe are a much finer race of men, who inhabit the northern part of Tierra del Fuego. They are supposed to be descended from the Patagonian Indians, and, like them, are brave and warlike. Their food consists of the flesh of the huanaco, the chief animal of the chase, the skin of which is used as a kind of mantle for their shoulders, and forms part of the covering of their wigwams. This tribe almost exclusively use the bow and arrow for warlike purposes and in pursuit of game. The native wigwam resembles, in size and shape, an ordinary haycock, with a hole in the roof through which the smoke escapes. It is made of branches of trees, stuck into the ground and covered with tufts of grass and rushes. Even this rude shelter some do not possess, but are content with digging a hole in the ground, a few feet deep, sufficient to cover their bodies. In the centre of the wigwam a fire is always burning, round which the whole family squat. We visited several wigwams, and seldom heard them converse amongst themselves; but, when they did speak, their voices sounded very harsh and discordant. In Darwin's 'Voyage of the Beagle' he says: 'Captain Cook has compared it to a man clearing his throat; but certainly no European ever cleared his throat with so many hoarse, guttural, and clicking sounds.'

"Ooshooia, the headquarters of the Fuegian mission, under the able superintendence of Bishop Sterling, is picturesquely surrounded by lofty mountains, the snowy peak of Mount Darwin towering in the distance. On landing, we were agreeably surprised at finding such a snug little colony, with its well-made wooden houses, and gardens adjoining, proving the industry and ability of the civilised Fuegian. The church, school-house, and orphanage were visited. At the orphanage we were shown some twenty healthy-looking, neatly-dressed orphan girls, under the benevolent care and management of the matron, Mrs. Hemmings. These children had been rescued from misery and destitution, in various parts of this wild country, to be taught Christianity and to become useful housewives. The boys are placed under training at Keppel Island (Falkland Islands) when quite young; they are taught English, to read and write their own language, carpentering and other occupations, to fit them to be useful settlers on returning to their own country. I was conducted at this place (Ooshooia) on a shooting trip by a grandson of the original Jemmy Button, who, it will be remembered, was taken to England by Captain Fitzroy and was brought back again in the Beagle. He was particularly proud of his parentage, and was certainly the most intelligent Fuegian I had spoken with.

"The last place touched at was Banner Cove, where still remain traces of the sad fate of Allen Gardner, late Commander R.N., the original founder of the South American Mission; who, with his companions, perished in September, 1851, of hunger and privation, at Spaniard Harbour, Tierra del Fuego. Their bodies or skeletons, after some fruitless efforts, were found in January, 1852, by H.M.S. Dido, and were then reverently committed to the grave on the scene of their terrible sufferings, borne with noble fortitude. That the Mission has done an immense amount of good anyone can see who may visit this country. The difference between the civilised and the uncivilised Fuegian is very striking, especially in their behaviour to shipwrecked crews, who in former years were tortured and killed; whereas now they are treated with kindness, and are conducted to places of refuge. Indeed, such was the fear that shipwrecked mariners formerly had of the savage islanders here, that some have killed themselves rather than fall into their hands."

We are much indebted to Surgeon Canton for this very interesting description of remote shores and people rarely visited; and for the use of his sketches and photographs, furnishing the Illustrations that appear on another page. It is long since we received any such precise account from that singular region of the Far South in the western hemisphere.

AN OLD UMBRELLA.

HY has no poet commemorated in immortal verse that most faithful of friends, the Umbrella? Bards have sung with more or less of the true "lyric cry"—an exquisite phrase, which I borrow from the new criticism—their sofas and their old arm-chairs, their old clocks on the stairs and their time-pieces, their old firesides, their old wines, and their old wives (in about equal terms of rapture!); but they have left the old umbrella to the disparagement of the cynic and the ridicule of the humourist. It is time to protest against this injustice, and to rehabilitate the victim of a selfish ingratitude. The umbrella, as everybody knows, comes of a fine antiquity; counts more centuries of honour than the Guelph or the Hapsburg—in fact, was borne aloft by sturdy arms long before Athens had reared her Areopagus, or Rome thrown its iron embrace round a silenced world. In the East it invested its possessor with the power and pomp of royalty—to wit, the golden umbrella of the King of Ashantee—and was for ages an object of terror to thousands of trembling mortals! Having an aversion to "ruddy gore," I know little of the new African school of fiction or travel (I do not pretend to determine "which is which"); but I fancy a pretty story might be made of a gallant young Englishman, equipped with one of Fox's Paragons, dropping down suddenly into the midst of a tribe of African savages, and there and then being acknowledged as King in virtue of his umbrella! The reader knows, of course, that the Greeks, in their processions, carried a *skiadeion* over the head of their liberal god, Dionysos; and that the patrician women of the Eternal City shaded their charms with an *umbraculum* when they appeared in the theatre. He knows the old tradition that the umbrella came into London early in the eighteenth century, and some fifty years later was popularised by the courageous persistency of Jonas Hanway. But it was certainly familiar here at a much earlier date, as references to it occur in Ben Jonson, in Drayton, and in Beaumont and Fletcher. On this head, however, I say no more. Enough to have reminded the reader that the umbrella, even if considered historically, is to be regarded with the reverence we English pride ourselves on reserving for things of high descent and ancient pedigree.

But it is on moral grounds I stand up for the umbrella, which has so often stood up for me. With what fidelity it serves its owner, alike in sunshine and in rain; sheltering Amelia's complexion from a too ardent sun, and her mantle from a too hasty shower! Then, how true a friend it proves to the man who uses it well! How many a snow-storm it enables him to face! How many a gale it helps him to buffet! How firmly it stays his steps down a rapid incline! Your umbrella is no mere fair-weather acquaintance: it sticks fast to you in adverse circumstances, and is sometimes blown "inside out" in the energy of its efforts on your behalf. I confess I have but a poor opinion of a man who thinks lightly of such services as these. I should suspect him to be fit for treason, stratagems, and spoils. For what more *would* he have? What more has he a right to demand? And yet, when his old companion begins to show the results of the wear and tear of its active existence—when its poor ribs are bent and battered, and perhaps even broken by the stress of its experiences; when the gloss has departed from the silk epidermis that once shone so brilliantly; and the once natty brass ferrule is worn to a stump—the man has the baseness to fling it aside contumeliously, to let it moulder in some cobwebbed nook, or to hand it over to his valet, who probably disposes of it to some second-hand dealer, and then—but its after-fate is too painful to dwell upon! One could hardly believe men capable of such ingratitude, if it were not for the pathetic examples that force themselves upon one's notice daily.

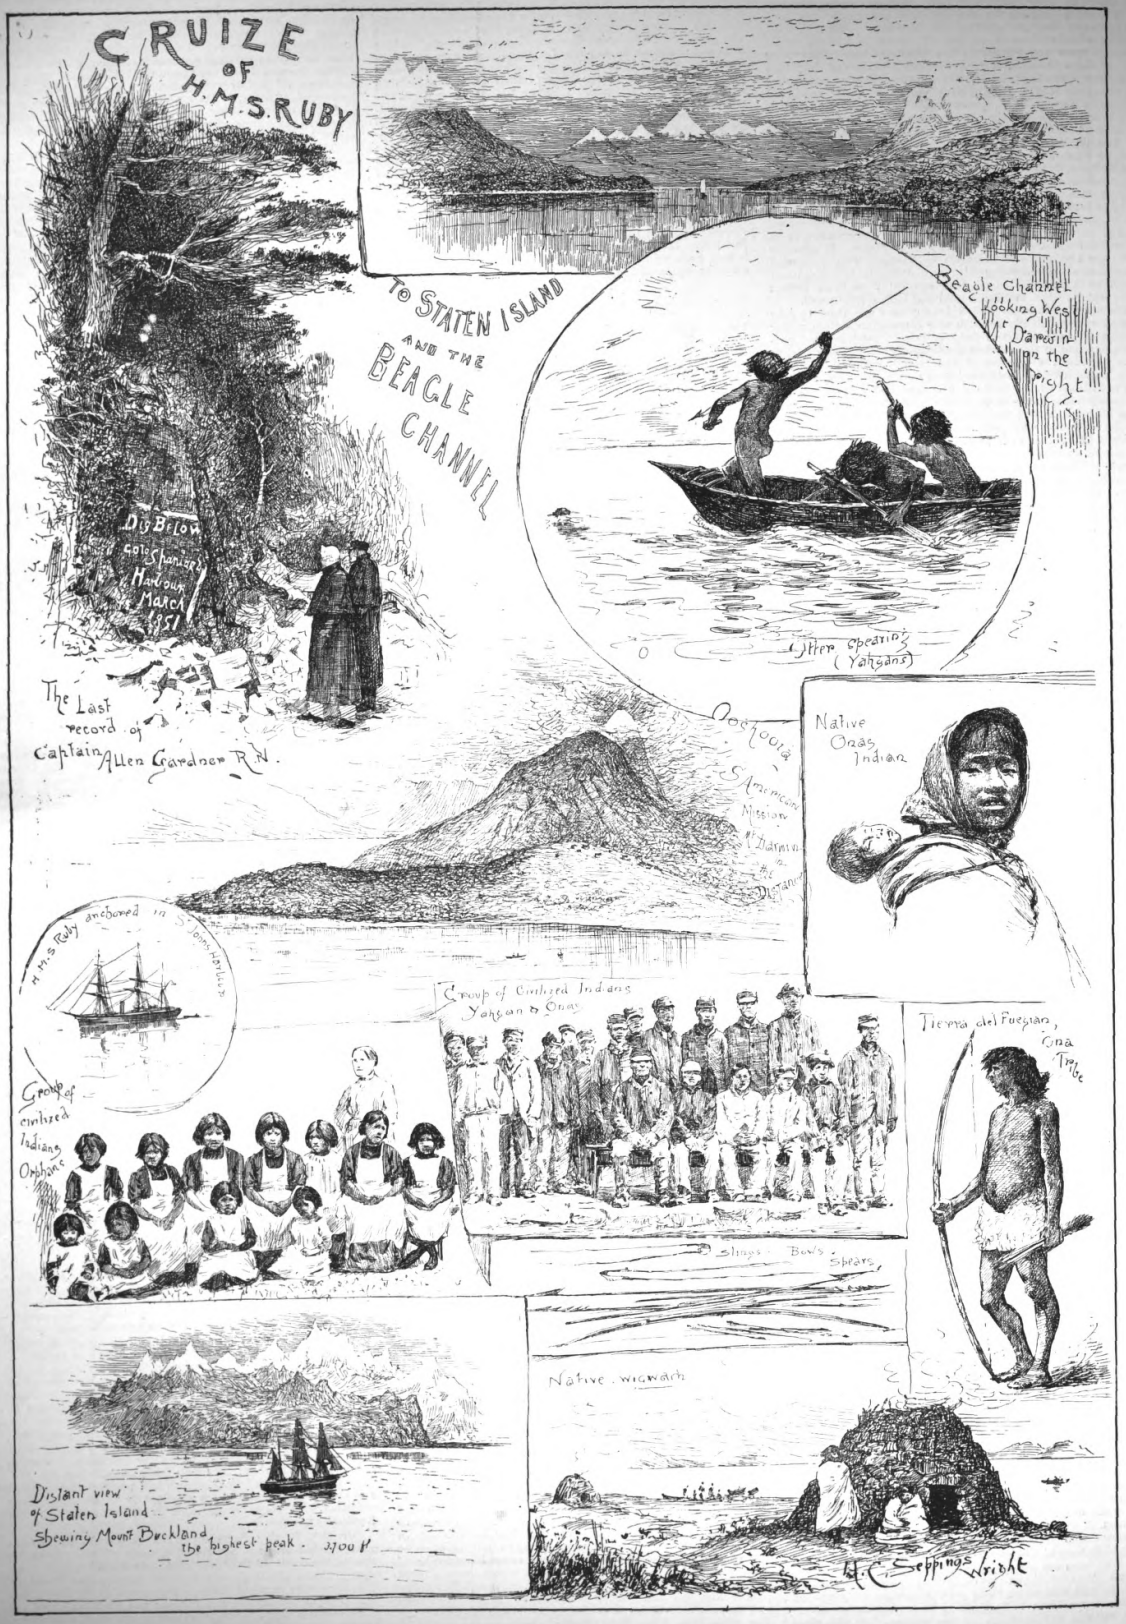
A right-minded and true-hearted gentleman, with a just conception of what the moral law requires, and a lively sense of the duty he owes towards all who render him faithful service, will act in no such heartless and disgraceful fashion. He will bethink him of the old motto, *Noblesse oblige!* He will remember the claims of old companionship. The worn and tattered staff—now as ragged as the emblem of the famous king-making Earl of Warwick—was with him, he recollects, in the vigour of its youth, that grey morning in October when he was overtaken by the mists among the rugged precipices of Morven and, but for its opportune aid, would have slipped down headlong into an unsuspected ravine. It accompanied him up the Nile to the sacred island of Philæ, and supported his steps over the sandy wastes of Luxor. It was with him when he visited the picturesque eyries of the Engadine, and he clasped it firmly in his hand when he trudged through the gardens and vineyards of Provence. In less ambitious excursions it has never failed him. Does he not recall the saloon-deck of the Columbia, the cosy corner behind the paddle-box, the sudden pelt of rain as the pleasure-ship steamed through the Kyles of Bute, and the picture of himself—*and another*—sheltered beneath its concave roof? Oh, never was Cleopatra happier under the silken canopy of her barge upon the Cydnus than he—*and she*—under that old umbrella! And that night, too, at the Lyceum, when the family carriage was missing, and again the welcome shower descended, and once more the old umbrella warded the raindrops off a fair girlish head, as he—*and she*—walked homeward, rejoicing! Its grateful owner, as memory yields these and other touching reminiscences, vows it shall hold an honoured place among his heirlooms and trophies until the end of the British Empire and—of Time.

There is much character in an umbrella; that is to say, it assumes to some extent the character of the man who owns it. In the janitor's cage at a great exhibition you will sometimes see a whole collection of umbracula, and will find it interesting to study their idiosyncrasies. The sturdy, the defiant, the aggressive, the susceptible, the retiring, the insinuating—all are there! Remember Mr. Brown's umbrella in Bulwer Lytton's "Disowned"—it was a part of the man; and Micawber's umbrella in "David Copperfield;" and Quilp's in "The Old Curiosity Shop"—what individuality in each! Some of my middle-aged readers may not have forgotten Adelphi Wright's umbrella in "Paul Pry." Was ever anything more provokingly inquisitive? It seemed to partake of the curiosity of its master—thrust itself in before him everywhere—poked its ferrule into everybody's business. This leads me to the obvious remark that the stage as yet has done little with, or for, what *should* be a most effective property. If Mr. Vincent Crummles relied on a pump as the foundation of a domestic drama, how much more might be made of the umbrella, treated realistically! Or, again, what a subject it would supply for a "shilling shocker"! What tragedies it may have witnessed, what scenes of anger, jealousy, revenge! Or it might be treated in the Dr. Jekyll and Mr. Hyde manner; for no doubt an umbrella *does* seem possessed of a second self when exposed to the violence of a north-easter. A good deal, it is clear, remains to be done with the umbrella.

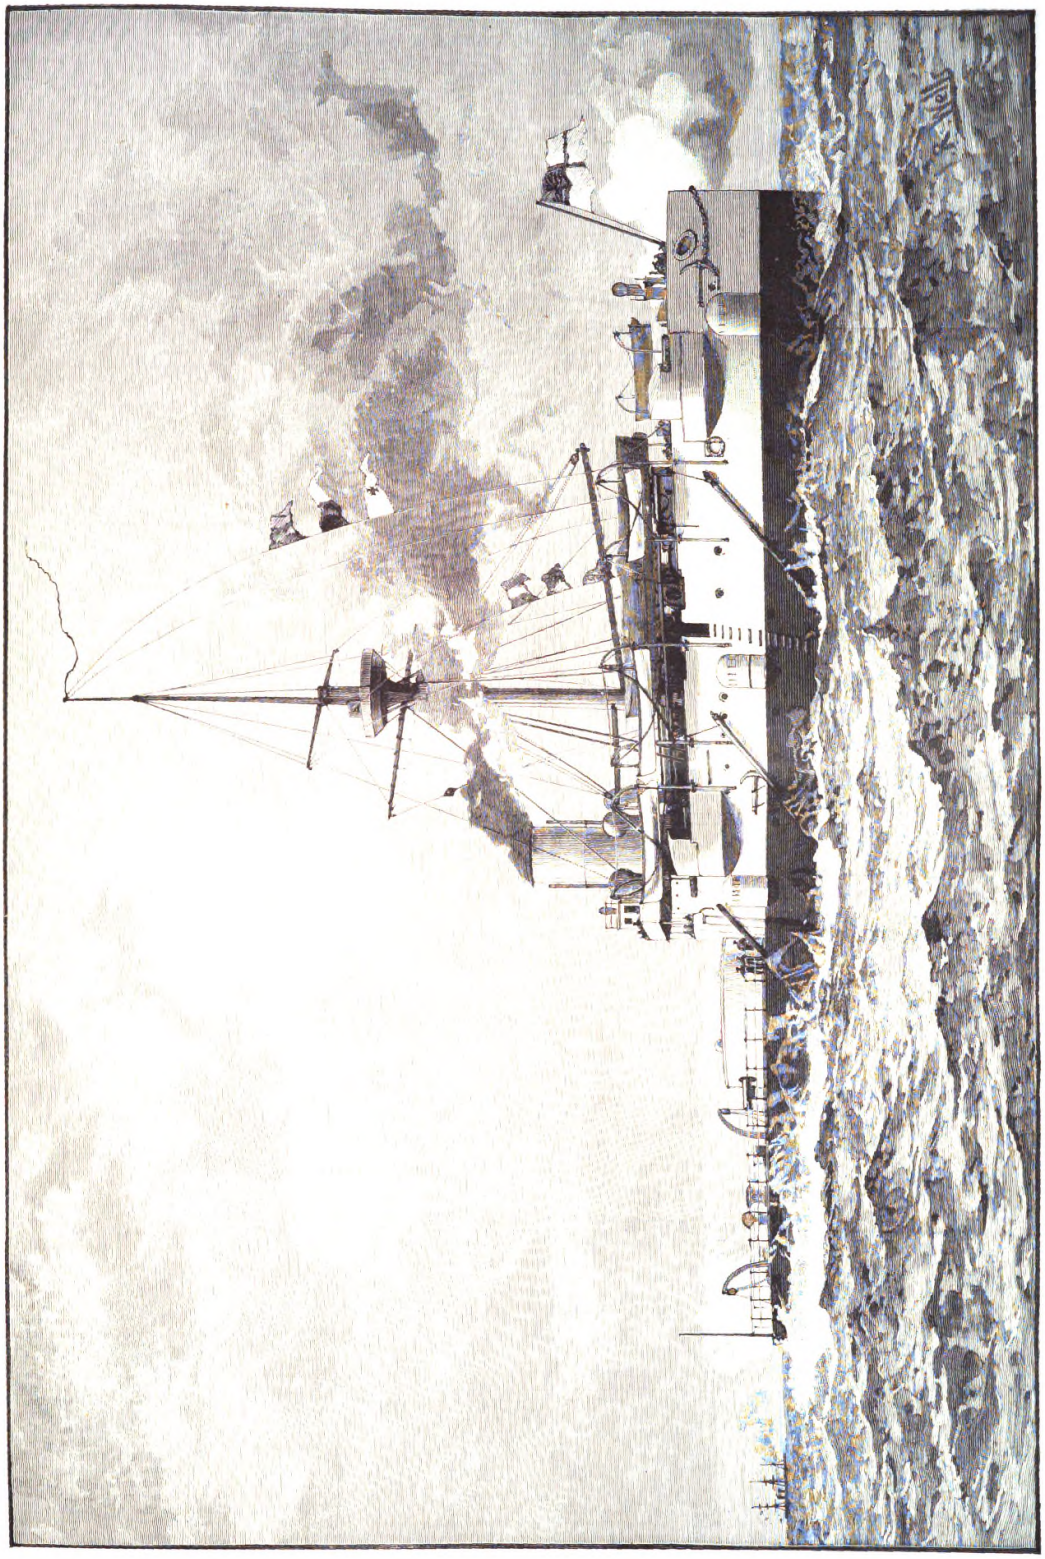
But with *your own* umbrella, most gentle reader, there is only one thing to be done—*keep it!*

W. H. D.-A.

THE CORAL INDUSTRY OF LEGHORN.



The French Consul at Leghorn in a recent report states that the coral industry has long flourished in Italy, its chief centres being Naples, Genoa, and Leghorn, but in recent years it has been declining. The price, which in 1883 was 800f. per kilogramme for wrought coral, fell to 600f. in 1884, 400f. in 1885, and was down to 200f. in 1886 and 1887. The export from Leghorn, which was valued at 11,298,400f. in 1883, amounted only to 3,104,600f. in 1886, while in quantity the exports increased in these years by ten per cent. There was a little improvement in 1887, but this is not believed to have been permanent. The great fall in price, which is ruining the industry in Leghorn, is attributed to the large supplies which come from Sciacca, in Sicily, and it is believed that these are due to some kind of submarine disturbance having put the coral where it is now obtained. Raw coral of medium quality has fallen in price from 10f. per kilogramme to 3f., and even less. The Consul himself saw poor Sciacca coral sold for 50 centimes the kilogramme. Ten years ago this would have cost about 8f. The most flourishing year for the coral industry was 1880, when the Sciacca reef was discovered. The greater part of the coral manufactured in Leghorn is sent to Russian Poland, Finland, Russia, the Balkan Peninsula, Asia, and Africa. From the most ancient times every country has had its favourite shape. In spite of the universal fall in prices, the best worked coral is still dear. A perfect piece, of dark colour, about the size of a pigeon's egg, is still worth 800f. to 1000f.; ten years ago it would have cost 1600f. to 1800f. Special pieces such as this are chiefly used to decorate the caps of mandarins or the turbans of wealthy Mussulmans. The red, whitish, and generally the light colours are less prized than the dark ones. The export to some countries has declined, because coral is now less used for money than it was; but still considerable quantities are sent to Abyssinia, the Congo, India, Ceylon, the Cape, Siberia, Japan, and China. The merchants themselves cannot tell how coral is used in all these countries. It is believed that it is used to decorate arrows, lances, &c., and also that the bodies of important persons are adorned with it after death. Peasants in Central Italy at one time used it to ornament their persons, because they knew that it could easily be turned into money when necessary; but now they do not buy it with this idea, since the fall in prices has been so great. Many houses in Leghorn in the trade are already shut up. Ten thousand women were employed in the industry, nearly all of whom work at home; the number now is about half of this. Yet nearly double the quantity is now exported than in 1882, but it is of inferior quality and receives less handwork. No machines are used, nor are there any mechanical processes in connection with the manufacture. The women give the required forms to the pieces by hand. The women get from 7d. to 15d. per day. In Europe coral is in little demand; it seems to have a special suitability for barbarous and semi-civilised peoples.



The Bishop of Marlborough has been presented with a silver salver and candlestick, subscribed for by the clergy and laity of the diocese of Exeter as a token of their regard and esteem on his resigning the Archdeaconry of Totnes. The presentation was made at the palace by the Bishop of Exeter.

Mr. Ritchie, president of the Local Government Board, was presented with the freedom of the Burgh of Dundee on Oct. 13, and, in reply, he acknowledged the assistance which he had received from men of all parties during the passage of the Local Government Bill through the House of Commons. He hoped that the members of the new councils would be elected irrespective of party feeling.

At Chester Police-Court the Chairman of the Bench, Mr. H. W. Brown, has presented Dr. Thelwall, of Farndon, with the Royal Humane Society's medal for conspicuous courage in saving life. On Aug. 28 a man flung himself into the Dee, when it was in flood. Dr. Thelwall was passing, and jumped into the river and brought the man ashore in an unconscious condition. He then set to work to restore animation, and eventually succeeded.

Mr. H. C. Burdett, Secretary to the Share and Loan Department, Stock Exchange, has issued a table which exhibits the state of the National Debt now that Conversion has been completed. From this it appears that the existing New Two-and-Three-Quarters per Cent Consols amount to £514,313,570, and that there is £42,464,052 Old Consols and Reduced Three per Cents outstanding. As regards these unconverted remainders, the Chancellor of the Exchequer gave notice in July last that at the end of twelve months from date they would be paid off when and how it pleased him, in amounts of not less than £500,000 at a time.

THE TWIN-SCREW BATTLE-SHIP HERO.

H.M.S. HERO.

The twin-screw battle-ship Hero, recently added to the Navy, is of the Conqueror type. She is built of steel, and carries a single turret 22 ft. in diameter. In this turret are mounted two 45-ton breech-loading guns. She has also four six-inch guns, on sponsons, twelve quick-firing, and several machine guns. The armour-plating is 12 in. thick on the sides, and 14 in. on the turret. The dimensions of the ship are—length, 250 ft.; beam, 58 ft.; displacement, 6200 tons. She has engines of 6000-horse power, which give her a speed of between fifteen and sixteen knots an hour. The bunkers will carry 620 tons of coal, which, at a ten-knot speed, will carry her over 5000 miles. During the recent manœuvres the Hero was attached to Admiral Tryon's squadron. She will now take up her position at Portsmouth as tender to the Excellent. This ship was constructed, at Chatham, with greater celerity than any other ironclad, either in private or public yards. There has been a saving of £20,000 over the cost of her sister-ship, the Conqueror, which was two years and eight months in hand, whilst the Hero has been turned out in eighteen months and six days. Another vessel of the class of belted cruisers, the Immortalité, is to be shortly commenced.

MUSIC.

As already intimated, the thirty-third series of Saturday afternoon concerts at the Crystal Palace was inaugurated on Oct. 13. The programme comprised Mozart's overture to "Die Zauberflöte" and Beethoven's First Symphony (in C major), and two pieces given for the first time at these concerts. These were an overture, by Mr. Hamish MacCunn, entitled "The Dowie Dens o' Yarrow"; and "España," a rhapsody, by M. Chabrier. The overture (which had been previously heard elsewhere) is the production of a young Scottish musician, who has recently attracted much attention by several compositions evidencing great aptitude for the command of orchestral variety and dramatic effect. The work now referred to gives further proof thereof, and it met with an enthusiastic reception. The rhapsody is reflective of the national character implied by its title, and may have to be spoken of again when better placed than at the end of the concert. Another instrumental piece in the programme referred to was Liszt's elaborate, eccentric, and difficult pianoforte concerto in E flat, which received a highly skilful interpretation from Mr. Fritz Hartvigson. In this and in the orchestral pieces, the band, conducted by Mr. Manns, maintained its reputation. Vocal pieces were contributed by Mdlle. Gambogi.

Mr. Freeman Thomas's Promenade Concerts at Covent-Garden Theatre closed—as we have previously intimated—on Oct. 15, with a special performance for his benefit. At the last of the classical nights during the previous week Mrs. Dutton Cook (who, as Miss Linda Scates, was a distinguished pianoforte student of the Royal Academy of Music) played Weber's Concertstück with sound taste and judgment; and Mr. Bernard Carrodus (son of the eminent violinist) executed two solo pieces by Wieniawski with special effect. Madame Belle Cole and Mr. H. Piercy were the vocalists, and the programme included sterling orchestral music worthily rendered.

The little theatre in Great Queen-street, Holborn (formerly called the "Novelty" and now entitled the "Jodrell"), was announced to reopen with performances by the Russian National Opera Company. The concerts recently given by the company at the Royal Albert Hall have been noticed by us. In their new venture they have the advantages (before wanting) of dramatic action and scenic surroundings; although the locale chosen is of very limited capacity for the presentation of grand opera. Of the performances we must speak hereafter.

The arrangements for the so-called festival at Hanley on Oct. 11—a tentative experiment with a view to more extensive operations in future—have already been given by us in detail.

Madame Adelina Patti recently gave a concert at Swansea, for the benefit of the hospital there and of the poor around her castle of Craig-y-nos; this occasion having been one of several on which the great prima-donna has exercised her rare gifts for similar benevolent purposes. Her own incomparable performances, and the co-operation of other eminent artists, combined to realise an attractive and varied programme.

THE BRISTOL FESTIVAL.

We have previously given details of the arrangements for this event, which closed on Oct. 19. These celebrations are of comparatively recent institution, this having been the sixth triennial occasion. As with the older established festivals (those of the three cathedral cities of Hereford, Gloucester, and Worcester; and of Birmingham), the Bristol performances are given with a benevolent purpose; in this instance, in aid of important local medical institutions by which large benefits are bestowed on the many in need of them in the locality and neighbourhood. Bristol has not, as yet, greatly distinguished itself, as Birmingham has, in the production of grand works especially commissioned for the festival; but, on the other hand, the programmes include many important compositions, sacred and secular, and the means for their interpretation are of adequate extent and efficiency.

As we have already given particulars of the arrangements for the festival which closed on Oct. 19, but little remains now to be said beyond recording its commencement, when the programme for the morning consisted of "Elijah," that of the evening miscellaneous concert having comprised many interesting vocal and instrumental pieces, among them having been a selection from Gluck's opera, "Iphigénie en Tauride," and Schumann's pianoforte concerto in A minor, played by Sir Charles Hallé.

The performances generally must be referred to hereafter, when brief notice will suffice, the works performed, although strong in interest and variety, having all been more or less familiar.

At Charing-cross Hospital medical school, the scholarship of fifty guineas open to students of the Universities of Oxford and Cambridge has been awarded to Mr. Albert Carling, of St. John's College, Cambridge. The entrance scholarship of 100 guineas has been awarded to Mr. William Escombe, and that of fifty guineas to Mr. Percy J. Probyn.

Conferences attended by members of the National Association of Certified Reformatory and Industrial Schools have been held in the lecture-room of the Society of Arts, Adelphi, to consider the provisions of the Reformatory and Industrial Schools Bills introduced into the House of Lords by the Government, a number of amendments being suggested.

Alderman Turney, the Mayor of Nottingham, unveiled on Oct. 12 a statue of the late Mr. Samuel Morley, which has been erected at the top of Market-street, Nottingham, by public subscription. The inscription reads:—"Samuel Morley, member of Parliament, merchant, philanthropist, friend, social reformer, Christian citizen." The Mayor entertained the delegates to the Congregational Union to breakfast before the ceremony, and then a procession was formed to the statue. Ten thousand persons were present.

CHESS.

TO CORRESPONDENTS.

Communications for the department should be addressed to the Chess Editor.

F W Newman.—The mistake did not appear in our report, so we have taken no notice in regard to your letter. We have no room to give names in extenso.

J W Young.—We cannot answer by post. The paper you mention is as good as it is; but you had better subscribe to a monthly magazine, either the *British Chess Magazine* or the *Chess Monthly*.

J W Walton (Bath).—Thanks; the game is under examination and, if approved of, shall be published.

Miss M C (Brixton, Perth).—The solution certainly appeared; but, to save trouble, we repeat it here: 1. Q to Q R 8th, K to B 6th; 2. Q to R 8th, mate. The other variation is correct also.

C L S (Camden Town).—The expression "I adjust" must be used before touching a piece, and expresses only the intention to readjust its position. Once a piece is moved, it must be moved, except by accident, it is not to be moved.

A D G.—Neither side can be compelled to do anything different, and the game, in the case mentioned, is drawn.

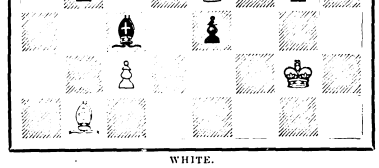
B Davey (Plymouth).—(1) White has three full moves to mate in. (2) No, 15. No, but you might arrange a game by correspondence.

G T Edwards, R E Elliott, B Davey, J Gaskin, W L, and others.—Problem No. 2321 can be solved in two moves as you point out, but it was very far from the author's intention.

Courtney.—The problem shall be re-examined and reported upon very shortly.

Correct Solutions of Problem No. 2319 received from G J Veale; of No. 2320 from Amateurs of Weddle's Hotel, F C Cook (Ealing), Quothiune (Leeds), L Desanges, Jack o' Both, T Lovell, J Goldie (Junior), and P B Gibbs (Plaistow); of No. 2321 from Mathetes, Dona John (East Manchester), W T Smith (Hailsham), Felix Robin, C, W Von Bevern (nil), J G Grant, and A W Hamilton Gell.

Correct Solutions of Problem No. 2322 received from A G Bachot, Martin F, J Dixon, A Newson, Retreward, R Worters (Canterbury), E Casella (Paris), W H Hicks, E Lucas, Retreward, A T Roberts, E Philips, Amateurs of Weddle's Hotel, G J Veale, Dr. Gustav Waltz (Heidelberg), Columbus, John G Grant, Down, W Wright, Mrs. Kelly, Shadforth, Peterhouse, Ruby Rook, W Von Bevernhuit, F C Cook (Ealing), E Louden, D McCoy (Oswin), Anglum (Lyme Regis), T G (Ware), Dr F S, J D Tucker (Leeds), Quothiune (Leeds), W R Baillieu, D T (Ben Rhydding), Thomas Chown (Brighton), Percy Ewen, H Brooks, and H S Brandreth (Highbury).



SOLUTION OF PROBLEM No. 2320.

WHITE.	BLACK.
1. Kt to Q 6th	Any move
2. Mates accordingly.	

PROBLEM No. 2324.

By Mrs. T. B. Rowland.

BLACK.

WHITE.

White to play, and mate in two moves.

The *English Mechanic* Problem tourney has resulted as follows:—For mate in three moves: First prize, G. J. Slater; second, E. J. Cooper. For mate in two moves: First prize, T. Taverner; second, A. Boline. The solution contest ended in a tie between three competitors for each prize. We give below the problems which secure first honours:

White's K at Q B 2nd, Q at Q B 6th, R at Q R 4th, Kts at K 4th and 1 K R 8th, P at K B 6th.
Black's K at K B 6th, P at K Kt 6th and Q B 6th.
White to play, and mate in three moves.

White's K at K R 2nd, Q at Q R 7th, R at K 5th, Kt at Q 6th, B at K R 8th, P at Q B 2nd and Q R 5th.
Black's K at Q 5th, Kts at Q Kt 3rd and Q Kt 5th, P at Q R 7th.
White to play, and mate in two moves.

Mr. G. J. Slater, whose success we have just recorded, announces for early publication a collection of problems, under the title of "Slater's Selected Stars." Mr. Slater's merits as a composer are so well known that the work ought to meet with a great demand, especially as a large proportion of the problems will be those that have won prizes in various competitions. An introduction illustrative of problem composition is also promised, in which the subject is to be dealt with on an entirely new basis.

On Monday, Oct. 8, Mr. J. H. Blackburne played eight simultaneous blindfold games against the same number of members of the City of London Chess Club. Commencing shortly after six play continued, save for a brief interval at nine p.m., till the last game ended at 11.30, when Mr. Blackburne scored, without apparent fatigue, the feat of winning five games and drawing three. The attendance was large, and the result received with much applause. On the Friday preceding, Mr. Blackburne gave an exhibition of simultaneous play over the board, when he won eighteen games, drew two, and lost one.

An open handicap tournament is announced to commence at Simpson's on Nov. 1. About twenty entries are expected, including (subject to engagements) J. H. Blackburne, C. Von Bardeleben, C. Müller, F. Lee, W. H. K. Pollock, and H. E. Bird. Mr. Hoxley, of Simpson's, is hon. treasurer, and the company head the list with a subscription. All further information can be obtained, either personally or by letter, of the hon. secretary, Mr. Bird.

We have received the sixth annual report of the Brighton Chess Club, which deals with a singularly successful year, not one of its inter-club matches having been lost. The Championship Cup was again taken by Mr. H. W. Butler, and the Handicap Cup by Mr. T. Smith. Altogether the club seems to be of considerable strength, and its prosperity speaks well for the energy of its executive.

The fourteenth annual meeting of the Manchester Athenæum Chess Club was held on Oct. 2, when the committee's report and the treasurer's account were presented, and both proved of a most satisfactory order. There are about 100 members on the books, and a full programme of engagements was got through with marked success. Mr. C. A. Dust won the open handicap, and the prizes of the junior handicap were divided after a second tie. A new programme, of much interest, has been arranged.

We have also received reports of the chess clubs at Hanley, Battersea, and Plymouth, which tell the same tale of progress and prosperity, and bear striking evidence of the marked interest in the game which is now shown in all parts of the country.

SUBSCRIPTION TO THE ILLUSTRATED LONDON NEWS.

AT HOME.

Twelve months (including Christmas Number), £1 9s. 3d.
Six months, 14s. Christmas Half-Year, 15s. 3d.
Three months, 7s. Christmas Quarter, 8s. 3d.

Copies will be supplied direct from the office to any part of the United Kingdom and the Channel Islands, for any period, at the rate of 6½d. for each Number, paid in advance.

ABROAD.

The yearly subscription abroad, including the Christmas Number, is £1 16s. 4d. on thin paper, £1 12s. 1, with the following exceptions:

To Abyssinia, Aden, Bechuanaland, Borneo, Ceylon, India, Java, Labuan, Penang, Philippine Islands, Sarawak, Siam, Singapore, and Zanzibar, £2 1s. on thin paper, 31s.

To Diego Garcia and Madagascar (except St. Mary and Tamatave), £2 8s. on thin paper, £1 16s. 4d.

Subscribers are specially advised to order the thick paper edition, the appearance of the engravings on the thin paper copies being greatly injured by the print at the back showing through.

Newspapers for foreign parts must be *posted* within eight days of the date of publication, irrespective of the *departure* of the mail.

Subscriptions must be paid in advance, direct to the Publishing Office, 198, Strand, in English money; by cheque, crossed "The Union Bank of London"; or by Post-office Order, payable at the East Strand Post Office, to Ingram Brothers, of 198, Strand, London.

SCIENCE JOTTINGS.

THE FALL OF THE LEAF.

The time of the "golden reaping" is over, and the tints of the autumn season already deck the face of the land. It is a peaceful time, this autumnal period—to my mind the most peaceful of the year. Spring is, in itself, a time of natural bustle and preparation. All is activity in the world of plant-life. The sap is maturing, and its products are bursting forth in the shape of swelling bud and expanding leaf. Summer is also a season of unrest. Nature has much to do in the "rosy time of the year." After the leaf comes the flower, and it is a great and important business this, of spreading petals, of issuing invitations to the insects, of fertilisation, and of forcshadowing the fruit. Winter is all gloom and chill. Plant-life has either died out, or has gone to sleep beneath the snow. But for the hardy evergreens, there is no sign of vitality on the earth. So these three seasons are neither restful nor show the great virtue of patient quiescence. But with autumn, how different things seem. Now you have the repose of Nature, and the mellow rest of the year. Activity is over, and you have come to the time of quiet fullness. Seed-time and ripening have passed away, and reaping-time itself has just gone by. As you sit on the lawn this autumn evening the spirit of rest sinks into your heart and mind; the world is almost lulled to sleep, but a flood of memories, mostly grave, rushes across the vista of your past. The rooks have gone to sleep earlier than usual this evening, and only a very late swift or swallow disturbs the evening air with the light whirr of its wings. Our lives repeat the seasons in their changing years; but the time when the tints deepen and the rich browns and purples replace the green hues of the summer days, brings all its own delight in the sweet "harvest of a quiet eye."

There is not a leaf round or about us to-night, save those of the evergreens, which does not speak of the waning of the life of the year. Primarily, think of a leaf and its uses. Between two delicate skins you find enclosed a multitude of the microscopic bags or sacs we name cells. On the upper side of the leaf these cells are long, and placed close together. From their resemblance to the arrangements of the slats in a close paling, these upper cells form what is known as the "palisade" layer. They are full of the green colouring matter which botanists know as chlorophyll. This, indeed, is why the upper side of a leaf is coloured of a darker green hue than its under surface. You have more chlorophyll above than below. It is leaf-colour, not sunlight, which makes the difference you have noted. Below this upper and close layer of cells you find a second layer. There the cells are loosely set together. Between them there are numerous gaps and spaces, and you can see, in a microscopic study of a leaf, that many of these spaces open on the under surface of the leaf in curious little apertures, called *stomata*. Existing by thousands on the under surface of leaves (there are more than a million on that lime-tree's leaf) each of these little mouths is really an opening bounded by two half-moon-shaped cells—the "guard cells." These mouths close in dry weather, but open in damp weather to allow the excess of moisture to escape from the plant. They are intimately connected, you observe, with the life and nutrition of the plant, and, in truth, the whole leaf is part and parcel of the plant's digestive economy.

But enough of leaf-structure. I merely dip into plant-anatomy to give you an idea of the complex nature of the foliage; and you will be the better able to realise the magnitude of the fall of the leaf when you know what a leaf really is. For a week or two past you have been watching the changing hues of the foliage; these changes are the signs of true death. The water which, absorbed by the roots, is carried up to the leaves to play its part in the plant's nourishment, contains minerals dissolved therein. This mineral matter remains behind: it chokes and clogs the vessels and cells of the leaf until, in the autumn-time, the leaf becomes cut off from all sources of nutritive supply. When leaves fall and decay you note that they must return to the soil the minerals stolen from it by the roots of the plant. By its death the leaf therefore returns, like the animal itself, to the matter whence it arose. Then, *pari passu*, come those changes in colour which precede the death of the foliage. You see the yellow of the birch and the willow; here and there you behold the red tint of that climbing vine; and the wood beyond is varied enough in its autumnal dress. How these tints are produced is, perchance, not yet quite a matter of botanical certainty. The green colour becomes chemically acted upon, and it may be that it is resolved into other substances after all. But here, as elsewhere, that we call decay is only change. You cannot destroy matter, you only change and alter its form. Nature herself teaches us the same wholesome lesson. That dead leaf, which will shortly decompose and vanish away, preaches nevertheless, when we know its history, the great truth that it has not been annihilated, but that its matter in fresh combinations will contribute to the welfare of the foliage with which the warmth of next spring will deck the trees.

Then the leaf falls. In some trees, leaves persist for years. That Scotch fir may keep its leaves for four or five years; in other firs, they are said to remain for ten or twelve years. But these are dry, solid leaves, and stand somewhat outside the category of those whose fall is heralded by the lengthening nights. Think of your leaf when it was displayed in all the glory of its full development, with broad green blade and lusty stalk. That stalk is a direct continuation of stem or branch. Into its substance, and thence into the leaf, pass the vessels or fibres which become the "veins." When autumn approaches, however, you observe a change to occur in the hitherto strong attachment between leaf and branch. As animal structures decay and wax old, as bones become more brittle and as blood-vessels develop rigid walls in place of their former elastic boundaries, so we have observed the leaf to become clogged with mineral matter. Then succeed changes of more intricate nature. Between the stalk of the leaf and the branch on which it is borne, a layer or two of cells is found to become affected by the stoppage of the leaf's food-supply. In this layer the cells become disintegrated; they undergo dissolution, and thus come to constitute a kind of barrier-line between the leaf-stalk and the branch. It is the old story this, of "the little rift within the lute," which by-and-by will silence the harmony of Nature's vital activities. Next, this process of disconnection deepens. The cells and fibres of the leaf-stalk begin to decay at the barrier-line which has been marked out from within. A faint mark shows where the leaf and the branch will part company. In some leaves, indeed, you may see this line of disjunction early enough in the season. Then, on each side of the line within, at the joining of leaf-stalk and branch, the cells become hardened. The stalk then gives way, the dead leaf flutters to the ground, and only a scar—but a scar that is healed in truth—remains to mark the place where once grew the living item of the tree-economy. Even in her measures for the separation of tree and leaf, Nature shows a kindly phase. There is no rudeness, harshness, or severity, but only a mild process of gradual separation and almost invisible decay when the leaf falls and flutters to the ground.

Andrew Wilson.

WILLS AND BEQUESTS.

The will (dated July 7, 1884), with a codicil (dated Nov. 15, 1887), of the late Mr. Charles Markham, J.P., of Tapton House, Chesterfield, Derbyshire, who died on Aug. 30 last, has been proved in the Principal Registry by the executors—H. W. K. Markham, the nephew, Mrs. Rosa Markham, the widow, and Charles Paxton Markham and Arthur Basil Markham, the sons, the value of the personal estate being sworn under £233,900. The testator gives legacies of £500 each to his widow and his nephew and executor, H. W. K. Markham, and devises his house and grounds at Tapton, and the whole of the effects therein, to his widow, Mrs. Rosa Markham, for her life, and after her decease to his son C. P. Markham, subject to a charge of £6000 on their marriage settlement. The testator further directs the sum of £55,000 to be set aside and invested for his widow, for her life; two sums of £20,000 each for his two daughters, Geraldine and Violet; and £6000 to his sister, Mrs. Mary Lovell. The residue of his estate is directed to be divided in equal shares between his two sons, above mentioned, C. P. Markham and A. B. Markham.

The Scotch Confirmation, under the seal of the Commissary Court of Elgin and Nairn, of the last will and testament (dated Nov. 30, 1887) of Lady Anne Pitcairn Gordon-Cumming, late of Altyre and Gordonstown, in the county of Elgin, who died on Aug. 18 last, granted to Sir William Gordon Gordon-Cumming, Bart., and Walter Frederick Campbell Gordon-Cumming, the executors nominate, was resealed in London on Oct. 8, the value of the personal estate in England and Scotland exceeding £14,000.

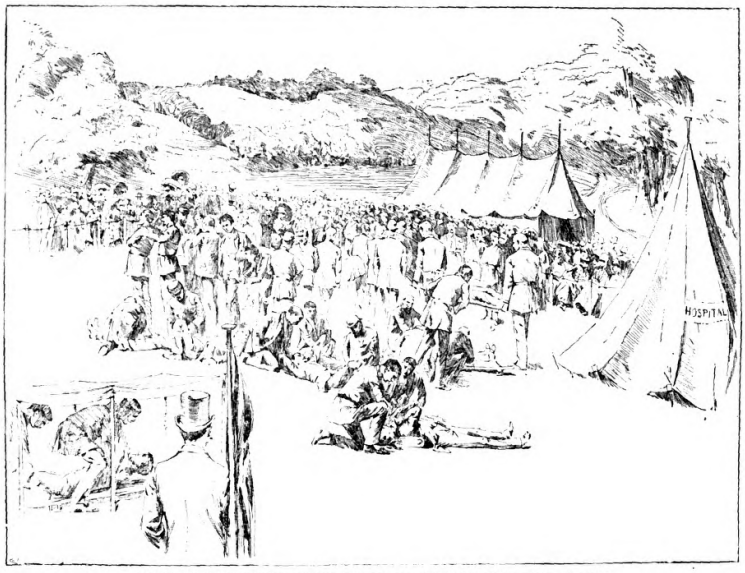
The Scotch Confirmation, under the seal of the Commissary Court of Elgin and Nairn, of the trust disposition and settlement (dated Feb. 21, 1877) of the Rt. Hon. James Ogilvie Grant, Earl of Seafield, M.P. for Elgin and Nairn from 1868 to 1874, late of Mayne, Elgin; N.B., and No. 61, Onslow-gardens, granted to Major-General Frederick William Edward Forestier Walker, the accepting executor nominate, was resealed in London on Oct. 11, the value of the personal estate in England and Scotland exceeding £1800.

The will (as contained in paper writings marked A, B, C, D, E, and F) of Mr. William James Scarlett, of No. 200, Queen's-gate, and Schemore House, Gigha, Argyll, who died on July 31 last, was proved on Oct. 8 by Thomas Roland Scarlett and Harry Scarlett, the brothers, Thomas Yate Benyon, and Richard James Streatfield, the executors, the value of the personal estate amounting to upwards of £142,000. The testator leaves £10,000, upon trust, for each of his younger children; £500 to each executor; £300 to his sister, Annie; and all his late wife's jewellery between his daughters. He devises his Scotch estates, upon trust, for his eldest son and the heirs male of his body. The residue of his property goes to his son who shall first attain the age of twenty-one.

The will (dated May 19, 1886) of Mr. John Ralph Engledue, late of No. 3, Durham-villas, Kensington, who died on July 19 last, was proved on Oct. 10 by Lewis John Martin Mason and Thomas Threlfall, two of the executors, power being reserved to John Simson, the other executor, to come in and prove; the value of the personal estate amounting to over £95,000. The testator, after making pecuniary and other bequests, leaves the residue of his real and personal estate, upon trust, for his six children, in equal shares.

The will (dated Nov. 1, 1877) of Mr. Charles Wetherell Wardle, late of Linton Spring, Spofforth, Yorkshire, engineer, who died on July 2 last, has been proved in the Wakefield District Registry by Edwin Wardle, the son, William Henry Leather, and George Hind Nelson, the executors, the value of the personal estate amounting to upwards of £72,000. The testator bequeaths £500, the use, for life, of his house, with the gardens, stables, and the furniture, plate, &c., therein, and an annuity of £2000 to his wife, Mrs. Anne Eliza Wardle; and £10,000 each to his daughters, Mrs. Alice Mary Piccoli, Mrs. Adelaide Eliza Sanderson, Mrs. Fanny Maria Smith, Mrs. Clara Richardson, and Harriet Emily Wardle. The residue of his real and personal estate he leaves to his son, Edwin Wardle, absolutely.

The will (dated Jan. 7, 1888) and a codicil (dated July 19, 1888) of the Countess Isabella Jane English (Contessa Romana), late of No. 8, Ulster-terrace, Regent's Park, and Dun Esk, Teignmouth, who died on Sept. 2 last, were proved on Oct. 9 by the Rev. James Shepherd, Austin John King, and James Parfitt, the executors, the value of the personal estate exceeding £47,000. The testatrix bequeaths £3000 to the Prior Park College, near Bath, and a further sum of £2000 to found a theological chair; £1000 each to the Seminary of St. Thomas, Hammersmith, the Superior of St. Charles's College, St. Charles'-square, and the Superior of the St. Scholastica at Dun Esk; £100 each to the Superiors of the Franciscans at Stratford and Portobello-road, the Sisters of Mercy, Blandford-square, and the Poor Clares at Notting-hill; £1000 to James Parfitt, £500 to Austin Joseph King, £5000 and an additional £1000 to carry on her house for twelve months after her death, to the Rev. James Shepherd; the original likeness of his Holiness Pius Nono to Cardinal Manning; and very numerous legacies to relatives, servants, and Roman Catholic institutions. The residue of her property she leaves to the Prior Park College, for the benefit thereof.



The will (dated June 3, 1884), with three codicils (dated Oct. 25, 1884, and June 28 and Oct. 22, 1886), of Miss Hannah Maria Hill, late of No. 4, Louisa-terrace, Exmouth, Devon, who died on Aug. 14, was proved on Oct. 8 by Henry Rivington Hill, the brother, John Park Sweetland, the nephew, and the Rev. Benjamin Fuller James, the executors, the value of the personal estate exceeding £45,000. The testatrix gives her jewel-case and contents to her niece Elizabeth Mary Hill; £1000 to her brother, Henry; £100 each to her other executors; and numerous small legacies to relatives and servants. The residue of her real and personal estate she leaves, as to one half thereof, to her brother, Henry; and the other half to her nephews, Edward Maddox Sweetland and John Park Sweetland, and her niece Sarah Matilda Greenfell, her said niece to have £1000 more than her nephews.

The will (dated Oct. 26, 1879), with a codicil (dated June 12, 1884), of Mr. Richard Micklethwait, J.P., late of Ardsley House, Barnsley, Yorkshire, who died on July 9 last, was proved at the Wakefield District Registry in September by Richard Micklethwait Stansfeld, one of the executors, the value of the personal estate exceeding £34,000. The testator charges his "Ardsley settled estates," with the payment of £8000 each to his younger sons and £3000 each to his daughters. He devises his "unsettled Ardsley estates" to his son, Richard Key Micklethwait, for life, with remainder to his first and other sons, according to seniority in tail male, but charged with the payment of £10,000 as portions for his daughters; and certain other lands and premises in Yorkshire he leaves to his other sons, John Leonard and George Whitley, but charged with the payment of £300 per annum to his wife, in addition to her jointure of £500. His household furniture he leaves to his wife, for life, and also the sum of £1000; and there are other legacies. The residue of his real and personal estate he leaves to his son who shall first attain the age of twenty-one.

The will (dated Oct. 15, 1887) of Mr. William Chalker, late of Belle Vue House, Newbridge Hill, Weston, near Bath, who died on Aug. 23 last, was proved on Oct. 8 by Mrs. Sophia Chalker, the widow, and William John Chalker, Henry Chalker, and Charles Chalker, the sons, the executors, the value of the personal estate exceeding £33,000. The testator bequeaths £100, the use, for life, of one of his messuages, and his household furniture, plate, horses and carriages, and an annuity of £300 to his wife; subject thereto, he leaves all his property between his children, William John, Henry, Charles, Sophia, and Elizabeth, in equal shares, but all sums advanced to them during his life is to be brought into hotchpot.

AMBULANCE-WORK FOR COAL-MINERS.

The recent Act of Parliament for regulating the management of mines, which came into force at the beginning of this year, contains a very important clause making provision for the better care of the unfortunate miners who get injured in many ways happening every day. It is now compulsory on mine-owners to have in every colliery a supply of bandages, splints, and tourniquets, ready for application to the injured, with a stretcher or ambulance on which the patient may be carried. The former mode of removing the injured was by an ordinary colliery cart, and no means were previously used to relieve suffering by steadying a broken limb with splints and bandages. By such rough treatment, a simple injury was too often converted into one of a much more serious character, attended by a much longer period of suffering, and frequently by death.

AMBULANCE-DRILL DEMONSTRATION FOR COAL-MINERS IN BEAMISH PARK, DURHAM.

The St. John Ambulance Association anticipated the coming into force of this Act by sending its able representative, Surgeon-Major Hutton, to organise classes throughout the mining counties. In the North of England, the work was speedily taken up by Mr. Waynman Dixon, of Middlesborough; Dr. Alfred Mantle, M.D., of Stanley, in Durham; and other gentlemen; and, in a comparatively short time, hundreds of miners, after attending a course of lectures and passing the necessary examination, received certificates of competency to render "first aid" to the injured.

As the outcome of so many classes being formed and certificates granted, the largest review and demonstration of ambulance work ever witnessed in this country took place on Saturday, Sept. 29, in Beamish Park (eight miles from Durham), the seat of Mr. T. Duncombe Eden. A more picturesque spot, or one better adapted for such a gathering, could scarcely be found than this park, which by the kindness of Mr. Eden was granted for the occasion. Three hundred miners, wearing the badges of the Association, walked four abreast, each class preceded by two men carrying the stretcher, the procession being headed by the South Derwent Colliery Band, with a detachment of ambulance members of the County Constabulary. The whole of the exercises and drills were carried out under the direction of Surgeon-Major Hutton and Dr. Mantle. The first part was the use of the triangular bandage, Professor Esmarch's three-cornered bandage, which can be tied in no fewer than thirty-two different ways, and can be used for any injury to the human frame. Surgeon-Major Hutton advises the miners, wherever they go, to have their pocket-handkerchiefs made on this triangular pattern. The next portion of the programme consisted of the various modes of carrying the injured, first with, and then without, stretchers. Then came an exposition of Captain Shaw's method of carrying persons out of burning buildings; the rescuer throws the person rescued over his shoulder or back in any position, but always in such a way as to leave one arm free for the rescuer to use in hanging to a ladder or other object. The method of restoring persons suffocated in burning buildings or from foul air in mines was next shown. There are two methods of doing this, one known as the Sylvester and the other as the Marshall-Hall system. The Board of Trade, however, in a recent order, adopted the Sylvester system, which is the one now generally practised. The next exercise was that of the restoration of the apparently drowned by the Marshall-Hall system. Then a loud report was heard, which was supposed to have been a pit explosion, and men with the following injuries were immediately attended to:—(1) broken thigh; (2) broken leg below knee; (3) injured head and ribs; (4) injured spine; (5) wounded thigh, artery, and broken thigh; (6) wounded arm, artery, and broken collar-bone; (7) wounded artery below knee. A second explosion followed shortly after to give the remainder of the classes an opportunity of showing their skill. Several of Messrs. Atkinson and Philipson's (of Newcastle) wheel-litters were used. This concluded the drill. The men who had taken part in the demonstration and the visitors drew near the lawn, and were addressed by several gentlemen, among them Mr. John Graham, the county Coroner, who bore testimony to the benefits of ambulance instruction.

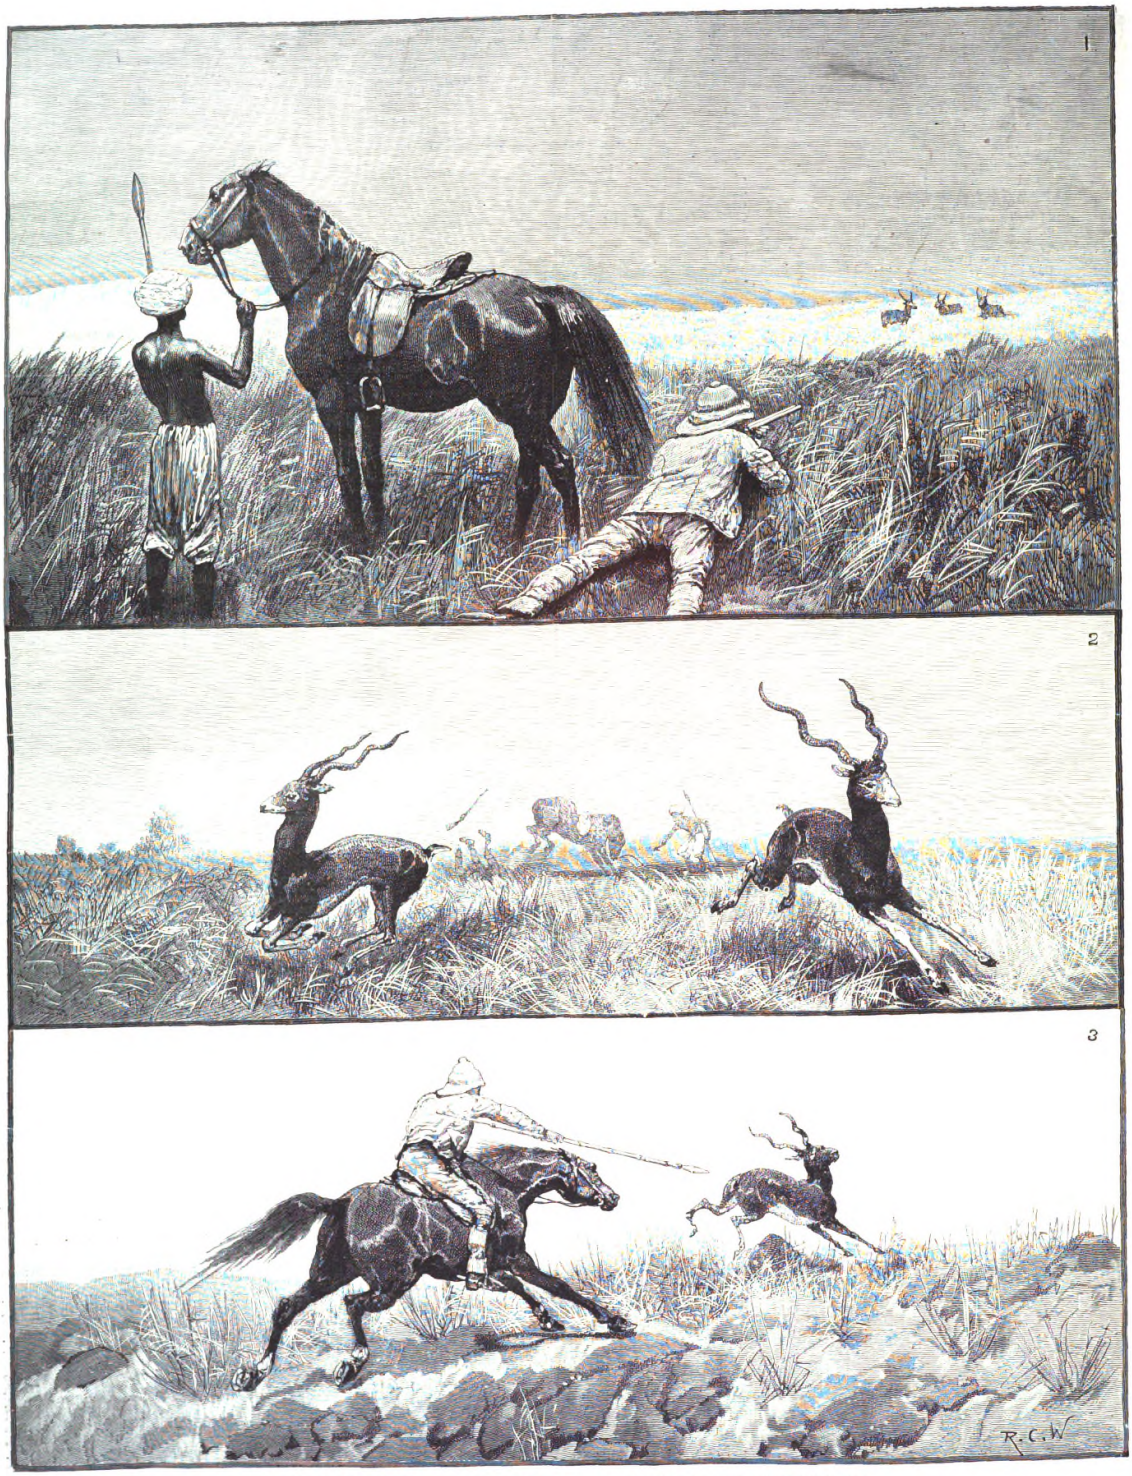
BLACK-BUCK SHOOTING IN INDIA.

Indian antelopes are pretty, graceful animals, standing about as high as an English sheep. The buck is very handsome: a good specimen will be jet-black on his back and half-way down his sides, while the under part of his body is snowy white. His horns are spiral and slender; sometimes they are widely spread, and sometimes close together; they are supposed to be most perfect when they approach the form of an equilateral triangle. We are told that the best horn on record measures about 28 inches. The females, which have no horns, are of a delicate fawn colour.

Shooting black-buck, though perhaps not a very exciting sport, is not bad fun. When they have been much hunted and fired at, they get very wild, and can only be approached by stratagem. One plan is to make a native lead your horse round the antelope, in a gradually decreasing circle, while you walk on the outer side of the horse. When you get close enough, you lie down; and the horse walks on a little way, to enable you to fire.

Our correspondent, whose sketches are engraved on another page, was one day stalking black-buck in this manner, when his horse, rather objecting to be used as "cover," suddenly turned and kicked his owner with both heels, sending him and his rifle, which was at full cock, spinning round the same centre. Luckily, the rifle did not go off; but, of course, the buck did.

Riding down a wounded buck is considered by some to be excellent sport. The first buck that our correspondent ever got was killed in this way. A rifle-shot had broken the buck's hind-leg at the hock; but he went away on three legs. The sportsman then seized a hog-spear, mounted his horse, which had been trained to pig-sticking, and rode after the crippled animal, a chase of about four hours, through a rough country with small patches of jungle, till the buck was speared.



When the indigo-plant is about 2 ft. high, the antelopes will often allow persons to approach very near them before they move; then you have to shoot them running, or rather jumping, which is very pretty. Our correspondent has often tried to approach them in natives' bullock-carts. They take no notice of the cart so long as it proceeds along the usual road; but the instant it leaves the wonted track they smell a rat, and are off. A fine herd of antelopes is a grand sight; the does often number a hundred or more; there are usually two or three young bucks, and a grand old one, coal-black, who walks last of the herd.

The Town Council of Leeds have unanimously resolved to purchase, if possible, Kirkstall Abbey, at a cost of £6000.

Mrs. Henderson, for many years housekeeper to her Majesty, died on Oct. 13 at Windsor Castle, of bronchitis. The deceased was attended by Sir William Jenner.

The Irish Poplin Manufactory, at 31, College-green, Dublin, have obtained another large order from the Queen of Italy for their excellent fabrics.

At Trinity College, Cambridge University, the four vacant fellowships have been bestowed upon the following gentlemen, all of whom were formerly scholars of the college: (1) Mr. Hugh Vibart Macnaghten, B.A., Craven Scholar, 1883, Chancellor's Medallist and First-class Classic, 1885; (2) Mr. Arthur Fenton Hort, B.A., First Division of Classical Tripos, Part I., 1885, and First-class of Part II., 1886; (3) Mr. Henry Bury, B.A., First-class Natural Science Tripos, 1885; (4) Mr. Alfred Cardew Dixon, B.A., Senior Wrangler, 1886, and First-class, Division I., of Mathematical Tripos (final), 1887.—At Queen's College the following scholars of the college have been elected into vacant fellowships:—(1) Robert Hatch Kennett, B.A., Senior in the Semitic Languages Tripos, 1886, Tyrwhitt Hebrew Scholar, 1887, Mason Prize for Biblical Hebrew, 1887; (2) William Stanley Melsome, B.A., First-class Natural Sciences Tripos, Part I., June, 1886, and First-class Natural Sciences Tripos, Part II., June, 1887, for Physiology. At the same meeting Francis Giffard Plaistowe, B.A., was awarded an Exhibition of £20.—At Oxford the following gentlemen have been elected to Classical Exhibitions at Worcester College: Mr. Frank Eric Charles Drew, of Leamington College; Mr. Richard St. John Vavasour, of Rossall School; Mr. Morrice Alfred Edwards, of King's College School, London; Mr. Herbert Joseph Tiffen, of Malvern College. The scholarships at Lady Margaret's Hall have been awarded in the following order:—(1) Miss Pemberton (classics); (2) Miss Mary Hollings (modern history). A prize of £10 has been given to Miss Cayley for distinction in modern languages. The Right Rev. Richard Durnford, D.D., Bishop of Chichester, has been elected to an Honorary Fellowship at Magdalen College.

THE TREATMENT OF THE LATE EMPEROR FREDERICK.

The publication of Sir Morell Mackenzie's book, entitled "The Fatal Illness of Frederick the Noble," giving his account of the malady and the medical or surgical treatment of the late German Emperor, from May, 1887, to the death of the illustrious patient in June this year, arouses a bitter professional controversy, the merits of which cannot hastily be judged by unlearned persons, and which ought nowise to be prejudiced, on either side, by partiality to English or to German professors of the healing science and art. Professor Von Bergmann, who is accused of having, on April 12, in the presence of Sir Morell Mackenzie and Mr. Hovell, grossly mismanaged the operation of inserting a new cannula into the wind-pipe, misdirecting its course, and forcing it through the soft tissues in front of the trachea, inflicting thereby severe torture and causing a wound followed by copious bleeding, flatly denies this accusation. He appeals to the evidence of the post-mortem made eight weeks afterwards, with Professor Virchow's report upon it, which showed no signs of inflammation in the cellular tissues between the trachea and the sternum, or breast-bone; and to Professor Virchow's opinion that the inflammation of the lungs, which was the immediate cause of death, had begun not longer than two weeks before the patient died, "probably not more than six or seven days." On the other hand, there is a note in the late Emperor's Landwriting, delivered by his Majesty three days before his death to Sir Morell Mackenzie, in which he refers to an occasion when, as he says, "Bergmann ill-treated me." This note does not appear in Sir Morell Mackenzie's book, but a photograph of it has been taken, and a facsimile of it has been published, without Sir Morell Mackenzie's knowledge or consent, in the *British Medical Journal*. Sir Morell Mackenzie further states that the Emperor expressed to him a hope that Professor Bergmann would not be allowed to perform any more operations on him. With regard to the earlier disputes between himself and the German physicians and surgeons, concerning the diagnosis of the malady and the expediency of a cutting operation, and the searing or burning treatment then resorted to by Professor Gerhardt, the observations of Sir Morell Mackenzie will be duly considered by professional men all over Europe. In the meantime, the sale of his book has been prohibited by the police authorities in Berlin, Leipsic, and other cities of Germany, and thousands of copies of the German translation have been seized and confiscated; but large extracts had already found their way into the German newspapers. The publication in England, on the other hand, of a translation of the official statements made by the German physicians and surgeons was hindered by an intimation that proceedings for libel would be taken here if these statements were injurious to the character of Sir Morell Mackenzie. The most essential parts, however, are given in the *Times* review of Sir Morell Mackenzie's book.

An order has been issued by the Education Department fixing the triennial election of the School Board for London for Monday, Nov. 26, and appointing as returning officer Sir Thomas Chambers, Q.C., Recorder of the City of London, or his deputy. The School Board will consist of fifty-five members.

MARRIAGES.

A fashionable company assembled at St. Paul's Church, Knightsbridge, on Oct. 10, to witness the marriage of Mr. William Cradock-Hartopp, second son of the late Sir John Cradock-Hartopp, of Four Oaks Park, Warwickshire, and Ascot, Flamville, Leicestershire, with Miss Janet Spicer, youngest daughter of the late Mr. John William Gooch Spicer, of Spye Park, Wilts. The service was fully choral.

On the same day Feltwell, in Norfolk, was quite gay on the occasion of the marriage of Mr. T. Fowell Victor Buxton, eldest son of Sir Thomas Fowell Buxton, Bart., with Miss Annie Matilda O'Rorke, daughter of the Rector of that parish.

The marriage took place on Oct. 11, at St. Paul's Church, Knightsbridge, of Captain F. Fetherstonhaugh, A.D.C. (the Cameronians), with Miss Beatrice Glyn, youngest daughter of the late Hon. St. Leger Glyn.

At St. Mary Abbott's, Kensington, on the same day, the marriage of Sir Joseph Dodge Weston, of Dorset House, Clifton, with Miss A. Beloe, youngest daughter of the late Mr. C. P. Beloe, Clifton, was solemnised.

The marriage of Mr. Francis Newdigate to the Hon. Elizabeth Lucia Bagot, youngest daughter of the late Lord Bagot and sister to the present Peer, was solemnised on the 13th, at St. Paul's Church, Knightsbridge, before a large and aristocratic congregation. Lord Bagot gave his sister away. The bridesmaids were—The Hon. Katta Bagot, sister of the bride; the Misses Agar Ellis (two), Miss Sybel Bass, Miss Mary Newdigate, and Miss Chandos Leigh.

THE GROSVENOR CLUB,
135, NEW BOND-ST., W.

This Club, which is proprietary and on a non-political basis, numbers 1100 members. It contains the usual Club-Rooms, has been recently redecorated, and is lighted throughout by means of Electricity. To meet the expenses of further proposed improvements, by an influx of members, the Committee has resolved to temporarily suspend the entrance fee.

Members have free admission to the Galleries during the Exhibition.

All members have the privilege of subscribing to the large Circulating Library, for the use of their families, at a reduced rate. For reading in the Club, books are supplied free of expense to members. The Club Reference Library is exceptionally fine.

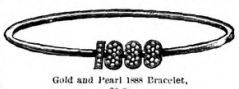
High-class Smoking and other Concerts have been successfully inaugurated.

The long association of the Grosvenor Gallery with art should render this Club attractive to artists as well as to professional, literary, scientific, and other gentlemen.

The Subscription is Five Guineas for town, Three Guineas for country members, and One Guinea for residents abroad, whether military or civilian. Subscriptions paid after Oct. 1, 1888, will hold good until Dec. 31, 1889.

The following names have recently been added to the Committee:—

The Earl of Crawford and Balcarres; Lord Wantage of Lockinge, V.C., K.C.B., &c.; Sir Coutts Lindsay, Bart.; Sir Chas. H. Stuart Rich, Bart.; Rev. A. Wellesley Batson, Mus.Bac. Oxon; Sir Chas. H. Stuart Rich, Bart.; Rev. A. Wellesley Batson, Mus.Bac. Oxon; Edmund Yates, Esq.; Joseph Barnby, Esq.; Chas. Wyndham, Esq.; F. C. Burnand, Esq.



Applications for membership should be addressed to the SECRETARY.

Pears' Soap

I have found it matchless for the hands and complexion

Adelina Patti

Since using Pears' Soap I have discarded all others.

Ellie Lansbury

For preserving the Complexion, keeping the skin soft, free from redness and roughness, and the hands in nice condition, it is the finest Soap in the world.

M. Fortescue

Good Complexion! AND Nice Hands!

NOTHING adds so much to personal attractions as a bright, clear complexion, and a soft skin. Without them the handsomest and most regular features are but coldly impressive, whilst with them the plainest become attractive; and yet there is no advantage so easily secured. The regular use of a properly prepared Soap is one of the chief means; but the Public have not the requisite knowledge of the manufacture of Soap to guide them to a proper selection, so a pretty box, a pretty colour, or an agreeable perfume too frequently outweighs the more important consideration, viz.: *the Composition of the Soap itself*, and thus many a good complexion is spoiled which would be enhanced by proper care.

A most Eminent Authority on the Skin,

Professor Sir Erasmus Wilson, F.R.S.,

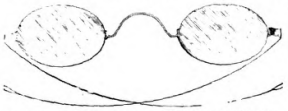
Writes in the JOURNAL OF CUTANEOUS MEDICINE:—

"THE use of a good Soap is certainly calculated to preserve the Skin in "health, to maintain its complexion and tone, and prevent its falling "into wrinkles. PEARS is a name engraven on the memory of the "oldest inhabitant; and PEARS' Transparent SOAP is an article of the "nicest and most careful manufacture, and one of the most refreshing "and agreeable of balms for the Skin."

TO persons whose skin is delicate or sensitive to changes in the weather, winter or summer, PEARS' TRANSPARENT SOAP is invaluable, as, on account of its emollient, non-irritant character, *Redness, Roughness and Chopping are prevented, and a clear appearance and soft velvety condition maintained, and a good, healthful and attractive complexion ensured.* Its agreeable and lasting perfume, beautiful appearance, and soothing properties, commend it as the greatest luxury and most elegant adjunct to the toilet.

Testimonial from

Madame Adelina Patti.



"I HAVE found PEARS' SOAP matchless for the Hands and Complexion."

Adelina Patti.

PEARS' Transparent SOAP. TABLETS & BALLS: 1s. each. Larger Sizes, 1s. 6d. and 2s. 6d. *(The 2s. 6d. Tablet is perfumed with Otto of Roses.)* A smaller Tablet (unscented) is sold at 6d. PEARS' Transparent SOAP.

WESTERHAM HILL-CLIMBING COMPETITION WON ON A WHIPPET SAFETY BICYCLE, AUG. 18, 1888.

In the Competition, held by the Catford Cycling Club up this Hill, Mr. W. Chater Lea, of the North-road C. C., won on a WHIPPET, beating the second man by 23 1-5th seconds. Out of fifteen competitors, only five succeeded in riding the hill at all, out of which the FIRST and THIRD rode WHIPPETS.

MANUFACTURERS,

LINLEY & BIGGS, 29, Clerkenwell-road, London.

THE BEAUTY OF THE SKIN

ENHANCED BY

POUDRE D'AMOUR,

PREPARED BY PICARD FRERES.

Ladies will find this delightful and refreshing TOILET POWDER invaluable as an application for the skin, reducing a too ruddy complexion and heightening a pallid skin to a beautiful tint. Its application absorbs all moisture, and induces that coolness and comfort to the skin so desirable in the ball-room, theatre, or in the open air. Price 1s. per box; per post, free from observation, 1s. 3d. In three tints: Blanche, for fair skins; Naturelle, for darker complexions; and Rachel, for use by artificial light. Of all Chemists and Perfumers.

Depôts: R. HOVENDEN and SONS, 31 and 32, Berners-street, W.; and 91-95, City-road, E.C., London.

ELLIMAN'S UNIVERSAL EMBROCATION

FOR RHEUMATISM LUMBAGO. SPRAINS.

The Championship Team of the Finchley Harriers state:— "Aug. 17, 1888.

"Cross-country runners in particular derive great benefit by using Elliman's Embrocation previous to taking part in long-distance races, as it protects them from colds and chills."

The Hon. Sec. Tower R. and A. C. writes:— "Aug. 29, 1888.

"Your Embrocation is always used by us, especially after and before a rowing race, as after a hard tussle your Embrocation soon restores the arms, which after the race generally feel quite useless."

THE ANNUAL RING IN TREES.

In the course of his last report, the chief of the forestry section of the Agricultural Department of the United States, referring to the annual rings in trees, asserts that these exist as such in all timber grown in the temperate zone. Their structure is so different in different groups of timber that from their appearance alone the quality of the timber may be judged to some extent. For this purpose the absolute width of the rings, the regularity in width from year to year, and the proportion of spring wood to autumn wood must be taken into account. Spring wood is characterised by less substantial elements, the vessels of thin-walled cells being in greater abundance, while autumn wood is formed of cells with thicker walls, which appear darker in colour. In conifers and deciduous trees the annual rings are very distinct, while in trees like the birch, linden, and maple the distinction is not so marked, because the vessels are more evenly distributed. Sometimes the gradual change in appearance of the annual ring from spring to autumn wood, which is due to the difference in its component elements, is interrupted in such a manner that a more or less pronounced layer of autumn wood can apparently be recognised, which again gradually changes to spring or summer wood, and then finishes with regular autumn wood. This irregularity may occur even more than once in the same ring, and this has led to the notion that the annual rings are not a true indication of age; but the double or counterfeit rings can be distinguished by a practised eye with the aid of a magnifying glass. These irregularities are due to some interruptions of the functions of the tree, caused by defoliation, extreme climatic condition, or sudden changes of temperature. The breadth of the ring depends on the length of the period of vegetation; also when the soil is deep and rich, and light has much influence on the tree, the rings will be broader. The amount of light and the consequent development of foliage is perhaps the most powerful factor in wood formations, and it is upon the proper use of this that the forester depends for his means of regulating the development and quantity of his crop.

Sir Thomas Chambers, Q.C., Recorder of London, has been appointed by the Local Government Board returning officer for the first election of county councillors for the administrative county of London.

The Commander-in-Chief inspected the troops at Shorncliffe on Oct. 13, and afterwards complimented Colonel Sir Baker Russell, the Camp Commandant, on the efficiency and smart appearance of the men.

The Church of the Holy Redeemer, Exmouth-street, Clerkenwell, was consecrated on Oct. 13 by the Bishop of London. The site, which has been given by the Marquis of Northampton, was formerly occupied by Spa-fields Chapel, a place of worship belonging to the sect founded by the Countess of Huntingdon. The new church is built in the Italian Renaissance style. The Incumbent is the Rev. E. V. Eyre, who has carried on the mission of the Holy Redeemer for eight years, and the new district comprises a population of 7000 persons, mostly of the poorer class. The Bishop of London, in addition to performing the Consecration Service, preached and celebrated the Holy Communion.—On the same day the church of St. Barnabas, which has been erected at a cost of about £16,000, towards which £11,000 has already been contributed, was opened at Tunbridge Wells, the sermon being preached by the Archbishop of Canterbury.

THE SHIPPING TRADE OF BRITISH INDIA.

According to the new Indian Statistical Abstract, the shipping-trade of India in the last ten years has increased in tonnage by more than a quarter, having amounted to 5,754,379 tons entered and cleared in 1878, against 7,172,193 tons in 1887. The increase has taken place wholly in British and foreign shipping, British Indian and native craft having decreased considerably. The figures for the trade through the Suez Canal show a marvellous increase since 1872. In that year the number of vessels entered and cleared from and to foreign ports from India by the Canal was 420, with an aggregate tonnage of 464,198; in 1877 the figures had increased to 1040 vessels and 1,518,690 tons, while in 1887 they were 1671 vessels and 2,946,650 tons. Since 1877, therefore, the Indian traffic through the Canal has increased fourfold in the number of vessels and more than sixfold in the amount of tonnage.

Under the decision of the arbitrators, the Congregational Colleges at Rotherham and Airedale are to be amalgamated, the college at Airedale alone to be continued, under the designation of the "United Yorkshire College."

The annual show of chrysanthemums in the Inner Temple Gardens has, by the permission of the treasurer and benchers, been thrown open to the public, over 900 plants being on view, of which about seventeen are new varieties.

According to a Parliamentary paper containing the returns of pauperism to the end of last July, the number of paupers in England and Wales steadily decreased from 796,363 in the first week of March to 698,761 in the last week of July. In every one of those weeks there was a diminution in the number.

THE AMMONIAPHONE. (HARNESS' PATENT.)

INVALUABLE TO CLERGYMEN, VOCALISTS, AND PUBLIC SPEAKERS.

FOR ASTHMA, BRONCHITIS, CONSUMPTION, PULMONARY AFFECTIONS.

"Successfully treated after all other means had failed."—Rev. D. A. DOWDNEY, D.D., St. Luke's Vicarage, Bedminster, Bristol.

INVALUABLE FOR THROAT AND CHEST AFFECTIONS.

"It has quite cured my daughter."—G. W. BACON, Esq., F.R.G.S., 127, Strand, London.

CONSUMPTION.

"I have derived great benefit from it."—Miss TOWNLEY, Wood Grange-road, Forest-gate.

"Benefited immensely."—Rev. H. L. NORDEN, Southampton.

WHAT IS THE AMMONIAPHONE? In the course of a long descriptive article, "The Times" says:—"The AMMONIAPHONE is one of the most remarkable inventions of the day." It is a tube about 25 *in.* long, constructed of a specially prepared non-corrosive metal, with handles having patent spring valves. It is charged with a chemical compound, combined so as to resemble in effect that which is produced by the soft balmy air of the Italian Peninsula when inhaled into the lungs: hence the term—Artificial Air.

FREE on receipt of Post-Card: New Illustrated Pamphlet, entitled "HISTORY OF THE AMMONIAPHONE," showing how thousands have been immediately relieved, and promptly and permanently Cured by the use of this unique invention. The extraordinary utility of the AMMONIAPHONE is demonstrated daily at the Company's Rooms, 52, Oxford-street, London, W., where their Medical Adviser will be happy to answer any inquiries, either personally or by letter Without Charge.

ORDER ONE TO-DAY.

You will find it Invaluable for the Voice and Lungs.

ORDER ONE TO-DAY.

You will find it Invaluable for Throat and Chest Affections.

THE AMMONIAPHONE (Harness' Patent) will be sent free by post to any part of the United Kingdom on receipt of a Postal Order or Cheque for 21s. (crossed "London and County Bank"). Address:

The Medical Battery Co., Ltd., 52, OXFORD-ST., LONDON, W. (CORNER OF RATHBONE-PLACE.)

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean Establishments on the Baths of the Rhine—Theatre, Concerts, Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo or in its special fascination and attractions—not only by the favoured climate and by the bathing season, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it took the resting-place of the aristocratic world, the spot most frequented by travellers in Europe in the short, sharp winter, and Monte Carlo enjoys a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY,
SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gotthard line. Through-going Sleeping-Cars from Ostend to Milan. Balcony Carriages. Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's Offices.

THE HIGHLANDS OF BRAZIL
SANATORIUM, in one of the finest all-the-year-round climates known. Inland, bracing, 2200 ft. above sea-level, and winter alike; no chance of residence forced on the English church. The voyage from England or the United States is a favourite fair-weather cruising trip. Terms, 10s. per diem. Circular, with further particulars, from CHARLES WILLIAM CLARK, Esq., 29, Drury-buildings, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

AUTUMN TOUR IN THE MEDITERRANEAN.
The Orient Company will dispatch their large, full-powered Steamship GARONNE, 3870 tons register, 2000-horse power, from TILBURY DOCKS, London, on NOV. 15, for a 26 Weeks' Cruise, visiting Lisbon, Tangier, Gibraltar, Algiers, Palermo, Naples, Leghorn, Genoa, Nice, for Riviera, Malaga, &c., arriving in London on Dec. 22.
The GARONNE is fitted with the Electric Light, Hot and Cold Baths, &c. Cuisine of the highest order. Number of passengers strictly limited.
An experienced Surgeon will be carried.
Managers: F. GREEN and Co., ANDERSON, ANDERSON, and Co., Fenchurch-avenue, E.C.
For Terms and other particulars apply to the latter firm; or to West-End Agents, Grindlay and Co., 55, Parliament-st., S.W.

WARD, LOCK, and CO.'S NEW SERIAL PUBLICATIONS.
Prospectuses post-free on application.

IN MONTHLY PARTS, SIXPENCE EACH.
Part I., ready Oct. 26, 1888. (To be completed in about 20 Parts.)
ENGLAND'S BATTLES BY SEA AND LAND.
With Full-page Illustrations.
The Publishers have great pleasure in announcing a Re-Issue, in a cheap and attractive form, of the valuable work, "ENGLAND'S BATTLES BY SEA AND LAND," which will be found replete with information about the notable events of the campaigns by which the British power has been built up, conveyed in an interesting, full, and intelligible style.
With Part I. will be PRESENTED GRATIS a PRESENTATION PLATE, representing
"THE DEATH CHARGE OF THE LIFE-GUARDS AT WATERLOO."
From the celebrated Picture by Luke Clennel.
Specimen Copy of Part I., with Plate, post-free, 7d.

RE-ISSUE IN SIXPENNY MONTHLY PARTS.
Part I., ready Oct. 26, 1888. (Complete in 18 Parts.)
GOD'S GLORIOUS CREATION; or, The Wonders of Land, Sea, and Sky. Translated from the German of Dr. Krausse, J. Klein, and Dr. Thome, by J. MINSHULL.
BEAUTIFULLY ILLUSTRATED WITH ORIGINAL HIGH-CLASS ENGRAVINGS.
The publishers feel, in announcing a new and cheap issue of "GOD'S GLORIOUS CREATION," giving an account of the wonders of the Earth, Sea, and Sky, and the Animal and Vegetable Kingdoms, that it is scarcely necessary to commend the work to a large section of the public. Suffice it to say that whatever quarter of the globe the reader may seek information about as to its surface, its seas, its rivers, its animals, its plants, its climate, he will find it in this work.
Specimen Copy, post-free, 7d.

IN SIXPENNY MONTHLY PARTS.
Part I., ready Oct. 26. (To be completed in about 10 Parts).
THE LAND OF THE BIBLE: Its Holy Sites and Sacred Story.
PROFUSELY ILLUSTRATED WITH MAPS AND WOOD ENGRAVINGS.
This well-known work is woven into a Connected Narrative of Bible Events, with EXPLANATORY DESCRIPTIONS, and incidently gives accounts of the Great Empires of the East in their connection with the Jews. Sunday-school teachers, as well as scholars and fathers and mothers who give their own children religious instruction, will find this work capable of affording them much help.
Specimen Copy, post-free, 7d.
London: WARD, LOCK, and Co., Salisbury-square, E.C.

By JOHN H. CLARKE, M.D.
London: JAMES EPPS and Co., 48, Threadneedle-street; and 170, Piccadilly.

OBITUARY.

LORD SEATON.

The Right Hon. James Colborne, second Baron Seaton, of Seaton, Devon, died on Oct. 11. He was born in 1815, the eldest son of the late distinguished Field-Marshal Sir John Colborne, who took the most prominent part, after Wellington, in the victory of Waterloo, and became eventually Lord Seaton. The nobleman whose death we record entered the Army in 1834, and attained the rank of General in 1881.

He was Aide-de-Camp to his father during the Canadian Rebellion, and was Military Secretary in Ireland from 1855 to 1860. He married, Feb. 12, 1851, Charlotte, daughter and co-heiress of Ulysses, last Lord Downes, and was left a widower in 1863. His eldest son and successor, Reginald John Upton, now third Lord Seaton, was born in 1854, and married, in 1887, Elizabeth Beatrice, daughter of Sir Francis Fuller Elliott Drake, Bart., of Nutwell Court, Devon.

We have also to record the deaths of—

Lady Margaret Maconochie Welwood, widow of Allan A. Maconochie Welwood, of Meadowbank and Garoock, on Oct. 11, at 13, Grosvenor-crescent, Edinburgh. She was youngest daughter of the ninth Earl of Stair, was born in 1828, and married April 27, 1859.

Lord Mount-Temple, at his residence, on Oct. 16. His memoir will be given next week.

Mr. Francis Hall, of Park Hall, Notts, J.P. and D.L., High Sheriff in 1846, on Oct. 5, in his eighty-third year.

Mr. Joseph M. Levy, one of the chief proprietors of the *Daily Telegraph*, on Oct. 12, in his seventy-seventh year. His portrait will be given in our next issue.

Lady James Murray (Elizabeth Marjory), widow of Lord James Murray, of Otterbourn Hall, Northumberland, and daughter of Mr. George Fairholme, of Greenknowe, on Oct. 11.

Major-General Charles James Hope-Johnstone, late Royal Artillery, on Oct. 6. He was born in 1835, son of Captain Charles James Hope-Johnstone, R.N., a descendant of the first Earl of Hopetoun.

Mr. Matthew Anderson, for many years Crown Solicitor of Dublin, at his residence in that city, at an advanced age, on Oct. 12. He had charge of all important State prosecutions for the past thirty years.

Mr. Goschen presided at Gresham College on Oct. 15 at a meeting in connection with the Society for the Extension of University Teaching. That society, he said, was practically carrying into effect the idea of Sir T. Gresham in founding that college, and he believed it had made some advance in solving the problem how higher education, such as is obtained at the Universities, can be acquired by busy men and women simultaneously with pursuing their business in life. He hoped the Royal Commission which was now sitting would devise a scheme by which this college would be made a part of some great scheme of university teaching for the Metropolis.

At a county meeting, convened by the Lord Lieutenant of Devon, and held at the Castle of Exeter on Oct. 15, it was decided to rebuild the cathedral organ. The estimated cost is £3000, half of which sum has been promised.

A meeting in connection with the opening of a Horticultural and Technical College, at Swanley, Kent, took place at the college on Oct. 15. Accommodation has been provided for about a hundred students, who will have every facility for acquiring a knowledge of scientific horticulture. Letters of sympathy were read from Mr. Gladstone and other gentlemen.

The German Emperor's visit to Rome, of which particulars are given in another column, fitly crowned his tour. On Oct. 16 the Emperor and King Humbert, accompanied by Prince Henry of Prussia and the Dukes of Aosta and Genoa, arrived at Naples, where a naval review was given in honour of the Imperial visit.—The Empress Frederick presided, on the 16th, at Berlin, over a meeting of the committee for the relief of the sufferers by the recent inundations in Germany. Measures have been taken to prevent floods in the future.

MARRIAGE.

In Victoria, B.C., at St. John's Episcopal Church, on Sept. 12, by the Rev. Percival Jenns, Charles W. Alisky, of Portland, Or., and Annie, eldest daughter of Robert Fyfe, Auditor of the Oregon Railway and Navigation Company, Portland, Oregon, U.S.A. No cards.

VITREMAINIE (Stained Windows). By this simple process WINDOWS may be quickly and richly decorated at small cost. Illustrated Guide, 2s., post-free. WILLIAM BARNARD, 119, Edgware-road, London.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world; it thoroughly cleanses partially-decayed teeth from all parasites or living animalcules, leaving them pearly white, imparting a delightful fragrance to the breath. The fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco smoke, being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

HOLLOWAY'S PILLS and OINTMENT. The Pills purify the blood, correct all disorders of the liver, stomach, kidneys, and bowels. The Ointment is unrivalled in the cure of bad legs, old wounds, gout, rheumatism.

TOWLE'S PENNYROYAL and STEEL PILLS for FEMALES. Sold in Boxes, 1s. 1½d. and 2s. 9d., of all Chemists. Sent anywhere on receipt of 15 or 31 stamps by the LINCOLN and MIDLAND COUNTIES DRUG CO., Lincoln.

ADAMS'S FURNITURE POLISH.

Exactly like this is the Only Genuine

It is put up only in this form

THE ST. JACOBS OIL BOTTLE IS ROUND.

Look also for the Signature of
The Charles A Vogeler Co.

The great success and popularity of St. Jacobs Oil has become the subject of comment by almost the entire press of the country; in many instances the leading articles of large and influential papers have been devoted to the details of what seem to be almost magical cures effected by the use of St. Jacobs Oil in local cases, coming under the immediate attention of the publishers. St. Jacobs Oil is endorsed by Statesmen, Judges, the Clergy, the Medical Profession, as well as by people in every walk of life.
The curative powers of St. Jacobs Oil are simply marvellous. It is wholly an outward application. It conquers pain quickly and surely. It acts like magic. It penetrates to the seat of the disease. It cures even when everything else has failed. It has cured thousands of cases of rheumatism and neuralgia which had resisted treatment for the greater part of a lifetime. It has cured people who have been crippled with pain for more than twenty years. After the most thorough and practical test, St. Jacobs Oil has received Six Gold Medals at different International Exhibitions for its marvellous power to conquer pain. It is used extensively in the leading Hospitals and Dispensaries of the metropolis and provincial cities, and also on board her Majesty's Troopships and the Cunard Steam-ship Company's Fleet. Put up in white wrappers for human use (the Oil is also sold in yellow wrappers with such ingredients added as are particularly adapted for use on horses, cattle, and dogs), price 2s. 6d. per Bottle, of all dealers in Medicine throughout the world; or sent, post-free, by the Proprietors, The Charles A. Vogeler Company, 45, Farringdon-road, London, E.C.

THROAT DISEASES.—BROWN'S BRONCHIAL TROCHES, which have proved so successful in America for the cure of coughs, colds, hoarseness, bronchitis, asthma, catarrh, or any irritation or soreness of the throat, are now imported, and sold in this country at 1s. 1½d. per Box. Put up in the form of a lozenge, it is the most convenient, pleasant, safe, and sure remedy for clearing and strengthening the voice in the world.

BROWN'S BRONCHIAL TROCHES Cure Coughs.
BROWN'S BRONCHIAL TROCHES Cure Colds.
BROWN'S BRONCHIAL TROCHES Cure Hoarseness.
BROWN'S BRONCHIAL TROCHES Cure Bronchitis.
BROWN'S BRONCHIAL TROCHES Cure Asthma.
BROWN'S BRONCHIAL TROCHES Cure Catarrh.
BROWN'S BRONCHIAL TROCHES Cure Soreness of the Throat.
BROWN'S BRONCHIAL TROCHES. Sold by all Chemists, at 1s. 1½d. per Box.

BROWN'S BRONCHIAL TROCHES have been before the public many years. Each year finds the Troches in some new distant localities in various parts of the world. Being an article of merit, when once used the value of the Troches is appreciated, and they are kept always at hand to be used as occasion requires. Singers and public speakers will find them excellent to clear the voice and render articulation wonderfully easy.

BROWN'S BRONCHIAL TROCHES Relieve the Hacking Cough in Consumption.
BROWN'S BRONCHIAL TROCHES Cure Irritation in the Throat.
BROWN'S BRONCHIAL TROCHES, For Public Speakers.
BROWN'S BRONCHIAL TROCHES, for Singers.
BROWN'S BRONCHIAL TROCHES. Used by everybody.
BROWN'S BRONCHIAL TROCHES. Sold by all Medicine Dealers.
BROWN'S BRONCHIAL TROCHES. Sold at 1s. 1½d. per Box.
BROWN'S BRONCHIAL TROCHES are perfectly safe.

BROWN'S BRONCHIAL TROCHES reach directly the affected parts, and give almost immediate relief. All sufferer from irritation of the throat and hoarseness will be agreeably surprised at the almost immediate relief afforded by the use of Brown's Bronchial Troches. The demulcent ingredients allay pulmonary irritation, and after public speaking or singing, when the throat is wearied and weakened by too much exercise, their use will give renewed strength to the vocal organs. For public speakers, singers, and those who overtax the voice, they are useful in relieving an irritated throat, and will render articulation easy. Sold by all Medicine Dealers, at 1s. 1½d. per Box.

BROWN'S BRONCHIAL TROCHES. Sold in all parts of the United States.
BROWN'S BRONCHIAL TROCHES. Sold in Australia.
BROWN'S BRONCHIAL TROCHES. Sold in the Cape Colonies.
BROWN'S BRONCHIAL TROCHES. Sold in India.
BROWN'S BRONCHIAL TROCHES. Sold in Paris.
BROWN'S BRONCHIAL TROCHES. Sold Every where.
BROWN'S BRONCHIAL TROCHES. Prepared by John I. Brown and Sons, Boston, United States.

BROWN'S BRONCHIAL TROCHES for clergymen's sore throats. Public speakers and singers will find them beneficial in clearing the voice before speaking or singing, and relieving the throat after any unusual exertion of the vocal organs, having a peculiar adaptation to affections which disturb the organs of speech. Few are aware of the importance of checking a cough or "slight cold" in its first stages. That which in the beginning would yield to a mild remedy, if neglected soon attacks the lungs. The Troches give sure and almost immediate relief. They may be had of any Medicine Dealer, at 1s. 1½d. per Box.

BROWN'S BRONCHIAL TROCHES Cure Coughs.
BROWN'S BRONCHIAL TROCHES Cure Colds.
BROWN'S BRONCHIAL TROCHES Cure Hoarseness.
BROWN'S BRONCHIAL TROCHES Cure Bronchitis.
BROWN'S BRONCHIAL TROCHES Cure Asthma.
BROWN'S BRONCHIAL TROCHES Cure Catarrh.
BROWN'S BRONCHIAL TROCHES Cure Soreness of the Throat.
BROWN'S BRONCHIAL TROCHES for Irritation of the Throat.

BROWN'S BRONCHIAL TROCHES or COUGH LOZENGES. They are very pleasant to take, contain no opium, and children will find them very beneficial in cases of whooping-cough. People who are troubled with a hacking cough should try them at once; they are a safe and sure remedy. Brown's Bronchial Troches for pulmonary and asthmatic disorders have proved their efficacy by a test of many years, and have received testimonials from eminent men who have used them.

Annual Rent of Safe, 1 to 5 Guineas; Annual Rent of Strong Rooms, from 8 Guineas.

THE CHANCERY-LANE SAFE DEPOSIT OFFERS FACILITIES SECOND to NONE as REGARDS SAFETY and CONVENIENCE, and HAS the ADVANTAGE of BEING LOCALLY SITUATED. IT PLACES ITSELF BEFORE the PUBLIC with the FULL CONFIDENCE of its ABILITY to SERVE ITS PATRONS in all ITS DEPARTMENTS with the BEST of its KIND. BEFORE the ERA of SAFE DEPOSIT COMPANIES, EVERY PERSON SEEKING a PLACE WHERE HIS VALUABLES WOULD BE SAFE from the INROADS of THIEVES, and from DESTRUCTION by FIRE, was OBLIGED TO LAY OUT LARGE SUMS OF MONEY in so-called BURGLAR-PROOF SAFES. IT WAS NOT LONG, however, before the EXPERIENCED THIEF FOUND the way to ENTER THESE STRONG-BOXES, and PEOPLE are now COMPELLED to SEEK OTHER MEANS of PROTECTION for their WEALTH. THE TIME HAS GONE BY WHEN PRIVATE SAFES IN ONE'S OWN HOUSE or OFFICE can be CONSIDERED ABSOLUTELY TRUSTWORTHY.

Allen & Hanburys' "Perfected" COD-LIVER OIL.
BYNIN, LIQUID MALT, forms a valuable adjunct to Cod-Liver Oil, being not only a highly-concentrated and nutritious Food, but a powerful aid to the digestion of all starchy and farinaceous matters, rendering them easy of assimilation by the most enfeebled invalid. BYNIN, being liquid, is entirely free from the inconvenient treacle-like consistence of ordinary Malt Extract; it is very palatable, and possesses the nutritive and peptic properties of malt in perfection. It is a valuable ailment in Consumption and Wasting Diseases. In Bottles, at 1s. 9d. each.

"Is as nearly tasteless as Cod-Liver Oil can be."—Lancet.
"Has almost the delicacy of salad oil."—Brit. Med. Journal.
"No nauseous eructations follow after it is swallowed."—Medical Press.
It can be borne and digested by the most delicate; it is the *only* oil which does not "repeat"; and for these reasons the most efficacious kind in use. In capsuled Bottles only, at 1s. 6d., 2s. 6d., 4s. 9d., and 9s.
Sold Everywhere.

THE EMPRESS FREDERICK LAYING THE FOUNDATION-STONE OF A MAUSOLEUM FOR THE LATE EMPEROR AT POTSDAM.

OUR NOTE BOOK.

BY JAMES PAYN.

A well-known Professor of the healing art has been giving a lecture to medical youth upon the value of attention. Many, he says, who plead their "bad memory" as an excuse for ignorance, do so on false grounds; they have not forgotten, but, through inattention, have never learnt. This is admirably true, and what he goes on to say about the same fault when they have ceased to be medical students and have become practitioners is, doubtless, true also—only to us laymen much more alarming. It seems that it is by no means uncommon for our medical adviser to visit us with a preoccupied mind; while we are telling him about our symptoms, and eloquent upon the size and colour of our great toe, he may be thinking about the next Derby, or the hue of the new dado in his dining-room. This, says the Professor, is very dangerous—that is, for the doctor, of course. "All men are thought-readers, and our patients more so than any others." It is not necessary for the doctor to mechanically murmur "It ought to be green," to convince an intelligent patient that he is not thinking about his toe. Again, what is called "a nervous operator," remarks the Professor, "is simply one who cannot bring his attention to bear upon a difficulty that suddenly arises." Instead of cutting one's leg off, for example, the lilt of some grand old song, I suppose, beloved in infancy, may vaguely float into his mind, and his knife become, as it were, a tuning-fork. Being under chloroform, the patient would, of course, be unconscious of this distraction of the surgeon's mind; but it is just possible it might interfere with the success of the operation.

If the Professor were not as honest as he is scientific he might have given us some hints as to the simulation of attention, which would be invaluable to his fellow-creatures, whether they belong to the medical profession or otherwise. How difficult it is to listen to a bore with any semblance of interest, however important it may be for us to do so! He may be the father of the girl we want to marry, or we may owe him money, or he may be the editor of the magazine to which we wish to contribute, and yet as he bores on and on we are conscious that our eyes are growing lack-lustre, and reveal the palsy that is attacking our vitals. If this good Professor would give us something to make us look bright and pleased under an infliction of this kind for twenty minutes at a stretch, that would be a prescription, indeed. Somebody advertises his pills, "No more disease or death; well worth five shillings a box"; but pills that could be conscientiously trade-marked, "No more necessity for counterfeiting attention" would be worth any money. They would have to be taken on the sly, of course, as people take dinner-pills; but who would have scruples about duplicity when under the harrow of an art critic or a china maniac? Even Emperors experience the need of some anodyne (or, rather, anæsthetic) of this kind. The most amusing incident in the late progress of the Emperor of Germany is the account of his being shown the objects of art and antiquity (for which he doesn't care sixpence) in the Museum and Basilica at Rome. The poor young fellow, we are told, rushed through the halls and through the church, repeating always, "I shall return; I shall return," in a loud voice; but adding to himself softly, we may be sure, "Not if I know it," or "If I do I'm a Dutchman"—or, more probably, "a Frenchman." The alternative suggestion that he meant, "I shall return *and take them*" (as another Emperor did who had a greater turn for bric-à-brac) offered by a cynical friend is one I am thankful to say that could never have entered into *my* head.

Everyone (I hope) remembers how the vulgar persons who ventured to express a doubt that because a thing was written in Greek and two or three thousand years ago, it was not on that account necessarily worth reading, were put to the rout by the publication of a volume called "Greek Wit": a striking example indeed of how a very small thing can put some people down. The quotations were all assigned to their proper author (including the oft cited "Ibid") so that the most ignorant of us learnt to whom he was indebted for each sparkling sally. Sometimes, quite a galaxy of great names were included in a single illustration, when the brilliancy of the story was, of course, proportionably dazzling. As, for example: "Antagoras the poet was cooking a conger eel, and holding the pan himself, when Antigonus came behind him and asked, 'Do you suppose Homer, when he was writing Agamemnon's deeds, cooked a conger?' 'Sir,' replied the other, 'do you suppose Agamemnon, the doer of such deeds, troubled himself to inquire whether any of his men cooked congers in camp?'" Of course, "Greek Wit" is not always of this side-splitting description. Human nature could not have stood it, but must have burst blood-vessels in its mirth; some of the humour is quite of a material kind (though full of philosophy), and—to compare great things with small—has an affinity with our humble "practical jokes." Alcibiades, having bought a remarkably handsome dog for a large sum, cut off its tail. "This I do," said he, "that the Athenians may talk about it, and not concern themselves with any other acts of mine." Even a person who has not received a classical education will be able to appreciate the vigorous drollery of the above anecdote; but there are other stories in the collection of much greater subtlety, the full aroma of which perhaps demands for its conveyance the unrivalled faculty of expression of the Greek aorist. For example: "Philip once gave a favourite a horse that had been badly wounded. The man sold him, and on being asked some time afterwards by the generous Monarch 'Where's your horse?' he replied, 'He is sold of his wound.'" Admirable as this is, as it stands, something seems to have escaped in translation. The following, however, one of the many charming stories from Plutarch, is perfectly intelligible (and only to think that it might have been burnt or mislaid, like the Sibylline Books and other works of antiquity, and never come down to us!):—

"Alcibiades, going to school, asked for Homer's 'Iliad.' 'We don't keep Homer here,' said the schoolmaster. Alcibiades knocked him down, and went on." To extract more beauties from "Greek Wit" would be to rob the dead—or, rather, the Immortals. There are positively none in the collection (which seems exhaustive) much inferior to those I have ventured to quote.

Having performed this good office to classical wit—so far as the Greek prose writers were concerned—the English editor has now favoured the unlearned public with selections from the Greek comic poets. We read how everybody (who *is* anybody) roars over the Westminster Play ("The Frogs," you know, and so on—not "The Boys and the Frogs," but the other), and why, says this good fellow to himself, should not the poor people who have been brought up in the "modern" schools, and even commercial academies, learn to appreciate what their betters enjoy so? Everyone has heard of Menander, but only a favoured few have hitherto been in a position to relish his amazing wit:—

> That wine of yours to queer sensations leads,
> I thought this morning I had got four heads.

This, it is true, is the very best of the poet's witticisms, but how excellent! And, of course, how new! These authors were not like the miserable wits of to-day, who can never hit on anything novel; they had all the world (of subjects) before them where to choose, so that (if a word of detraction is permissible) their complete success is not, perhaps, after all, so wonderful. Long before the *Daily Telegraph* exploited the topic, Menander wrote of wedlock:—

> Marriage, if truth be told (of this be sure),
> An evil is—but one we must endure.

What must have enhanced the charm of these ancient utterances is that they are almost all longer in Greek—the linked sweetness more drawn out—than they are in English. Many persons I trust, for his name is in the Scriptures, have heard of Philemon; but that was not the Philemon who wrote the following epigram:—

> "Hail, father!" when a crab was served, Aygrrhius said; and rather
> Than such a prize should wastrel be, preferred to eat his father.

This witticism, with which I conclude, reminds one of what Cheirisophus said to his patron Dionysius when asked why he laughed at a joke, when he was too far off to catch it. "Well, I saw *you* laughing at it, and trusted to you for the joke being a good one." Similarly, we have now and then to trust to the English editor for the goodness of his Greek jokes. There is no question, as I understand, among scholars but that he has rendered them admirably. And notwithstanding our boasted march of intellect, and all the rest of it, I doubt whether the contents of either volume can be much surpassed by the wit of the first Shakspearean clown in any travelling circus in the United Kingdom. If the Wisdom of the ancient Greeks is on a par with their Wit, or anything like it——but the English Editor has probably got *that* in hand by this time, and I will not anticipate the treat he must needs have in store for us!

If the horror of the Whitechapel murders should have the effect, as I am in some slender hope it may have, of calling public attention to the growing brutality of our roughs, they will not have happened in vain. Our Judges and our Magistrates have so persistently shut their eyes to it, or treated it as a natural outgrowth of poverty and vice, that the whole community—save those who suffered from it—were beginning to take the same view. Only here and there has astonishment been expressed that, while crimes against property have been punished with rigour, those which make the lives of thousands of women and children intolerable, and death their only sanctuary, meet with comparative impunity. The moan of the mother, the cry of the children, goes up to Heaven in vain. Nothing short of murder seems to rouse Justice from her apathy—a sort of Justice nearly allied in its partiality to what used to be called "Justices' Justice," and so dull that she does not recognise a noxious weed till it grows to its full height. Even so early a lesson as Hogarth's "Stages of Cruelty" seems to have been forgotten, if she ever learnt it. She is shocked at a murder like that at Tunbridge Wells, for instance, when a man has a bullet put in his head and is dead in an instant; but to the slow torture of innocent and helpless persons at the hands of miscreants ten times worse than murderers, she blinks (I had almost said "winks"), and murmurs, "Forty shillings, or a month." A young ruffian is standing in the street, and a cat "rubs itself affectionately against his legs"; whereupon he seizes it, throws it thirty feet in the air, and laughs to see it come down with its spine broken. Another fiend burns a lame pony with a hot poker to make it "travel" faster. If the punishment for these acts seems adequate—three weeks' imprisonment in the one case and a month in the other—it only shows how callous (notwithstanding its milk-and-water fears of brutalising those who are brutes already) the public mind has become to such crimes. I am ignorant enough, Heaven knows, but I do claim to know something of human nature; and in letting these villains off with so light a punishment. I maintain the law has practically said, "It is nothing to me that you should grow up bad fathers, bad husbands, and bad citizens; it will be time for me to take you in hand when you have murdered somebody." One is almost tempted to add (save that it is the law rather than its administrators which is to blame) that it would be only poetical justice if they selected such Justices for their victims.

We have had some curious information dug up lately as to the prices that used to be paid for subjects for dissection; but the advertising enterprise of the body-snatching days has been strangely neglected. Here is a notice from a public company, started not so much, as usual, "to supply an obvious void" as to prevent a void only too likely to take place in the family sarcophagus. "Body-stealing has commenced. The dissecting lectures will require more than two hundred bodies every week to be dragged from the wood coffins. Several persons have been deterred—which they have lamented at our manufactory—from adopting the only means of safety by iron coffins, by interested persons stating they would not be received at the burial-grounds. We are informed at the Bishop of London's Office they cannot be refused." I think that "which they have lamented at our manufactory"—their going to the wholesale offices of the company to do it—is a pretty touch.

A correspondent, touched by my reference the other week to "Nick of the Woods," inquires after "Horse-Shoe Robinson," another favourite of his boyhood, as of mine. I fancy we must have been both indebted for it to *The Novel Newspaper*, a work which attracted my attention at that epoch more, perhaps, than it should have done. A year or two ago, when publishers thought to make their fortunes by selling books for sixpence—as authors have since thought to do by selling them for a shilling—"Horse-Shoe Robinson" made its appearance. I bought it at once, as I always do buy any literary favourite of my schooldays, to see whether I have quite outgrown them: if the terrible situations, or the perilous adventures, have still their charms—"If it be I, as I do hope it be"—I am gratified; if not, I attribute the change to the fastidiousness of a too-cultured intelligence. I do not like to think the fault can lie in the books that once seemed so delightful. I confess, however, I found "Horse-Shoe Robinson" dull.

This was not at all the case with another and much more widely known American favourite that I happened, after forty years of absence, to come across the other day, Cooper's "Pathfinder." It had not only all the interest of old, but a merit I had never suspected in it, and which I fancy few readers have recognised: an original spring of humour. "Pathfinder," who is not only the best shot but the greatest moralist in the settlement, is explaining to "Cap" how right it is to be honest and just in our dealings even with Indians. "Once I came suddenly upon a camp of six Mingoes asleep in the woods with their guns and horns piled in such a manner that I could have got the whole of them without waking a miscreant of them all. If the 'Serpent' had been there he would have had their scalps at his girdle in less time than it takes me to tell you. . . . But a white man can no more attack an unarmed than a sleeping enimy. No, no; I did myself, and my colour, and my religion too, greater justice. I waited till their nap was over, and they well on their war-path again; and by ambushing them here and flanking them there, I peppered the blackguards so intrinsically" (Pathfinder occasionally caught a fine word from his associates, and used it a little vaguely) "that only one ever got back to his village, and he came into his wigwam limping. Luckily, as it turned out, the great Delaware had only halted to jerk some venison, and was following on my trail; and when he got up he had five of the scoundrel's scalps hanging where they ought to be; so, you see, nothing was lost by doing right, either in the way of honour or in that of profit." This is surely true humour, and (what seems rather curious now-a-days) though written by an American author it has nothing in common with American humour.

THE EMPRESS FREDERICK.

The illustrious lady, recently widowed, who has our cordial and respectful sympathy—the Empress Frederick of Germany and Queen of Prussia, Princess Royal of Great Britain—laid the foundation-stone of a Mausoleum for her lamented husband on Thursday, Oct. 18, which was his birthday. Its site is in the Royal Park of Sans Souci at Potsdam, behind the Friedenskirche, where his funeral took place in June, in a spot shaded by fine oak and beech trees. There will be a circular building, 25 ft. in diameter, with a rotunda above, surmounted by a high cupola, lantern, and gilt cross. Her Majesty had that morning, at the palace, received a deputation from the Berlin Municipality with an address of condolence. In performing the ceremony in the park, she was accompanied by the Hereditary Prince and Princess of Meiningen, the three younger Princesses her daughters, Princess Frederick Charles and Prince Leopold, the Crown Prince of Greece, Count Seckendorf, and her Ladies-in-Waiting. As the stone was lowered, the 126th Psalm was sung by the choir. Short addresses were delivered by the Rev. Dr. Windel and the Rev. Dr. Persius, Court Chaplains, followed by singing a hymn.

RUSSIAN OPERA.

The performances of the Russian National Opera Company at the little theatre formerly called the Novelty, and now entitled the Jodrell, have already been briefly referred to in anticipation. The opening of the series was announced for Oct. 17, and then suddenly postponed to Oct. 18; having again been deferred to the following Monday, Oct. 22. The production of Rubinstein's opera, "The Demon"—a work of the grand romantic class, requiring elaborate stage effects and scenic splendour—would have been a questionable step under any circumstances in a tiny theatre best adapted for vaudevilles and pieces of a similar description; and as the opera just named has been given in an Italian version at our Covent-Garden opera house with great solo vocalists and especial stage and scenic advantages, the recent experiment on a much smaller scale was somewhat risky. It is gratifying, therefore, to be able to record that the experiment met with an amount of success that will probably be enhanced when the performances become better known to the public. The representation of "The Demon" now referred to included a masterly performance, both vocally and dramatically, of the title-character by M. Winogradow, a young baritone whose declamation and action were alike admirable. Mdlle. Ivanowa sang agreeably, if not very powerfully, as the Angel of Light, as did Mdlle. Wieber, as Tamara; and M. Jumaschew, as Prince Sinodal, in the little tenor music assigned to that character; the part of Prince Gudal having been efficiently maintained by M. Weisshoff. The choral passages were excellently rendered by the Moscow choir, and a select orchestra did its best with the elaborate and difficult instrumentation of the score. Signor Truffi conducted ably.

A memorial statue of Sir Hugh Owen, late Secretary of the Local Government Board, was unveiled at Carnarvon on Oct. 22 in the presence of a large and representative assembly.

The Bishop of Pretoria has again sailed for his distant diocese. He has taken with him a set of plans for his cathedral of St. Albans, designed by Mr. William White, F.S.A.

THE GERMAN EMPEROR IN ITALY.

The visit of the Emperor William II., King of Prussia, to King Humbert I. of Italy, sojourning at Rome from Oct. 11 to Oct. 16, then proceeding to Naples, whence their Majesties returned to Rome on the 18th, the Emperor departing next day to Germany, was everywhere attended with gratifying expressions of welcome on the part of the Italian nation. His arrival at the railway station of Rome, near the Piazza delle Terme, where he was met by the King of Italy and the Royal Princes, and his passage from the railway station to the Quirinal Palace, were described in our last, but are the subjects of two additional Illustrations.

The review, on Saturday the 13th, of thirty thousand troops of all arms by the Emperor and King at Centocelle, seems to have been a brilliant success. The camp of Centocelle, well known to members of the Roman Hunt, is about seven kilometres distant from Rome. The troops began to arrive on the ground so early as five o'clock, and before eight all the positions were taken up in good order. Queen Margherita drove up, followed by the Duchess of Aosta and Genoa. At half-past ten the Emperor and the King came on the ground. The Emperor wore the white uniform of the Imperial Guards, with a silver helmet, and the Grand Cordon of the Military Order of Savoy, which the King had conferred on him the day before. His Imperial Majesty rode a magnificent black horse. King Humbert, in the uniform of an Italian General, was on a handsome bright bay charger. The two Sovereigns, followed by a staff of two hundred officers, among whom were twelve Italian Generals, rode at a gallop to the Royal stand, where they saluted the Queen, with whom the Emperor exchanged a few words. The bands played the German National Anthem when the Sovereigns first came on the ground, and afterwards the Italian Royal March.

The review commenced immediately. The Emperor, with the King, passed slowly along the lines, inspecting the troops with keen attention. They then took up positions on the Queen's right for the march past. The force consisted of Carabineers, Grenadiers, Regiments of the Line, Bersaglieri, Foot and Horse Artillery, Alpine troops, Mountain Artillery on the backs of mules, and Lancers, being thoroughly representative of the Italian army. The Bersaglieri went by at a run, keeping the line admirably; and the trot past and gallop past of the Field Artillery were splendidly executed, a left wheel being afterwards made as if the men, horses, and guns were a solid mass. The Emperor was much pleased with the appearance of the Alpine troops: the majority of them were light-haired, like the German soldiers. He greatly admired the Bersaglieri, and asked how long they could hold out that pace, observing at the same time that he did not think the German soldiers were elastic enough to maintain such a speed.

In the evening of the same day, their Majesties attended a reception given by the Syndic and Municipality of Rome, at the Capitol, in honour of the German Emperor.

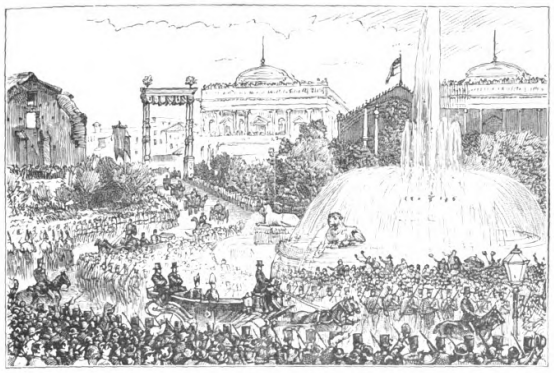
The visit of the Emperor to the Pope, at the Vatican Palace, which we have mentioned, was so managed as to avoid the recognition of his Majesty being the guest of the King of Italy, with whom his Holiness still refuses to entertain courteous and neighbourly relations, denying the right of the Italian nation to make Rome its political capital. The Emperor therefore went, in a German State carriage, with German attendants, from the residence of the German Envoy accredited to the Pontifical Court. The scenes in the streets on his Majesty's way to the Vatican are shown in some of our Artist's Sketches.

At Naples, on the Tuesday following, the Emperor and the King of Italy were greeted with immense demonstrations of popular enthusiasm. They went next day to Castellamare, on the shore of the Bay of Naples, where are the new docks in which the latest addition to the Italian Navy, the great ship Ré Umberto, has been built. This ship, one of the largest war-ships in the world, is 400 ft. long, 76 ft. 9 in. broad, draws 28 ft. 8 in. of water, and has a displacement of 13,298 tons; she has no side armour, but the deck armour, curving up from below the water-line, is of steel plate, and she is divided into 150 water-tight compartments; she carries four 104-ton Armstrong guns of seventeen-inch calibre, mounted on two barbettes defended by very strong armour, and many smaller guns; she has twin-screw propellers, with engines of great power, to attain a speed of eighteen knots an hour. The Italia and the Lepanto are ships of equal dimensions.

The Emperor, the King, Prince Henry of Prussia, and the Dukes of Aosta and Genoa, on reaching Castellamare, found all ready for their reception. The Italian Fleet was at anchor in the bay, drawn up in four lines facing the shore. Nearest the land was a line of torpedo-boats, next lay some more torpedo-boats, with despatch-vessels and one cruiser, and behind them, in the third line, appeared the majestic hulls of the ironclads of first rank. The fourth line was formed by a number of second-rate ironclads, transport, and service vessels.

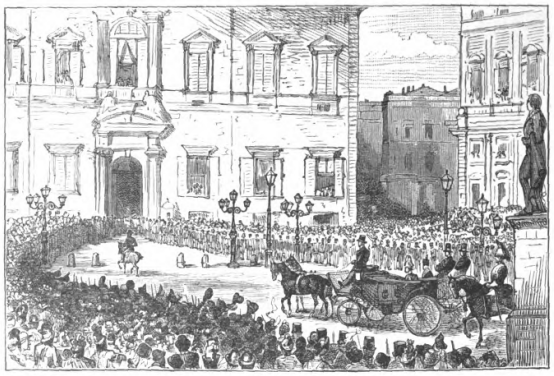
The operations for the launch were begun as soon as the Emperor and the Royal party had arrived. The Bishop of Castellamare, in full canonicals, attended by his clergy, pronounced a benediction on the great ship; the christening with a bottle of Italian wine was duly effected; and then the Ré Umberto began her descent into the water amid tumultuous cheering from thousands of spectators, the Emperor taking off his hat and waving it in salutation.

When the ceremony was finished, the two Monarchs went on board the Royal yacht Savoia, where they were received by Admiral Acton. After the Royal party had partaken of luncheon, the Savoia weighed anchor and put further out to sea, where they could witness the succeeding evolutions.



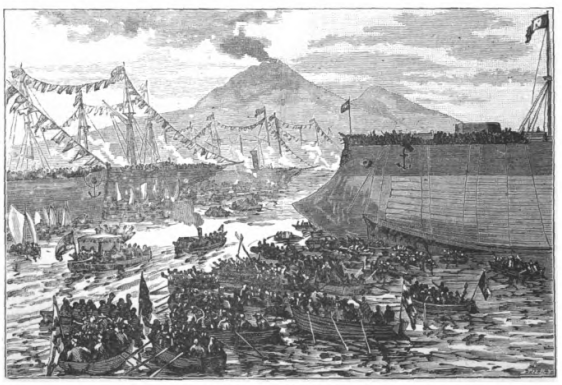
All the ships of the fleet began to move, and forming lines, passed to the right and left of the Savoia, steaming towards Naples. Near Cape Posilipo they made a long counter-movement, and, turning, took up fresh positions to defile past the Savoia. Sixteen torpedo-boats led the way, followed on the right by the ironclads Lepanto, Dandolo, Duilio, and Affondatore and the cruisers Galileo, Tripoli, Saetta, Sparviero, and Nibbio, the left line consisting of the cruisers Etna, Bausan, Stromboli, and Vesuvio. After these came the screw despatch-vessels Staffetta and Colonna, and the torpedo cruisers Goito, Folgore, Aquila, and Avoltoio. The rest of the fleet had remained at their stations as an escort to the Savoia.

The spectacle from the shore of the Bay of Naples was most imposing. Ship after ship passed the Royal yacht, each saluting as it steamed by, with yards manned. The two Monarchs remained on the bridge three hours, the Emperor expressing his admiration.



The illumination on Thursday night of the ruins of Ancient Rome, and of the view stretching from the Capitol to the Coliseum, was one of the most interesting spectacles offered to the German Emperor. A Royal stand, surmounting two others for specially invited guests, was erected on the highest point of the Palatine Hill, facing the Temple of Peace, and thence the Emperor and the Royal party commanded the whole view. The Forum and the Via Sacra were kept quite clear, and every stone was visible, as now the electric light, anon red, white, or green fires, shed strong reflections on the mighty ruined buildings. The Coliseum was illuminated from within. Many coloured lights came and went, transfiguring the Capitol, the Arch of Titus, the Temple of Peace, the Arch of Septimius Severus, and the surrounding churches with magical effect. Sheaves of fiery rockets darted upwards from the ruins, dissolving in multicoloured stars. When the last rocket had been fired, there suddenly shone out from the summit of the Capitol an immense star in a pure white light, symbolising the Hope of Italy.

Next morning the Emperor and the King witnessed some manœuvres by the Third Regiment of Bersaglieri, on the parade-ground of the Cavalry Barracks, the German Emperor having expressed a great desire to see more of their peculiar mode of marching. At three o'clock the Emperor left Rome, passing to the station by the King's side. They were heartily cheered. The Emperor travelled direct to Berlin.



The Queen has approved the appointment of Mr. Gurudas Banerjee, Pleader of the High Court at Calcutta, to be a Judge of that Court.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Oct. 23.

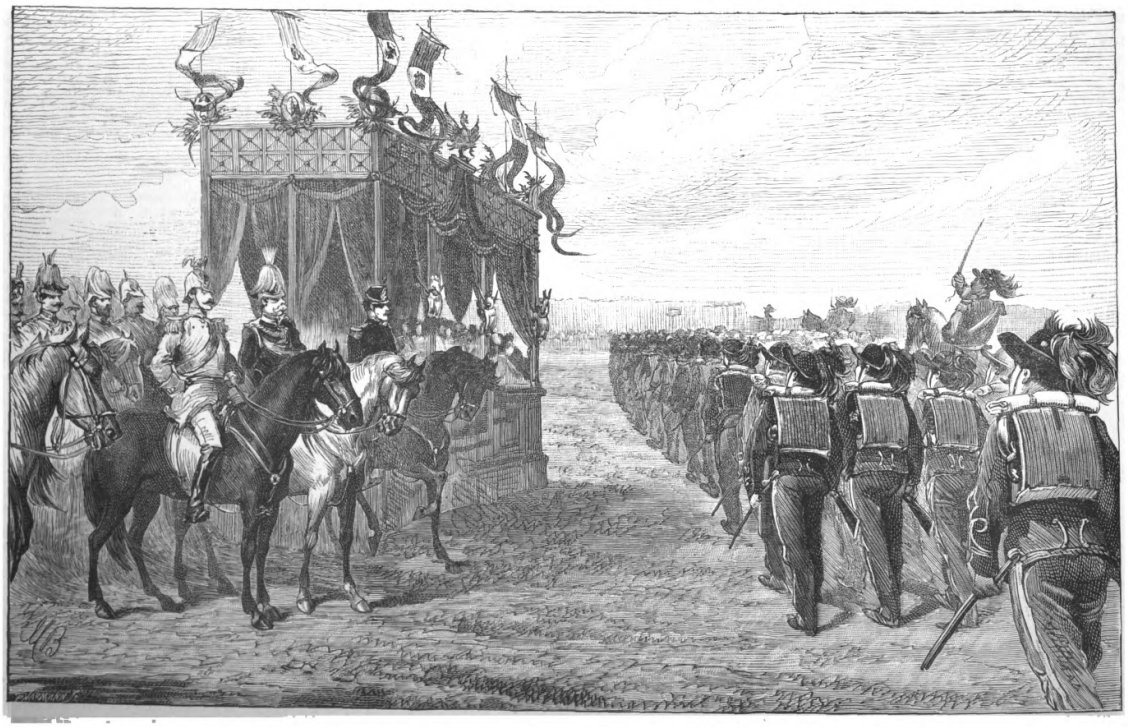
The political record of the week is an inextricable labyrinth of financial complications. The Budget of 1889 has come on for discussion, and, like the Budgets of 1888 and 1887, it has to struggle against a terrible deficit. The Republic outlives its income, year in and year out, to the tune of some four hundred millions, and within ten years has borrowed about four milliards. The discussion seems likely to centre on the enormity of this deficit, which, in view of the forthcoming elections, the Republicans will try to conceal and the Conservatives to expose, all of which will tell in favour of Boulanger and the malcontents. To make their electoral prospects worse the Ministers have revived the hated question of an income-tax, to be levied independently of the existing taxes, which apply to various kinds of revenue. There is every probability that the Chamber will reject the Ministerial Bill, which decidedly opens a door for spying of all kinds.

The event of the day about which there is most talk is the publication of another violent anti-Semitic pamphlet of five hundred pages, by M. Edouard Drumont, author of "La France Juive." The present work, called "La Fin d'un Monde," is a social and psychological study of the different classes of French society since the Revolution — the aristocracy, the middle classes, the people, the world of politics, finance, law, Socialism, &c. — the whole from the point of view of a militant Catholic, whose mania it is to see Jews everywhere. M. Drumont depicts modern France as being full of rottenness and corruption—a decadent nation, devoured and dominated by the Jews and the Freemasons, who are masters of its finances, its commerce, its justice, and its government. The only remedy, he thinks, would be the revision of the Revolution for the advantage of all; and, in order to accomplish this, he proposes to arrest some three hundred persons, Jews or Christians by birth, but who have acquired their wealth by the Jewish system—that is to say, by speculation and financial operations—and to force these persons to restore to the nation the millions which they have managed to monopolise. Although M. Drumont makes frequent appeals to violence and bloodshed, he considers that this Revolution could be made peacefully by resorting to the methods of the Middle Ages and of the old Monarchy—namely, the convocation of a Chamber of Justice.

The Chamber of Deputies nominated to-day a Commission to report finally on the projected maritime canal between Paris and Rouen, one of the most important Bills that the present Legislature has had to consider. The object of making Paris a seaport is to enable it to get possession of the transit business which now goes through Antwerp. The maritime canal, by facilitating the provisioning and defence of Paris, would have great strategic importance. The projected canal would be 112 miles long, twenty feet deep, and half as broad again as the Suez Canal. There is a strong movement in favour of the creation of this canal, of which the estimated cost is £4,800,000. The Paris Seaport Company asks no State subvention; and amongst the politicians it is believed that the Bill will be voted authorising the execution of the scheme.

The horrible agglomeration of sheds which have long encumbered the Place du Carrousel, serving as a temporary post-office, are at last being removed, and soon the space will be clear, leaving visible the long perspective of the Tuileries gardens and the Champs Elysées, terminating at one end with the Arc de Triomphe and at the other with the Gambetta monument. This perspective is certainly grandiose, but the contrast of its two extreme points, Napoleon I. and Gambetta, is curious, not to say comic. The space is to be converted into a garden. It is suggested, however, that a vast winter garden, a democratic Crystal Palace, might be built there for the joy of the children, who could play there in the cold months, while their parents listen, as usual, to the military band.

M. Paschal Grousset, taking advantage of experience gained in England, has been making a journalistic campaign in *Le Temps* in favour of physical education and athletic sports. The consequence is the formation of a Ligue Nationale de l'Education Physique, presided over by M. Berthelot, of the Academies of Science and of Medicine, and the projected foundation at Paris of an Ecole Normale des Jeux Scolaires by means of private subscriptions. The matter is attracting much attention, and strong propagandist efforts are being made.



The Municipal Council decided last December to erect a monument to Danton at the corner of the Boulevard Saint Germain and the Rue de l'Ecole de Médicine, near the former dwelling of the famous member of the Convention. A *concours* was opened, and no less than seventy French sculptors have sent in models, which are now on exhibition at the Hôtel de Ville. To the execution of the model finally selected, the Municipal Council has devoted the sum of 60,000 f. T. C.

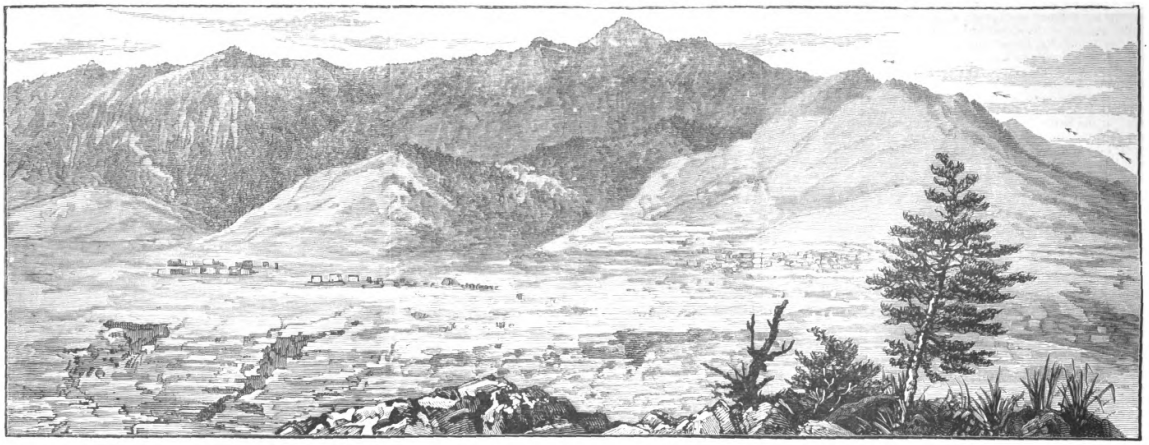
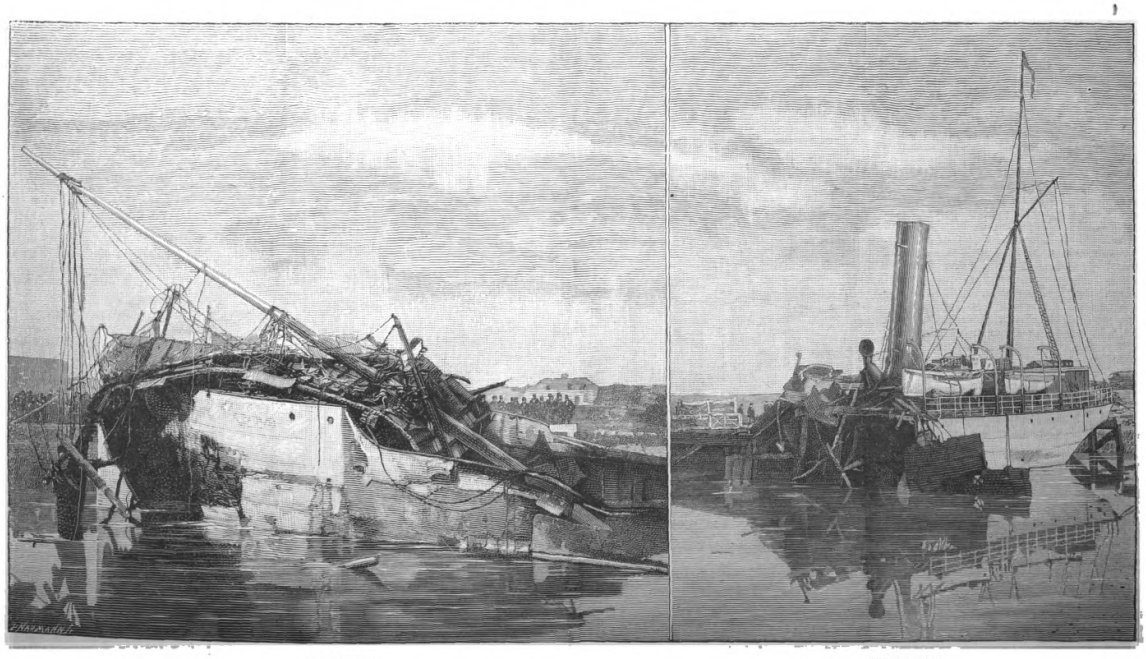
THE EMPEROR ARRIVING AT THE VATICAN: SKETCHES IN THE CROWD.

THE EMPEROR AND THE KING OF ITALY AT THE REVIEW AT CENTOCELLE, NEAR ROME.

THE LATE MR. JOSEPH M. LEVY.



DR. CARL PETERS,
COMMANDER OF THE GERMAN EMIN PASHA RELIEF EXPEDITION.



THE LATE LORD MOUNT-TEMPLE.

The arrows show the route of the 1st Column of the Hazara Field-Force ascending the mountain range.

THE BLACK MOUNTAIN, VIEW LOOKING WEST FROM BAGRWAN.

FORE PART. AFTER PART.

THE PETROLEUM EXPLOSION AT CALAIS: THE WRECKED VESSEL.

GERMAN EMIN PASHA RELIEF EXPEDITION.

The apprehended failure of Mr. H. M. Stanley's expedition to relieve Emin Pasha, who is a German physician and man of science, from his embarrassed position on the Upper Nile, has caused the Germans to subscribe ample funds to send out a new expedition, the Commander of which is to be Dr. Carl Peters. He is thirty-two years of age, a native of Neuhaus, on the Elbe, and was educated at Ilfeld, and at Göttingen, Tübingen, and Berlin, studying law, history, geography, and national economy; and graduating in the Berlin University. From 1881 to 1884, Dr. Peters resided in England, gaining a thorough knowledge of the history and state of our Colonies. Having returned home, he obtained, with the support of Prince Bismarck, an Imperial charter, under which he formed the German East African Company, of which he was elected President. He dispatched sundry expeditions to East Africa, in order to take possession of the territory opposite Zanzibar. In September, 1886, Dr. Peters convened at Berlin the first German Colonial Congress. In the following spring, he went to Zanzibar with his executive staff, and concluded a treaty with the late Sultan Said Burghash. Since his return to Europe, Dr. Peters has initiated in Germany the movement for a relief expedition to aid his countryman, Emin Pasha, and is President of the committee. He is also presiding Director of the German East African Company, Chairman of the German East African Plantation Company, joint President, with Prince Hohenlohe, of the German Colonial Society, and President of the General German Colonial Alliance. He is author of several works on colonisation. Lieutenant Wissmann, the well-known African traveller, will be associated with Dr. Peters in the command of the German Emin Pasha Relief Expedition.

THE LATE MR. JOSEPH LEVY.

The death of Mr. J. M. Levy, one of the chief proprietors and managers of the *Daily Telegraph*, not, indeed, from its foundation, but from the early period at which it was put on a footing that rendered it a most successful London newspaper, took place on Oct. 12, at his seaside residence, Florence Cottage, Ramsgate, in the seventy-seventh year of his age. He was born in London, in 1812, and was partly educated at Bruce Castle School, Tottenham, the well-known establishment of Mr. Hill, father of Sir Rowland Hill, where the late Right Hon. W. E. Forster and other sons of the Nonconformist families, several of them destined to public eminence, received their education. Mr. Levy finished his education in Germany, and engaged in commercial business. He was an esteemed member of the Jewish Community in England, a steadfast Liberal, and a man of enlightened views; and he took much interest in musical and dramatic art, while his private virtues were known to his family and many personal friends. His funeral, in the Ball's Pond Cemetery, performed by the Rev. A. Löwy, was attended by Mr. Edward Lawson, Mr. H. W. Lawson, M.P., Sir Edwin Arnold, and the members of the *Daily Telegraph* editorial staff.

THE BLACK MOUNTAIN EXPEDITION.

The military expedition commanded by General M'Queen in the hill country on the Hazara frontier of the Punjaub seems, within ten days of its starting for the Black Mountain, to have effected the complete defeat of the Hasanzais and the Akozais. These hostile tribes have been summoned to pay a fine in money, and to surrender the leaders of the attack on Major Battye's detachment of the Punjaub Frontier Force at midsummer last. Their villages and the towers of their chiefs have been destroyed to enforce submission. Some fighting took place on Oct. 10, when a force which had crossed the Indus to reconnoitre Palosi was on its return march. The fourth column was still advancing northward, and occupied Kunhar on Oct. 11, having cut a road through the forest. We have received from Captain Francis C. Carter, of the Northumberland Fusiliers, with the first column, a sketch of the view of the Black Mountain looking west from the Bagrwan post, near Dilbori, where this portion of the Hazara Field-Force was on Sept. 27. The highest peak, in the centre of the background, is that of Chittabut, which was reached by General M'Queen in the first week of October.

PETROLEUM-SHIP EXPLOSION AT CALAIS.

An alarming disaster, by which four persons were killed, took place on Tuesday, Oct. 16, at seven o'clock in the evening, in the dock basin at Calais. A vessel of 1100 tons, called the Ville de Calais, which had brought a cargo of petroleum from America, blew up from an explosion of petroleum gas, and was broken into two pieces; the fore part continued burning all night. The cargo of oil had been discharged, as the ship was to leave the port next day, but the woodwork partitions were saturated with that liquid, which had generated an immense quantity of inflammable gas; and this, mixing with the air, became highly explosive, and was ignited by some accident. The sound was tremendous; houses in that part of the town were shaken as by an earthquake, and hundreds of windows were shattered by the concussion of the air. Huge beams, spars, and other fragments of the vessel were hurled to a great distance. The second officer, Lieutenant Clinquart, of Gravelines; the third engineer, a Breton named Kervouasou; a sailor named Derrien, and another, lost their lives by this disaster. Captain Blondel, who was lying down in his cabin; M. Souvignon, the chief engineer, and one or two other persons on board, were unhurt, but the stoker had a leg broken. Several ships in the dock were more or less damaged. The explosion was felt and heard at Boulogne.

The Fishmongers' Company have given £250 to the funds of the National Sea Fisheries Protection Association.

Arrangements have been made with the Great Western Railway Company for the despatch of a special train from Paddington at 8.55 a.m. on Saturday, Oct. 27, for the conveyance of passengers to be embarked by the Orient, leaving Plymouth the same afternoon for Gibraltar, Naples, Suez, Albany, Adelaide, Melbourne, and Sydney.

The new school-room at the High School for Girls, at Bromley, Kent, was opened on Oct. 22 by the Archbishop of Canterbury, Sir John and Lady Lubbock being present.

The Marchioness of Salisbury has given another proof of her sympathy with women's work by opening the premises taken, in Brook-street, by Miss Charlotte Robinson (Home-Arts Decorator to her Majesty) for the decorative work done in her London and Manchester studios.

THE PARIS STATUE OF SHAKSPEARE.

The bronze statue of Shakspeare presented to the city of Paris by Mr. William Knighton, vice-president of the International Literary Association, is erected at the junction of the Avenue de Messina with the Boulevard Haussmann. The sculptor, M. Paul Fournier, has represented our great dramatic poet in an Elizabethan costume, with a cloak hanging over his left arm, and in a meditative posture. An ornamental stone pedestal supports the statue. At the unveiling ceremony, on Sunday, Oct. 14, speeches were made by Mr. Knighton, M. Darlot, President of the Paris Municipal Council, and M. Mézières, a

STATUE OF SHAKSPEARE IN THE BOULEVARD HAUSSMANN, PARIS, GIVEN BY MR. W. KNIGHTON.

member of the French Academy, and former lecturer at the Sorbonne on English literature. Several other persons of note, among whom were the Belgian and the Chinese Ambassador, were also present. The study of Shakspeare in France has not been despised or neglected during the past half-century, as it was in the times of Boileau and of Voltaire, having been favoured by the influence of the French romantic school and of Victor Hugo. The translation of Shakspeare by François Hugo is considered to have some merit.

THE FULHAM FREE PUBLIC LIBRARY.

The Bishop of London, on Saturday, Oct. 20, opened the new building erected, at a cost of £6000, by the Commissioners appointed under the Act of Parliament to carry out the vote

THE NEW PUBLIC LIBRARY AT FULHAM.

of the parishioners of Fulham, at their polling in December, 1886, for the establishment of a free public Library. The votes in favour of this institution were 3788; against it, 1324. The sum mentioned has been raised by a loan to be paid off in thirty years, secured by a penny rate which brings in £1300 a year. The new building is on the main road to Putney and Richmond, in the centre of Fulham. Mr. J. G. Hall is the architect, and Mr. Charles Wall, of Chelsea, the builder. The reading-room is 70 ft. long, 30 ft. wide, and in height 22 ft. The ceiling is beautifully decorated by Messrs. Merolda and Casanova, Italian artists, from the Italian Exhibition. In the front of the building are the lending and reference libraries, the ladies' reading-room, and the Commissioners' room, on the first floor; the remainder being occupied by Mr. H. Burns, the librarian. There are seven thousand volumes of books.

OBITUARY.

LORD MOUNT-TEMPLE.

The Right Hon. William Francis Cowper-Temple, Baron Mount-Temple, died on Oct. 16. He was born Dec. 13, 1811, the second son of the fifth Earl Cowper by Amelia, his wife, daughter of Viscount Melbourne. He was educated at Eton, and was formerly Brevet-Major Royal Horse Guards. He sat in the House of Commons for Hertford, 1834 to 1868, and for South Hampshire, 1868 to 1880, holding at various periods several Ministerial appointments—viz., a Lord of the Admiralty, 1846 to 1852; Under-Secretary of State, 1855; President of the Board of Health and Vice-President of the Educational Department, 1855 to 1858; Vice-President of the Board of Trade and Paymaster-General, 1859 to 1860; and Chief Commissioner of Public Works, 1860 to 1866. He was private secretary to Lord Melbourne when Premier, and was sworn of the Privy Council in 1855. He assumed, by Royal license in 1869, the additional surname and arms of Temple on succeeding to the estate of his stepfather, Viscount Palmerston; and was created a Peer in 1880. He married, first, June 24, 1843, Harriet Alicia, daughter of Mr. Daniel Gurney, of North Runcton, Norfolk, which lady died in the August following; and secondly, Nov. 22, 1848, Georgiana, daughter of Admiral J. R. D. Tollemache. As Lord Mount-Temple has died without issue, the title becomes extinct.

Our Portrait of the late Lord Mount-Temple is from a photograph by Mr. Samuel A. Walker, of 230, Regent-street.

THE DOWAGER DUCHESS OF HAMILTON.

Princess Mary of Baden, widow of the eleventh Duke of Hamilton and eighth Duke of Brandon, died on Oct. 18. Her Grace was born Oct. 11, 1817, the younger daughter of Charles Louis Frederick, Grand Duke of Baden, by his wife, Princess Stephanie, Vicomtesse de Beauharnais, adopted daughter of the Emperor Napoleon I. The issue of the marriage consisted of two sons and one daughter—viz., William Alexander Louis Stephen, the present Duke of Hamilton and Brandon; Lord Charles George Archibald Douglas Hamilton, who died in 1886; and Lady Mary Victoria, married, first, to Prince Albert of Monaco, Duke of Valentinois, and secondly to Count Tassilo Festetics.

We have also to record the deaths of—

Count di Robilant, Italian Ambassador at the Court of St. James, at the Embassy in London, on Oct. 17, aged sixty-two.

The Rev. Thomas Agar Holland, Rector of Poynings, suddenly on Oct. 18, in the eighty-sixth year of his age.

Captain H. V. Pennefather, late of 22nd and 41st Regiments, at Pietermaritzburg, Natal, South Africa, on Aug. 9, aged fifty-nine years.

Mr. J. W. De Longueville Giffard, Judge of the Exeter County Court, and brother of the Lord Chancellor, on Oct. 23, at his residence near Exeter. He was appointed Judge of the Huddersfield circuit in March, 1875, and was transferred to Exeter a few years ago.

COLONEL SIR B. P. BROMHEAD.

Sir Benjamin P. Bromhead, Bart., Lieutenant-Colonel Bengal Staff Corps, and Commandant of the 32nd Pioneers, who lost his right hand in the action with the Thibetans, saw service in Afghanistan, where he took part in both the Bazar Valley expeditions, comes of a family of soldiers. He is brother of Lieutenant-Colonel Charles Bromhead, commanding 2nd Battalion South Wales Borderers; of Major Gonville Bromhead, V.C., of the same regiment, whose heroic defence of Rorke's Drift after the massacre of Isandlwana, in conjunction with Lieutenant Chard, will ever be one of the brightest pages in our Army annals; and of the late Captain Edward Bromhead, of the 4th King's Own, who served in the Crimea, and died in Burmah. Their father, Sir Edward Gonville Bromhead, Bart., was a Peninsular and Waterloo officer, who led the forlorn hope at Cambrai, and was present, then a Major, at the capture of Paris; while their grandfather, the son of a gallant officer who had been at Louisburg, and with Wolfe at Quebec, distinguished himself in the North American campaigns, and obtained a baronetcy for his services. Other members of the family have been noted for their prowess.

MARRIAGES.

Mr. Robert Piercy, eldest son of the late Mr. Piercy, of Marchwiel Hall, Denbighshire, was recently married to Margherita Alliata Vaglienti, only daughter of the Count and Countess Alliata Vaglienti, of the Palazzo Scotto, Pisa.

The church of St. Mary, Weldon, Northamptonshire, was crowded on Oct. 17 by a fashionable assembly to witness the marriage of Mr. Charles Vere Gunning, of the 68th (Durham) Light Infantry, son of Sir George Gunning, Bart., of Horton, with Miss Ethel Beatrice Finch-Hatton, daughter of the Rev. W. R. Finch-Hatton, Rector of Weldon. The bridesmaids were the Misses Finch-Hatton (the bride's sisters), the Misses Gunning (the bridegroom's sisters), Miss Maud Oxenden, Miss Monckton, and Miss S. Pratt. The best man was Mr. G. C. Ansel, of the 68th (Durham) Light Infantry, and Master Laud Robinson officiated as page.

The marriage of Dr. Edward Stewart and Lady Philippa Fitzalan Howard took place on Oct. 18 at St. John's Church, Heron's Ghyll. The bride was given away by her brother, the Duke of Norfolk, and was attended by her sister, Lady Margaret Howard, and Miss Stewart, sister of the bridegroom, as bridesmaids. Among those present were the Duke of Norfolk, Lady Mary Howard, Lord and Lady Edmund Talbot, Mr. James Hope, and Dr. Pasteur, who was the best man.

THE LATE LORD SHAFTESBURY.

Baroness Burdett-Coutts, on Oct. 7, unveiled the statue of the late Earl of Shaftesbury, which has been placed in Westminster Abbey, near the western door. The statue is the work of Mr. Boehm, R.A., and was executed from a bust by the same artist which was finished from life a few years before Lord Shaftesbury's death. He is represented in the robes of the Garter, with his hands clasped in front. The statue is about

STATUE OF THE LATE EARL OF SHAFTESBURY IN WESTMINSTER ABBEY.

8 ft. 6 in. high, and is placed upon a marble pedestal, which bears the inscription :—"Anthony Ashley Cooper, seventh Earl of Shaftesbury, K.G. Born April 28, 1801; died Oct. 1, 1885. Endeared to his countrymen by a long life in the cause of the helpless and suffering. Love. Serve." The last two words are the family motto of the Shaftesburys. It is also intended to erect another memorial, probably in Piccadilly-circus, in the shape of a bronze drinking-fountain, which has been designed by Mr. A. Gilbert, A.R.A., and it is also hoped that funds will be forthcoming for the establishment of a seaside or country home for poor and convalescent children.

The Queen has conferred the dignity of a Marquisate on the Viceroy of India under the title of Marquis of Dufferin and Ava.

The Prince of Wales has appointed Colonel Robert N. Fitzhardinge Kingscote, C.B., Receiver-General of the Duchy of Cornwall, vice the late Right Hon. Sir John Rose, Bart.

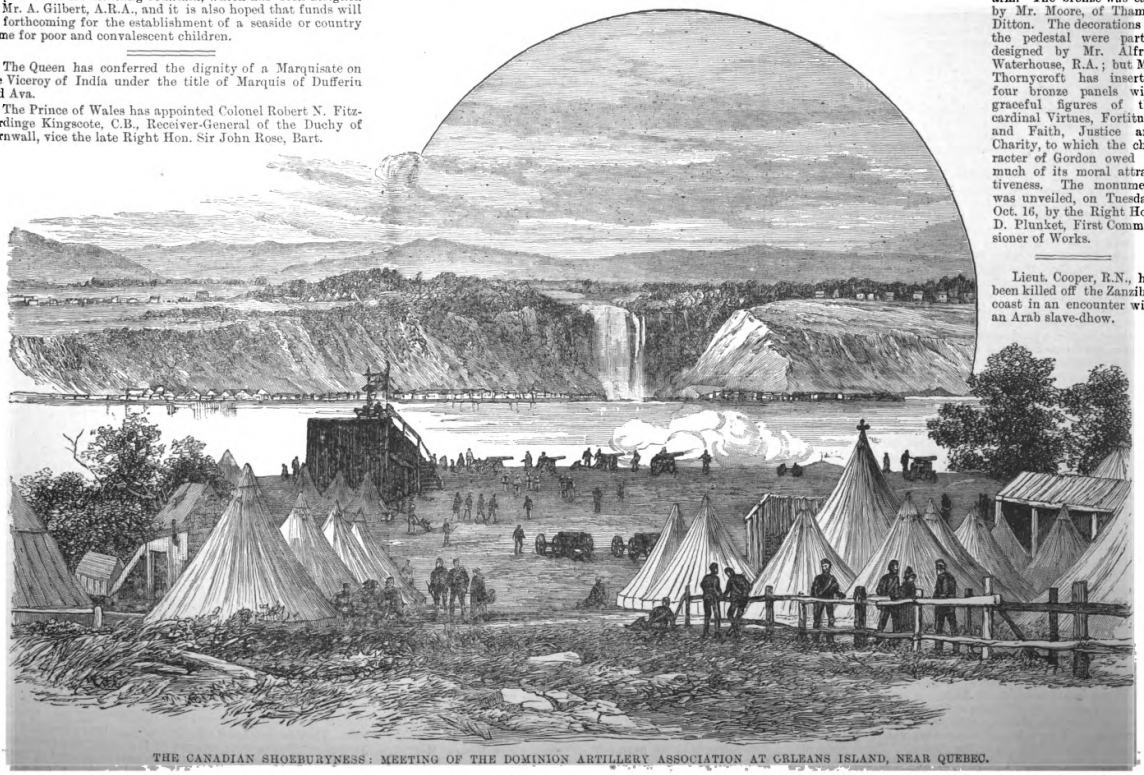
THE PARNELL COMMISSION.

The Special Commissioners appointed to investigate the charges against the Parnellite members proceeded with their inquiry on Monday, Oct. 22. Little public interest was manifested in the proceedings or the personages engaged or concerned in the inquiry. When Sir J. Hannen, the President, and Justices Day and Smith took their seats, only a few of the members implicated in the charges besides Mr. Parnell were present, and the Court was not full; but the attendance increased during the day. Counsel for Mr. Parnell applied at the outset for an order for the release from prison of Mr. W. Redmond, M.P. The Commissioners consented to order his release on his undertaking to take no part in public proceedings during his release. These conditions being refused, no order was made. The Attorney-General, in opening the case for the *Times*, said he alleged that the acts which he should prove were done in furtherance of a concerted and preconceived conspiracy, with definite objects and aims, and with the knowledge or idea that the only way in which the organisation could do its work was by the commission of crimes. He proceeded to show the connection of individuals with various organisations, beginning with the formation of the Land League after the collapse of the Fenian movement, and stated that Mr. Parnell and others implicated in the charges were connected with the League, which derived its support from those in America who advocated dynamite and assassination. He read extracts from intimidating speeches made by members of the League, which were followed by murders and outrages, and had not finished this branch of the case when the Court adjourned. The Attorney-General, continuing his statement next day, reviewed the operations of the Land League between 1879 and 1882 in the counties of Kerry, Mayo, Cork, and Clare, with a view of showing that the institution of local branches and the holding of meetings at which violent speeches were made invariably resulted in murders and other outrages, as well as in intimidation and boycotting. The heads of the League were cognisant of the acts of their agents, and found the money for carrying on the organisation of crime. Some documents had come into the possession of the *Times* which would be produced to establish that contention. As to the letters alleged to have been written by Mr. Parnell, every information would be given to the Court as to their source. Impartial persons had had the opportunity of comparing them with undoubtedly genuine autographs of Mr. Parnell, and declared that they were in the same handwriting. Mr. Parnell came into court at the time the Attorney-General was referring to the letters which are alleged to have been written by him. The proceedings were continued on the 24th, when there was a considerable discussion about certain documents in a box marked "A," which it was ultimately agreed on should be handed over to the Commissioners to decide whether they were material to the inquiry or not. After a few more words the Attorney-General then resumed his address.

THE CANADIAN SHOEBURYNESS.

The Dominion Artillery Association of Canada, in September, held its annual meeting on Orleans Island, in the River St. Lawrence, near Quebec. It may be called "the Canadian Shoeburyness," and will be interesting to our Artillery Volunteers in England. Captain Imlah, of the Regiment of Canadian Artillery in Quebec Citadel, took some photographs, which have been sent us by Captain R. N. Rutherford. The meeting, which was a complete success, was attended by batteries from the provinces of Ontario, Quebec, Nova Scotia, New Brunswick, and Prince Edward Island. Some of the detachments had travelled over 800 miles to be present. It was expected that an English and a Scotch team would have been present; but this is hoped for next year. The last English team that came out for the meeting was in 1884. The Canadians sent a detachment to England in 1886.

TRAFALGAR-SQUARE STATUE OF GORDON.



The National Monument, for which money was voted by Parliament, in honour of the late Major-General Charles George Gordon, C.B., the hero of China and of Khartoum, is erected in the middle of Trafalgar-square. It is a bronze colossal statue, 10 ft. 6 in. high, standing on a pedestal of Derbyshire limestone, which is nearly 20 ft. high, with two granite steps. Mr. Hamo Thornycroft, R.A., the sculptor, has

STATUE OF THE LATE GENERAL C. G. GORDON IN TRAFALGAR-SQUARE.

produced an effective figure, looking perhaps more robust and athletic than Gordon seemed when living: the hero stands, bareheaded, in undress military uniform, with his left foot resting on a shattered cannon; a Bible is in his left hand, which also supports the head in an attitude of deep thought. A short cane, which he was accustomed to carry even on the battle-field, is under his arm. The bronze was cast by Mr. Moore, of Thames Ditton. The decorations of the pedestal were partly designed by Mr. Alfred Waterhouse, R.A.; but Mr. Thornycroft has inserted four bronze panels with graceful figures of the cardinal Virtues, Fortitude and Faith, Justice and Charity, to which the character of Gordon owed so much of its moral attractiveness. The monument was unveiled, on Tuesday, Oct. 16, by the Right Hon. D. Plunket, First Commissioner of Works.

Lieut. Cooper, R.N., has been killed off the Zanzibar coast in an encounter with an Arab slave-dhow.

THE CANADIAN SHOEBURYNESS: MEETING OF THE DOMINION ARTILLERY ASSOCIATION AT ORLEANS ISLAND, NEAR QUEBEC.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIDEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXXI.

THE VISION OF CONSOLATION.

I ran so fast, being then young and strong, that Benjamin, I am sure, could not have overtaken me had he tried, because he was already gross of body and short of breath in consequence of his tippling. I have since heard that he did not follow me, nor did he dare to push aside his father. But he laughed and said, "Let her run; let her run. I warrant I shall find her and bring her back," thinking, I suppose, that I had run from him as a girl in play runs from her companions. I ran also so long, fear lending me strength, that the sun was getting even into the afternoon before I ventured to stop. I looked round from time to time, but saw no one following me. I do not remember by what road, track, or path, I went: pasture fields and plantations I remember; twice I crossed a stream on stepping-stones, once I saw before me a village with a church-tower; but this I avoided for fear of the people. When I ventured to stop, I was in a truly wild and desolate country—our county of Somerset hath in it many such wild places, given over to forests, fern, and heather. Presently I remembered the place, though one forest is much like another, and I knew that I had been in this part before, on that day when we rode from Lyme to Taunton, and again on the day when we walked prisoners with the soldiers to Ilminster. I was on the Black Down Hill again.

When, therefore, I understood where I was, I began to recover a little from the first horror which had driven me to fly like one possessed of an evil spirit; and seeing that no one was in pursuit, I began to collect my senses and to ask myself whither I was going, and what I should do. I was then near that ancient inclosure called Castle Ratch, from whose walls one looks down upon the broad vale of Taunton Dean. In the distance, I thought I could discern the great tower of St. Mary's Church: but perhaps that was only my imagination. I sat down, therefore, upon the turf under these ancient walls, and set myself to consider my condition, which was indeed forlorn.

First, I had no friends or protectors left in the whole world, because after what I had done I could never look upon Robin or even Humphrey again; nor could I importune Madam, because she would not anger her son (I represented him in my mind as most unforgiving); nor could I seek the help of Mr. Boscorel, because that might help his son to find me out, and everybody knows that a husband may command the obedience of his wife. And Sir Christopher was dead, and my father was dead, and my mother was dead, and I could not even weep beside their coffins or follow their bodies to the grave. A woman without friends in this world is like unto a traveller in a sandy desert without a bottle of water.

Yet was I so far better than some of these poor friendless creatures, because I had, concealed upon me, a bag containing all the money which Barnaby had given me—two hundred and fifty gold pieces—save a little which we had expended at Taunton and Ilminster. This is a great sum, and by its help I could, I thought with satisfaction, live for a long time, perhaps all my life, if I could find some safe retreat among godly people.

No friends? Why, there was Susan Blake of Taunton; she who walked with the Maids when they gave Monmouth the Bible, the sword, and the flags. I resolved that I would go to her and tell her all that had happened. Out of her kindness she would take me in and help me to find some safe hiding-place and perhaps some honest way of living, so as to save his money against Barnaby's return from the Plantations.

Then I thought I would find out the valley where we had lived for a fortnight, and rest for one night in the hut, and in the early morning before daybreak walk down the comb and so into Taunton while as yet the town was still sleeping. And this I did. It was very easy to find the head of the comb and the source of the stream, where we had made our encampment. Close by, beneath the trees, was Barnaby's hut: no one had been there to disturb or destroy it; but the leaves upon the boughs which formed its sides were now dead. Within it the fern and the heath which had formed my bed were still dry. Outside, the pot hung over the black embers of our last fire; and, to my great joy, in the basket which had contained our provisions I found a large crust of bread. It was, to be sure, dry and hard; but I dipped it in the running water of the stream and made my supper with it. For dessert I had blackberries, which were by this time ripe, and are nowhere bigger or sweeter than on Black Down. There were also filberts and nuts, now ripe, of which I gathered a quantity, so that I had breakfast provided for me, as well as supper.

When I had done this, I was so tired and my head was so giddy with the terror of the day, that I lay down upon the fern in the hut and there fell fast asleep, and so continued until far into the night.

Now, in my sleep a strange thing happened unto me. For my own part, I account it nothing less than a Vision granted unto me by mercy and special grace of Heaven. Those who read of it may call it what they please. It was in this wise. There appeared before my sleeping eyes (but they seemed wide open, as it were, a broad and open campaign; presently there came running across the plain in great terror, shrieking and holding her hands aloft, a girl, whom one face at first I could not see. She ran in this haste and terrible anguish of fear because there followed after her a troop of dogs, barking and yelping. Behind the dogs rode on horseback one whose face I saw not any more than that of the girl. He cursed and swore (I knew the voice, but could not tell, being in a dream, to whom it belonged), and cracked a horrid whip and encouraged the dogs, lashing the laggards. In his eyes (though his face was in some kind of shadow) there was such a look as I remembered in Benjamin's when he put the ring upon my finger—a look of resolute and hungry wickedness, which made me tremble and shake.

Now, as I looked, the dogs still gained upon her who ran, and yelped as if in a few moments they would spring upon her and tear her flesh from her bones. Then suddenly, between her who ran and those who pursued, there arose an awful form. He was clad in white and in his hand he bore a sword, and he turned upon that hunter a face filled with wrath. Lightnings shot from his eyes and a cloud of thunder lay upon his brow. At the sight of that face the dogs stopped in their running, cowered, and fell dead. And at the dreadful aspect of that face the hunter's horse fell headlong, and his rider, falling also with a shriek of terror, broke his neck, and so lay prostrate and dead. Then this dreadful minister of God's wrath turned from him to the flying figure, and lo! his face was now transformed; his eyes became soft and full of love; he smiled graciously; a crown of glory was upon his head; white robes flowed downward to his feet; his fiery sword was a palm branch: he was the Angel of Consolation. "Have no more fear," he said, "though the waves of the sea rise up against thee and the winds threaten to drown thee in the deep. Among the ungodly and the violent thou shalt be safe; in all times of peril the Lord will uphold thee; earthly joy shall be thine. Be steadfast unto the end."

And then I looked again, those blessed words ringing in my ears; and behold! I saw then, which I had not seen before, that the flying figure was none other than myself; that he who cruelly hunted after with the dogs and the whip was none other than my husband; and that the Angel of Wrath, who became the Angel of Consolation, was none other than my father himself! But he was glorified! Oh! the face was his face—that anyone could see; but it was changed into something—I know not what—so far brighter and sweeter than the earthly face that I marvelled! Then the Vision disappeared, and I awoke.

So bright and clear had it been that I seemed to see it still though I was sitting up with my eyes open and it was night. Then it slowly vanished. Henceforth, however, I was assured of two things: first, that no harm would happen unto me, but that I should be protected from the malice of my enemies, whatever they might design (indeed, I had but one enemy—to wit, the man who had that morning sworn to love and cherish me); and next, that I had seen with mortal eyes what, indeed, hath been vouchsafed to few, the actual spiritual body—the glorified body, like to the earthly but changed—with which the souls of the Elect are clothed.

So I arose now without the least fear. It was night; but in the East there showed the first grey of the dawn, and the birds were already beginning to twitter as if they were dreaming of the day. The wind was fresh, and I was lightly clad, but the splendour of the Vision made me forget the cold. Oh! I had received a Voice from heaven! How could I henceforth fear anything? Nay, there was no room even for grief, though those terrible things had fallen upon me, and I was now alone and friendless, and the world is full of ungodly men.

It must have been about *half*-past four in the morning. It grew light quickly, so that not only the trees became visible, but the black depths between them changed into glades and underwood, and I could see my way down the comb beside the stream. Then, without waiting for the sun to rise (which he presently did in great warmth and splendour), I started, hoping to get into Taunton before the people were up and the streets became crowded. But I did not know the distance, which must have been seven miles at least, because it was nearly eight o'clock when I reached the town, having followed the course of the stream through three villages, which I have since learned must have been those of Pitminster, Troll, and Wilton.

It was market day, and the streets were full of country people—some of them farmers with bags of corn in their hands, going to the corn-market, and some with carts full of fresh fruit and other things. Their faces were heavy and sad, and they talked in whispers, as if they were afraid. They had, indeed, good cause for fear; for the prison held over five hundred unfortunate men waiting for their trial, and the terrible Judge was already on his way with his carts filled with more prisoners rumbling after him. Already Colonel Kirke had caused I know not how many to be hanged, and the reports of what had been done at Dorchester and Exeter sufficiently prepared the minds of the wretched prisoners at Taunton for what was about to be done there. Among them was the unfortunate Captain Hucker, the Serge-Maker, who had looked for a peerage, and was now to receive a halter. There was also among them that poor man, Mr. Simon Hamlyn, who was hanged only for riding into Taunton in order to dissuade his son from joining Monmouth. This the Mayor of Taunton pointed out to the bloodthirsty Judge; but in vain. The whole five hundred prisoners were, in the end, sentenced to death; and one hundred and forty-five actually suffered, to the great indignation of those who looked on, even of the King's party. Nay, at one of the executions, when nineteen were hanged at the same time, and a great fire was made so that the sufferers might actually see before their death the fire that was to burn their bowels, the very soldiers wept, saying that it was so sad a thing they scarce knew how to bear it. Three years later, the hard heart of the King met with its proper punishment.

The soldiers were among the crowd, some leaning against bulkheads, some drinking at the ale-houses, some haggling for the fruit; some were also exercising upon Castle Green. They looked good-natured, and showed in their faces none of the cruelty and rage which belonged to their officers. But what a doleful change from the time when Monmouth's soldiers filled the town, and all hearts were full of joy and every face shone with happiness! What a change, indeed!

As I passed among the crowd, one caught me by the arm. It was a little old woman, her face all wrinkled and puckered. She was sitting on a stool beside a great basket full of apples and plums, and a short pipe of tobacco within her lips.

"Mistress," she whispered, taking the pipe from her mouth. "Thou wert with the Maids the day of the Flags: I remember thy pretty face. What dost thou here abroad among the people? The air of Taunton town is unwholesome! There may be others who will remember thee as well as I. Take an old woman's advice, and get thee gone. How fares it with thy father, the worthy Dr. Eykin?"

"Alas!" I said, "he died in Ilminster Jail."

"'Tis pity. But he was old and pious: he hath gone to Glory. Whither will those poor lads in the Clink go when they are hanged? Get thee gone, get thee gone! The air is already foul with dead men's bodies: they tell strange stories of what hath been done by women for the safety of their brothers. Get thee gone, pretty maid, lest something worse than prison happen to thee. And Judge Jeffreys is coming hither like the Devil, having much wrath."

I could not tell her that nothing would happen to me because I was protected by a Heavenly Guard.

"I was in the town forty years agone," the old woman went on, "when Blake defended it and we were wellnigh starved. But never have I seen such things as have been done here since the Duke was routed. Get thee gone!—haste away, as from the mouth of Hell!—get thee gone, poor child!"

So I left her and went on my way, hanging my head, in hopes that no one else would recognise me. Fortunately, no one did, though I saw many faces which I had seen in the town before. They were then tossing their caps and shouting for Monmouth, but were now gloomily whispering, as if every man feared that his own turn would come next. Over the great gateway of the Castle was stuck up a high row of heads, arms, and legs of rebels blackened with pitch—a horrid sight. Unto this end had come those brave fellows who went forth to dethrone the King. No one noticed or accosted me, and I arrived safely at Susan's house. The door seemed shut, but when I pushed I found that it was open—the lock having been broken from its fastening. Barnaby did that, I remembered. I went in, shutting it after me. No doubt Susan was with her children in the school-room. Strange that she should not repair her lock, and that at a time when the town was full of soldiers, who always carry with them their riotous and lawless followers. 'Twas unlike her orderly housekeeping.

There was no one in the back parlour, where Susan commonly took her meals and conducted the morning and evening prayers. The dishes were on the table, as if of last night's supper or yesterday's dinner. This was, also, unlike a tidy housewife. I opened the door of the front parlour. Though it was already past the hour for school, there were no children in the room; the lesson-books and copying-books and slates lay about the floor. What did this untidy litter mean? Then I went up-stairs and into the bed-rooms, of which there were three—namely, two on the floor above, and one a garret. No one was in them, and the beds had not been made. There remained only the kitchen. No one was there. The house was quite empty; I observed also that the garden, which was wont to be kept with the greatest neatness, now looked neglected: the ripe plums were dropping from the branches trained upon the wall; the apples lay upon the grass; the flower-beds were cumbered with weeds; grass grew in the walks; the lawn, which had been so neat and trim, was covered with long grass.

What had happened? Where was Susan? Then I seemed to hear her voice above chanting God for the victory, as she had done when Barnaby burst in upon us; and methought I heard her singing a hymn with the children, as she had done while we all sat embroidering the Flags. Oh! the pretty Flags! And oh! the pretty sight of the innocents in white and blue carrying those Flags! The house was filled with the sounds of bygone happiness. Had I stayed another moment I am certain that I should have seen the ghosts of those who filled the rooms in the happy days when the army was in the town. But I did not stay. Not knowing what to do or whither to fly, I ran quickly out of the house, thinking only to get away from the mournful silence of the empty and deserted rooms. Then, as I stepped into the street, I met, face to face, none other than Mr. George Penne, the kind-hearted gentleman who had compassionated the prisoners at Ilminster.

CHAPTER XXXII.

THE MAN OF SAMARIA.

"'Tis no other than the Fair Maid of Ilminster!" said Mr. Penne, with surprise. "Madam, with submission, is it safe—is it prudent—for one who walked with the Maids of Taunton on a certain memorable day, to venture openly into the streets of this city at such a time? Judge Jeffreys doth approach to hold his Court. Thy friends are in prison or in hiding. The Maids are scattered all."

"I sought shelter," I said, "at the house of Susan Blake, the schoolmistress."

"How? You have not heard then? Miss Susan Blake is dead."

"She is dead?"

"She died in Dorchester Jail, whither she was sent, being specially exempted from any pardon. 'Twas fever carried her off. She is dead. Alas! the waste of good lives! She might have bought her freedom after a while, and then—but—well, 'tis useless to lament these mishaps."

"Alas! alas!" I cried, wringing my hands. "Then am I in evil plight, indeed! All, all are dead!—all my friends are dead!"

"Madam," he replied very kindly, "not all your friends, if I may say so. I have, I assure you, a most compassionate heart. I bleed for the sufferings of others; I cannot rest until I have brought relief. This is my way. Oh! I take not credit to myself therefore. It is that I am so constituted; I am not proud or uplifted on this account. Only tell me your case, entrust your safety to me. You may do so safely, if you reflect for one moment, because—see—one word from me and you would be taken to prison by yon worthy clergyman, who is none other than the Rev. Mr. Walter Harte, the Rector of Taunton. No one is more active against the rebels, and he would rejoice in committing thee on the charge of having been among the Maids. A word from me would, I say, cause you to be hauled to jail; but, observe, I do not speak that word—God forbid that I should speak that word!"

"Oh, Sir!" I said, "this goodness overwhelms me."

"Then, Madam, for greater privacy, let us go back into the house and converse there."

So we went back into the empty house and sat in the back parlour.

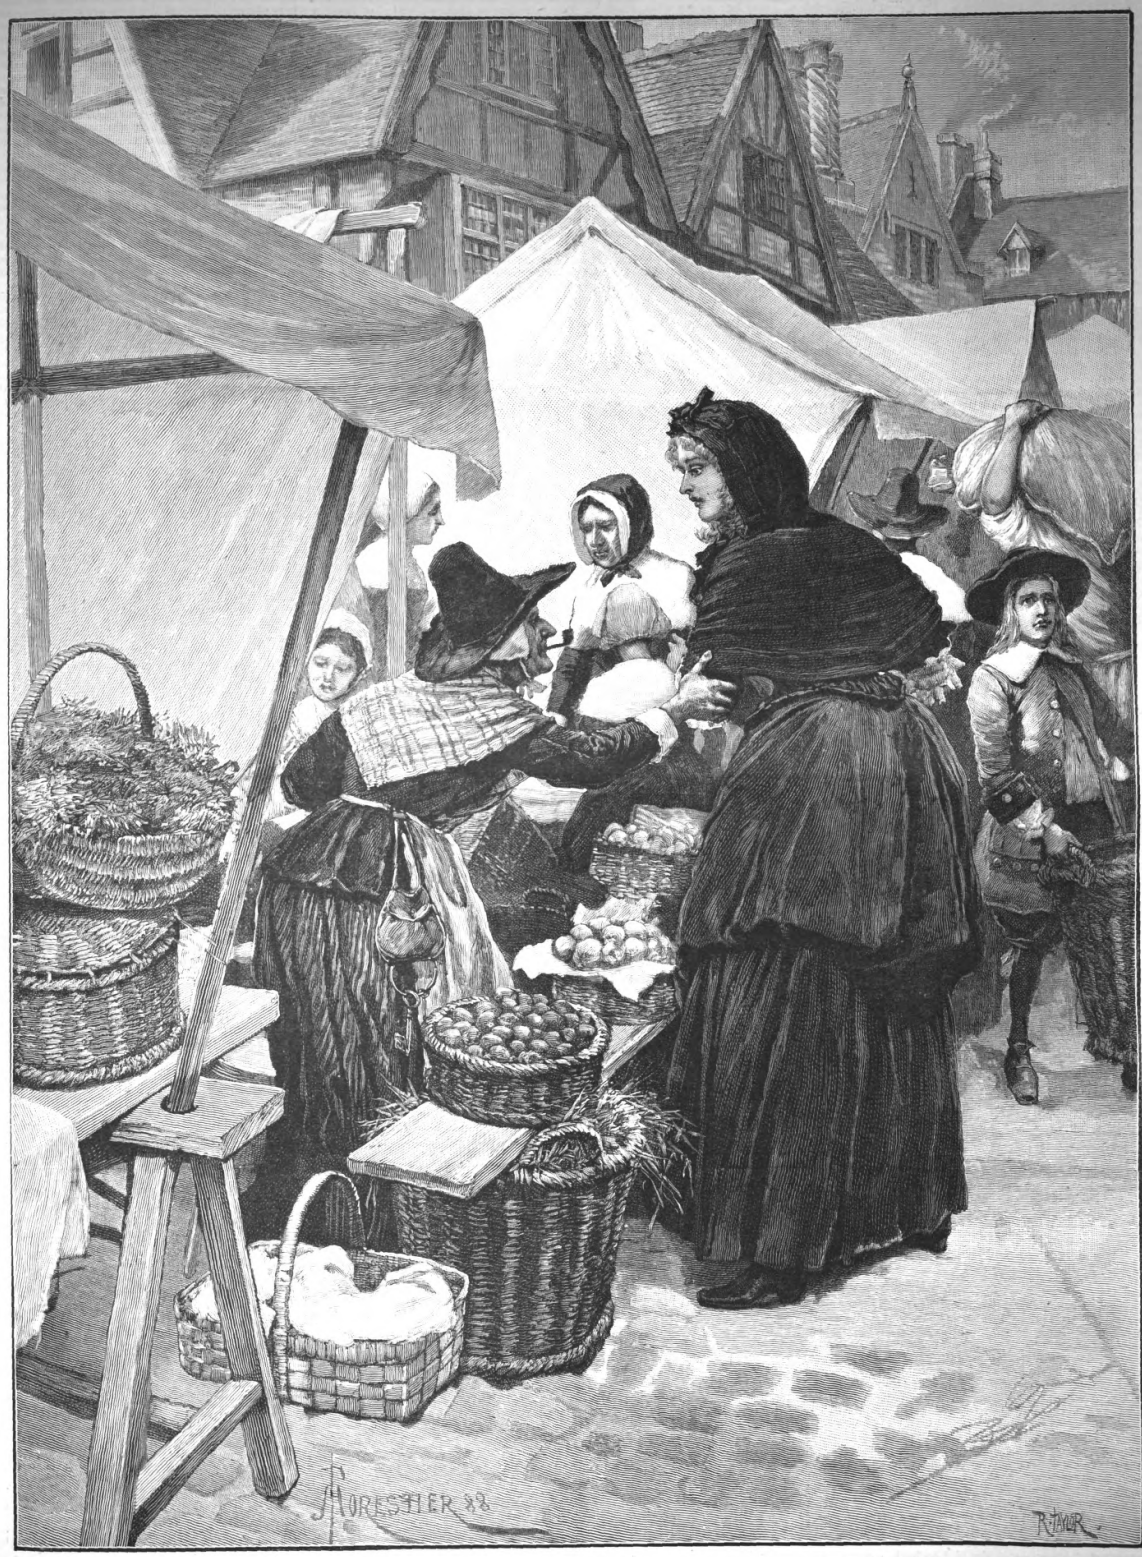
"As for the nature of your trouble, Madam," he began, "I hope you have no dear brothers or cousins among those poor fellows in Taunton Jail."

"No, Sir; my only brother is at Ilminster, and my cousins are far away in New England."

"That is well. One who, like myself, is of a compassionate disposition, cannot but bewail the grievous waste in jail-fever, smallpox, scarlet fever, or putrid throat (to say nothing of the hangings) which now daily happens in the prison. What doth it avail to hang and quarter a man, when he might be usefully set to work upon his Majesty's plantations? It is a most sinful and foolish waste, I say"—he spoke with great sincerity and warmth—"and a robbing of the pockets of honest merchants."

"Indeed, Sir," I said, "your words prove the goodness of your heart."

"Let my deeds, rather than my words, prove that. How fare the prisoners with whom you are most concerned?"



"Alas! Sir Christopher is dead; and my father hath also died of his wound."

"So?—indeed? More waste! They are dead. More waste! But one was old: had Sir Christopher been sent to the plantations, his value would have been but small, though, indeed, a ransom—but he is dead; and your father, being wounded—but they are dead, and so no more need be said. There are, however, others, if I remember aright?"

"There is my brother, in Ilminster Prison, and"——

"Yes; the two young gentlemen—Challis is their name—in Exeter. I have seen them and conversed with them. Strong young men, especially one of them. 'Tis sad, indeed, to think that they may be cut off in the very bloom of their age when they would command so high a price in Jamaica or Barbadoes. I ventured to beg before their trial that they would immediately begin to use whatever interest they might be able to command in order to get their sentence (which was certain) commuted. Many will be suffered to go abroad—why not these young gentlemen? But they have no interest, they assured me; and therefore I fear that they will die. 'Tis most sad. They cannot hang all—that is quite true; but then these young gentlemen were officers in the army, and therefore an example will be made of them if they have no interest at Court."

All Rights Reserved.

DRAWN BY A. FORESTIER.

As I passed among the crowd, one caught me by the arm. It was a little old woman, with a short pipe of tobacco within her lips.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

"Well, Sir," I told him, pleased to find him of such a kindly and thoughtful disposition, "you will be glad to hear that they are already pardoned, and have been presented by the King to a gentleman at Court."

"Aha! Sayest thou so?" His eyes glittered, and he rubbed his hands. "This is, indeed, joyful news. One of them, Mr. Robin Challis, is a goodly lad, like to whom there are few sent out to the plantations. He will certainly fetch a good price. The other, Mr. Humphrey, who is somewhat crooked, will go for less. Who hath obtained the gift of these young gentlemen?"

"It is a person named Mr. Nipho."

"Mr. Jerome Nipho. I know him well. He is a good Catholic—I mean a Papist—and is much about the Court. He is lucky in having had many prisoners given to him. And now, Madam, I hope you will command my services."

"In what way, Sir?"

"In this way. I am, as I have told you"—here he wagged his head and winked both eyes, and laughed pleasantly—"one of those foolish busybodies who love to be still doing good to their fellow-creatures. To do good is my whole delight. Unfortunately the opportunities are rare of conferring exemplary benefit upon my fellow-men. But here the way seems clear."

He rubbed his hands and laughed again, repeating that the way was clear before him, so that I believed myself fortunate in falling in with so virtuous a person.

"Oh, Sir," I cried, "would that the whole world would so live and so act!"

"Truly if it did, we should have the prisons cleared. There should be no more throwing away of good lives in hanging; no more waste of stout fellows and lusty wenches by fever and smallpox. All should go to the plantations—all. Now, Madam, to our business, which is the advantage of these young gentlemen. Know, therefore, that Mr. Jerome Nipho, with all those who have received presents of prisoners, straightway sells them to persons who engage to transport them across the seas to his Majesty's plantations in Jamaica, Virginia, or elsewhere. There they are bound to work for a certain term of years. Call it not work, however," he added, quickly; "say rather that they are invited every day to exercise themselves in the cotton and the sugar fields. The climate is delightful; the sky is seldom clouded; there are never any frosts or snows; it is always summer; the fruits are delicious; they have a kind of spirit distilled from the sugar-canes which is said to be finer and more wholesome than the best Nantz; the food is palatable and plentiful, though plain. The masters or employers (call them rather friends) are gentlemen of the highest humanity, and the society is composed of sober merchants, wealthy planters, and gentlemen, like your brother, who have had the misfortune to differ in opinions from the Government."

"Why, Sir," I said, "I have always understood that the transported prisoners are treated with the greatest inhumanity: forced to work in heat such as we never experience, driven with the lash, and half starved, so that none ever come back."

He shook his head gently. "See now," he said, "how prejudices arise! Who could have thought that the plantations should be thus regarded? 'Tis true that there are estates cultivated by convicts of another kind—I mean robbers, highwaymen, petty thieves, and the like. Bristol doth every year send away a shipload at least of such. Nay; 'tis reported that rather than hang murderers and the like the Bristol merchants buy them of the magistrates: but this is out of the kindness of their hearts. Madam," he thrust his hand into his bosom and looked me in the face, "I myself am sometimes engaged in that trade. I myself buy these unhappy prisoners and send them to estates where, I know, they will be treated with the greatest kindness. Do I look like a dishonest man, Madam? As for my name it is George Penne, and I am known to every man of credit in Bristol. Do I talk like one who would make money out of his neighbours' sufferings? Nay, if that is so, let us part at once and say no more. Madam, your humble servant—no harm is done: your humble servant, Madam." He put his hat under his arm, and made as if he would go; but I begged him to remain, and to advise me further in the matter.

Then I asked him if transported persons ever came home again.

"Surely," he replied, "some of them come home laden with gold. Some, possessed of places both of honour and of profit, who return to visit their friends, and then go back to the new country. It is a very Eldorado, or land of gold, to those who are willing to work; and for those who have money and choose to buy exemption from work, it is only an agreeable residence in cheerful society for a certain term of years. Have you, by chance, Madam, any friends who can influence Mr. Jerome Nipho?"

"No, Sir: I have none."

"Then will I myself communicate with that gentleman. Understand, Madam, that I shall have to pay him so much a head for every prisoner; that I shall be engaged to place every man on board ship; that the prisoners will then be taken across the seas and again sold. But in the case of those who have money, a ransom can be procured, by means of which they will not have to work."

So far, he had spoken in the belief that I was at Taunton on my brother's business, or that of my friends. I told him, therefore, that certain events had occurred which would prevent me from seeing the prisoners at Exeter. And because I could not forbear from weeping while I spoke, he very earnestly begged me to inform him fully in every particular as to my history, adding that his benevolence was not confined to the unhappy case of prisoners, but that it was ready to be extended in any other direction that happy chance might offer.

Therefore, being, as you have seen, so friendless and so ignorant, and so fearful of falling into my husband's hands, and, at the same time, so grateful to this good man for his kindly offers (indeed, I took him for an instrument provided by Heaven for the safety promised in my Vision of the night) that I told him everything exactly, concealing nothing. Nay, I even told him of the bag of gold which I had tied round my waist—a thing which I had hitherto concealed, because the money was not mine, but Barnaby's. But I told it to Mr. Penne.

While I related my history he interrupted me by frequent ejaculations, showing his abhorrence of the wickedness with which Benjamin compassed his design, and when I finished, he held up his hands in amazement.

"Good God!" he cried. "That such a wretch should live! That he should be allowed still to cumber the earth! What punishment were fitting for this devil in the shape of man? Madam, your case is, indeed, one that would move the heart of Nero himself. What is to be done?"

"Nay—that I know not. For if I go back to our village he will find me there; and if I find out some hiding-place he will seek me out and find me; I shall never know rest or peace again. For of one thing am I resolved—I will die—yea—I will, indeed, die—before I will become his wife more than I am at present."

"I cannot but commend that resolution, Madam. But, to be plain with you, there is no place in the world more unsafe for you than Taunton at this time. Therefore, if you please, I will ride with you to Bristol without delay."

"Sir, I cannot ask this sacrifice of your business."

"My business lies at Bristol. I can do no more here until Judge Jeffreys hath got through his hangings, of which I fear there may be many, and so more sinful waste of good convicts. Let us, therefore, hasten away as quickly as may be; as for what shall be done afterwards, that we will consider on the way."

Did ever a woman in misfortune meet with so good a man? The Samaritan himself was not of better heart.

Well, to be brief, half an hour afterwards we mounted and rode to Bristol, by way of Bridgwater (this town was even more melancholy than Taunton), taking three days; the weather being now wet and rainy, so that the ways were bad. Now, as we rode along—Mr. Penne and I—side by side, and his servant behind, armed with a blunderbuss, our conversation was grave, turning chiefly on the imprudence of the people in following Monmouth, when they should have waited for the gentry to lead the way. I found my companion (whom I held to be my benefactor) sober in manners and in conversation; no drunkard; no user of profane oaths; and towards me, a woman whom he had (so to say) in his own power, he behaved always with the greatest ceremony and politeness. So that I hoped to have found in this good man a true protector.

When we reached Bristol he told me that for my better safety he would lodge me apart from his own house; and so took me to a house in Broad-street, near St. John's Gate, where there was a most respectable old lady of grave aspect, though red in the cheeks.

"I have brought you, Madam," he said, "to the house of a lady whose virtue and piety are well known."

"Sir," said the old lady, "this house is well known for the piety of those who use it. And everybody knows that you are all goodness."

"No," said Mr. Penne; "no man is good. We can but try our best. In this house, however, Madam, you will be safe. I beg and implore you not at present to stir abroad, for reasons which you very well know. This good woman has three or four daughters in the house, who are sometimes, I believe, merry"—

"Sir, said the old lady, "children will be foolish."

"True—true," he replied laughing. "Take care, then, that they molest not Madam."

"No, Sir; they shall not."

"Then, Madam, for the moment I leave you. Rest and be easy in your mind. I have, I think, contrived a plan which will answer your case perfectly."

In the evening he returned and sent me word, very ceremoniously, that he desired the favour of a conversation with me. As if there could be anything in the world that I desired more!

"Madam," he said, "I have considered carefully your case, and I can find but one advice to give."

"What is it, Sir?"

"We might," he went on, "find a lodging for you in some quiet Welsh town across the Channel. At Chepstow, for instance, or at Newport, you might find a home for a while. But, the country being greatly inflamed with dissensions, there would everywhere be the danger of some fanatical busybody inquiring into your history—whence you came, why you left your friends—and so forth. And, again, in every town there are women (saving your presence, Madam) whose tongues tittle-tattle all day long. Short work they make of a stranger. So that I see not much safety in a small town. Then, again, you might find a farm-house where they would receive you; but your case is not that you wish to be hidden for a time, as one implicated in the Monmouth business. Not so; you desire to be hidden all your life, or for the whole life of the man who, if he finds you, may compel you to live with him, and to live for—how long? Sixty years, perhaps, in a dull and dirty farm-house, among rude boors, would be intolerable to a person of your manners and accomplishments."

"Then, Sir, in the name of Heaven"—for I began to be wearied with this lengthy setting up of plans only to pull them down again,—"what shall I do?"

"You might go to London. At first I thought that London offered the best hope of safe retreat. There are parts of London where the gentlemen of the robe are never seen, and where you might be safe. Thus, about the eastern parts of the City there are never any lawyers at all. There you might be safe. But yet—it would be a perpetual risk. Your face, Madam, if I may say so, is one which will not be quickly forgotten when it hath once been seen—you would be persecuted by would-be lovers; you would go in continual terror, knowing that one you fear was living only a mile away from you. You would have to make up some story, to maintain which would be troublesome; and presently the time would come when you would have no more money. What, then, would you do?"

"Pray, Sir, if you can, tell me what you think I should do, since there are so many things that I cannot do."

"Madam, I am going to submit to you a plan which seems to me at once the safest and the best. You have, you tell me, cousins in the town of Boston, which is in New England."

"Yes. I have heard my father speak of his cousins."

"I have myself visited that place, and have heard mention of certain Eykins as gentlemen of substance and reputation. I propose, Madam, that you should go to these cousins, and seek a home among them."

"Leave England? You would have me leave this country and go across the ocean to America?"

"That is my advice. Nay, Madam"—he assumed a most serious manner—"do not reject this advice suddenly; sleep upon it. You are not going among strangers, but among your own people, by whom the name of your pious and learned father is doubtless held in great honour. You are going from a life (at best) of danger and continual care to a place where you will be certainly free from persecution. Madam, sleep upon it."

(To be continued.)

Mrs. A. M. Herbert has borne the entire cost of rebuilding the church at Upper Helmsley, Yorkshire, and has placed a set of bells in the tower as a memento of the Queen's Jubilee.

Lord Aveland, in reply to a request from the labourers of Edenham, Lincolnshire, has granted them 25-acre allotments, at a rental of 25s. an acre, including rates.

The scholarships offered by the Council of Newnham College for competition in the Cambridge Higher Local Examination, held in June last, have been awarded as follows:—The Winkworth Scholarship, to Miss Windsor, Manchester High School; the Goldsmiths' Scholarship, to Miss M'Aulay, Scarborough; the Clothworkers' Scholarship, to Miss Hall, Blackburn; the Drapers' Scholarship, to Miss Reddan, Notting-hill High School; and the Cobden Scholarship, to Miss Latter, Downham Market. Scholarships have also been awarded to Miss Tabor, Newnham College, and to Miss Vernon, Manchester High School.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

OCTOBER 27, 1888.

Subscribers will please to notice that copies of *this week's number* forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny;* THIN EDITION, *One Penny.* To Australia, Brazil, Cape of Good Hope, China (*viâ* United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence;* THIN EDITION, *One Penny.* To China (*viâ* Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny;* THIN EDITION, *Three-halfpence.*

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

ASTRONOMICAL OCCURRENCES FOR NOVEMBER.

The MOON is near Mercury on the 3rd; she is near, and to the right of, both Jupiter and Venus on the evening of the 5th, Jupiter being between Venus and the Moon, the Moon on this day sets at 5h 48m p.m. She is near, and to the right of, Mars on the evening of the 7th. The Moon is near Saturn on the mornings of the 25th and 26th, being right of the planet on the former and to the left on the latter morning. On the 25th the Moon will be on the meridian at 57 minutes after 4 a.m., and Saturn will be due south 36 minutes later; on the 26th Saturn will be on the meridian at 10 minutes after 5 a.m., and the Moon 35 minutes later. Her phases or times of change are:—

New Moon on the	3rd at	2 minutes after midnight.	
First Quarter	„ 10th „	16	„ 4 in the afternoon.
Full Moon	„ 18th „	16	„ 3 „ „
Last Quarter	„ 26th „	21	„ 5 „ „

She is nearest the Earth on the 4th, and most distant from it on the 19th.

MERCURY is a morning star rising on the 1st at 6h 52m a.m., or 4 minutes before sunrise; on the 5th at 6h 6m a.m., or 58 minutes before the Sun rises; on the 10th at 5h 30m a.m., or 1h 41m before sunrise; on the 15th at 5h 23m a.m., or 1h 57m before the Sun rises; on the 20th at 5h 33m a.m., or 1h 56m before sunrise; on the 25th at 5h 53m a.m., or 1h 44m before the Sun rises; and on the 30th at 6h 16m a.m., or 1h 28m before sunrise. He is in ascending node on the 2nd; is near the Moon on the 3rd; at least distance from the Sun on the 6th; and at greatest western elongation (19 deg. 26 min.) on the 17th.

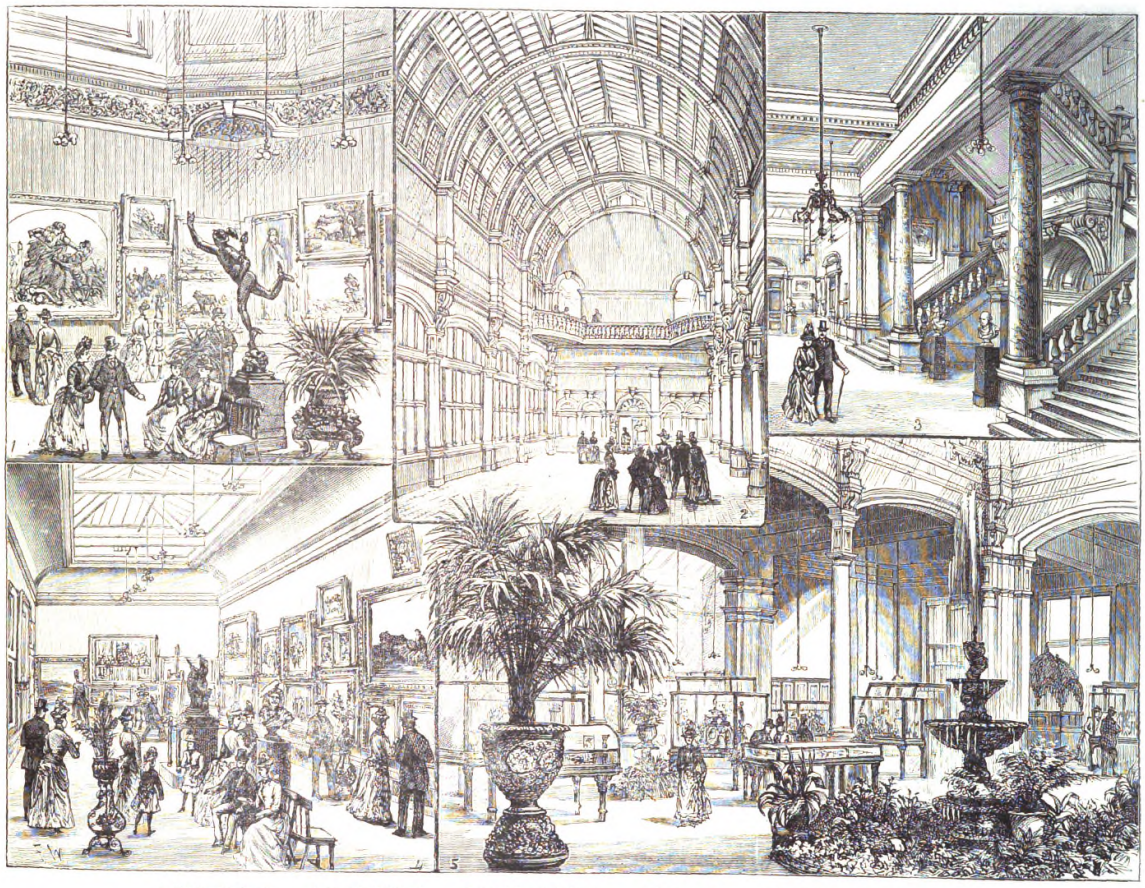
VENUS sets on the 1st at 5h 42m p.m., or 1h 11m after the Sun; on the 8th at 5h 41m p.m., or 1h 22m after sunset; on the 18th at 5h 47m p.m., or 1h 42m after the Sun; on the 28th at 6h 4m p.m., or 2h 10m after sunset; and on the 30th at 6h 9m p.m. She is near Jupiter on the 1st; near the Moon on the 6th; and at greatest distance from the Sun on the 13th.

MARS sets on the 1st at 7h 28m p.m., on the 9th at 7h 27m p.m., on the 19th at 7h 27m p.m., on the 29th at 7h 29m p.m. He is near the Moon on the 7th.

JUPITER sets on the 1st at 5h 52m p.m., or 1h 21m after sunset; on the 7th at 5h 33m p.m., or 1h 12m after the Sun sets; on the 18th at 4h 58m p.m., or 53 minutes after sunset; and on the 28th at 4h 25m p.m., or 31 minutes after sunset. He is near Venus on the 1st; and near the Moon on the 5th.

SATURN rises on the 1st at 11h 14m p.m., on the 7th at 10h 52m p.m., on the 17th at 11h 14m p.m., on the 27th at 9h 35m p.m. He is in quadrature with the Sun on the 11th; and near the Moon on the 25th.

THE LEEDS FINE ART GALLERY.



The new Fine Art Gallery erected by the Municipal Corporation of Leeds was opened by the Mayor of that great manufacturing town, Alderman Scarr, on Wednesday, Oct. 3, an event upon which the townspeople may be fairly congratulated. This addition to their flourishing public institutions has been the work, during two years past, of a special committee of the Town Council, whose zealous and active chairman is Colonel Harding, while Councillors Ambler and Tweedale have been useful members. The Free Library, supported by a special rate, affording a surplus of £800 a year, as it was largely stocked with books, £400 a year was to be set apart for interest on the fund raised to erect an Art Gallery, and there will be £400 a year for its working expenses; but £5171 of the Queen's Jubilee Fund last year has been devoted to this object. An Art Exhibition is now opened, the profits of which will also be applied to the purchase of pictures and sculpture and other works of art.

We give some Illustrations, from photographs by Mr. T. D. Nettleton, of the interior of the Art Gallery, which forms part of the Leeds "Municipal Buildings," adjacent to the Townhall, with their principal front in Calverley-street. The main block of those buildings, constructed between 1878 and 1884, in the Italian Renaissance style, from designs by Mr. George Corson, architect, of Leeds, contains most of the administrative offices of the town, and the central library, reading-room, and news-room. The library, for reference and lending, consists already of forty thousand volumes. The former reading-room, a noble apartment on the ground-floor, is now converted into a sculpture gallery, and an additional building, of which the architect is Mr. W. H. Thorp, of Albion-street, Leeds, has been erected at a cost not much exceeding £9000. This is entered from the sculpture gallery, which is 80 ft. long and 40 ft. wide, divided into nave and aisles by an arcade of six arches, resting on twelve pillars of polished granite, the ceiling decorated with coloured mosaic, and the walls covered with embossed diaper tiles of a greyish-green tint. Having windows only on the south side, it is proposed to use the electric light to show the sculpture in this gallery. The first apartment of the new building is the Queen's Room, a beautiful rectangular apartment with arches crossing its corners, which give the roof an octagonal character, with coved ceiling and lantern, and with clerestory lights through arcades with classic moulded pilasters; it has a fine frieze, designed by Mr. Thorp, and carried out by Mr. J. W. Appleyard, with panels bearing the names of Hogarth, Reynolds, Gainsborough, and Turner, Past Grand Masters of the English school of painting. All the new rooms forming the Art Gallery are lighted from the roof, and their walls are coloured in maroon, of dead texture, which shows off the pictures and their gilt frames to the best effect, and which contrasts agreeably with the ivory white of the ceilings and lanterns. Most of the pictures will be placed on the walls of the four fine rooms on the upper floor. This is reached by a noble double staircase, at the bottom of which rise two Ionic pillars where the inner balustrades commence, and two massive Doric pillars aiding to support the upper staircase and the lantern above. The Central Court, lighted from the roof, is surrounded with a lofty Doric arcade, with low segmental arches; and this arcade is used as a museum, except one portion screened off as a new reading-room. On the upper walls of the Central Court are studies for mosaics, from the old masters; in the centre is a pretty fountain of Burmantofts faïence, with a pleasing collection of plants. Mr. George Birkett is curator of the Art Gallery.

The opening ceremony was attended by the Marquis of Ripon, the Bishop of Ripon, Mr. W. Beckett, M.P., Mr. J. Barran, M.P., Sir Edward Baines, Sir Philip Cunliffe Owen, Director of the South Kensington Museum, and the eminent artist, Professor Herkomer, founder of the School of Art at Bushey, near Watford; besides the Lord Mayor of York and the Mayors of thirteen other towns in Yorkshire.

There has been an extension of the Homes for Working Girls in Queen's-road, Bayswater, which were founded ten years ago.

The Duchess of Westminster, on Oct. 17, presented the prizes at the annual exhibition of the Cheshire Dairy Association, and also distributed the certificates awarded to the pupils of the Cheshire Dairy Institute.

THE CARPET MARKET AT CAIRO.

The part of Cairo which most completely retains its old characteristics as a Moslem city—Asiatic rather than African characteristics—and which differs greatly in the aspect of its buildings and inhabitants from the modern half-European quarter—is situated towards the eastern wall, between the gate called the Bab-el-Futuh and the citadel, a mile or two from the banks of the Nile. Here is a line of streets, called in different parts the Souk-el-Nasin, or Coppersmiths' Bazaar, the Ghoriyeh, and the Sukkariyeh, or Sugar Market, crossed by another, the Muskye, with numerous by-streets, alleys, and courts, many of which are occupied by particular classes of tradesmen. The Gemaliyeh, which is the north-eastern quarter, devoted to wholesale commerce, and the great Khan-el-Khalily, where the Red Sea trade is accommodated, occupy a good deal of space; there is also a separate market for goods from the Soudan, but this trade has of late years been much diminished. The principal kinds of retail shopkeeping find their allotted places in markets composed of narrow lanes or alleys, where on the ground-floor of almost every house, with its large arched doorway of massive stone, the front apartment is a shop, open all day, but closed by heavy wooden doors at night, and without any shop-windows. Divans and benches at the entrance, and within the shop, invite customers to lounge there, and to inspect the goods offered for sale. Such is the carpet-shop, of which our Artist made a sketch, where two European ladies and a gentleman who can speak Arabic, while their dragoman stands aside, and the ladies' female attendant sits closely veiled behind them, are examining a carpet held up for them to see, and are listening to the shrewd-looking bearded and turbaned master of the shop, as he explains to them his reasons for asking a very moderate price. The progress of their bargaining is attentively watched by the dealer's friends waiting outside, who may even presume to put in a word in his favour, and may expect their reward in the event of his concluding a profitable sale. It is much the same in the armourers' bazaar, where fine scimetars and silver-mounted pistols, or muskets with inlaid ivory ornamental stocks, and other weapons of a decorative style, are to be purchased by curious collectors; also in the street of silversmiths and jewellers, in the bazaar of booksellers and collectors of manuscripts, and among the shops and stalls of other branches of trade.

The Duchess of Albany has become a patroness of the Bethnal-green Free Library.

A portrait of the late Sir Barrow Ellis has been unveiled in the Council Room of Jews' College, Tavistock-square, of which institution he had been chairman until his death last year.

Mr. Corney Grain has produced yet another of the musical sketches which have for so long formed the most attractive portion of the programme at St. George's Hall. The subject of Mr. Grain's new sketch is "John Bull Abroad"—a fitting sequel to its predecessor, "Mossoo in London." In "John Bull Abroad" Mr. Grain describes, in his own quaintly unctuous way, his impressions and experiences during a visit to the Italian lakes, keeping his audience in a simmer of laughter throughout. Mr. Grain's portion of the evening's entertainment is preceded by Mr. Watson's familiar comic operetta "Tally-Ho," in which Mr. Alfred German Reed, supported by his well-known company, is as thoroughly amusing as ever.

EARLY NAVIGATORS.

The sailing of a toy boat on any pond is a fascinating employment for youngsters. There is a mystery in the uncertain movements of the diminutive vessel between two elements, the air and the water, of which their unscientific minds have the vaguest notions; and, as they are ignorant both of the art of setting the sails and that of adjusting the rudder, not the slightest idea of controlling the course of the voyage, after giving one push at the moment of launching, can possibly be entertained. A child has indeed been observed, in frantic anxiety, blowing with all the force of his small lungs to send a favourable gale to his ship ten yards off the shore; and we have seen a boy throwing stones to assist the progress of his boat, which thereupon reeled in the eddy caused by the sinking pebble, turned round, and presently came home on a different tack. Where all sides of the pond are easily accessible, and there are no weeds, the children may feel tolerably sure of welcoming the return of their adventurous craft to land, in one direction or another; and they are quite indifferent to the chance of a port, having no cargo of merchandise or mails and passengers to deliver. This interesting play does not always meet with parental approval, and we should scarcely be inclined to permit it, on deep water, in the absence of older persons whose prudence and vigilance can be trusted. But there are many shallow ponds, with low shores, where it can be safely practised, and wet feet may be the only real danger.

The fish condemned during September at and near Billingsgate Market, and on board boats lying off that place, amounted to 59 tons 10 cwt. The weight of fish delivered at that market during the month was 13,368 tons.

ENGLISH HOMES.

No. XVI.

Cobham Hall.

IN the north-western part of Kent—about half-way between the curious old town of Gravesend, with its houses slipping downhill into the river, and the immense mass of dingy brick-and-mortar known as Chatham, Rochester, and Strood—stands Cobham Hall, the famous seat of an ancient Kentish family.

The great houses of Kent are interesting in their unlikeness. Penshurst is a castle still, with its mighty hall five

SKETCH IN THE PRIVATE GARDENS.

centuries old; Knole is a congeries of countless picturesque old rooms; the family histories of both have their flavour of romance, are studded with famous or notorious names. Cobham wears its antiquity with a difference. The house is great and stately, but its main interest is to be found in its galleries of wonderful pictures. The history is that of an important English family—not of the very highest fame, like the Stanleys or the Cecils—but of a substantial influence, the leader of its county, sending every generation or so a great statesman to help to lead the nation: a family which held its place, estates and honours descending without a break from father to child, for some four hundred years.

Such a history, of a line unbroken from the days of John till those of James II., has a completeness, a continuity perhaps unrivalled; and they were sturdy English nobles, the Lords of Cobham—warriors and statesmen, living long and living vigorously, marrying their three or five times, leaving their families of fourteen or so, ruling their neighbours and adding to their lands. We have the records of their rise, of their long and on the whole little varied prosperity, of their decline and somewhat swift extinction. In Holinshed and many other of our old books of history, their doings are told; and, in the village that bears their name, the most complete and remarkable series of brasses to be found in England preserves for all churchgoers their features and their dates.

The family seems to have taken its name from the village, where in the twelfth century Serlo de Cobham held some property. His son Henry—said to have been one of the Crusaders who fought in the siege of Acre in 1191—obtained a grant of the manors of Cobham and Shorne from a Norman soldier known as William, Knight of the Four Seas ("Quatremere"). Henry was Lieutenant of Dover Castle, and died in the year 1225, leaving—as in the good old stories of "once upon a time" people always did—three sons to succeed him: John, known as the Elder, Henry "of Roundall" (in Shorne), and Reginald or Reinold "of Allington"; for the eldest son very properly made a division of the estates with his brothers. John reigned in Cobham for a full quarter of a century, apparently a prosperous gentleman—old records show him to have been Keeper of Rochester Castle, Sheriff of Kent, a Justice Itinerant (as were his two brothers), and a Justice of the Common Pleas; and moreover he added to his estates the manors of Cowling and West Chalk. He was twice married, and, like his father, left three sons.

John "the Younger" succeeded his father, and soon took a leading part in county politics. From 1258 to 1261 he was Sheriff of Kent; and in 1264 he aided Simon De Montfort at the siege of Rochester in the Barons' War. As one often sees in the history of the Cobhams, there was little rancour in these English civil wars. Within three years of this (unsuccessful) siege, the King had made his defeated opponent one of his Justices, both Itinerant and of the Common Pleas; and the next Monarch, Edward I., not only made him a Serjeant-at-Law, and, a little later, a Baron of the Exchequer, but actually appointed him, for life, Constable of that very Rochester Castle which he had tried to take from Henry III.—and which his executors, oddly enough, objected to deliver up to the Bishop of London. It is interesting to note that his yearly allowance for his expenses as Justice Itinerant was £40; and that the sturdy old gentleman marched to Scotland with the King against William Wallace when he was close upon his seventieth year. The army had, however, to return to England for want of provisions; and it is very likely that the hardships of the war hastened John de Cobham's end.

His eldest son and successor, Henry "the Younger" (so called to distinguish him from his father's brother, Henry "le Uncle," of Roundall) also fought in Scotland; and was knighted, with three others of the family, at the siege of Carlaverock. Henry was forty years old when his father died; he was the eldest son by that first wife, Joan de Septvans, whose memory is perpetuated by the earliest "brass" in the chancel of Cobham Church. Its inscription runs thus, in its old rhyming French:—

DAME JONE DE KOBEHAM GIST ISI
DEVS DE SA ALME EIT MERCI
'KI KE PVR LE ALME PRIERA
QVARANTE JOVRS DE PARDOVN AVERA.

"For her soul whoever prays, Shall have pardon forty days"—a common promise of indulgence at that time.

This Henry the Younger was the first to bear the title of Lord of Cobham, by which he was summoned to Parliament in 1313; he became one of the most noted of his house, in his long and busy life of seventy-nine years. Constable (like his father and his son) of the castle and city of Rochester, Constable of Dover and Canterbury Castles, Governor of the castle and honour of Tunbridge, Warden of the Cinque Ports, "Guardian of all the lands forfeited by the King's enemies in Kent, Surrey, and Sussex," he had many duties and many prisoners to look after. The most famous of the latter was Queen Elizabeth of Scotland, wife of Robert Bruce, and ancestress of those Lords of Darnley who, centuries later, came to bear rule at Cobham.

When the famous Order of the Templars was prosecuted and dissolved, Henry Lord Cobham was appointed custodian of their lands in Surrey and Sussex. He was a Justice, too, and a tried soldier; summoned to take his part against the Scotch; to raise troops and march to join the King against the Earl of Lancaster, at Coventry; to lead the Kentish detachment in a projected war with France; and, later, to block the shores of the Thames to prevent a landing of the French.

He died in 1339, at Stoke-under-Hamden, in Somerset. John, his eldest son and the next Baron, had already—seven-and-twenty years before—served as a Knight of the Shire. In those practical days, a member of Parliament was not expected to serve his country for nothing, and John received £26 16s. for his expenses in attending the House for sixty-seven days.

Like his forbears, John the third was a distinguished man in his way—which was not so much the way of law, like that of John the second, nor of the keeping of castles, like the second Henry's, but a naval way: he was indeed Admiral of the King's fleet "from the mouth of the Thames westward"—a title which to our ears savours somewhat of burlesque.

He was a brave soldier, too—made a Knight-banneret for service in the field—and a gentleman of great hospitality, if we may judge from the expression, *cortays viandour* (shall we say "courteous dinner-giver"?) on the brass, in some respects unique, which preserves his memory. The wayfarer in Cobham Church is asked to pray for the soul of the good Knight who "overcame his last enemies" on the morrow of St. Matthew, 1354:—

Vous qe passez ley entour
Priez pur lalme le cortays viandour
Qe Johan de Cobham avoit a noun
Dieux luy face mercy pardoun
Qe trepassa lendemayn de seint Mathi
Le puissaunt otrie a demorer one *[ly*
En lan de] grace Mil C C C L quatre
Ces enemis mortels fist abatre.

Next comes John, third Baron, and last of this line; the best remembered of the Cobhams. "John the Founder" he was called, because he founded that ancient and picturesque college which, in the pretty village of Cobham, is still the most interesting thing, as it stands back behind the church, with its curious high chimneys, dull-red roof, and ivy-covered walls, yellow-grey with extreme old age. It is not a college now, but a hospital, whose ancient pensioners have something of the weather-worn look of those crumbling walls which shelter them.

Cobham Church was greatly rebuilt and adorned by this "pious Founder": who, moreover, built Cowling Castle, not far off, "for the defence of the country," and joined with Sir Robert Knollys in the construction of Rochester Bridge. A liberal-minded, patriotic, and a brave and independent man: too upright to hope for the favour of Kings. Gower, the poet (one of whose executors he was), described him, in the jingling Latin verse of the day:—

Unus erat dignus, patiens, pius atque benignus,
Providens, et justus, morum virtuti robustus
Non erat obliquus, regni sed verus amicus
Hunc rex odivit, in quo bona talia scivit
Ut dicunt mille, dominus Cobham fuit ille.

During a life of, at all events, over four score and ten years—for he died at least seventy-four years after his marriage—he was constantly employed for the good of his country. Indeed, for many years he seems to have spent most of his time in France, either as a warrior or as a Commissioner to treat for peace. In the very year in which he succeeded his father, 1355, it seems most likely that he was in France (where a very energetic little war was just going on), since we find him paying his wife's father-in-law, Hugh, Earl of Devonshire, £15 6s. 8d. for her board and lodging for a year. Such payment hardly tallies with our ideas of the old English hospitality of a princely family in those days; but there is the Earl's receipt, in antiquated French, for "*quynze livres sys south, S oyet deniers pur le soiourn S awltres necessaries Margaret de Cobeham n're fylle sa compaigne*" ("our daughter, his wife").

That same year he was summoned to Parliament as Baron of Cobham, and four years later made one of the brilliant army whose successful expedition into France, under Edward III. himself, was terminated the following autumn by the Treaty of Bretigny. By this treaty King John of France, at that time our prisoner, was allowed to return home, the Dukes of Orleans, Anjou, Berry, and Bourbon becoming hostages; but in 1363 the Duke of Anjou and others broke their knightly parole—another shock to the reader who had faith in those chivalrous days—Lord Cobham was sent to Calais as our King's representative, and King John had to return to his captivity.

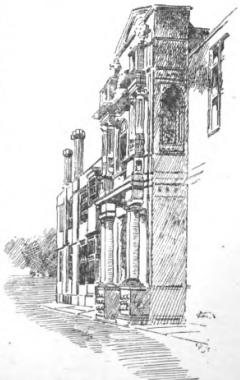
Fighting in France and Scotland—and bravely, for he was made a banneret—defending our coasts against the French, and oftentimes an Ambassador to France, Sir John of Cobham passed many years of an active and honoured life. He was a much-trusted public servant; was placed on Committees "to inquire into the expenses of the King's household," "to investigate the complaints of piracy on the high seas," and many others; and was appointed to confer with the Commons on the grant of the franchise and the manumission of villeins.

So far, so good. But in the tenth year of the reign of the foolish young King, Richard II., he was chosen as one of the fourteen Lords, "Governors of the Realm," to inquire into the abuses which, later on, made possible the rebellion of Henry Bolingbroke. In 1388, the Commons impeached the King's Chancellor, the Archbishop of York, De Vere, "Duke of Ireland," and others; and the venerable John de Cobham was one of the Lords Appellants. On the day fixed for their meeting, however—as Mr. Waller tells us in his very full account of "The Lords of Cobham" ("Archæologia Cantiana," vol. xi.)—"an armed ambuscade was placed at the mews, under the command of Nicholas Brembre, Lord Mayor of London, to waylay them on their route to Westminster. Being duly warned, they avoided the snare, and then demanded a safe-conduct under the King's own hand."

When the time came, it appeared that the Lords Appellants had a very comprehensive idea of their duties, and no intention to shrink from carrying them out. None of the accused put in an appearance; but the Barons declared at length their charges against them, and flung their gloves, as gages of their readiness to support these charges in person against the defendants, upon the floor of the House, before the King. Meanwhile, one of the accused, Sir Robert Tresillian, was arrested, in disguise, within the Abbey precincts, and brought before the Lords. He was by no means loth to decide the matter in single combat; but—despite the aforesaid bravery of his judges—this was not allowed. Both he and Sir Nicholas Brembre were drawn on hurdles to Tyburn and executed.

But when the King for a while got the upper hand again—by tampering with the elections, it is said—he lost no time in taking his revenge upon those subjects who had made him submit to such humiliation. Even the walls of a monastery did not protect the good Lord Cobham. Though he had taken refuge with the Carthusians, and renounced the world, he was dragged forth, sent to the Tower, tried, and doomed to death: the statesman of eighty was to be hanged, drawn, and quartered, and his estates confiscated to the Crown. But even Richard did not dare to carry out this sentence. Lord Cobham was banished to Jersey, and there remained till Henry Bolingbroke overthrew the King, against whom one of the heaviest charges was his treatment of the "Lords Appellants." The last public act of John the Founder's life was the signing of the entail of the Crown upon the sons of Henry IV.

The great statesman of Cobham left no child to succeed him. His daughter Joan, who was married to Sir John de la Pole, died some twenty years before her father; and as she again left no male heir, her daughter inherited the estate—a second Joan, whose husbands were, for their time, the Lords of Cobham.



I say husbands, for she had five. They were all Knights—Sir Robert, Sir Reginald, Sir Nicholas, Sir John, and again Sir John. Sir Robert Hemenhale, of a good Norfolk house, married her when she was quite a girl. There was one child, a boy, who died in infancy; and Sir Robert went to rest in Westminster Abbey in 1391. Joan was still under age when she married Sir Reginald Braybrooke, a man of distinguished family; and this union lasted for about a dozen years. Sir Reginald fought in Ireland in 1399, and died abroad, in Holland, in 1405. There were two sons and a daughter of this marriage; but it is curious how about this time there was fated to be no male heir to Cobham. Though the Lady Joan had (as appears by her brass *in* the church) ten children *in* all—only the last marriage being childless—yet one girl alone survived her parents; and Joan the grand-daughter, like Joan the daughter and Joan the mother, was heiress to the lands of Cobham.

Not more than a year after Sir Reginald Braybrooke's death his widow wedded one Sir Nicholas Hawberk, of whom little is known but that he was of no great family, but was a proper man of his hands, overthrowing, "horse and man," one Cookeborne, Esquire, of Scotland, in the jousts at Smithfield, in 1393. He was a widower when he married Joan. She was a widow again in a year or little more.

Three months after the death of Sir Nicholas, "John the Founder" died, and the thrice-wedded Joan succeeded him as ruler at Cobham. So wealthy a lady as she had now become was not likely to remain unwooed; and in about a year she married the most famous of her husbands—Sir John Oldcastle, whom some historians make a hero, and others the prototype of Falstaff. This latter charge, however, Shakspeare distinctly denies—"Oldcastle died a martyr, and this is not the man"—and there seems no reason that we should not take the highest estimate of his character.

That he was a brave warrior there is no question; and his attitude as a protector of Lollards is little likely to do him harm in these days. In his own, however, it brought him to death. He was tried for heresy, excommunicated—which involved all the consequences of the more modern boycotting—and sent to the Tower. Hence, however, he escaped, and fled to Wales. A thousand marks were offered for his capture, dead or alive; he eluded pursuit for four years; but was then taken (grievously wounded), again condemned for heresy, and—on Christmas Day, 1417, in the presence of an immense crowd of orthodox holiday-makers—drawn on a hurdle through the city, and, in the new place of execution, at the gate of St. Giles's Hospital, "hung, and burnt hanging."

Joan's fifth husband—Sir John Harpenden, of the old Hertfordshire family—distinguished himself chiefly by outliving his wife four and twenty years. Joan was, indeed, despite her many marriages, by no means a very old woman when, in 1434, she died; as far as one can make out, only about sixty or sixty-one. The beautiful brass to her memory gives her a somewhat stately figure; its inscription, curiously enough, only describes her as the "wife of Sir Reginald Braybrooke."

ENTRANCE-DOOR, 1670.

Joan the third married a Somersetshire gentleman, Thomas Brooke, who was in Parliament as Knight of the Shire for Dorset, and afterwards for Somerset, and who received the dignity of knighthood about 1420. He died before the Lady Joan, leaving a family of fourteen children; and his eldest son, Edward, was summoned to Parliament by the title of Lord Cobham—which had been in abeyance for thirty-two years, since the time of Oldcastle. Sir Edward fought in the wars of the Roses and on the winning side—for though he married the daughter of the Lancastrian Lord Audley, he was a trusted friend of Richard, Duke of York, and (with John Bagenhall) commanded the Kentish forces in the battle of Northampton.

His son John, the next Baron, led the Royal forces to victory at the battle of Blackheath—which peaceful suburb is

now hardly to be imagined as a battlefield—and the commander of the rebels was his grandfather, the Lord Audley just named, who was captured and afterwards beheaded. Yet when Henry of Lancaster came to the throne Lord Cobham seems to have had no great difficulty in obtaining his friendship and his confidence, for the King employed him as an Ambassador to Flanders.

The sixth Baron, Thomas, son of John, was a distinguished soldier, and high in favour with Henry VIII. We find him attending the King at the Field of the Cloth of Gold, and during the visit of the Emperor Charles V. to England; he was one of the twelve Barons who tried the unhappy Duke of Buckingham; and was a Commissioner for the levying of taxes in the county of Kent. These taxes were both illegal and oppressive—four shillings in the pound for the clergy, three-and-fourpence for the laity—and Lord Cobham's action shows that he, like the rest of the waning nobility, had lost, under the Tudors, the old sturdy independence of the great Barons.

His eldest son died in his lifetime, and the second, George, became his heir. George was made a Knight of the Garter by Henry VIII., and was the Lord Deputy of Calais. He was cast into prison by Mary, on suspicion of sharing the rebellion of Wyatt; though he had opposed Wyatt's entrance to his castle of Cowling.

With the next Baron, William, the fortunes of the House of Cobham stood high, before their final fall. He was a favourite of Elizabeth, and during a Royal progress in Kent entertained her at Cobham—where is a room called by her name, perhaps on no very high authority. He was employed as an ambassador, was made Knight of the Garter and a member of the Privy Council, and, like so many of his family, was Warden of the Cinque Ports, and Governor of Dover Castle. He endowed a new College on the site of that built by John the Founder, and died in 1596.

To him succeeded the weakest and worst of the Cobhams: Henry Brooke, whose confession—of a conspiracy against the Cecils—ruined the noble Raleigh. For this confession Henry received a pardon; but, with a characteristic meanness of cruelty, James I. had the three Lords—Cobham, Markham, and Grey—who were doomed to death, actually brought to the block and shrived by the priest before their pardon was announced.

All Lord Cobham's possessions were seized by the King, and he was himself confined to the Tower "during his Majesty's pleasure." "The miserable man was almost starved," says Weldon, "had not a trencher-scraper, some time his servant at Court, relieved him with scraps!"

He died in 1619, without issue. His brother, George Brooke, succeeded, was beheaded as a conspirator, and left a son who was made a Knight of the Bath; but the male line became extinct in 1651, with the death of Sir John Brooke, made Baron of Cobham in the twentieth year of Charles I.

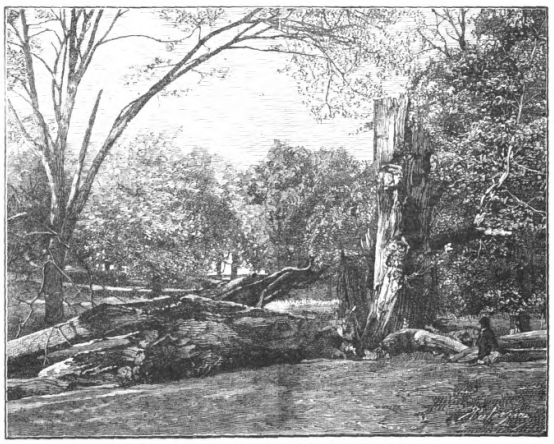
So disappeared a great and representative English house; and the history of the later Lords of Cobham may be very briefly told. James II. granted the estates to his kinsman, Lodowick Stuart, Duke of Lenox; from him they descended for some four generations, then passed to a cousin germaine, Charles Stuart, Earl of Lichfield, and then became the subject of a very remarkable lawsuit which followed the death, in 1707, of their next owner, Sir Joseph Williamson. Sir Joseph—a very wealthy man, and the originator of the *London Gazette*—had married the sister and heiress of Lord Lichfield, and bought back Cobham Hall, which had been sold for debt; and he left two thirds of his estate to his widow, and one third to Mrs. Mary Hornsby, who had been his housekeeper. The suit was brought—in opposition to Mrs. Hornsby's claim—by John Bligh, the husband of the sister of the son of the daughter, by her first husband, of Sir Joseph Williamson's widow. This sounds sufficiently complex; but it will be seen that it is nothing to the complications which might have arisen among the five families of the Lady Jean. In the end, Mrs. Hornsby's suit was settled, in 1731, by the payment of £70,000 by Edward, second Lord Darnley. (The John Bligh above mentioned had been created first Earl of Darnley in 1725; and the earldom has remained in the family ever since, with the estate and the great house of Cobham.)

The house, as it now stands, was built by instalments, divided by two intervals of something less than a century apiece. It is a great rectangular building, in the shape of the letter H, only with the top half closed, so as to form a quadrangle, and an addition (of stables and coach-house) at the right-hand top corner. The H lies nearly east and west; and its lower limbs, called the north and south wings, were the first built—their builders being the two last Barons of Cobham, and their dates from 1584 to 1603. The crossbar of the H was built for the Duke of Lenox by Inigo Jones, partly on the remains of an earlier house; and from 1770 to 1818 the third and fourth Earls of Darnley added (or, as regards some portions, rebuilt) the "Kitchen-square," which forms the upper part of the H. By these two Earls—whose architects were James Wyatt and the Reptons—the interior of the house was entirely remodelled, and very greatly improved in comfort and convenience.

The finest view of Cobham Hall is, I think, from the near end of the great avenue, which was the ancient and noble approach to it. Here two sides of the house are seen—the south, long and low, of red brick like all the rest, varied and broken up with turrets, mullioned windows, high chimneys, and cupola-tower, and overlooking a little plain with stone-walled ponds and fountain; and the west front, with its great open quadrangle—if so Irish a figure may be admitted—formed by the stately Elizabethan wings and the more Classic centre. The warm red of the walls stands out against the trim grass and gravel at their feet; it is broken in the north wing by the great grey Tudor doorway, a stately work, built by William Lord Cobham of two hundred tons of stone from Caen, and bearing the date 1594, and the inscription *Deo Opt. Max.*

The chief entrance to the house is rather curiously placed, under an archway in a long covered corridor, projecting northwards from the middle of the north side (a continuation of the cross bar of the H, one might say). Passing inwards up the long Gothic entrance hall, beneath the arms of Elizabeth, and by the ancient fireplace, on which is blazoned the coat of William Brooke, Lord Cobham, a turning to the right brings us to the Large Dining-Room, where hang some of the finest portraits in the house.

The room is fine, quiet, simply furnished; with woodwork of a soft brown, a brown ceiling fretted with gold, and much brightness of white marble—a statue at the end of the room, marble arches, a kind of marble fountain by the long, small-paned window, and (over the blazing fire of logs, piled on the massive firedogs) a high chimneypiece, of marbles, black and white. This reaches to the ceiling, and in its midst stands up a statue of Pomona—white against a black background—with



OLD TREE IN THE PARK.

great vases to the right and left; and a curious picture of Moses striking the rock is outlined on the black marble.

Among the most interesting portraits are the Mary Stuart, painted after her death, the execution shown in the background; the Charles I. of Mytens, with a face so noble that critics think it must be someone else; the fourth Duke of Lenox (by Vandyke), his hand on the head of his faithful dog; and the charming "Lady Frances Cole"—a lovely child—by Reynolds, said to be the last picture he finished.

When these, and many more, have been long studied, we may go—in half a dozen steps—to the room which was called by George IV. the finest he had ever seen. This is the lofty and brilliant Music-room, all flashing with white marble and gold tracery, light and rich, after the fashion of Louis Quinze. It is thirty-two feet in height, and at its ends are two galleries, upheld by yellow pillars of scagliola. Along the balustrade of the organ gallery is just one line of red—a crimson velvet cushion, there placed at the suggestion of Sir Edwin Landseer to add colour to the room. To the height of one storey the walls are entirely of white veined marble; from the ceiling—designed by Inigo Jones, rich with the arms and monograms, in gold on white, of Dukes of Lenox—there hangs a round gilded chandelier; and over the carved marble mantelpiece is the great Vandyke which shows us Lords John and Bernard Stuart—young "bucks" of that day—brave in their blue and

OLD TREE AFTER A STORM.

amber satin, shadowed by no foreboding of their early deaths in battle for their King.

The room is further brightened, as all such rooms should be, with mirrors; and at its western end four windows above and four below look out towards the lawn.

Between this Music-Room and the Library comes the Vestibule, a kind of boudoir or snuggery: a quaint and happy little place in green and white, divided by an arch and pillars, behind which, in the dim background, is a round divan of Turkish luxuriance. Tall, grey-green vases adorn the little chamber; and a French window opens into the great quadrangle, just where, it is said, was formerly the grand entrance to the house (whence the room's name of Vestibule).

Then comes the Library, delightful, homely, cosy; as a library should be. It is a very pretty room—or pair of rooms, rather, divided by little pillars, with two fireplaces, cheery and comforting; and the colouring is warm and (shall I say?) British, dotted and broken up into spaces of red, and green, and brown, and cream-colour, glimmering with mirrors, with family portraits looking down from the walls. Lord Darnley's grandfather—a good picture by Phillips—hangs in state above the quaint china on the chimneypiece; and there are two pretty pictures of the Queen, as a child and a young woman, by Fowler. Yet the famous rooms at Cobham—famous for their priceless contents—are of course the Picture Gallery and the Portrait Gallery. From the Music-Room one goes to them up the grand staircase—built of stone, cold, white, and broad, with solid railings of iron, curved and gilt. On the ceiling above are the arms of Lenox, with the motto, *Avant D'Arnley;* and great game-pictures hang on the walls.

In the long Picture Gallery the ceiling is painted like the blue sky, but with a red border; and the walls are red. There are four fireplaces, of which the chief one is magnificently carved in white marble, and bears the date 1599—the time of that unhappy Lord Cobham of whose fall I have spoken, and who (as if by some strange prevision) had here placed as motto, "Sibi quisque naufragium facit."

The artist who did this and other marble-work—perhaps, indeed, all the sculpture in the buildings—was an unlucky Dutchman named Giles de Whitt, specially brought over from Holland by the noble owner, who had to be reminded (by a conscientious steward) of his duty to the poor fellow. "Yr. Lo: must resolve," wrote the steward, "what and how much you are pleased to have doen by Giles de Whitt, either upon som newe Chymney piece, or upon my Lo: yor. father's tombe, that the poore man may have some worcke, to get wherewithall to maintaine and susteyne himself."

Among the painters at Cobham, the great master is Titian; and to some minds his finest picture will be the one first seen—a glorious portrait of Ariosto. The poet stands, his arms folded, wearing a plain, grey, heavy dress; and in the dark voluptuous beauty of his face one seems to read the man's whole character. The most famous Titian in the gallery, the Europa, is unrivalled in the luxurious beauty of its colouring, and the wonderful flesh-painting of the superb girl-figure; yet the greater "human interest"—the beauty which is more of insight than of technique—is in the portrait.

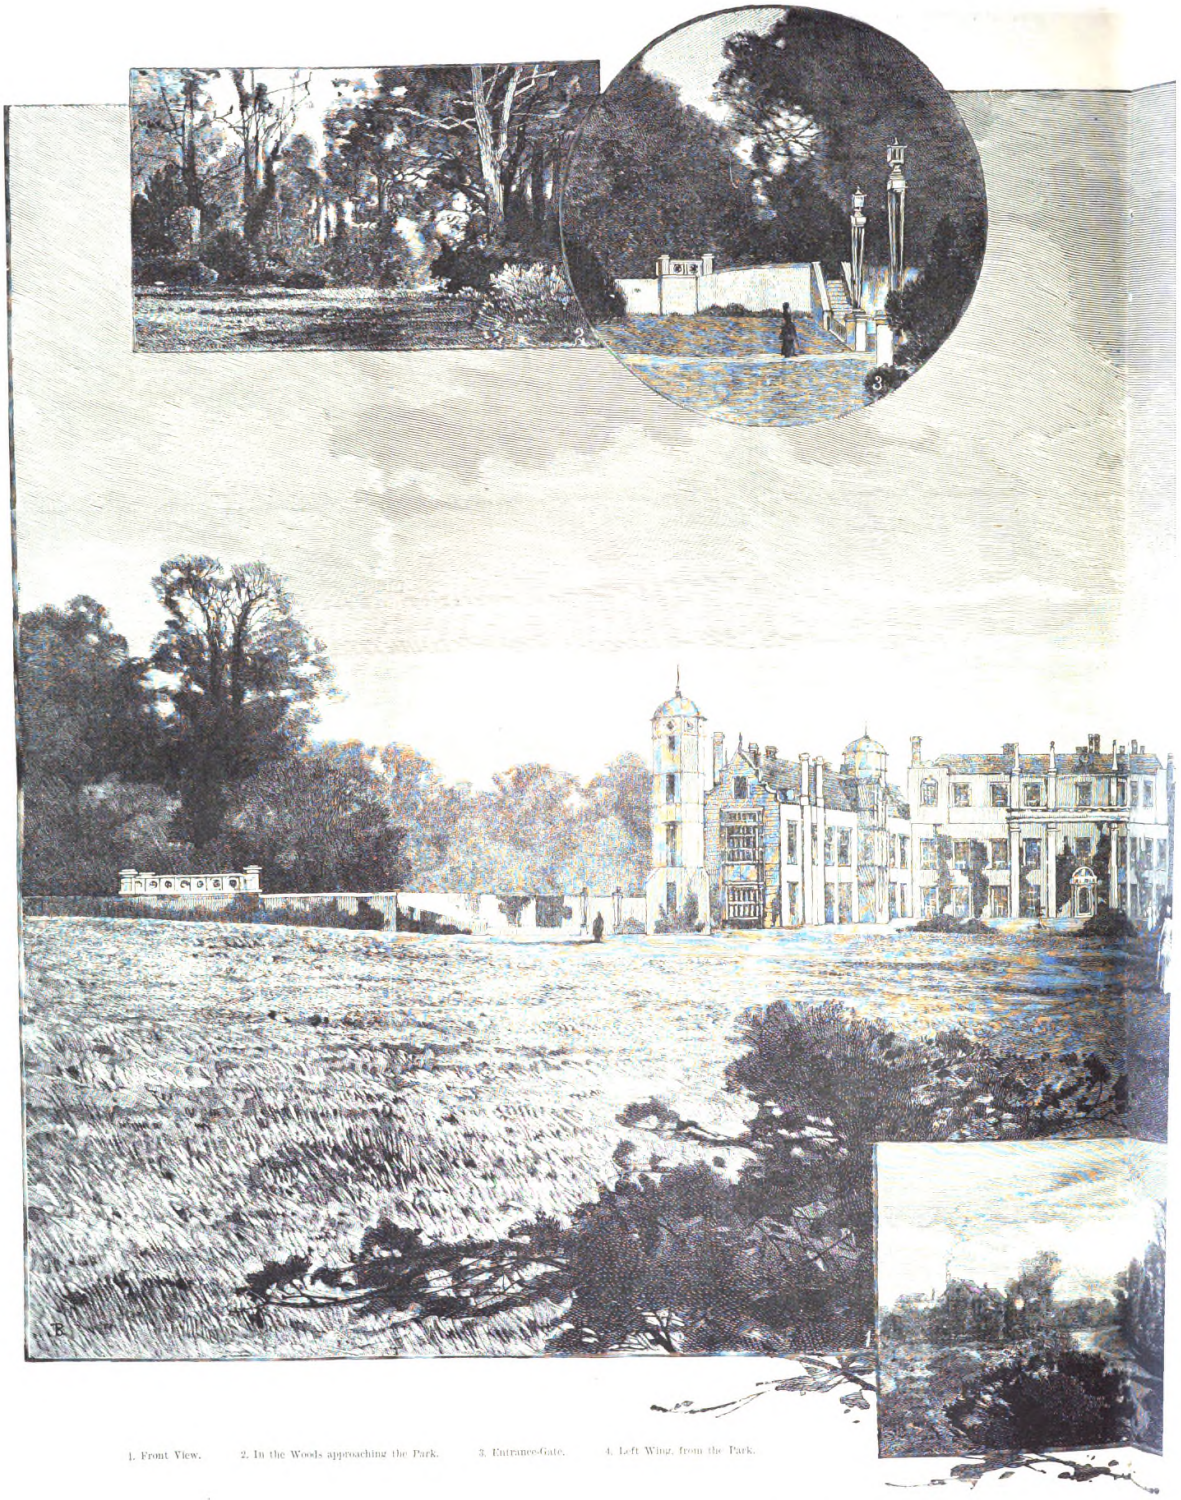
A tremendous picture by Rubens—"one of the most magnificent gallery-pictures in Europe," says Mr. F. G. Stephens, in his interesting paper on the masterpieces at Cobham—is that which shows us Thomyris, Queen of the Massagetæ, causing the head of Cyrus to be plunged into a vessel of blood. The picture is all strength and freshness, with a curious realism in the faces and figures of the lookers-on.

A companion-picture, for its strength, is the gloomy and splendid "Death of Regulus," by Salvator Rosa. The unlucky Roman is being vigorously rolled down-hill, and the whole scene is alive with action.

Then there are other Titians: a jolly little Rubens, of Cupids; a curious Carlo Dolci—a picture within a picture, the inner one being a very large portrait of their founder which the Virgin is handing down to the Dominicans. And—in that room adjoining this Gallery, which is called, on no known authority, Queen Elizabeth's—are four most curious and valuable allegorical pictures by Paolo Veronese.

The Portrait Gallery is a long, low, narrow corridor of pale grey-green, overlooking the plain buildings of the great servants' quadrangle; along its western side one sees the faces of almost all the greatest men of our history. Here is Shakspeare, and a very smooth, uninteresting person the painter has made him; while not far off is the presentment of Sir Philip Sidney, by just as much rougher than one has usually seen him. Locke's troubled, curious face is here; and Dryden, dismal, sleepy, and feminine. Several of the great men of the period when (as Thackeray says) all the great men were fat, are shown in their fullest fatness: the blue-cheeked, half-shaven Steele; the plump and piglike Swift; the substantial Bolingbroke; with, as the necessary exception, Pope's thin fretful face. Perhaps the face and forehead which strike one as the finest in all the gallery—solid, intellectual, manly—are those of Betterton, the great actor; and another big, powerful head is that of Sir Hugh Myddelton, who holds a picture of the New River. Royal people—Mary Stuart, Elizabeth, Catherine of Russia—there are, of course, in abundance.

Of the private rooms of Cobham I have not space to speak; of the charming gardens, the beautiful park, a very few words must be enough. Not thirty years ago, much of the private grounds—which, by-the-way, cover fifty-five acres—was a wilderness, but since that time they have been laid out carefully and with taste. Of the old avenues many have been cut down, but the Grand Avenue is still as magnificent a one as can be seen, with its four parallel rows, 1100 yards in length, of glorious limes.



The gate at the further end of this avenue is now closed to the public: on which slender foundation is built the legend that the stately walk is never used but at the funeral of an owner of Cobham—a story which Charles Dickens was not ashamed to tell to Cyrus Field, who trustfully printed it!

In the private grounds stands the pretty châlet, given to Dickens by Fechter, in which the great novelist wrote most of his later books. This is a little two-storey building of wood, the upper room being fitted up as a study, with hangings of the curious pea-green that Dickens loved. His family asked their father's old neighbour, the Earl of Darnley, to place it in his garden.

The park contains 700 acres, and is seven or eight miles round. There are fine sweeps of hill, sometimes bare, sometimes studded with great trees, standing single and in groups. There are woods, too, of noble trees, often knee-deep in bracken: a grand ash, whose gigantic widespread roots tell of a century of growth; immense sturdy oaks, and beautiful elms; fine old pollard chestnuts, and many noble ruins of great trees, blown down in recent gales—for there has been rough work of late years—where the green, broken trunk lies on the ground, and the dry hulk stands desolate.

The most famous tree of Cobham is, of course, the great chestnut known as the Four Sisters, one of whose stems was

SEAT OF THE EARL OF DARNLEY.

unfortunately blown down in April, 1887. Of this Lord Darnley kindly sends the following account:—

"This venerable relic of sylvan antiquity, although consisting of four distinct stems, had, until closely examined, the appearance of a single tree. It was probably the second Spanish chestnut-tree in this country in point of size, the celebrated Tortworth chestnut being the first. The measurement of the latter is given by Strutt as being fifty-two feet at five feet from the ground; that of the Four Sisters, twenty-nine feet at three feet and thirty-three feet at twelve feet from the ground."

By the public path from Rochester—trodden by the immortal feet of Pickwick and his companions, on their way to join the disconsolate Tupman at the Cobham Leather Bottle—there stands high up, as a landmark, a Mausoleum, which may be described as a Greek temple with a pyramid at top. Rumour says that it has never been used, as there was a difficulty about its consecration; and, further, that in it abides a hermit—indeed, the Earl of Darnley has often received applications for the post. Need it be said that the rumour is as wrong as usual?

From many points of the park one has a distant glimpse, across a wide slope of grass, of the long line of the great avenue, looking, through the haze of a winter day, like the dark battalions of an army on the march. Over the hillsides are dotted the small black and white Shetland cattle, with their roughish coats, no two marked alike; among the trees glance the great herds of deer; little rabbits dart and dip about; and the rooks caw, as they come in their long line over the great red house, which stands back, half-hidden by the ancient trees, where the long avenue ends. EDWARD ROSE.

MUSIC.

THE BRISTOL FESTIVAL.

The sixth of these triennial celebrations terminated on Oct. 19. The opening performance of "Elijah" (already briefly referred to) included, as principal vocalists, Madame Albani, Miss Anna Williams, Madame Patey, Mr. E. Lloyd, and Mr. Santley. The selection from Gluck's opera "Iphigénie en Tauride" (given at the evening concert of the same date) was an interesting example of the noble simplicity of style by which the composer redeemed the opera stage of his time from the prevailing Italian frivolities and inanities. Madame Albani's fine delivery of the soprano portion was an admirable feature of the performance. Her coadjutors were Miss M. Gane, Mr. W. Mills, and Mr. W. Thomas. As previously said, another specialty of this programme was Sir Charles Hallé's artistic rendering of Schumann's Pianoforte Concerto in A minor. The concert also comprised interesting vocal and orchestral pieces that do not call for specific mention.

The morning performances of the other days of the festival week included Cherubini's fine fourth Mass (in C), followed by Dr. Mackenzie's dramatic cantata "The Rose of Sharon." The principal soloists in the Mass were Madame Albani, Madame Belle Cole, Mr. E. Lloyd, Mr. C. Banks, and Mr. Santley, those in the cantata having been Mesdames Albani and Belle Cole, Mr. Lloyd and Mr. Santley, and Mr. Worlock. Mendelssohn's "Walpurgis Night" music (soloists, Madame Belle Cole, Mr. E. Lloyd, and Mr. Santley) and Sir Arthur Sullivan's dramatic cantata "The Golden Legend" (with Madame Albani, Madame Belle Cole, Mr. E. Lloyd, Mr. Santley, and Mr. W. Thomas as solo vocalists) formed the morning programme of Oct. 18; "The Messiah" having closed the festival on Oct. 19. The solo vocalists on this last occasion were Miss Anna Williams, Madame Patey, Mr. E. Lloyd, Mr. Santley, and Mr. Worlock.

The second of the evening concerts opened with Berlioz's dramatic symphony "Romeo and Juliet"—a work that comprises much beautiful and effective music, together with some of that eccentricity which colours most of the composer's works. The solo vocalists were Madame Belle Cole, Mr. C. Banks, and Mr. W. Mills. Miscellaneous orchestral and vocal pieces completed this programme. The last of the evening concerts—on Oct. 18—comprised some effective orchestral and vocal performances of pieces too familiar to call for specific mention. It is much to be regretted that the continued indisposition of Madame Trebelli hindered her from fulfilling her engagement at the Bristol Festival, where she was readily replaced by Madame Belle Cole.

Sir Charles Hallé's fine band, with himself as conductor, a powerful and well-trained chorus, and the eminent solo singers already named, have combined to realise performances mostly worthy of the standard classical works of which the programmes have chiefly consisted. Mr. Rootham, as chorus-master, and Mr. Riseley, as organist, have rendered efficient services to the festival proceedings.

The opening of the thirty-third series of the Crystal Palace Saturday afternoon concerts on Oct. 13 was duly recorded by us. At the second concert of the series, on Oct. 20, the programme comprised two works, given for the first time here—a symphony (No. 2) by Herr Goldmark, and a "Concerto Romantique" for violin, by M. Benjamin Godard. The symphony is a work of a similar class to one by the same composer, entitled "A Country Wedding," that has been given at these concerts and elsewhere with much success. The second symphony contains much effective writing, especially in the earlier portions, and may well find a second hearing. The violin piece contains many passages affording scope for executive display, which were brilliantly rendered by M. Johannes Wolff. Other portions of the concert require no mention beyond stating that vocal solos were successfully rendered by Madame Valleria and Mr. Braxton Smith.

Mr. William Carter will give the first of a new series of grand concerts at the Royal Albert Hall on Oct. 31, with a Scotch festival.

Mr. W. Nicholl is to begin a new series of his interesting chamber concerts at Princes' Hall on Nov. 1, when a varied and attractive programme of vocal and instrumental music will be offered.

Dr. Latham delivered the annual Harveian oration at the Royal College of Physicians on Oct. 18.

Sir Edward Watkin, Bart., M.P., was on Oct. 18 presented with an address from the electors of the Parliamentary borough of Hythe, on the occasion of his departure for India.

The Lord Mayor entertained at the Mansion House on Oct. 17 a large number of the Mayors and Provosts of England, Ireland, Scotland, and Wales.

A deputation representing the ratepayers of Kensington waited upon Mr. James Heywood at his residence, Palace-gardens, on Oct. 20, to present him with a bust of himself, executed in white Carrara marble, by Mr. Adams Acton, in acknowledgment of his gift of a library, which is to form a nucleus for the new Free Library in Kensington.

The Wax-Chandlers' Company have enriched their hall in Gresham-street with a stained-glass window containing their arms, granted in the time of Richard III., surrounded by those of members of the Court. The whole has been carried out by Mr. Taylor, of Berners-street, under the direction of Mr. Horatio Gregory, clerk of the Company.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

J H BLACKBURNE.—Many thanks for the game and the information.

E W P (Wandsworth).—Held over for want of space.

HEREWARD.—There has been some confusion, which we cannot at the moment explain. The problem shall be re-examined with a view to publication.

E. H. E.—We do not publish solutions; and as you send no solution of your position, we cannot offer an opinion on its merits.

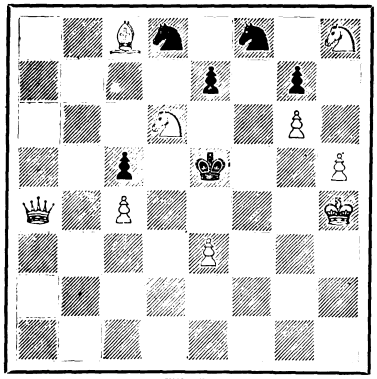
JEFF ALLEN (Romiley).—We have a large number of two-movers yet to be published, and cannot, therefore, promise an early appearance of yours, even if it stands examination.

E HALLEWELL (Bolton).—Your problem is marked for insertion, if sound.

J AMYGDALIS.—Thanks for problem, which shall not be overlooked.

F HEALEY, Carshake; W Wood, Mrs Baird, J P Taylor, W T Pierce, J Pierce, B G Laws, Senior Asps, W Biddle, E Hallwell, Hereward, J Amygdalis, A Silvery, L Desanges, and Columbus are severally thanked for the problems so courteously placed at our disposal.

CORRECT SOLUTIONS OF PROBLEM No. 2320 received from J W Shaw (Montreal), G J Veale, and J Rutter; of No. 2322 from J Sage, A W Hamilton Gell, Alpha, Mermet, J Bryden, B Reynolds, J G Hankin, Quidnunc, and W H D Wallbank.



CORRECT SOLUTIONS OF PROBLEM No. 2323 received from Hereward, B Reynolds, J D Tucker (Leeds), Howard A. E Casella (Paris), Martin F. Dawe, A Newman, E Lucey, W Hilbert, Jupiter Junior, G J Veale, E Phillips, J Bryden, R F N Banks, Rev. Winfield Cooper, Peterhouse, Julia Short (Exeter), T G (Ware), T Roberts (Hackney), Dr Gustav Waltz (Heidelberg), Mrs Kelly, D McCoy (Galway), W S (Shefffield), E Louden, H Wortzel (Canterbury), Columbus, W H Hallewell, H H Brooks, L Desanges, Dr F St, E Lucas, Percy Ewen, and J Dixon (Colchester).

SOLUTION OF PROBLEM No. 2321.

WHITE.	BLACK.
1. B to K 2nd	P takes P
2. Kt to Kt 3rd	K takes Kt
3. Kt Mates.	

Numerous correspondents point out a solution in two moves by 1. Kt *to* B 8th.

PROBLEM NO. 2325.
By L. DESANGES.
BLACK.

WHITE.
White to play, and mate in three moves.

BRITISH CHESS CONGRESS.
Game played between Mr. GUNSBERG and the Rev. J. OWEN.
(*French Defence.*)

WHITE (Mr. G.)	BLACK (Mr. O.)
1. P to K 4th	P to K 3rd
2. P to Q 4th	P to Q B 3rd
3. P to K B 4th	P to Q 4th
4. P to K 5th	Kt to Q R 3rd
If Black Kt Black answers with Q to R 5th check.	
5. Kt to K B 3rd	Kt to B 2nd
6. B to Q 3rd	P to Q Kt 3rd
7. Castles	P to Kt 3rd

Black is constructing an elaborately defensive position, but this Pawn is moved from a post where it would presently prove useful to one in which the subsequent proceedings do not invite it.

8. P to Q Kt 3rd	P to Q B 4th
9. Q to K 2nd	P to Q R 3rd
10. B to Kt 2nd	B to Q Kt 2nd
11. K to R sq	Q to Q 2nd
12. Q Kt to Q 2nd	Kt to K 2nd
13. Q R to Q sq	

Black's game is strong only in appearance, and with true strategical instinct White detects the weakness of his opponent's centre, and acts accordingly.

13.	Kt to B 3rd
14. P to B 4th	

White continues with admirable judgment. By this move he preserves his K it and connects an *exclusive* of Pawns, greatly to his own advantage.

14.	B P takes P
15. P takes P	Kt takes Q P
16. Kt takes P	Kt (Q 4th) to Kt 5th

Loss of time. The Knight is well posted, and should not have been moved. B to R 3rd, threatening a Pawn not easily defended, would have been better.

17. Kt to K 4th	

White's position is decidedly the better of the two.

17.	B to K 2nd
18. B to Kt sq	Kt to Q 4th

A confession of the weakness of his 16th move.

19. Kt to Q B 2nd	Castles (Q R)
20. Kt to K 3rd	Q to B 2nd

Losing the exchange and the game. K R to B sq would have still left Black with some fight; but he was, in any case, getting hard pressed. The remaining moves are merely a massacre of his forces.

21. Kt to Q 6th (ch)	K to Kt sq
22. Kt takes Kt	P takes Kt
23. Kt takes P	B to B 4th
24. Kt takes K R	P to Q 5th
25. Kt takes P	P takes Kt
26. B takes Kt P	Kt to Kt 5th
27. B to K 4th	B to Q B sq
28. P to Q R 3rd	P to Q 6th
29. Q to B 3rd	Kt to B 7th
30. R takes P,	and wins.

Mr. Blackburne, who is now starring the provinces, gave an exhibition of his skill at Trowbridge on the evenings of Oct. 10 and 11. On the first night he played thirty-six simultaneous games, of which he only lost two and drew three, winning the rest; and the following evening, when meeting eight opponents, blindfold, he won six, drew one, and lost one. His programme includes visits to Birmingham, Manchester, and Luton. On Nov. 3 he gives a blindfold performance at the British Chess Club.

At the Dover Chess Club, on Oct. 15, Mr. Bird played twenty simultaneous games, of which he won seventeen, drew two, and lost one. Some of the games were very spirited, being forced by the single player in characteristic style.

The match between the Athenæum and North London Chess Clubs, played at the rooms of the latter on Oct. 11, resulted in a victory for the Athenæum team by 9½ games to 5½.

"The Chess-Player's Pocket-Book and Manual of the Openings," by James Mortimer (Wyman and Sons). Chess-players of all classes ought to be grateful to Mr. Mortimer for this excellent little work, which is so simple in idea that the wonder is no one has ever thought of it before. Within a compass permitting the book to be easily slipped into a breast-pocket, the author has managed to give the first ten moves of sixty-one different openings, including such novelties as the Pierce and the two Blackmar gambits, whilst an appendix provides further analyses of the leading attacks. The volume is, in fact, an exhaustive compendium of the labours of all the analysts, and contains as much real instruction in the openings as one ten times its size. There are, of course, no notes; but by an ingenious code of signs, the value of different lines of play, or of particular moves, is as fully indicated as in any of the ordinary text books. In each case the criterion is Mr. Mortimer's own; but his proved merits as a player necessarily command respect for his judgment as a commentator. We already owe to him some interesting variations in the most popular lines of play; but we consider that in this manual he has done still more for the game. So far as our examination has gone, we have discovered no defects of any kind, and great care has evidently been taken to avoid errors. The volume is daintily got up, and its price (one shilling) brings it within the reach of everyone. We wish it all the success it deserves, and shall be surprised if it does not obtain a large demand.

The tenth annual Brewers', Mineral Water Manufacturers' and Allied Trades' Exhibition was opened at the Agricultural Hall, Islington, on Oct. 22, and continued till the 27th.

The Board of Trade have received two silver medals and their diplomas, which have been awarded by the French Government to Mr. William Garson, second mate, and John Neill, seaman, of the British steam-ship Richmond, in recognition of their services to the passengers and crew of the French vessel Ville de Victoria, which foundered in Lisbon Harbour on Dec. 21, 1886.

SCIENCE JOTTINGS.

OYSTERS.

That window in the oyster-shop has always had a strange fascination for me, and I never contemplate the bivalves in its tanks without a sigh of regret that so much in the way of complex anatomy should glide over the human throat without exciting even a quiver to mark its sense of the social barbarity to which it has been subjected. It is curious, too, to note how different are the feelings with which we of these islands regard two nearly-related molluscs—the oyster and the snail. For the former we pay down cheerfully our two-and-six or three-and-six per dozen on Mrs. Driver's counter, while the dainty, vegetable-feeding snail (costing us, as imported, nothing like such prices) is eschewed as a Continental culinary and gastronomic eccentricity. I suppose it always will be so in the matter of our food. We are terribly insular, in a dietetic sense. I do not aspire to the free ideas of John Chinaman, who despises nothing which is edible, and to whom a rat or a dog may come with equal relish as does his trepang or bird's nest (for soup); but I do contend we might enlarge our daily bill-of-fare with great advantage to health and pocket alike. In my many journeyings to and fro over the surface of the earth it is my lot to sojourn frequently at hotels. I find the British waiter has invented a shibboleth which in the matter of breakfast is repeated over the length and breadth of the land. Inquire what there may be ready to offer you for the first meal of the day, and you are answered at hotel No. 1, "Chop-fish-steak-ham-and-eggs, Sir!" At hotel No. 2 it is, "Fish-chop-steak-ham-and-eggs, Sir!" At No. 3 it varies like the same old chimes—"Steak-fish-chop-ham-and-eggs, Sir!"—and so on, from Land's End to John o' Groat's, the refrain ceaseth never.

What this plaint of mine has to do with oysters may not, I confess, be apparent all at once; but my logical position is, luckily, secure. I contend that, as we have gone out of our (edible) way, ages ago, to devour the mollusc, we should progress a little further on the same (dietetic) lines. Why not enlarge and extend the British bill-of-fare? Here is a topic for my friend Mr. Payn. The oyster must have been "a great departure" in its time. Imagine the attitude of the solid and eminently respectable Britisher who first swallowed an oyster. It was, in truth, a great feat; it led to a great innovation in food delicacies, and I trust it may be repeated in the case of many of the products of marine zoology as yet limited to the aquarium. The late Mr. Gosse used to relate how once upon a time he cooked and ate a sea-anemone. In the days of my youth, fired with a strong emulation to imitate my masters in science, I went and did likewise. The experiment was not a success. The anemone was tough, and it wanted a nice *Sauce Hollandaise*, say, to make one fancy it was only cod-fish after all. Unfortunately I had to cook the animal myself (the head of the kitchen in those days refused to "mess about," as she put it, with "such filthy things"), and there were no directions in any of the estimable manuals of the culinary art at my command whereby I might be guided in my attempts in food-reform. Later on I may "return to my anemone"; but it will be rather in a literary than in a culinary sense, I fear. You get nice fresh cuttlefish on the Mediterranean borders, and it tastes like nicely-done tripe. Everybody has had (or thinks he has enjoyed) frogs' hind legs in Paris; but "you can never be sure," as the comic song has it, unless you go to the Halles Centrales and buy your frogs nicely skewered on those little bits of wood, each looking for all the world like a monkey on a stick. Anyhow, I always take mine oyster as a proof that once upon a time we did make a step in the direction of a fuller *menu*; and when one thinks of the endless reiteration of the "beef, pork, mutton," and of the "chop-fish-steak-ham-and-eggs, Sir!" I can only hope (without being a Sybarite) that when we next enlarge our dietary I may be there to see—and to partake likewise.

Our oyster is designated, somewhat unfeelingly, I confess, in natural history text-books, "a headless bivalve." Whether it ever possessed a head or not, the sequel doth not show. I can certainly hie back, if you will, in oyster-history, and trace for you its development; but even in its early days there is no appearance of a head. Hence it is an inferior creature in this sense to your snail or whelk, which not only posseses a head, but contrives to see a good deal of the world in the course of its somewhat laboured peregrinations.

The oysters lying in Mrs. Driver's tank this morning are gaping widely enough. You might almost think they had died in the night; but when you tap the shell ever so lightly you notice how it closes with a somewhat leisurely but highly determined motion. Now, this observation proves two things to the inquiring mind. It shows, first of all, that the bivalve exhibits a quick appreciation of the "tapping at its garden-gate"; in other words, it is provided with a very distinct nervous system. Then, secondly, you observe that it possesses a powerful muscle wherewith the shell is closed. Look at the empty valve or shell from which you have just removed its tenant. You see the oval impression on the valve showing where the muscle was attached, and you note on the other and companion valve, the neighbour impression. Between the two valves of the shell, then, there stretches this strong band of muscular fibres: so strong that it requires the deft hand of the oyster-opener to detach them. This muscle which closes the valves and keeps them shut is called the "adductor"; and while our oyster has but one, the mussels themselves possess two. It is a voluntary muscle this of the oyster, and quite as much at the command of the animal as your own biceps is placed under your behest. But the adductor muscle of the oyster is not an organ which is frequently in use. If the shell is closed by its action, how, you inquire, are the valves opened? Look once again at the empty shell. You observe at its beak or apex the remains of a brownish substance. That is the "ligament" of the shell. It is an elastic band, which is put on the stretch when the shell is closed by the adductor muscle. If that muscle relaxes, you see what will happen. The elastic ligament will come into play, and by that elasticity will keep the shell open. Now, as an open shell is the oyster's natural condition, we can see in this contrivance a saving of power. The shell is kept unclosed by the purely elastic and mechanical action of the ligament. The oyster has no need to bother itself over this duty. But it is when the more unusual work of closing the shell has to be accomplished that the vital and muscular act comes into play. Then the muscle acts, and "shuts up shop," so to speak, without delay. Nature is always economical in her distribution of power, and our oyster is kept gaping without the expenditure of any vital activity.

I may not linger to-day to tell you of the gills of the oyster (otherwise the "beard"), with their countless cilia, which waft in currents of water perpetually for food and breathing, and as perpetually sweep out these currents laden with the waste of the molluscan body. But perchance I have said enough to convince you that the oyster-shop exhibits many interesting problems in science in the contents of its tanks; and to suggest that, as oysters contribute largely to the material nutrition of mankind, they may also be found not less wholesome when regarded from an intellectual point of view. ANDREW WILSON.

THE BLUE LION DEBATING CLUB.

The old-fashioned tavern in Bustle-street, which anciently displayed for its sign the painting of a ferocious King of Beasts, fabulously called blue, rampant in a scarlet field, as true to Nature as the ideas and speeches of some tavern debating clubs are true to fact and common-sense—retains

"Mr. Chairman, the learned opener of the debate has told us that"——

merely its name as the Blue Lion, with its license to sell wines and spirits and malt liquors, and with a respectable sort of custom. Passing through the bar, where glasses clink merrily on the broad zinc-covered counter, behind which a potman and two barmaids ply the brass-handled engines that pump up streams of refreshing liquids from the cellar, you may, if you have nothing better to do, at eight or nine o'clock on a Monday evening, find an odd kind of mutual amusement going on, to which listeners are freely welcome, though only members of a recognised society take an active part in the performance. The visitor, however, will soon be courteously asked by a Blue Lion waiter to mention what he prefers in the way of stimulating drink; and, if he likes also to smoke, will be encouraged by neighbouring examples.

The large inner room, entered from the bar through swing-doors, has a divan of green leather seating at the upper end and along two sides, except at the ample fireplace; and there are tables, marked with many a dint and stain by the setting down and spilling of thousands of pots, jugs, and tumblers, or the burning ashes of thousands of pipes and cigars. The wall at the upper end is adorned with portraits of John Wilkes and Tom Paine, which attest the historic boast that the Blue Lion Debating Club has existed a hundred years, being the gift of two of its founders when those great demagogues were most admired. Below them, on a little raised platform, with a little separate table, is an arm-chair, now occupied by Mr. Soggins, who presides over the feast of reason and the flow of soul, but does not contribute to either. His flow pours down his silent throat; reason to his stomach is an indigestible feast. He is a second-hand furniture dealer in Bag-lane, with no particular family call to spend his evenings at home. The landlord of the Blue Lion is an old friend of his, and Mr. Soggins gets his brandy-and-water free of cost. Every half-hour the rap of a hammer is sounded, and you may observe the Chairman looking at the clock; this happens regularly from half-past eight till eleven. He does not look at the waiter, but the waiter understands this glance at the clock as a signal, and instantly brings to the Chairman's little table another "six of brandy," with a fresh jug of hot water. The Chairman is armed, as we have noticed, with a handy wooden hammer of cylindrical shape, with which he knocks to enforce order. When his fifth glass of brandy-and-water is nearly finished, he knocks very decisively, and calls out, "Time! gentlemen! Time!"

This is all that Mr. Soggins, the Chairman, has to do; except that, when he takes his seat, at half-past eight, and gets his first glass, he rises and says, "Gentlemen, Mr. White," or "Mr. Black," or "Mr. Brown," "will address you on the question of which he has given notice." The question, or abstract proposition, or assertion of "policy," to be debated, with the name of its propounder, written on a sheet of paper, has been publicly set on view in the bar-window of the Blue Lion, during four days of the preceding week. Anybody stopping for a moment in Bustle-street might have read the following:—

"That the present crisis in the affairs of the human race imperatively demands the total and immediate abolition of the existing system in all its ramifications, social, political, religious, industrial, and commercial; and that institutions based on despotic tyranny, consecrated by hypocrisy, and bearing the fruits of moral anarchy, servility, and wide-spread misery, shall forthwith be superseded by arrangements more conducive to the progress of mankind. Proposed by Mr. Sadface."

The rising of Mr. Sadface, one of the most frequent and lengthy speakers of this society, is but faintly cheered, or rather is not cheered at all, but is saluted by a slight rapping of spoons on the table. With a visage bearing the dismal expression of a convicted criminal just awaiting his sentence to be hanged, his stream of oratory, in forced monotonous utterance like the tones of a cow's-horn, begins and proceeds for nearly five-and-twenty minutes. Among the forty or fifty members present, some are furtively chatting with each other, some are loudly giving their orders for "Scotch" or "Irish," brandy, gin, or "bitter;" some are busily filling and lighting their pipes, while several, being near the door, escape with a sly wink into the bar, promising to return directly. Mr. Sadface, absorbed in the recollection of a train of tremendous thoughts and terrible phrases, to which he has previously devoted long hours of solitary study, glares at the wall-space between the two pictures above the Chairman's head, unobservant of the demeanour of his audience. He is an attorney's copying clerk, and a furious philosophic reformer. His speech is a convincing exposition of the notorious rottenness of all that is established—legal, traditional, or customary—in this and every other so-called civilised nation. Church and State, Law and Gospel, the Court, the House of Lords, the Bench of Bishops, the Bench of Judges, Landed Estate and Trade

"Mr. Chairman, I denounce"——

"Downright robbery, gentlemen—robbery and confiscation!"——

"But, gentlemen, let us be serious"——

Capital, Finance and Credit, all Corporations, all officials, all professions, all who seek gain by trade or investment of money, are denounced as the crafty enemies and robbers of the working classes. "Mr. Chairman, I denounce," he exclaims with a solemn gesture; and he stands still denouncing—

Until the Chairman's hammer is heard; for it is nine o'clock, and the Chairman is going to signal for his second

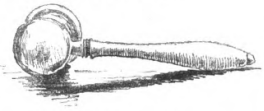
"That question, Mr. Chairman, is doubtless full of difficulty and"——

glass of brandy. Then Mr. Sadface indignantly sits down; and to him rises Mr. Backstead, a retired tax-collector, who has, with his wife's money, bought up the leases of the dilapidated old dwelling-houses in Mugsby's-alley, and screws £300 a year of weekly rents out of the wretched tenants overcrowding those squalid abodes of filth and disease. He is, of course, a member of the Select Vestry of his parish, and a

"There was one subject, Mr. Chairman, that—er—er—I—er—would like to mention—er—er—er—one other matter that—er—er"——

practised debater. "Mr. Chairman," he says, "the learned opener of the debate has told us that"—property is robbery; but Mr. Backstead can prove that it is not; for if there were no property, nobody could get anything; if there were no rents, there would be no houses to live in; if there were no capital, there would be no trade and no wages; what would become of the working classes then? "Property, in fact, gentlemen, supports and provides for all."

But Mr. Backstead has an inveterate personal antagonist, Mr. Trounce, one of the People's Grievances' Reform Association, who is the next speaker. He attacks the management of local and parochial business, and declares that it is

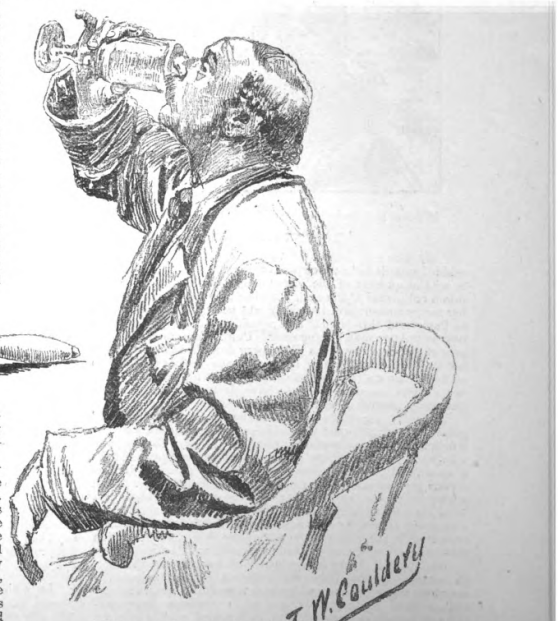


"And this is the man, gentlemen, who has the effrontery to tell you"——

often perverted, "worse than our National Government, I say, bad as that is," by private jobs and corrupt transactions. Then he relates an instance in which a Select Vestry was prevailed on by intrigue to rescind a resolution passed in consequence of its surveyor's report, ordering some ruinous and unwholesome dwellings to be put in repair. "I will tell you, gentlemen, those dwellings and their owner; they were in Mugsby's-alley, and he was Mr. Backstead! And this is the man, gentlemen, who has the effrontery to tell you that private property is held for the benefit of all!"

After Mr. Trounce's exciting harangue, which dealt with various local topics, a slowly-moving, honest-looking, elderly man, recognised as Mr. Waite the shoemaker, stood up, carefully feeling his chin to make sure that his head was upright. He could not agree with the sweeping denunciations of everything in this country that Mr. Sadface, who was a gentleman who had had a much superior education to himself (Mr. Waite) had so strongly expressed. But he believed that the prosperity of the country might be improved by an amendment of the Land Laws. "That question, Mr. Chairman, is doubtless full of difficulty"—so Mr. Waite candidly confesses that he has not yet made up his mind whether it would be more desirable to repeal the antiquated "Statute of Primogeniture," or to decree the summary confiscation of all estates hitherto settled in perpetuity on male heirs under the iniquitous "Law of Entail."

But Mr. Bangham, the sturdy gentleman with an intensely earnest countenance, who makes the table shudder under the blows of his muscular fist, has inexorably made up *his* mind to wipe out that huge national scandal, the infamous and accursed Pension List, by which, as he proves from printed figures in the *Democratic Almanack*, the vast sum of two millions and three quarters sterling is yearly paid by the British taxpayer among ninety-seven descendants of the illegitimate offspring of that base and profligate Monarch, King Charles II. "It is downright robbery, gentlemen—robbery and confiscation!"



When so much vehemence and portentous gravity seem to have fatigued the company, they are relieved by the bland jocosity of Mr. Felix Smoothers. He is a personal friend of Mr. Sadface, and sits with him all day at an opposite desk in the same office. "I deeply regret," he says, "that I have come here too late this evening, and have missed the rich treat you have all enjoyed in hearing my honourable and learned friend's brilliant exposition, set off, as I can fancy, by the flashes of wit, the genial glow of humorous pleasantry, the soft touches of delicate irony, the charming graces of a refined and captivating eloquence, that we appreciate in his frequent discourses. Mr. Sadface, gentlemen, is blessed with a temperament of airy cheerfulness. There he sits, with a glass only of water before him, as you observe, sufficiently exhilarated by the internal radiance of his delightful imagination; we, less gifted minds, are fain to imbibe a slight inspiration of hopeful benevolence through the medium of whisky or brandy or whatever it may chance to be. But, gentlemen, let us be serious"—— Cries of "No, no!"

interrupted the speaker, and a voice at the lower end of the room, beginning timidly in subdued tones, was heard trolling the notes of an old rollicking chorus, "For we always are so jolly oh—Slap, bang, here we are again, what jolly dogs are we!"

The whole assembly, within three minutes, had assumed a convivial aspect; fresh orders were shouted to the waiters; there was a clattering of pots and a tinkling of spoons in glasses, a loud chattering of tongues in many sociable groups of laughing talkers, brief snatches of song from different quarters, and a growing cloud of tobacco-smoke filling the hall of debate. Amidst this festive turmoil, the figure of Mr. James Priggins, one of the most punctual attendants of the club, was discerned rising with a written paper in his left hand, while his right manipulated a double eyeglass. He feebly uttered the following syllables:—

"There was one subject, Mr. Chairman, that—er—I—er—would like to mention—er—er—er—one other matter that—er—er"——

"Time! gentlemen! Time!"

But the Chairman saw, at that moment, the bottom of his fifth glass of brandy-and-water. He drained its last drop, and put down the glass. He lifted the official hammer, exclaiming "Time! gentlemen! Time!" The hammer fell with such force that fifty glasses jingled on the tables. Mr. Soggins left the chair, and the Blue Lion Debating Club presently went home to bed.

HALLOWMAS EVE.

"The good old customs of the country are passing away."

No speech, perhaps, is oftener heard than this when, over the walnuts and the wine about Christmas time or Hallowe'en, the talk has turned upon the subject of old-fashioned festivities. And the sentiment seldom fails to evoke a sigh of regret, and to awake recollections of frolic mirth enjoyed in lighter-hearted days. But while there is, without doubt, truth in the remark, happily it is not altogether true. The portly old gentleman who animadverts upon the subject is generally too apt to take for granted that, because for some decades he has ceased to share in these festal sports, the sports themselves have ceased to be observed. If, however, the speaker were to return upon such a night as All Hallow's Eve to the village where perchance his youthful years were passed, he might find that the quaint and merry customs he laments do not altogether belong to the golden dusk of long-forgotten days. Though he himself has grown older and graver, the great heart of the world has remained ever young; and ever still, as the traditional occasions come round, there breaks forth amid its long-accustomed scenes the ancient madcap carnival of mirth.

Not, indeed, quite as in bygone times is this festival of Hallowe'en now observed. The witches no longer, as in days of yore, are believed to hold their revels then upon the green-sward, and something of the ancient superstition which otherwise lent awe to the eve of All Saints' Day has been dispelled by modern education. But enough remains of uncanny feeling to lend interest to the more mysterious proceedings of the night: and the spirit of simple enjoyment may be trusted to keep alive for its own sake most of the mirth-giving functions of the feast. An institution which took its origin probably from some strange rite of far-back pagan times, and which has managed to survive countless changes of thought, and, like a rolling snowball, to incorporate in itself traces of the Crusades, of the Mediæval Church mysteries or miracle plays, and of later witchcraft and elfin superstitions, must have a strong hold somewhere upon human nature, and is not likely to disappear quite at once even before the blast of the steam-engine and the roll of the printing-press.

If one wishes to know how lads and lasses spent their Hallowe'en in Ayrshire a hundred years ago, he has but to read the famous description of the occasion written by the glowing peasant-pen of Burns; and cold indeed must be his imagination if he does not catch from that description something of the madcap frolic of the night. In these lines he may hear the timid lasses "skirl" as their sweethearts surprise them pulling the fateful corn-stalks; he may watch Jamie Fleck secretly sowing his handful of hemp-seed, and waiting for the image of his destined true-love to appear behind him in the act of harrowing it; he may see Meg in the empty barn, weighing her "wechts o' naething," and likewise waiting for her true-love's presentment; and he may laugh at the mishap befalling the wanton widow as she dips her left sleeve in the rivulet at the meeting of three lairds' lands. But one must not think that these time-honoured frolics are all unpractised now.

Let him step into some great farm-kitchen of the Lothians, with its red fire roaring up the chimney, its plate-racks gleaming on the walls, and dressers, tables, and chairs clean as scrubbing can make them, and he will find, in practice, bits of traditional folklore and traits of human nature equally worthy of the poet's pen.

The place for the moment is empty, the lamps shining from their bright tin sconces on the walls upon unoccupied wooden settles and chairs; for lads and lasses together have betaken themselves to pull each his particular prophetic stock in the kailyard at hand. But presently, with shouts of laughter, they come streaming in out of the darkness; and shrieks of merriment greet the discovery of the fortune which has befallen individual members of the company. For, according as the stock lighted on in the dark turns out to be straight or crooked, and its taste sweet or bitter, so the appearance and disposition of its possessor's future mate will be; and according as earth has clung to the upturn root or not will the pockets of the future pair be well-filled or the reverse. A merry party these men and maidens make, bringing in with them as they enter a breeze of the cool night air, and a breath of the sweet, fresh-smelling earth. And from the flaming cheeks and sparkling eyes of at least one of the laughing girls it is to be doubted that she has met outside with somewhat warmer and more certain assurance of the personality of her future partner in life than is likely to be afforded by her stock of curly kail.

Another method of divination, however, presently engrosses all attention indoors. Three bowls are set out on the hearth—one full of clean water, one muddy, and the remaining vessel empty. One after another each lad and lass is blindfolded, the position of the bowls is changed in thimble-rigging fashion, and he or she is led forward and invited to place a hand in one. According as the dish chosen proves dirty, clean, or empty will the inquirer of the Fates marry a widow or a maid, or remain a bachelor; and shrieks of merriment are occasioned by the appropriate mishaps which befall the most confident.

Then there is the burning of nuts to be done in the great kitchen-fire—a method of discovering whether the future

1. The feast, with Hawaiian female attendants bearing fans of feathers. 2. The "houlah-houlah," or native dance, in the presence of the King.

ENTERTAINMENT GIVEN TO BRITISH AND AMERICAN NAVAL OFFICERS AT HONOLULU (SANDWICH ISLANDS).

wedded state is to be one of peace or discord. And it is amusing to see the quietest of the maids drop two nuts side by side into a red corner of the coal, blushing at the guesses made by her merry companions, but shyly whispering to herself, "This is Patey and this is me," and watching with bashful eagerness as the two take fire together. Puff! Alas for her hopes, poor child! "Patey" has shot away from her side; and the hot tears are woefully near her eyes as she notices that he has settled down to burn by the nut of her neighbour. May her sorrows, sweet lass, never have darker cause than this imaginary presage of losing a fickle lover!

And now, by way of supper, a mighty platter of "champed" potatoes is placed upon the table—a pile mountain-high, in which are hidden somewhere a ring, a sixpence, a thimble, and a button. The lamps are put out, each person is armed with a spoon, and in the uncertain light of the glowing fire the mystic procession moves round the table in single file. Each one as he passes the platter takes a spoonful of potatoes, and he or she who finds the ring is fated to be first married. The sixpence is an augury of wealth, and the finding of the thimble or button is, according to the sex of the finder, an indication that he or she will marry a maiden spouse or will die single.

But, listen! There is a sudden loud knocking at the door. It heralds the time-honoured visitation of the Guizards, a ceremony annually renewed by each succeeding generation of village boys. In they stalk, got up in grotesque improvisations of mumming costume, and each armed with a wooden sword, and carrying a ghostly lantern hollowed out of a giant turnip. "Hare comes in Galoshin," as that individual himself informs the company—being doubtless the traditional representative of some forgotten Templar Knight; and presently he is engaged in a sanguinary hand-to-hand encounter with another wooden-sworded champion upon the floor. Many are the bold words that are said and the doughty deeds that are done; and through the whole performance one may see, as Scott remarked in a note to Marmion, traces of the ancient monkish plays and the revels of the mediæval Lord of Misrule. At the end the players are contented with a reward of apples and nuts, and a share in their elders' merriment.

Tubs full of water are placed on the floor, and dozens of red-cheeked apples set swimming in them; and immediately a wild scene of revel ensues as all and sundry, men and maids, on their knees, seek to snatch the floating apples with their teeth. Many an unexpected ducking is got, and shrieks of laughter greet each mishap and each ineffectual effort to secure a prize. Then there is a wild game of blindman's buff, led off by Galoshin himself, who turns out, now that his burnt cork and whiskers have been washed off, to be one of the younger men of the house, and the soul of all the fun. And from the sly fashion in which he avoids other quarry and keeps hemming one rosy little maid into corners, compelling her to spring shrieking over settles and chairs, it may be gathered that the knowing fellow is no more blinded than he wishes himself to be.

And so the night goes on, a night of whole-hearted and innocent mirth—enough to prove that the spirit of old-fashioned revelry is by no means dead, and that, for at least one night in the year, the young blood of Lowland and Lothian still can wake as much and as joyous merriment as ever did its progenitors a hundred years ago. G. E.-T.

Lady Shelley, accompanied by Sir Percy Shelley, on Oct. 17, started an engine which drove in a pile in connection with a new pier to be erected at Boscombe, about a mile and a half to the eastward of the present Bournemouth pier. The new pier, the first portion of which will be 400 ft. long, is to be completed before the next summer season, and will cost £6000.

In Edinburgh, on Oct. 17, the Marquis of Huntly's Aberdeenshire estates were for sale in eight lots. The upset price was over a quarter of a million pounds sterling. The only sale effected was the estate of Dess, which sold at the upset price of £18,000. The far-famed deer forest of Glentanar, and Birse Forest, with fine grouse-shooting, were unsold. Dumbarrow estate, in Forfarshire, fetched £16,600.

A ROYAL ENTERTAINMENT IN HAWAII.

The island kingdom of Hawaii, formerly called the Sandwich Islands, in the middle of the North Pacific Ocean, has made considerable progress in civilisation since Captain Cook was killed there a hundred years ago. Its position, in the highway of commercial navigation between San Francisco and China and New Zealand, secures to it an increasing amount of intercourse with the most prosperous nations of the world. The natives, who are probably of a race akin to the Maoris of New Zealand, have been converted to the profession of Christianity by American missions, and there are numerous churches and schools. The King, who not long ago visited Europe, is a Constitutional monarch, and his habits of life are quite European. In August last, when two British ships of the Pacific Squadron, H.M.S. Hyacinth and H.M.S. Espiègle, were in the harbour of Honolulu, with two of the United States Navy, the Vandalia and the Dolphin, his Majesty gave an entertainment to the officers of these ships. Our Illustration is from a sketch by Lieutenant A. W. Smith-Dorrien, R.N., of H.M.S. Espiègle. The feast took place in a tent made out of flags and palm-leaves. All the guests were decorated with garlands of flowers, in accordance with the pretty custom of the country. The table was covered with ferns, and most of the delicacies were carefully wrapped in green leaves. There was both seaweed and raw cuttle-fish on the table, and many other luxuries. The guests at table were fanned by women holding great feather fans. After the feast a native dance, called a "houlah-houlah" was given in the garden. This scene is represented in the smaller Engraving. His Majesty is standing in front with a wine-glass, while a few natives with guitars and banjoes are playing and singing Hawaian music. In the distance is the band, which played at intervals, and behind the dancers are some natives climbing up cocoanut-trees for a prize. In the foreground are native Princesses and naval officers, served with champagne by a waiter.

NOW! IS THE CONSTANT SYLLABLE TICKING FROM THE CLOCK OF TIME.

NOW! IS THE WATCHWORD OF THE WISE. **NOW!** IS ON THE BANNER OF THE PRUDENT.
NOW! YOU CAN CHANGE THE TRICKLING STREAM BUT TO-MORROW YOU MAY HAVE THE RAGING TORRENT TO CONTEND WITH.

IN THE BATTLE OF THIS LIFE ENO'S "FRUIT SALT" is an imperative hygienic need, or necessary adjunct. It keeps the blood pure, prevents fevers and acute inflammatory diseases, removes the injurious effects of stimulants, narcotics, such as alcohol, tobacco, tea, coffee, by natural means; thus restores the nervous system to its normal condition, by preventing the great danger of poisoned blood and over-cerebral activity, sleeplessness, irritability, worry, &c.

DON'T GO TO SEA WITHOUT A BOTTLE OF ENO'S "FRUIT SALT."—"From a Town in British Guiana, South America.—J. C. Eno, Esq., London.—Sir,—After two years' trial of your excellent 'FRUIT SALT,' I can safely say that it has saved me much misery from colonial fevers, indigestion, and impaired appetite, to which I have been subject during eleven years' residence in the tropics. It is invaluable to travellers as a preventive of sea-sickness, and a relief from the other ailments of life aboard ship; and for myself I would as soon think of going a voyage without my tooth-brush as my bottle of ENO'S 'FRUIT SALT.' With ordinary care it does not get hard and caked as other effervescent preparations do in warm and humid climates, and this is greatly in its favour.—I am, Sir, yours respectfully, W. J. B."

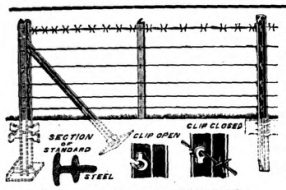
HEAD WINDS AND HEAVY SEA CROSSING "THE BAY."—"I have recently returned from a trip in a P. & O. Company's ship, and consider it a duty incumbent upon me to make known to you that, during a nautical career extending over a period of thirty years, I have been invariably a sufferer from sea-sickness, more or less, according to the weather; but on the last occasion, I am happy to say (although we experienced strong head winds and heavy sea crossing 'The Bay'), I entirely escaped; and this I attribute to my HAVING PROVIDED MYSELF with ENO'S 'FRUIT SALT,' which I can most conscientiously recommend to all who may be similarly afflicted, whose business or pleasure may cause them to 'go down to the sea in ships.'—I am, Sir, yours faithfully, A PURSER."

EUROPE, ASIA, AFRICA, AMERICA, AUSTRALIA.—Important to all Travellers.—"Please send me half a dozen bottles of ENO'S 'FRUIT SALT.' I have tried ENO'S 'FRUIT SALT' in America, India, Egypt, and on the Continent for almost every complaint, fever included, with the most satisfactory results. I can strongly recommend it to all Travellers; in fact, I am never without it.—Yours faithfully, AN ANGLO-INDIAN OFFICIAL, June 26, 1878."

"I used my 'FRUIT SALT' freely in my last severe attack of fever, and I have every reason to say it saved my life.—J. C. ENO."

CAUTION.—*Examine each Bottle, and see the Capsule is marked* "ENO'S 'FRUIT SALT.'" *Without it you have been imposed on by a worthless imitation.*

SOLD BY ALL CHEMISTS.



PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

DISORDERED STOMACH AND BILIOUS ATTACKS.—A Gentleman writes: "Dec. 27, 1887.—After twelve months' experience of the value of the 'VEGETABLE MOTO,' I unhesitatingly recommend their use in preference to any other medicine, more particularly in bilious attacks; their action is so gentle, and yet so effective, that nothing equals them in my opinion. They have never failed to give the wished-for relief. I take them at any hour, and frequently in conjunction with a small glass of ENO'S 'FRUIT SALT.'—Yours gratefully, "ONE WHO KNOWS."

WEST INDIES. To Mr. J. C. Eno, London.—"Please send me further supply of your 'VEGETABLE MOTO' to the value of the P.O. inclosed (eight shillings). The first small parcel came fully up to what is written of them.—St. Kitts, West Indies, Oct. 11, 1887." THE SAME CORRESPONDENT, in ordering a further supply of the "VEGETABLE MOTO," in July, 1888, writes as follows: "I cannot help telling you that the 'MOTO' is a valuable addition to your 'FRUIT SALT,' and ought to be as generally known as the latter."

ENO'S "VEGETABLE MOTO," of all Chemists, price 1s. 1½d.; post-free, 1s. 3d.

CAUTION.—The Company regret to find that many of their designs are being copied in a very inferior quality, charged at higher prices, and inserted in a similar form of advertisement, which is calculated to mislead the public.

They beg to notify that their only London retail address is 112, REGENT-STREET, W.

"A SUCCESSFUL BUSINESS." "We know of no enterprise of recent years which has been crowned with greater success than the Goldsmiths' and Silversmiths' Company, of 112, Regent-street, who eight years ago opened their show-rooms to place the productions of their workshops direct before the public, thus saving purchasers the numerous intermediate profits which are obtained by 'middlemen' on high-class goods. Such has been the appreciation by the public that the Company have now the largest business in England, and are quite supplanting the old-fashioned houses that pride themselves upon having been established so many decades, but have utterly failed to keep pace with the times, and find it impossible to depart from their long credit system, entailing bad debts, for which cash buyers have to compensate."—Court Journal.

Jewellery and Diamond Mounting Workshops, Clerkenwell, in Direct Communication by Telephone with the Show-Rooms. GOLDSMITHS' AND SILVERSMITHS' COMPANY, 112, REGENT-STREET.

HIGH-CLASS JEWELLERY. The Stock of BRACELETS, BROOCHES, EARRINGS, NECKLETS, &c., is the largest and choicest in London, and contains designs of rare beauty and excellence not to be obtained elsewhere, an inspection of which is respectfully invited.

DIAMOND ORNAMENTS.—A magnificent assortment of Rings, Stars, Sprays, Flies, Necklaces, &c., composed of the finest White Diamonds, mounted in special and original designs, and sold direct to the public at merchants' cash prices.

NOVELTIES.—A succession of Novelties by the Company's own artists and designers is constantly being produced to anticipate the requirements of purchasers.

BRIDAL PRESENTS.—Special attention is devoted to the production of elegant and inexpensive novelties suitable for Bridesmaids' Presents. Original designs and estimates prepared free of charge.

WEDDING PRESENTS.

COMPLIMENTARY PRESENTS.

APPROBATION.—Selected parcels of goods forwarded to the country on approval when desired. Correspondents not being customers should send a London reference or deposit.

COUNTRY CUSTOMERS have through this means the advantage of being supplied direct from an immense London stock, containing all the latest novelties, and which are not obtainable in provincial towns.

OLD JEWELLERY, Diamonds, and Plate taken in exchange or bought for cash.

TESTIMONIALS.—The numerous recommendations with which the Goldsmiths' Company have been favoured by customers is a pleasing testimony to the excellence and durability of their manufactures.

MEDALS.—Awarded Seven Gold and Prize Medals and the Legion of Honour, the highest distinction conferred on any firm.

WILLS AND BEQUESTS.

The will (as contained in writings marked B and A), with a codicil, of Mr. Edward Young, J.P., late of Thornleigh, Richmond-hill, Bournemouth, who died on Aug. 31, at Hoylake, Cheshire, was proved on Oct. 17 by Mrs. Betsey Young, the widow, Reginald Young, the son, Mrs. Mary Field, the daughter, and the Rev. Reginald Gunnery, the executors, the value of the personal estate amounting to upwards of £110,000. The testator bequeaths £100 each to the Church Missionary Society, the Church Pastoral Aid Society, the Bible Society, and the Liverpool Scripture-Readers' Society; £500, all his household furniture, plate, &c., consumable stores, horses, and carriages to his wife; £100 each to his nieces, Emma Barrow and Elizabeth Woodward; £50 to each executor; annuities of £30 each to his sisters Mary Woodward, Anne Young, and Elizabeth Woods; and specific gifts of pictures by Sir Joshua Reynolds, and others, to his children. The residue of his real and personal estate he leaves as to one eleventh thereof to each of his children by his former wife—viz., Mrs. Emelyn Drury, Mrs. Mary Field, Mrs. Dora Edmonds, the Rev. Vincent Young, Sydney Young, and Reginald Young—and the remaining five elevenths, upon trust, for his wife, for life, and on her decease to her five children, in equal shares.

The will (dated April 18, 1873), with four codicils (dated April 6, 1882; Sept. 23, 1884; and Jan. 5 and 20, 1888), of Mr. James Easton, formerly of No. 37, Norfolk-square, Hyde Park, but late of No. 44, Prince's-gardens, a member of the firm of Easton and Anderson, civil engineers, of Whitehall-place and Erith, who died on Aug. 28, was proved on Oct. 17 by John Easton, M.D. (the brother), John Edward Compton Bracebridge, and Charles Thomas Arnold, the executors, the value of the personal estate amounting to upwards of £91,000. The testator bequeaths £3000 to each of his children; annuities of £100 each to his sisters-in-law Louisa, Mary, and Margaret during the life of their uncle John Chambers; and £500 and his household furniture, plate, jewels, &c., to his wife, Mrs. Anne Devonshire Easton. The residue of his real and personal estate he leaves, upon trust, for his wife, for life; but in the event of her again marrying she is to receive an annuity of £500, and subject thereto for his children in equal shares.

The will (dated Oct. 7, 1881) of Mr. George Bramwell, late of 73, Chester-square, Pimlico, who died on Sept. 15 last, was proved on Oct. 13 by Miss Emma Bramwell and Miss Cecilia Bramwell, the daughters and executrixes, the value of the personal estate amounting to upwards of £57,000. The testator states that he has made settlements on his four children, George, Blanche, Mrs. Alice Mary Rae, and Mrs. Frances Rawdon, and under the powers contained in his marriage settlement, assigned to the trustees of the settlements of Mrs. Rae and Mrs. Rawdon (subject to the life interest of his wife) two fifths of the funds therein named. He bequeaths, subject as aforesaid, the remaining three fifths of the said funds, and also his leasehold house, and the furniture, plate, &c., therein, to his two daughters, Emma and Cecilia; an annuity of £140 to his daughter Agnes, and £250 to his wife, Mrs. Mary Spark Bramwell. The residue of his real and personal estates he leaves between his said two daughters, Emma and Cecilia, but charged with any amounts he may have, during his lifetime, covenanted to pay to his other children.

The will (dated Oct. 11, 1886) of Mr. Thomas Christopher Burrow, late of Buckstone House, near Burton, Westmorland, who died on June 14 last, was proved in the Lancaster District Registry, on Sept. 4, by Robert Carlyle, the surviving executor, the value of the personal estate exceeding £46,000. The testator devises part of his real estate, including his residence, upon trust, for his sister, for life, and then to Anne Burrow; and the other part thereof, upon trust, for Robert Sanders Bateson, and at his death to Mary Brooks. He bequeaths £1000 each to Mary Ann Wishart, Mary Wishart, Elizabeth Wishart, Anne Moses, Isabella Carlyle, William Carlyle, Mary Brooks, and the Rev. William De Bomville; and £500 each to Robert Sanders Bateson and the widow of Anthony Bateson. The residue of his property he leaves to the above-mentioned legatees in proportion to their legacies.

The will (dated March 4, 1885), with four codicils (dated March 31 and June 6, 1885; June 25, 1886; and July 12, 1887), of Mr. Philip Richard Falkner, late of Upton Hall, Upton, Nottinghamshire, who died on May 19, was proved on Oct. 16 by Evelyn Sherard Falkner, the son, the Rev. William James Peacock, Sir William Henry Houldsworth, Bart., and Lucas Brodhurst, the executors, the value of the personal estate exceeding £41,000. The testator gives £50 each to the British and Foreign Bible Society and the Church Missionary Society; and large legacies to his children (in addition to settlements made on them in his lifetime), clerks, and servants. He devises his Manor of North Scarle, Lincolnshire, with the mines, minerals, chief rents, cottages, &c., and his mansion at Newark-upon-Trent, to his son Evelyn Sherard Falkner. The residue of his property he leaves, as to two twentieths, to his daughter Jane Houldsworth Browne; six twentieths to his son Evelyn; seven twentieths to his son Alfred Sydney; four twentieths between his daughter Margaret Ann Peacock and her husband, the Rev. William James Peacock; and the remaining one twentieth to Lucas Brodhurst.

The will (dated June 24, 1885) of Mr. John Joseph Reynolds, J.P., late of No. 14, Dorset-square and Hereford, who died on Aug. 17 last, at The Shafberg in the Salzkammergut District, Austria, was proved on Oct. 15 by Mrs. Maria Reynolds, the widow, and Mr. Charles Hardwick, the executors, the value of the personal estate amounting to upwards of £34,000. The testator bequeaths £100 each to Anne Hardwick, Charles Hardwick, and Emma Hardwick; £50 each to Alice Reynolds and William Allen; and all his furniture and household effects to his wife. The residue of his real and personal estate he leaves, upon trust, to pay £420 per annum to his wife so long as she shall remain his widow, or until his youngest child attains the age of twenty-one; and, upon further trust, out of the remainder of the income to educate and maintain his children. On the coming of age of his youngest child he gives to his wife, in lieu of the annual payment, a sum of £6000 if unmarried, and £3000 if married; and the ultimate residue to his children, in equal shares.

The will (dated Jan. 24, 1883), with two codicils (dated May 21, 1883; and Jan. 14, 1887), of Mr. William Adam, late of No. 3, Tenterden-street, Hanover-square, who died on July 27 last, at Forfar, was proved on Oct. 11 by Robert Whyte, the nephew, and James Guthrie, the executors, the value of the personal estate exceeding £29,000. The testator bequeaths £500 each to St. George's Hospital (Hyde Park-corner), King's College Hospital, the Middlesex Hospital, St. Mary's Hospital (Paddington), and Charing-Cross Hospital; £600 to the Hospital for Incurables (Putney); £400 to the Association for the General Welfare of the Blind; £300 each to the Hospital for Epilepsy and Paralysis (Regent's Park), St. Thomas's Hospital, the Hospital for Diseases of the Throat (Golden-square), the infirmary at Forfar, and the Cancer Hospital (Brompton); £200 to St. John's Episcopal Church (Forfar); £1000 each to his sister, Margaret Whyte, and her daughters, Margaret and Elizabeth; £1300 to his niece, Annie Whyte; £1500 to his nephew Robert Whyte; £1000 to his nephew George Whyte; £600 to John Whyte; £500 to William Whyte; £1500 to Mrs. Charlotte Wilhelmina Whyte; £300 to each executor, and other legacies to relatives. The residue of his real and personal estate he leaves to his niece and godchild, Mrs. Charlotte Wilhelmina Whyte.

ART NOTES.

At the Hanover Gallery (47, New Bond-street) Messrs. Hollender and Cremetti have brought together a more than usually interesting collection of cabinet pictures, chiefly by artists of the French school. As they do not limit themselves to the works painted within the last year or two, we are enabled to judge of the French school in a catholic spirit, and to contrast the widely different aims of men like Corot, Diaz, Roybet, J. F. Millet, and of that talented lady, Rosa Bonheur. From her we have the well-known "Troupeau de Moutons," with its strong effects of light and shadow—a characteristic work in all respects, and more attractive than Millet's "Dénicheurs"—peasants or poachers knocking down from their roosting-places the birds suddenly awakened by blazing torches. The lady who paints under the name of A. Brandeis sends a number of clever miniature studies of Venice, of which we may say that the smallest are invariably the best; and Mr. Gilbert Munger is almost as fertile in his productions of sylvan and riverside sketches in the valley of the Seine. Amongst the other exhibitors may be named Messrs. De Haas, Th. Weber, Madrazo, A. Stevens, Lybaert (his "Caligula" is a masterpiece of colour), Mellery, and Backhuysen, who inherits more than the name of his possible ancestor.

Miss Dora Noyes, who has already gained notice by her pictures, chiefly of peasant life, at the Royal Academy, the Institute, and elsewhere, has just completed a set of paintings for the reredos for St. Luke's Church, in the Uxbridge-road. The lateral panels exhibit the Nativity and the Road to Calvary, respectively; and the centre, which is flanked by two figures of St. Luke, as the physician and the artist, represents the Lamb, bearing a red-cross banner, surrounded by angels and cherubs. In the figure of the Virgin-Mother, Miss Noyes has been especially successful; and into the treatment of the two scenes—the morning and evening of the Saviour's life—she has infused a spirit of poetry and sentiment which is deserving of high praise. The more conventional figures of the cherubs, on a gold ground, have presented difficulties to an artist who has wished to avoid a slavish imitation of Fra Angelico, and it must be admitted that Miss Noyes has acquitted herself with credit. The competition was open to the public, and the trustees of St. Luke's Church are to be congratulated on the selection they made. The reredos will be placed in the church in the course of the week.

The Home for Crippled Boys, Kensington, has received £250 from the executors of the late Miss Louisa McKellar.

Mr. S. D. Muttlebury, of the third Trinity Boat Club, has been elected president of the Cambridge Boat Club, which office he held last spring.

Mr. Henry Irving, on Oct. 17, laid the memorial-stone of the new Theatre Royal, Bolton, in the place of the old building, which was destroyed in January last by an incendiary fire. Subsequently the visitor was entertained at a public banquet, and, in responding to the toast of his health, spoke of the services which the drama had rendered to humanity.

MAPLE and CO., Manufacturers of DINING-ROOM FURNITURE. The largest assortment to choose from, as well as the best possible value. Three more houses have just been added to this important department. Half a century's reputation.

MAPLE and CO.'S NEW SPECIMEN DINING-ROOMS, decorated and fully appointed with furniture in pollard oak, brown oak, Chippendale mahogany, antique carved oak, American walnut, and other woods, are now open to the public, and should be seen by all intending purchasers.

THESE ROOMS are not only helpful as showing the effect of the furniture when arranged in an apartment, but also most suggestive as regards decorative treatment, as well as a guide to the entire cost of furnishing in any selected style.

THE SEVILLE LADY'S EASY CHAIR,
In Saddlebags of rich Persian design and colourings, mounted on velvet, £3 15s.

DINING-ROOM FURNITURE.

BED-ROOM SUITES.

500 IN STOCK.

MAPLE and CO.—BED-ROOM SUITES. The WHITBY SUITE, in solid ash or walnut, consisting of wardrobe with plate-glass door, toilet table with glass affixed, washstand with marble top and tile back, pedestal cupboard, and three chairs, £10 15s. Illustration free.

MAPLE and CO.—BED-ROOM SUITES. The SCARBOROUGH SUITE, in solid ash or walnut, including wardrobe with plate-glass doors, and new-shaped washstand, £12 12s.; or, with bedstead and spring bedding, £17 10s. Designs and full particulars free.

MAPLE and CO.—BEDSTEADS.

MAPLE and CO. have seldom less than Ten Thousand BEDSTEADS in stock, comprising some 600 various patterns, in sizes from 2 ft. 6 in. to 5 ft. 6 in. wide, ready for immediate delivery—on the day of purchase, if desired. The disappointment and delay incident to choosing from designs only, where but a limited stock is kept, is thus avoided.

POSTAL ORDER DEPARTMENT. Messrs. MAPLE and CO. beg respectfully to state that this department is now so organised that they are fully prepared to execute and supply any article that can possibly be required in Furnishing, at the same price, if not less, than any other house in England. Patterns sent and quotations given free of charge.

"I'm weak and weary!"—
so the maiden sighed—
My spirits droop, of late—my
roses pine!
Oh, for the days when I might
row or ride,
And glowing health made light
this heart of mine!
Are there no medicines that can recall
My fresh young strength, and
rid me of my ills?
I sometimes think that
I have tried them all—
But stay—I have not
yet had
Beecham's
Pills!"
And thus,
by hope and
doubt alternate
swayed,
She, tired
with musing,
sought her
couch once
more;
When dreams
of gladness
came to cheer
the maid
And tell how
Beecham's
Pills
could
yet
restore!

Oh, kindly vision!
And oh, maiden wise,
Who flew to this ne'er failing friend
in need!
Her merry laugh, bright cheeks,
and sparkling eyes
Now prove that Beecham's Pills
brought strength, indeed!
And gaily can she ride or row, to day,
For health from every hour new
joy distils;
Her happy face remains—so people
say—
The best advertisement of
Beecham's Pills

WILLS AND BEQUESTS.

The will (as contained in writings marked B and A), with a codicil, of Mr. Edward Young, J.P., late of Thornleigh, Richmond-hill, Bournemouth, who died on Aug. 31, at Hoylake, Cheshire, was proved on Oct. 17 by Mrs. Betsey Young, the widow, Reginald Young, the son, Mrs. Mary Field, the daughter, and the Rev. Reginald Gunnery, the executors, the value of the personal estate amounting to upwards of £110,000. The testator bequeaths £100 each to the Church Missionary Society, the Church Pastoral Aid Society, the Bible Society, and the Liverpool Scripture-Readers' Society; £500, all his household furniture, plate, &c., consumable stores, horses, and carriages to his wife; £100 each to his nieces, Emma Barrow and Elizabeth Woodward; £50 to each executor; annuities of £30 each to his sisters Mary Woodward, Anne Young, and Elizabeth Woods; and specific gifts of pictures by Sir Joshua Reynolds, and others, to his children. The residue of his real and personal estate he leaves as to one eleventh thereof to each of his children by his former wife—viz., Mrs. Emelyn Drury, Mrs. Mary Field, Mrs. Dora Edmonds, Miss Rev. Vincent Young, Sydney Young, and Reginald Young—and the remaining five elevenths, upon trust, for his wife, for life, and on her decease to her five children, in equal shares.

The will (dated April 18, 1873), with four codicils (dated April 6, 1882; Sept. 23, 1884; and Jan. 5 and 20, 1888), of Mr. James Easton, formerly of No. 37, Norfolk-square, Hyde Park, but late of No. 44, Prince's-gardens, a member of the firm of Easton and Anderson, civil engineers, of Whitehall-place and Erith, who died on Aug. 28, was proved on Oct. 17 by John Easton, M.D. (the brother), John Edward Compton Bracebridge, and Charles Thomas Arnold, the executors, the value of the personal estate amounting to upwards of £91,000. The testator bequeaths £3000 to each of his children; annuities of £100 each to his sisters-in-law Louisa, Mary, and Margaret during the life of their uncle John Chambers; and £500 and his household furniture, plate, jewels, &c., to his wife, Mrs. Anne Devonshire Easton. The residue of his real and personal estate he leaves, upon trust, for his wife, for life; but in the event of her again marrying she is to receive an annuity of £500, and subject thereto for his children in equal shares.

The will (dated Oct. 7, 1881) of Mr. George Bramwell, late of 73, Chester-square, Pimlico, who died on Sept. 15 last, was proved on Oct. 13 by Miss Emma Bramwell and Miss Cecilia Bramwell, the daughters and executrixes, the value of the personal estate amounting to upwards of £57,000. The testator states that he has made settlements on his four children, George, Blanche, Mrs. Alice Mary Rae, and Mrs. Frances Rawdon, and under the powers contained in his marriage settlement, assigned to the trustees of the settlements of Mrs. Rae and Mrs. Rawdon (subject to the life interest of his wife) two fifths of the funds therein named. He bequeaths, subject as aforesaid, the remaining three fifths of the said funds, and also his leasehold house, and the furniture, plate, &c., therein, to his two daughters, Emma and Cecilia; an annuity of £140 to his daughter Agnes, and £250 to his wife, Mrs. Mary Spark Bramwell. The residue of his real and personal estates he leaves between his said two daughters, Emma and Cecilia, but charged with any amounts he may have, during his lifetime, covenanted to pay to his other children.

The will (dated Oct. 11, 1886) of Mr. Thomas Christopher Burrow, late of Buckstone House, near Burton, Westmorland, who died on June 14 last, was proved in the Lancaster District Registry, on Sept. 4, by Robert Carlyle, the surviving executor, the value of the personal estate exceeding £46,000. The testator devises part of his real estate, including his residence, upon trust, for his sister, for life, and then to Anne Burrow; and the other part thereof, upon trust, for Robert Sanders Bateson, and at his death to Mary Brooks. He bequeaths £1000 each to Mary Ann Wishart, Mary Wishart, Elizabeth Wishart, Anne Moses, Isabella Carlyle, William Carlyle, Mary Brooks, and the Rev. William De Bomville; and £500 each to Robert Sanders Bateson and the widow of Anthony Bateson. The residue of his property he leaves to the above-mentioned legatees in proportion to their legacies.

The will (dated March 4, 1885), with four codicils (dated March 31 and June 6, 1885; June 25, 1886; and July 12, 1887), of Mr. Philip Richard Falkner, late of Upton Hall, Upton, Nottinghamshire, who died on May 19, was proved on Oct. 16 by Evelyn Sherard Falkner, the son, the Rev. William James Peacock, Sir William Henry Houldsworth, Bart., and Lucas Brodhurst, the executors, the value of the personal estate exceeding £41,000. The testator gives £50 each to the British and Foreign Bible Society and the Church Missionary Society; and large legacies to his children (in addition to settlements made on them in his lifetime), clerks, and servants. He devises his Manor of North Scarle, Lincolnshire, with the mines, minerals, chief rents, cottages, &c., and his mansion at Newark-upon-Trent, to his son Evelyn Sherard Falkner. The residue of his property he leaves, as to two twentieths, to his daughter Jane Houldsworth Browne; six twentieths to his son Evelyn; seven twentieths to his son Alfred Sydney; four twentieths between his daughter Margaret Ann Peacock and her husband, the Rev. William James Peacock; and the remaining one twentieth to Lucas Brodhurst.

The will (dated June 24, 1885) of Mr. John Joseph Reynolds, J.P., late of No. 14, Dorset-square and Hereford, who died on Aug. 17 last, at The Shafberg in the Salzkammergut District, Austria, was proved on Oct. 15 by Mrs. Maria Reynolds, the widow, and Mr. Charles Hardwick, the executors, the value of the personal estate amounting to upwards of £34,000. The testator bequeaths £100 each to Anne Hardwick, Charles Hardwick, and Emma Hardwick; £50 each to Alice Reynolds and William Allen; and all his furniture and household effects to his wife. The residue of his real and personal estate he leaves, upon trust, to pay £420 per annum to his wife so long as she shall remain his widow, or until his youngest child attains the age of twenty-one; and, upon further trust, out of the remainder of the income to educate and maintain his children. On the coming of age of his youngest child he gives to his wife, in lieu of the annual payment, a sum of £6000 if unmarried, and £3000 if married; and the ultimate residue to his children, in equal shares.

The will (dated Jan. 24, 1883), with two codicils (dated May 21, 1883; and Jan. 14, 1887), of Mr. William Adam, late of No. 3, Tenterden-street, Hanover-square, who died on July 27 last, at Forfar, was proved on Oct. 11 by Robert Whyte, the nephew, and James Guthrie, the executors, the value of the personal estate exceeding £29,000. The testator bequeaths £500 each to St. George's Hospital (Hyde Park-corner), King's College Hospital, the Middlesex Hospital, St. Mary's Hospital (Paddington), and Charing-Cross Hospital; £600 to the Hospital for Incurables (Putney); £400 to the Association for the General Welfare of the Blind; £300 each to the Hospital for Epilepsy and Paralysis (Regent's Park), St. Thomas's Hospital, the Hospital for Diseases of the Throat (Golden-square), the infirmary at Forfar, and the Cancer Hospital (Brompton); £200 to St. John's Episcopal Church (Forfar); £1000 each to his sister, Margaret Whyte, and her daughters, Margaret and Elizabeth; £1300 to his niece, Annie Whyte; £1500 to his nephew Robert Whyte; £1000 to his nephew George Whyte; £600 to John Whyte; £500 to William Whyte; £1500 to Mrs. Charlotte Wilhelmina Whyte; £300 to each executor, and other legacies to relatives. The residue of his real and personal estate he leaves to his niece and godchild, Mrs. Charlotte Wilhelmina Whyte.

ART NOTES.

At the Hanover Gallery (47, New Bond-street) Messrs. Hollender and Cremetti have brought together a more than usually interesting collection of cabinet pictures, chiefly by artists of the French school. As they do not limit themselves to the works painted within the last year or two, we are enabled to judge of the French school in a catholic spirit, and to contrast the widely different aims of men like Corot, Diaz, Roybet, J. F. Millet, and of that talented lady, Rosa Bonheur. From her we have the well-known "Troupeau de Moutons," with its strong effects of light and shadow—a characteristic work in all respects, and more attractive than Millet's "Dénicheurs"—peasants or poachers knocking down from their roosting-places the birds suddenly awakened by blazing torches. The lady who paints under the name of A. Brandeis sends a number of clever miniature studies of Venice, of which we may say that the smallest are invariably the best; and Mr. Gilbert Munger is almost as fertile in his productions of sylvan and riverside sketches in the valley of the Seine. Amongst the other exhibitors may be named Messrs. De Haas, Th. Weber, Madrazo, A. Stevens, Lybaert (his "Caligula" is a masterpiece of colour), Mellery, and Backhuysen, who inherits more than the name of his possible ancestor.

Miss Dora Noyes, who has already gained notice by her pictures, chiefly of peasant life, at the Royal Academy, the Institute, and elsewhere, has just completed a set of paintings for the reredos for St. Luke's Church, in the Uxbridge-road. The lateral panels exhibit the Nativity and the Road to Calvary, respectively; and the centre, which is flanked by two figures of St. Luke, as the physician and the artist, represents the Lamb, bearing a red-cross banner, surrounded by angels and cherubs. In the figure of the Virgin-Mother, Miss Noyes has been especially successful; and into the treatment of the two scenes—the morning and evening of the Saviour's life—she has infused a spirit of poetry and sentiment which is deserving of high praise. The more conventional figures of the cherubs, on a gold ground, have presented difficulties to an artist who has wished to avoid a slavish imitation of Fra Angelico, and it must be admitted that Miss Noyes has acquitted herself with credit. The competition was open to the public, and the trustees of St. Luke's Church are to be congratulated on the selection they made. The reredos will be placed in the church in the course of the week.

The Home for Crippled Boys, Kensington, has received £250 from the executors of the late Miss Louisa McKellar.

Mr. S. D. Muttlebury, of the third Trinity Boat Club, has been elected president of the Cambridge Boat Club, which office he held last spring.

Mr. Henry Irving, on Oct. 17, laid the memorial-stone of the new Theatre Royal, Bolton, in the place of the old building, which was destroyed in January last by an incendiary fire. Subsequently the visitor was entertained at a public banquet, and, in responding to the toast of his health, spoke of the services which the drama had rendered to humanity.

MAPLE and CO., Manufacturers of DINING-ROOM FURNITURE. The largest assortment to choose from, as well as the best possible value. Three more houses have just been added to this important department. Half a century's reputation.

MAPLE and CO.'S NEW SPECIMEN DINING-ROOMS, decorated and fully appointed with furniture in pollard oak, brown oak, Chippendale mahogany, antique carved oak, American walnut, and other woods, are now open to the public, and should be seen by all intending purchasers.

THESE ROOMS are not only helpful as showing the effect of the furniture when arranged in an apartment, but also most suggestive as regards decorative treatment, as well as a guide to the entire cost of furnishing in any selected style.

DINING-ROOM FURNITURE.

MAPLE and CO. devote special attention to the production of high-class DINING-ROOM FURNITURE that will afford permanent satisfaction in wear. The numerous recommendations with which Messrs. Maple and Co. have been favoured by customers who have used the furniture for years is a pleasing testimony to the excellence of the articles.

MAPLE and CO.—DINING-ROOM SUITES.—The LICHFIELD SUITE, in solid oak, walnut, or mahogany, consisting of six small and two elbow chairs in leather, dining table with patent screw, also Early English sideboard with plate glass back; and fitted with cellaret, 16 guineas.

MAPLE and CO.—DINING-ROOM SUITES.—The STAFFORD SUITE, comprising six small chairs, two easy chairs in leather, telescope dining table, sideboard with plate glass back and cellaret, and dinner waggon, in light or dark oak, walnut or ash; very substantial in character; 23 guineas.

FURNITURE FOR EXPORTATION.

VISITORS as well as MERCHANTS are INVITED to INSPECT the largest FURNISHING ESTABLISHMENT in the world. Hundreds of Thousands of Pounds' worth of Furniture, Bedsteads, Carpets, Curtains, &c., all ready for immediate shipment. Having large space, all goods are packed on the premises by experienced packers—very essential when goods are for exportation so as to insure safe delivery. The reputation of half a century.

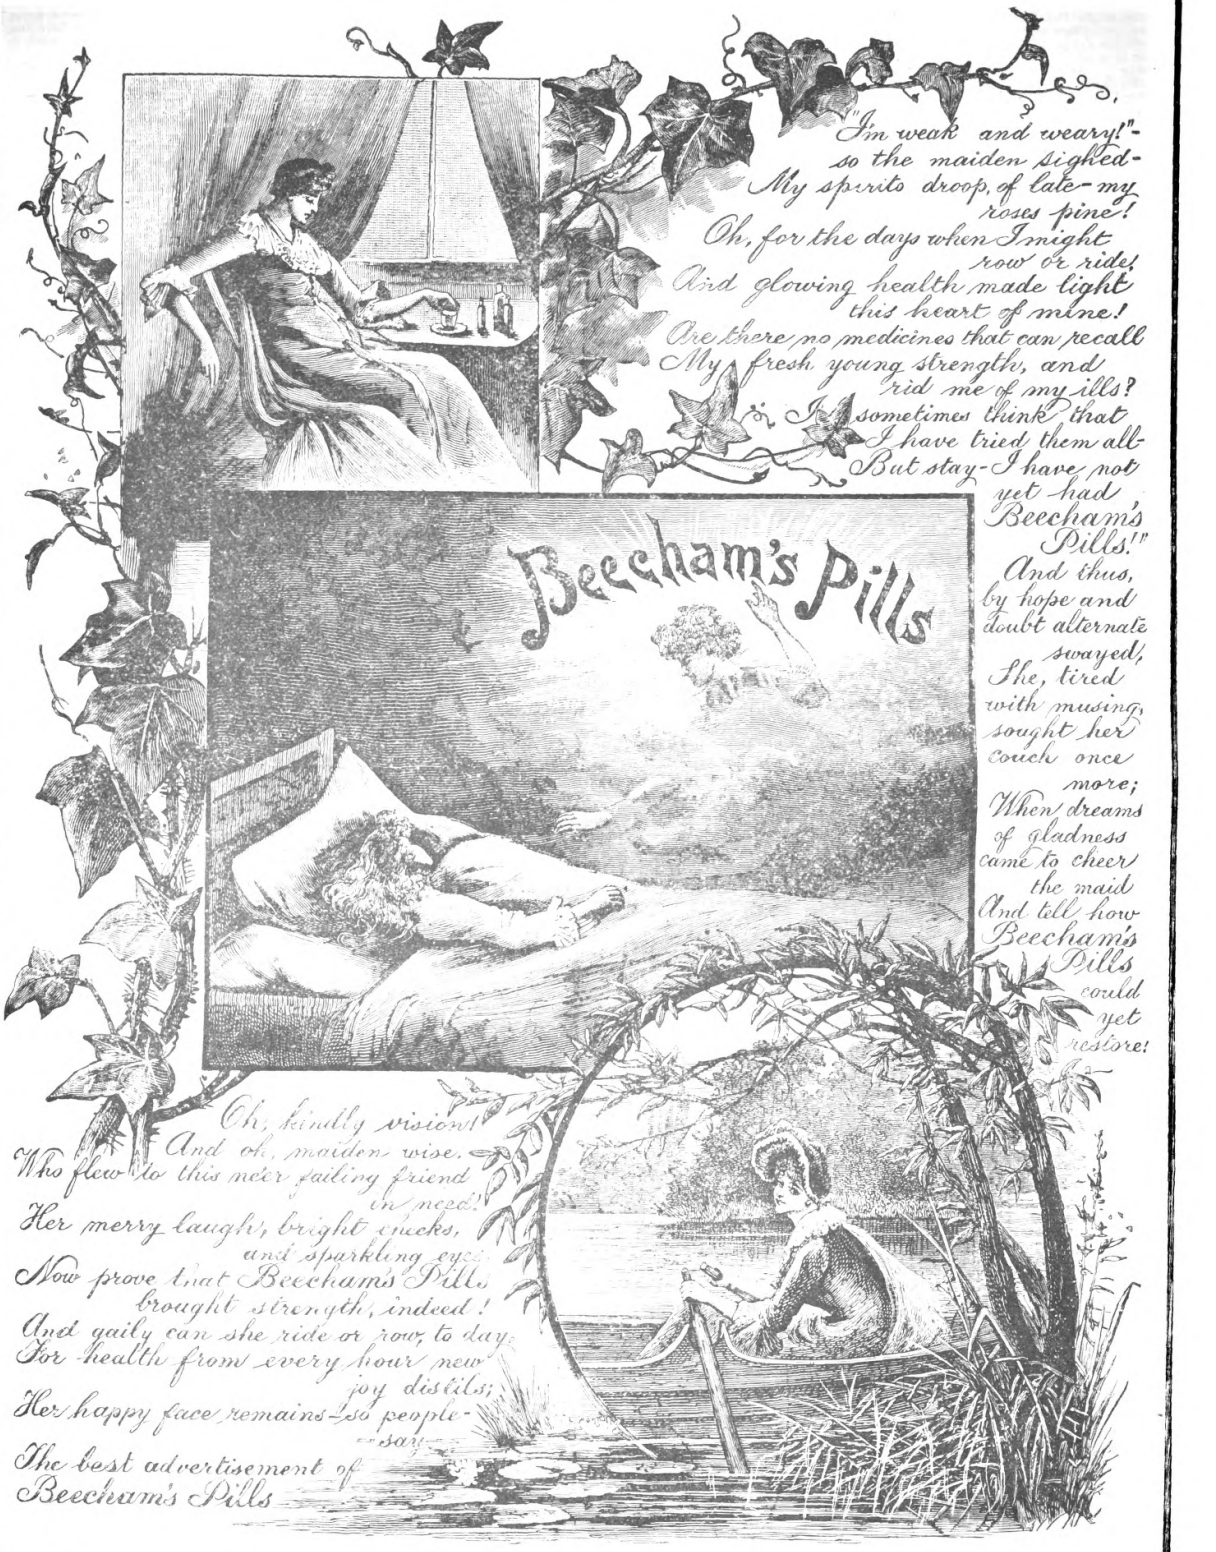
MAPLE and CO., Upholsterers by Special Appointment to Her Majesty the Queen. The reputation of half a century. Factories: Beaumont-place, Euston-road; Southampton-buildings, Liverpool-road; Park-street, Islington.

HUNDREDS of THOUSANDS of POUNDS' WORTH of Manufactured GOODS ready for immediate delivery. All Goods marked in plain figures for net cash—a system established 50 years.

BEDROOM SUITES.

500 IN STOCK.

MAPLE and CO.—BED-ROOM SUITES. The WHITBY SUITE, in solid ash or walnut, consisting of wardrobe with plate-glass door, toilet table with glass affixed, washstand with marble top and tile back, pedestal cupboard, and three chairs, £10 15s. Illustration free.



MAPLE and CO.—BED-ROOM SUITES. The SCARBOROUGH SUITE, in solid ash or walnut, including wardrobe with plate-glass doors, and new-shaped washstand, £12 18s.; or, with bedstead and spring bedding, £17 10s. Designs and full particulars free.

MAPLE and CO.—BEDSTEADS.

MAPLE and CO. have seldom less than Ten Thousand BEDSTEADS in stock, comprising some 600 various patterns, in sizes from 2 ft. 6 in. to 5 ft. 6 in. wide, ready for immediate delivery—on the day of purchase, if desired. The disappointment and delay incident to choosing from designs only, where but a limited stock is kept, is thus avoided.

POSTAL ORDER DEPARTMENT. Messrs. MAPLE and CO. beg respectfully to state that this department is now so organised that they are fully prepared to execute and supply any article that can possibly be required in Furnishing, at the same price, if not less, than any other house in England. Patterns sent and quotations given free of charge.

MAPLE & CO., London, Paris, Smyrna, & 134, Calle Florida, Buenos Ayres.

"I'm weak and weary!"—
so the maiden sighed—
My spirits droop, of late—my
roses pine!
Oh, for the days when I might
row or ride,
And glowing health made light
this heart of mine!
Are there no medicines that can recall
My fresh young strength, and
rid me of my ills?
I sometimes think that
I have tried them all
But stay—I have not
yet had
Beecham's
Pills!"
And thus,
by hope and
doubt alternate
swayed,
She, tired
with musing,
sought her
couch once
more;
When dreams
of gladness
came to cheer
the maid
And tell how
Beecham's
Pills
could
yet
restore!
Beecham's Pills
Oh, kindly vision!
And oh, maiden wise,
Who flew to this ne'er failing friend
in need!
Her merry laugh, bright cheeks,
and sparkling eyes
Now prove that Beecham's Pills
brought strength, indeed!
And gaily can she ride or row to day,
For health from every hour new
joy distils;
Her happy face remains—so people
say—
The best advertisement of
Beecham's Pills

THE LADIES' COLUMN.

Lord Mount-Temple's decease is a great loss to many of the more gentle charities and humane "movements" of the day. He was always found ready, in company with his now bereaved lady, to give aid of any kind to attempts to help the suffering and oppressed. I have not seen in any obituary notice of him a mention of the fact that the medical education of women owes its present legal position mainly to Lord Mount-Temple, who, when he was in the House of Commons, got an Act passed making it permissible for any examination for a recognised degree to be thrown open to women, at the option of the governing bodies granting diplomas. This was rendered necessary by the decision of the highest Scotch Court that the Senatus of the University of Edinburgh had no power to admit women to sit for medical degrees. It was known that some out of the seventeen doors to the medical profession would be immediately opened to women if it were once declared to be legal for the authorities to admit female students, so that a Permissive Bill would be, and in fact turned out to be, all that was required. In this action Lord Mount-Temple was influenced no less by the belief that female doctors would often be a boon to suffering womanhood than by a desire to give women a free course in life.

His Lordship himself had the advantage (I know that he held it so) of being related to women of more than common distinction and excellence. He was the son of the famous Lady Palmerston by her first husband, Earl Cowper: and Lady Mount-Temple is reverenced for her goodness by all who have the honour of her acquaintance. It makes a great difference to a man of naturally fine disposition when the women belonging to him are singularly admirable for wisdom or goodness, or for moral and intellectual qualities combined.

How do ladies put on their watches now? Amongst the little changes of fashion that are readily noted by people "in the movement," but are perplexing to those who live quiet lives, such a little matter as this comes in. The newest of all new notions in this regard is the outcome of the Directoire fashions in dress. For the coats and bodices made in that now familiar and popular style, a watch-pocket, and even a watch tucked into the bodice, are impossible. The proper thing, therefore, is to have a tiny pocket put in the skirt, quite near to the front, but towards the left side, and as high up towards the waist-band as the short vest will allow. The watch being snugly placed therein, a short chain hangs over outside, just as it did from the gentlemen's fob-pockets in olden days. At the end of the few inches of gold chain is either a jewelled or engraved ball of the same precious metal, or a little cluster of seals and trinkets on a ring. Similar short chains are used for the wearing of a watch with an ordinary bodice, only then the timepiece nestles between two of the fastenings of the dress, and allows the tiny chainlet to hang its inch or two of length and its jewelled ball over the bodice. Watch wristlets of leather or bracelets of gold and silver, enclosing the timepiece in the centre, are a good deal worn, too.

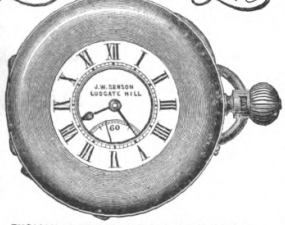
Another new fashion. There prevails in town just now a modern and approved method of shaking hands, the which if you are ignorant of, you receive a sort of electric shock on greeting by an initiate. This silly salutation *à la mode* is achieved by elevating the right elbow as high in the air as possible and delivering the one or two short abrupt shakes which alone are then convenient as near the level of the chin as may be. Only remember, if your hand is opposite your chin your elbow must be as high as your ear! This amiable and elegant vagary of fashion does not, of course, commend itself to the elder and the more highly-placed fraction of society. It is simply one of those shibboleths, like the talking of a peculiar and ever-changing slang, and wearing of "the newest things out" as rigidly as though they were a uniform, by which a certain large but rather feeble-minded class of folk strive to obtain and to confer a sort of distinction that they are well aware their own social and personal merits will not award to them. It is the kind of persons who a couple of years ago spoke of "swells" and now always talk of "smart people"; who call their dresses "frocks" one season and "gowns" the next; who scarify their chins with "masher" collars, or who (if of the other sex) wear "the colour of the year," however unsuited to their complexions; whose hair is smooth and dark when they are twenty years old, and becomes fair and crimpled when they are twenty-five, or the other way round, according as "the style" may be—this large class of social sheep it is who are indulging in the latest fashion in handshakes.

Mrs. Frances Hodgson Burnett has sailed for the land of her adoption: for such America is, she being by birth and bringing-up English; by marriage and residence American. The day before she sailed, the presentation was made to her of an address from her brother and sister novelists, to which I referred when it was in embryo. The address was signed by nearly a hundred authors. It thanked her for the protection which she had secured for novelists, preventing a writer's plot and language being turned into a drama without his consent; and these pretty words were accompanied by a gift of a diamond bracelet. Mrs. Burnett, in her reply, had the tact and good sense to recognise that the whole affair, though graceful and justifiable enough, was really an instance of the truth of the severe prophecy—"Men shall speak well of thee if thou doest good unto thyself." She says that she was encouraged in her legal struggle to prohibit the representation of a pirated version of "Little Lord Fauntleroy" by the reflection that even if she failed she would have drawn attention to that grievance of novelists: "but to have been allowed to aid through success, and to receive such a generous tribute of sympathy, is to be fortunate indeed."

The private view on Oct. 20 of the Pastel Exhibition at the Grosvenor Gallery showed that, though the fashionable world still does not think fit to show its presence in town, literary and artistic London is quite full. The most striking figure at the private view was Mrs. Bernard-Beere, who looked perfectly charming in a grey faille française Directoire coat, with white silk front and cut-steel buttons, and a big broad-brimmed hat almost covered with white and grey plumes, and having one of the new long white feather boas hanging from the back and twisted two or three times round the throat. A pretty costume was of black silk with epaulettes of alternate gold and jet fringes, and a band of trimming to match passing right across the shoulders back and front—quite an old fashion revived. Cloth dresses were the most general wear. Lady artists are excellently represented on the walls, pastel drawing, which is done with coloured chalk used dry, appearing to suit them. Mrs. Jopling has one of her fine frank women's heads, Miss Hilda Montalba a capital study of a middle-aged lady, and Miss Elizabeth Armstrong some good country figures and scenes. The most remarkable contributions from a woman, however, are several works by Mdlle. Anna Belinska—strong and individual and realistic to a degree. This lady had a striking painting at the Academy two years ago, which attracted the attention of many good judges by its force and realism, though it was the reverse of lovely. Everybody interested in female art should look at Mdlle. Belinska's pastels.

FLORENCE FENWICK-MILLER.

Sir Arthur Sullivan gave the presidential address and presented the prizes, in connection with the Birmingham and Midland Institute, on Oct. 19. He took "Music" as his subject.



The Bishop of Bedford has acknowledged the receipt of £100 3s. from Mr. Richard Mansfield, being the result of the benefit given at the Lyceum Theatre on Oct. 19 in aid of the Home and Refuge Fund.

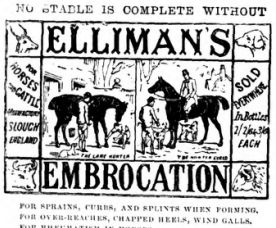
THE GROSVENOR GALLERY.

The exhibition with which Sir Coutts Lindsay proposes to fill up the interval between now and the date of the ordinary winter exhibition has at all events the merit of novelty. Nothing of the sort has, we believe, been attempted before in this country; and we may congratulate both the manager of, and contributors to, the present exhibition on the ease and rapidity with which they have adopted and revived a branch of art which, except in a few hands, has in this country at least fallen into neglect. The limits of pastel-painting, if we may use the term, leave little room for anything more than the display of certain technical skill, which we gather comes almost naturally, though in different degrees, to every painter in oils or water-colours. Further than the production of a certain surface it seems difficult to go—and consequently the pictures, chiefly portraits, must be wanting in dramatic expression.



The art of the "pastellistes," a *recognised* body in French art, is so little known in this country, that we may be excused if we briefly refer to its history—of which we hasten to add very little is known with certainty; for whilst some authorities refer it back to the ancient Egyptians, others assert, with no less confidence, that it was never practised, as a recognised form of art, until the early part of the last century.

Pastels hold a sort of middle place between drawings and painted pictures. They are executed with coloured pencils on rough paper, and occasionally on specially prepared canvas. Three sorts of pencils are usually employed by artists in this work—hard and medium ones for the outline and more strongly-marked traits; and soft ones, of which the chalk is crumbled and spread with the finger, so that the result is, in fact, nothing more than a light coating of coloured dust, which adheres more or less to the paper. The perishable nature of all pastels has been recognised by artists of all times and in all countries, and many attempts have been made to fix their work; and in Italy paper is specially prepared with marble powder rubbed into the surface, which has the quality of attaching the chalk subsequently applied. In spite, however, of the difficulties which would seem to stand in the way of making pastels permanent, there are numerous collections of the highest interest both in this country and on the Continent. At Castle Howard, at Windsor, and at Wilton House are to be found specimens which certainly date from the sixteenth century, and in many cases the colours are fresh and the likenesses well preserved. Most of these works are attributed to French artists, but there is little doubt that Holbein also worked with this medium. Historically, however, the invention of pastel-painting is attributed by most authorities to the Germans—the honour being divided between two ladies of Dantzig, Madame Vernerin and Fräulein Heid, and Herr Thiele, of Erfurt, all of whom lived in the first half of the eighteenth century. The Louvre contains some portraits of the kind which go back to the times of Charles IX., although it was not until after the accession of Louis XV. that the pastellistes became fashionable, and were sought after by the ladies of the Court who desired to sit for their portraits. Amongst the artists of that time Maurice Quentin de la Tour was the most noteworthy, and after him may be mentioned Vivien, Liotard, Russel-Nattier, Vigée, Grenze, and others. Amongst the Italians the works of the Venetian lady Rosalba Carriera are the most sought after by amateurs; and those of Lundberg among the Germans. Amongst the modern artists in this style are Fless, Bouquet, Riesener, Vidal, &c.; and among contemporaries we may mention Madame de Léoménil, M. Perrogis, M. Steuben, and Mdlle. Allain.

Of these pastellistes there are no specimens at the Grosvenor Gallery; but, for all that, the French school is strongly represented in both its realistic and impressionist phases, although, as Frenchmen, they will scarcely be gratified at the attention and well-deserved admiration which Mr. Otto Scholderer's "Master Victor" (38) will obtain—a delightful boy in a Cavalier suit standing firmly on his little legs, and looking every inch a boy of force and character. If we compare this with M. J. E. Blanche's most effective work, the portrait of Donna Olga Caracciolo (24) in a brown frock and white spotted pinafore—the stiffness of which is a parody rather than a triumph of realism—we must feel that the less affected school of which Herr Scholderer is a disciple produces the pleasanter impression. In absolute *technique*, possibly M. Blanche is far above all other competitors. His portrait of Mdlle. Bartet (52) shows what he can achieve with simple black and white, and, it must be added, what the lady also—well known as an actress—can do with very simple materials. It is, at the same time, disfigured by the repetition of the same curves throughout the whole of the drapery; and by the still greater fault of making the lady in all respects subordinate to her clothes. With another portrait (153), a young lady in a painfully ugly pink dress, the same fault cannot be found. M. Machard is another recognised master in pastels amongst our neighbours, and he excels in flesh colour, with a slight exaggeration of its green reflections, as seen in his "Juno" (28) and "Soap Bubbles" (20), where the figure, however, is admirable in pose. It requires a long apprenticeship to foreign art—and, we may add, to foreign climate—to appreciate M. P. Roll's not very elegant nor gracefully-proportioned nymphs "Resting" (44) and "Bathing" (60); and we honestly confess our inability to discover wherein the beauty of such work resides. We infinitely prefer M. Dubufé's portrait of a lady (23) in black, where the surface of the flesh is produced with far greater regard to truth, and is far more complimentary to the lady; and in his other smaller work, a study of a boy's head (14), the colour is stronger and the expression of character more strongly marked. M. Emile Lévy's portrait of his daughter (25), and that, apparently, of his wife (90), and of Madame D. (249); Madame Louise Abbema's portrait of M. Paul Mantz (163), Théodore Roussel's admirable "Pierrot" (174), a true harmony in white, are amongst the best figure pictures of the foreign school. The impressionists — who, for the most part, are brought together in the East Gallery—must be judged by another standard; but their principal exponent, Mr. P. Helleu, is not seen at his best in his "Spanish Lady" (148), clever though it be, or by the "Young Lady" (156) in evening dress. Of the more intricate difficulties which landscapes and groups offer to the pastellist we have some very interesting examples—especially "The Sunset" (75) and "Le Rocher du Dombier" (77), by M. Pointelin; M. Montenard's "Road in the South of France" (22), and M. Léon Lhermitte's "Confirmation Day" (6), Mr. J. L. Brown's "Battle-field" (73), strewn with dead horses, and his less gruesome "Hunting-Scene" (167). We should not, perhaps, quit the French school without mentioning the name of Mdlle. Anna Belinska, whose numerous works show a very decided individuality, which, in many cases, has no sympathy with French art. She is always firm and vigorous, and sometimes as uncompromising in colour as in pose.

Another lady, who is well represented in this exhibition, Miss Elizabeth Armstrong, also belongs to two schools. In sentiment she is thoroughly English, but in her treatment of colour she is ultra-French, as seen in "One, two, three, and away we go" (43), a band of merry children in full sunlight playing in the fields; and again in the "Maids in the Garden hanging out the Clothes" (59). In these and other works Miss Armstrong pushes pastel-work to such an extreme that we are inclined to ask why they were not painted in oils, which would have given her far more freedom, and permitted greater finish? But amongst the English exhibitors Mr. George Clausen deserves almost, if not quite, the foremost place. In "The Harrow" (39), although too obviously a reminiscence of F. J. Millet, there is a delicacy of touch combined with an honest rendering of nature, which stamps it as a true work of art; and we meet these characteristics again in his "Child's Portrait" (178) and the "Girl's Head" (210). It is difficult to fix accurately Mr. Hubert Vos's nationality, but he has settled himself amongst us, and we are only too glad to welcome so accomplished an artist. His skill in rendering attractive the somewhat attenuated Mdlle. De Staal (12) shows no less cleverness than his thoroughly French rendering of such pre-eminently English scenery as is to be found in the neighbourhood of Porlock (36). Mr. Vos has also two "political" pastel "Home Rulers" (139) and "In Dreamland" (233), which will attract notice. Mr. W. Llewellyn's "Waiting" (37), a lady dressed for a walk in a green dress against a green background, is *très chic*, and the success which the artist has achieved justifies his boldness; and with it we may compare Mr. Jacomb Hood's "Lady Artist" (57) and Mr. George Hare's portrait of Madame H. (65), both of which show great refinement as well as deftness in manipulation. Mr. Whistler and Mr. Holman Hunt, essentially different in their use of pastel, belong to an older school of workers; but we scarcely think the latter's portrait of Mr. T. Coombe (78) will provoke admiration, for it lacks that quality of colour in which Mr. Holman Hunt excels. Mr. Whistler is as delicate as ever in his little bits of Venice, of which, by-the-way, we seem to have seen some at his own exhibition a year or two back. If this be so, it is only fair to say that they have not deteriorated by keeping; and if they are fresh fruit from his store, we can honestly compliment him on maintaining his high position amongst contemporary "pastellistes." Mr. Solomon I. Solomon's full-length portrait of Miss Ethel Wright (72), which occupies one of the places of honour in the large gallery, in spite of its cleverness, betrays too much effort to obtain a simple result, and, like Mr. J. J. Shannon, he seems to have taken to this style of work almost *en dépit de lui-même*. In fact, when we look through the catalogue and recognise the familiar names of those who have achieved a reputation in oils and water colours, without once, so far as the public knows, suspecting their own talent for pastel, one is inclined to be a little sceptical of the spontaneity of much of their work. In time, doubtless, we shall see the English school take its place, and possibly it will distinguish itself by some special features; but at present the artists in pastel, for the most part, are imitators of the French, or simply bring to their easel the ideas and aims which inspired them when at work in oils or water colours. We do not say this in any depreciation of the exhibition or of its object. Many of those who send works are deserving of high praise, and amongst such we may name Mr. W. E. F. Britten, Mrs. Stokes, Miss E. M. Osborne, Miss Florence Small, and others. It is, perhaps, needless to add that Mr. William Stott, of Oldham, finds in pastel-work an admirable means of filling his frames with wide expanse of sand and water; but the result is hardly more attractive, to the initiated, than in his more ordinary medium. In conclusion, we should say one word of commendation for the admirable hanging of the rooms. M. Deschamps has shown not only judgment, but excellent taste, in the grouping of English and French artists; and, whilst keeping in view the general effect, he has managed to do full justice to the claims of individual works.

THE GROSVENOR CLUB,
135, *NEW BOND-ST., W.*

This Club, which is proprietary and on a non-political basis, numbers 1100 members. It contains the usual Club-Rooms, has been recently redecorated, and is lighted throughout by means of Electricity. To meet the expenses of further proposed improvements, by an influx of members, the Committee has resolved to temporarily suspend the entrance fee.

Members have free admission to the Galleries during the Exhibition.

All members have the privilege of subscribing to the large Circulating Library, for the use of their families, at a reduced rate. For reading in the Club, books are supplied free of expense to members. The Club Reference Library is exceptionally fine.

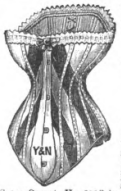
High-class Smoking and other Concerts have been successfully inaugurated.

The long association of the Grosvenor Gallery with art should render this Club attractive to artists as well as to professional, literary, scientific, and other gentlemen.

The Subscription is Five Guineas for town, Three Guineas for country members, and One Guinea for residents abroad, whether military or civilian. Subscriptions paid after Oct. 1, 1888, will hold good until Dec. 31, 1889.

The following names have recently been added to the Committee:—

The Earl of Crawford and Balcarres; Lord Wantage of Lockinge, V.C., K.C.B., &c.; Sir Coutts Lindsay, Bart.; Sir Chas. H. Stuart Rich, Bart.; Rev. A. Wellesley Batson, Mus.Bac. Oxon; Edmund Yates, Esq.; Joseph Barnby, Esq.; Chas. Wyndham, Esq.; F. C. Burnand, Esq.



Applications for membership should be addressed to the SECRETARY.

THE PLAYHOUSES.

On Saturday, Oct. 20, a new theatre was opened, and, luckily, without any mishap. The paint was dry, the staircases suited, nobody had got wet outside—for the very good reason that the night was uncommonly fine—no rights had been abused, and no privileges taken away: and the success of the new Shaftesbury Theatre was acknowledged without one dissentient voice. The pit was so large and excellent; the architectural arrangements and improvements so good, thanks to clever Mr. Phipps: the refreshments, served by the management itself, of such good quality, that it would have been ungracious indeed to bait an author, to groan at an iron curtain, or to attack the defenceless. All went off with flying colours, so far as the management was concerned; and though the entertainment itself was a little tedious and lasted until close upon midnight, there was a cheer still left for that excellent Lancashire man, Mr. Lancaster, who was cordially summoned, and brought on smiling by his charming wife, Miss Wallis. The play selected was "As You Like It," the one particular poem by Shakspeare that requires, not only an intelligent direction, but a guiding hand and brain not wholly destitute of poetry, imagination, and fancy. Something more than smart dresses, silks and satins, gorgeous foresters and elaborate courtiers is needed to do justice to "As You Like It." We want first the heart and soul—the breathing spirit of the play. In a certain sense this can be supplied by an intelligent director: the poetic weakness of the company can be in a measure concealed by the scene-painter and decorator. For instance, one can conceive how "As You Like It" would be presented at the Lyceum with Mr. Hawes Craven to revel on the woodland pictures, with Mr. Irving to direct—and oh! if it were possible to play not Touchstone but Jaques—and, best of all, with Miss Ellen Terry as Rosalind. That, of course, would be something like an ideal revival; but we must not banish the play from the stage because it is not always presented as the mind can picture it. In this instance, however, most unfortunately, very few engaged in the preparation of the play seem to understand the dominant idea of the poem: they, one and all, get away from Shakspeare and the text as far as they possibly can. The scene-painter considers that the wild carol of an English springtime is to be depressed with the fading leaves and intense melancholy of autumn; he makes Rosalind and Orlando wander under beech-trees whose yellow leaves are scattered on the ground; the designer of costumes, being an Italian, naturally goes as far away from England and English characteristic dresses as he possibly can. We all desire to get back to Shakspeare's day and the English woods of Warwickshire; to imagine this fantastic scene as Shakspeare imagined it; but the decorator, with his dresses, drives us away from England as far as possible, and arrests the imagination. An incongruous mixture is the result. We have foresters who look like court cards, and peasants the least picturesque ever presented; and castles of modern design, surrounded by the newest Hampton-Court ribbon beds; and old Adam issuing from a modern villa that might have been built yesterday at Brixton or Balham. It will be said that these are very small matters: on the contrary, they are most important things when an attempt is made to stimulate the imagination, and to suggest an atmosphere of poetry. Some may consider it a very insignificant thing whether or not Phebe or Silvius look pretty or ugly. It is apparently the object of the decorator to make them hideous. He swathes them in clothes and oppresses them with bandages. Phebe looks as if she had just come from a day's washing; and Silvius appears to be attired for an Arctic expedition. They have so many wraps on them—poor creatures!—that they can scarcely waddle. Phebe looks, thanks to the clever designer, five times her age; and Silvius might be, apart from his young voice, a veritable Methuselah. Now, here we maintain that the supposed realistic scheme of design, or whatever it may be, positively destroys the pleasure of the play, and is as inimical to the success of the actor. The idea of the poet is to make Phebe and Silvius a pretty pastoral pair. They ought to be romantic and charming. Far better see them dressed up as Dresden china shepherd or shepherdess, than bundled on to the stage in woollen stuff and padded calves. The best actors in the world cannot utter poetical sentiments when they look ridiculous. To the retort that the swains and maids in Shakspeare's day did not look romantic, we may reply nor did the foresters look so uncommonly smart. If it be worth while to make a forester picturesque, who blows "the lusty, lusty horn," why on earth not extend the same favour to the very characters in the play whose every utterance teems with poetry? It would appear as if the style of the poem to be illustrated is the last thing considered by the illustrator. As it turned out, the best performances were those of Miss Wallis as Rosalind and Mr. Arthur Stirling as Jaques. Both these artists understood how to deliver the text of Shakspeare. Both were distinct and audible. Both have studied the play, and made the most of every line intrusted to them. This was not the general rule. Mr. Forbes Robertson made Orlando a flippant young gentleman who sneered at love and treated Rosalind with insolent disdain—a petulant boy, who was positively bored and disgusted with the attentions of his innocent. This may be a new reading, but is scarcely a defensible one: and it is not recorded that it was adopted by the same actor on other memorable occasions. The Touchstone of Mr. Mackintosh was a painstaking, conscientious performance, but quite barren of the requisite called "humour." Mr. William Farren as old Adam did not succeed in touching the emotions of his audience: Miss Annie Rose made a pretty Celia: and Mr. Seymour Jackson sang with some effect several Shakspearean and non-Shakspearean songs in the character of Amiens. The elocutionary failures in the play were really quite remarkable. They displayed an utter inability to produce the voice or to do justice to the text. In the dull history of modern elocution on the stage it is not conceivable that the beautiful lines allotted to Oliver were ever so unintelligently spoken. We sometimes wonder why Shakspeare is not more attractive. The reason is that the modern actor does not take the trouble to read the text or understand it. How can we appreciate Shakspeare if we cannot hear the speeches that he has put into the mouths of the players?

THE COURT.

The Queen, accompanied by Princess Beatrice, went to Abergeldie on Oct. 17, and took leave of the Princess of Wales, who, with Prince Albert Victor and the three Princesses, left for the south shortly afterwards. Her Majesty, again accompanied by Princess Beatrice, drove in the afternoon to Braemar, and honoured Lady Cochrane with a visit at Kindrochit. The Marquis of Lansdowne had the honour of dining with the Queen and the Royal family. On the 18th her Majesty went out with Prince and Princess Henry of Battenberg; and in the afternoon her Majesty drove out, accompanied by Princess Frederica. The Marquis of Lansdowne kissed hands on his appointment as Viceroy of India, and took leave of the Queen. On the 19th her Majesty, with Princess Beatrice and Princess Frederica, drove to the Glassalt Shiel, where they were joined by the Duchess of Albany, attended by Fräulein Von Riedel. The Queen and Princess Beatrice went out from Balmoral on the morning of the 20th; and in the afternoon her Majesty drove out, accompanied by Princess Beatrice. Mr. Ritchie, Minister-in-Attendance, had the honour of dining with the Queen and Royal family. On Sunday morning, the 21st, her Majesty, with Prince and Princess Henry of Battenberg and Princess Frederica, with Baron Von Pawel Rammingen, was present at Divine service at the parish church of Crathie. The Communion was dispensed. Mr. Ritchie dined with the Queen and the Royal family. Major-General Sir John M'Neill arrived at the castle on the 22nd, and, with Mr. Ritchie, had the honour of dining with the Royal family.

The Princess of Wales, accompanied by Princesses Louise, Victoria, and Maud, arrived at Marlborough House on Oct. 18 from Abergeldie Castle. Next evening the Princess and her three daughters witnessed the performance of "The Yeomen of the Guard" at the Savoy Theatre. On Sunday morning, the 21st, the Princess of Wales, accompanied by Princesses Louise, Victoria, and Maud, was present at Divine service. The Prince arrived at Marlborough House early on the morning of Monday, the 22nd, from Paris. The Duke of Cambridge visited the Prince and Princess of Wales. In the evening their Royal Highnesses witnessed the performance of "L'Abbé Constantin" at the Royalty Theatre. Lieutenant-General Sir Dighton Probyn represented the Prince and Princess at the funeral service which was held for the late Italian Ambassador (General Count di Robilant) at the Roman Catholic Church in Warwick-street, Regent-street. The Prince of Wales travelled to Newmarket on the 24th to witness the contest for the Cambridgeshire Stakes.

Prince Albert Victor of Wales fulfilled a series of public engagements, on Oct. 20, at Manchester, where he was the guest of the Corporation. He was first presented with a loyal address from the citizens, and was subsequently entertained at luncheon in the Townhall. Afterwards his Royal Highness opened a public recreation-ground at Rusholme, laid the foundation-stone of a new wing of the Ancoats Hospital, and opened a new club for working lads. On the 22nd his Royal Highness shot over the Ashley estates, and next day hunted with the North Cheshire hounds.

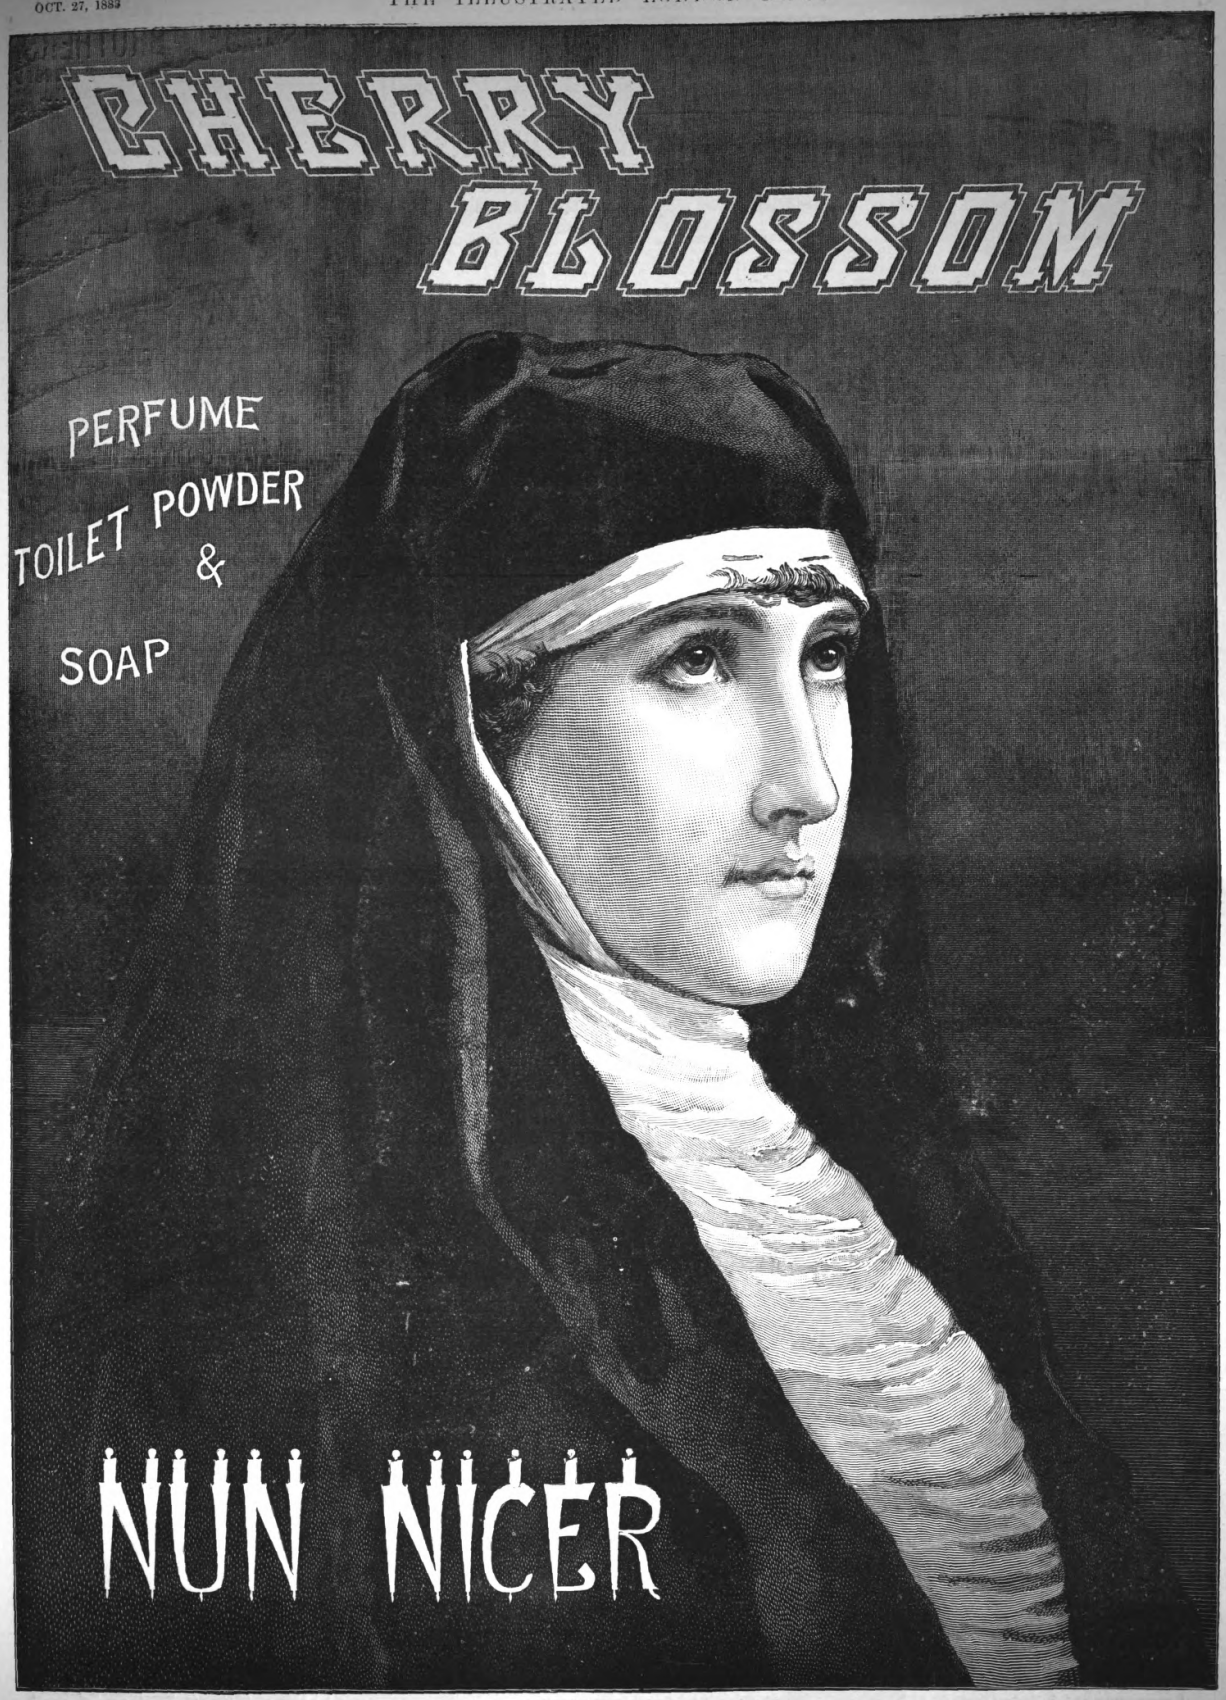
IN MONTHLY PARTS, SIXPENCE EACH.
Part I. now ready. To be completed in about 20 Parts.)
ENGLAND'S BATTLES BY SEA AND LAND.
With Full-page Illustrations.
The Publishers have great pleasure in announcing a Re-Issue, in a cheap and attractive form, of the valuable work, "ENGLAND'S BATTLES BY SEA AND LAND," which will be found replete with information about the notable events of the centuries by which the British power has been built up, conveyed in an interesting, full, and intelligible style.
With Part I. will be PRESENTED GRATIS a PRESENTATION PLATE, representing "THE DECISIVE CHARGE OF THE LIFE-GUARDS AT WATERLOO."
From the celebrated Picture by Luke Clennel.
Specimen Copy of Part I., with Plate, post-free, 7d.

RE-ISSUE IN SIXPENNY MONTHLY PARTS.
Part I. now ready. (Complete in 18 Parts.)
GOD'S GLORIOUS CREATION; or, The Wonders of Land, Sea, and Sky. Translated from the German by J. MISSULLE.
BEAUTIFULLY ILLUSTRATED WITH ORIGINAL HIGH-CLASS ENGRAVINGS.
The publishers feel, in announcing a new and cheap issue of "GOD'S GLORIOUS CREATION," giving an account of the wonders of the Earth, Sea, and Sky, that it is scarcely necessary to commend the work to a large section of the public; suffice it to say that where ever quantity of the globe the reader may seek information about as to its surface, its seas, its rivers, its animals, its plants, its climate, he will find it in this work.
Specimen Copy, post-free, 7d.



IN SIXPENNY MONTHLY PARTS.
Part I. now ready. (To be completed in about 10 Parts),
THE LAND OF THE BIBLE: Its Holy Sites and Sacred Story.
PROFUSELY ILLUSTRATED WITH MAPS AND WOOD ENGRAVINGS.
This well-known work is now issued in a Connected Narrative of Bible Events, with EXPLANATORY DESCRIPTIONS, and incidentally gives accounts of the Great Empires of the East in their connection with the Jews. Sunday-school teachers, as well as scholars and fathers and mothers who give their own children religious instruction, will find this work capable of affording them much help.
Specimen Copy, post-free, 7d.

DR. DE JONGH'S
KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM
KNIGHT OF THE LEGION OF HONOUR
LIGHT-BROWN COD LIVER OIL

Incontestably proved by Thirty Years' Medical Experience to be
THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS
IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.

SELECT MEDICAL OPINIONS.

Dr. PROSSER JAMES,
Lecturer on Materia Medica, London Hospital.
"Dr. De Jongh's Oil contains the whole of the active ingredients of the remedy, and is easily digested. Hence its value, not only in Diseases of the Throat and Lungs, but in a great number of cases to which the Profession is extending its use."

Dr. THOMAS NEDLEY,
Physician to the Lord Lieutenant of Ireland.
"The most uniformly pure, the most palatable, and the most easily retained by the stomach, is Dr. De Jongh's Light-Brown Oil. I have habitually prescribed it in cases of Pulmonary Consumption, with very beneficial results."

JOSEPH J. POPE, Esq., M.R.C.S.,
Late Staff-Surgeon, Army, India.
"The value of 'hydro-carbons' in all debilitated states of the system is now becoming thoroughly recognised. Dr. De Jongh's Oil places in everyone's reach a reliable and valuable remedy."

LENNOX BROWNE, Esq., F.R.C.S.E.,
Senior Surgeon, Central London Throat Hospital.
"The action of Dr. De Jongh's Oil has proved, in my own experience, particularly valuable in many cases of Weakness of the Singing and Speaking Voice, dependent on Bronchial or Laryngeal Irritation."

Sold ONLY in Capsuled Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; by all Chemists and Druggists.

OUR NOTE BOOK.

BY JAMES PAYN.

"Clericus Dubitans," a correspondent of the *Spectator*, to which all cases of conscience seem naturally to come as to a Father Confessor, is seriously exercised in his mind as to the morality, or otherwise, of sixpenny whist; and he has been taken to task by a writer in another journal for having any doubt of its wickedness. The divine is very properly dead against playing for points "unnecessarily high," but cannot divorce his mind from the conviction that unless people play for something they "don't try"—not having sufficient motive for any exertion; and, in a word, that whist for nothing, though, of course, very moral, is apt to be very bad. Like the wine which the rich but thrifty host put before his guest, with the encomium that it was honest wine, it is "poor but honest." To this the journalist cynically rejoins that "Clericus Dubitans" seems to be of opinion that nothing is done well unless there is a little money upon it. I am unfortunately not "Clericus" (for though so many people find themselves in holes, it is only a few who are in the hole that just suits them); but I think "Clericus" is right in this matter, with very little "Dubitans" about it. It is my experience that work of all kinds is better done when it is paid for. We all know what a lawyer's opinion is worth when it is got for nothing: I believe that dentists who write "Teeth extracted gratuitously between ten and two" over their doors are not spoken of by their patients with the gratitude one would expect; and though I may have dreamt it, *I think* I have occasionally seen the doings of the Great Unpaid contrasted unfavourably with those of our stipendiaries. Breathes there, again, an editor in all England who can lay his hand upon his heart and speak highly of that "Amateur Contributor," who prefaces his dreadful MS. with the statement that he seeks no pecuniary remuneration for it? And, surely, anyone who has ever belonged to a club, must be aware that a committee does not look into matters with the same keen eye for economy that belongs to the paid housekeeper. There are, of course, some exceptions: honorary secretaries of charitable associations, for example, who do their duty manfully; while the admirable journalist who derides the notion of anything being worse done for "love" than "money" no doubt would scorn remuneration for his articles; but, speaking of men and not angels, my opinion is that they do do things better, from whist upwards or (not to be rude to the noble science) downwards, for their having "a little money upon it."

A correspondent of *Notes and Queries* is perplexed by the chronology of "Pickwick"; but probably not so much as was the author himself. He dated the commencement of his fiction in 1827, with a light heart, without reflecting that as the serial itself began in 1836, there was not time enough allowed for the development of the story. The circumstance is not at all surprising, nor does it the least detract from the reality of the composition. For my part, I can hardly fix a date for any occurrence in my life, and yet I suppose I must have lived, though I may have failed to "flourish." Moreover, the author of "Pickwick" was a very young man, and, with all his genius, had, of course, no knowledge of the art of writing fiction, though in later years he grew to be the most careful story-teller of his time, and took great precautions to ensure accuracy. Nothing, indeed, annoyed him more—for "whatever is worth doing is worth doing well" was his favourite proverb—than to be proved incorrect even in the smallest matter. For that reason I always forbore during his lifetime to point out his mistake in setting down Cleopatra and the Major to piquet, at Brighton, and then making them play écarté instead; one would almost think, but for his known ignorance of cards, that he could not resist making Cleopatra ask her admirer to "propose." The truth is, every novel has plenty of errors of inconsistency, of misdating, and of misnaming; it is scarcely possible, indeed, that it should be otherwise, if the story is artistically written, and has its characters, each in halves, as it were, the one part being drawn from real life and the other from the imagination. Fortunately, the gentlemen who read the stories submitted to their criticism—though it may not be true that they only "cut the leaves and smell the paper-knife"—do not give a very particular attention to them, or they would more often find us tripping. Sometimes an admirer will write to his novelist to inquire why Angelina in the first volume has golden hair, and in the third (instead of a change to grey, which would seem reasonable enough) "tresses dark as the raven's wing." The poor story-teller gets out of his hobble as best he can (probably by another story); but if he told the truth his explanation would be simple enough. The person he is describing under the veil of fiction has black hair; he makes it golden, and generally pictures to himself his creation in the hue it owes to his artistic hands; but on some particular occasion, his mind, though he is writing of her presentment, reverts to the original, and he paints her in her natural colours.

In the recent anecdotal biography of Mr. Toole there is a pleasant note upon theatrical orders from which one gathers that some people imagine with difficulty the existence of an individual who would not take advantage of an order for the theatre if he could get one. Charles Mathews, it is related, was once at a country inn, where, struck by the civility of "the Boots," he gave him an order for the theatre where he was playing. The next day, he asked him how he liked the play; to which "the Boots" answered rather dubiously, "Oh, well enough; but who 's to pay me for my time?" To have seen Mathews or Mr. Toole can scarcely, of course, be called lost time; but that everybody wants to be amused is rather a doubtful dogma; while to suppose that everybody finds amusement where his fellow-creatures find it is certainly an error. "The Lady of Lyons" is said to be a most popular play, but so far from hungering for an order for it, I should require at least ten pounds—and my expenses there and back—to see it out. Musical entertainments are thought to be very charming by some people; but others, like myself, have literally not the sense for them; I am, unfortunately, growing deaf. I must confess, however, that when I had my full hearing they were still more unattractive to me. I could not expect, of course, to have got for listening the same sums that Mr. Sims Reeves got for singing, but I should have wanted a good deal of money. A large class of persons, I am told, even like lectures; it is impossible to account for some people's tastes; but, for my part, I cannot conceive an intelligent being hurrying over his dinner, and smoking one pipe instead of two afterwards, in order to attend a lecture without some handsome "compensation for disturbance." We are all too apt to think that what we like ourselves other people must like; but the idea of a "ticket for the platform" (let the "platform" be what it will) being a privilege to be struggled for, seems to push this social error to its extreme verge. To be asked, if one is not a sportsman, to pay a country visit in November is also rather "a large order" (though not of course a theatrical one); no doubt it would be an unusual thing for the would-be host to enclose a cheque in three figures along with his invitation, but it is a thing that ought to be done, and until it is done many persons, in the rôle of invited guest, will continue to say with that untheatrical Boots, "Who is to pay me for my time?"

Miss Edna Lyall, the authoress, is enviable for many reasons, and not the least of them that, writing—as she does—under a *nom-de-plume*, her "double," though apparently eccentric and certainly unorthodox, seems to confine her depredations upon the individuality of her original to the isle of Ceylon. Miss Lyall's publishers are very indignant upon her account, whereas they ought in reality to be astonished at the moderation of this impersonator of their client. Everyone who writes a book "By the Author of" something or other, instead of in his (or her) proper person, is wellnigh certain to have this compliment—a much more sincere form of flattery than mere imitation—paid to his success in literature. Everyone knows about George Eliot's double, and, indeed, the chance she gave him, by pretending to be of his own sex, was an irresistible temptation; but the fact is, it is a very common offence, and arises almost naturally from the system of anonymous authorship. To a person with a literary turn, but without a literary gift, it is the easiest way of securing a reputation—an ephemeral one, it is only too probable; but how ephemeral is fame itself! How many more writers for the *Times* there are in the world than are known in *Printing* House-square! How many more contributors to *Punch* than his dog Toby (who never forgets a face) can recognise! I have seen articles appropriated before now (not innocently, alas! but unconsciously) in the very presence of their owners. To say "I am 'S. G. O.' or 'X.,'" is only to mount one round higher on the ladder of impudence. What is much worse than this is when not Vanity but Impecuniousness is the motive of the impersonation—when the anonymous author of that very successful poem "Heart-Throbs," or of that fine philosophical work on the Moral Emotions, finds himself asking for money of strangers and running up bills, with gin and beer in them, at country inns by proxy. This little mischance may happen, as I have reason to know, to the best of authors.

I don't know whether the author of "Robbery Under Arms" is an Australian, but certainly, except by Charles Reade (who, by-the-by, had never been in Australia), life in the under-world has never been so well described. Rolf Boldervood (as the writer calls himself) might very well have hit upon a better name for his story; and, indeed, "The Bush-ranger" would have seemed ready to his hand; but what is the main point, after all, it is a good story. There is adventure enough in it to serve for half a dozen ordinary novels, and the interest never flags. The writer has little literary skill; but in these days, when we are so overdone with "art" and "style," his straightforward way of telling things is by no means unwelcome. One has seen his high-born hero-highwayman "Starlight" and his matchless steed before, but not for these many years, and one is very willing to renew their acquaintance.

If some people take too much pains to associate themselves familiarly with men of letters, "because of advantage," others, it seems, take too little. That most good-natured of authors, Dr. Oliver Wendell Holmes, tells us that he has really thought it his duty to refuse a lady's application for an autograph who has addressed him as "Miss Oliver Holmes." The existence of such an individual will seem incredible to those who do not know the amateur autograph-hunter, but not to those who do. Of course there is no reason why an illiterate person should not have made such a mistake; but the wonder is that anyone who felt sufficient interest in the author to want his handwriting should have done so. Yet it constantly happens. Charles Reade had almost as many gushing correspondents who addressed him as "Read" or "Reed" as by his true name; and not seldom he was "Sir Charles Reid." It must have been difficult even for a born fool to spell Dickens's name wrong; yet even he had admirers who preferred to use two "k's" instead of the "ck." I remember a dreadful story of a very pretty young lady coming to show herself to him, as Dolly Varden on her way to a fancy ball; and the painful fact being disclosed during their brief conversation that she had not the least idea from what book of his (or anybody's) the character was taken. The saddest experience of the want of knowledge of one's own subject *I* ever remember, was the rapturously applauded song of a young lady in which the line occurred "Thou who so gently walkest over me." It was encored, so I felt I could not be mistaken in the words, and ventured to inquire their meaning of the fair songstress. She said she thought it was plain enough, and that she had never had such an inquiry addressed to her, though she had sung it scores of times. "Don't you think it would sound better" I said (I thought the "sound" might move her, which the sense would obviously never do), "if you said 'watchest'?" "If you like," she replied good-naturedly; "'watchest,' or 'walkest,' what can it matter?"

It is probable that no one has had so many bird's-eye views of his native land as Mr. William Green, the champion Steeple Jack. He has repaired no less than fifty-three towers or spires, from that of Salisbury Cathedral, 404 ft. high, to that of Whittlesea, 280 ft. What an authority he must be on "Picturesque England"; though his line of business lies rather in the other direction, for I read that he has built 550 chimneys, which probably raise their stately heads and raven tresses in the manufacturing districts. Like his father before him, he is also an aeronaut, and took his first flight under the paternal care, from York to Wolverhampton, when eleven years old. He must know a deal more of "high latitudes" than the Marquis of Dufferin and Ava, though he probably never wrote "letters" about them. What is very curious, when he is not in the clouds, he is a Government diver—he recovered ten of the bodies after the Tay Bridge disaster—and goes to the bottom of things as well as the top of them; and yet I don't find his name among "Men of the Time." His hardest piece of work, we are told, was the setting right of a chimney 280 ft. high (with a diameter of 70 ft. at the base and only 8 ft. at the summit) which had got 3½ ft. out of the perpendicular. It was accomplished, we are vaguely told, "very expeditiously by screw-jacks and cutting out;" but what "cutting out expedition" was ever to be compared with this for danger and audacity? He is, of course, quite above all sectarian prejudices, and is just now repairing a Roman Catholic Cathedral spire at Plymouth. I am not very fond of going out to dinner, but I would not decline an invitation which had in its corner "To meet Mr. William Green." How much more interesting he would be than the generality of elevated persons!

THE COURT.

The Duchess of Albany, who had received the sad intelligence of the death of her mother, the Princess of Waldeck and Pyrmont, drove over from Birkhall on the morning of Oct. 27, and, having taken leave of her Majesty and the Royal family, left for Germany. The Prince of Wales arrived at the castle at one o'clock. A guard of honour of the Queen's Own Cameron Highlanders, under the command of Captain Davidson, was mounted at the Ballater Station. Colonel the Hon. Henry Byng, Equerry-in-Waiting, attended his Royal Highness from Ballater. Her Majesty drove in the afternoon, attended by the Countess of Erroll and Miss M'Neill. The Rev. J. Mitford Mitchell, Minister of the West Church, Aberdeen, arrived at the castle. The Right Hon. C. T. Ritchie and Major-General Sir C. Teesdale, in attendance on the Prince of Wales, had the honour of being included in the Royal dinner-party. Divine service was performed at Balmoral Castle on Sunday morning, the 28th, in the presence of the Queen, the Royal family, and the Royal household. The Rev. J. Mitford Mitchell, Minister of the West Church, Aberdeen, one of her Majesty's Chaplains, officiated. Princess Frederica and Baron Pawel Rammingen dined with the Queen and the Royal family. Mr. Ritchie, the Rev. J. Mitford Mitchell, and Major-General Sir C. Teesdale had the honour of being invited. On Monday morning, the 29th, the Queen went out, accompanied by Princess Beatrice; and her Majesty drove in the afternoon, attended by the Countess of Erroll, the Hon. Ethel Cadogan, and Miss M'Neill. The Prince of Wales, attended by Major-General Sir Christopher Teesdale, left the castle for Marlborough House. Prince and Princess Henry of Battenberg accompanied the Prince to Ballater, where a guard of honour of the Queen's Own Cameron Highlanders, under the command of Captain Davidson, was mounted at the station. The Right Hon. C. T. Ritchie and Mr. Allan Mackenzie had the honour of dining with the Queen and the Royal family.

The Prince of Wales, attended by Major-General Sir C. Teesdale, left Marlborough House on Oct. 26 for Balmoral on a visit to the Queen, and returned to town on the 30th. The Princess of Wales, with Princesses Louise, Victoria, and Maud—attended by Miss Knollys, Mdlle. Vauthier, Fräulein Noedel, and Lieutenant-General Sir D. M. Probyn—arrived at Sandringham on the 27th by Great Eastern Railway from Marlborough House, for the winter season. Her Royal Highness and her three daughters, together with the ladies and gentlemen of the household, were present at Divine service at Sandringham parish church on Sunday morning, the 28th. The Rev. F. Hervey, Domestic Chaplain to the Prince of Wales, Chaplain to the Queen, and Rector of Sandringham, officiated and preached.

The Duchess of Connaught has attended a course of nursing lectures with a St. John Ambulance class at Poona, India, and has passed a very satisfactory examination. Her Royal Highness obtained the "first aid" certificate some weeks previously.

THE BLACK MOUNTAIN EXPEDITION.

The military expedition, under General M'Queen, against the hostile tribes of the Black Mountain, on the frontier of the Hazara district, north of the Punjaub, seems to have nearly finished its work, and was expected to return to the Oghi Fort, near Abbotabad, in the first week of November, having occupied just one month in this campaign. The Akozais, the tribe who began hostilities last June, paid the fine imposed upon them by Oct. 27. It was the intention of the general commanding to proceed to Thakot and explore the whole district. The Thakotis number 1500 fighting men. General Sir Frederick Roberts, Commander-in-Chief of the Indian Army, arrived at headquarters of the expedition and inspected the force there. He went on to visit General Channer at Maidan, and inspected his brigade. The Khyber levies, with their chief, Major Adam Khan, have proved, by their wonderful activity, more than a match for the enemy in the harassing guerrilla warfare of the tribesmen, entirely disconcerting the ambuscades. Colonel Crookshank, who was wounded in the fighting on Oct. 4, has died.

The first and reserve columns of the Black Mountain Expedition, advancing northwards, have already reached Thakot, beyond the northern spurs of the mountain. No opposition is offered by the tribes. The other columns continue to hold their positions.

Our Illustration is a view of the post beyond Bagrwan, at the foot of the Black Mountain, which was occupied by the Northumberland Fusiliers at an early stage of the expedition. It is from a sketch by Captain F. C. Carter.

Prince Ferdinand opened the Bulgarian Sobranje on Oct. 27, and congratulated the country on the fact that the cause of Bulgaria was daily growing stronger.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Oct. 30.

General Boulanger has been banqueted by the revisionist committees of the arrondissements of Paris. The ceremony was crowded, enthusiastic, and uninterrupted by dissident cries, fighting, revolver shots, or other disagreeable incidents. The General made a speech, was applauded by a thousand people, and escorted home in triumph by a considerable crowd. It may be remarked that the General spoke with singular confidence; he seems convinced of his strength; he is evidently sure that he has only to stretch out his arm in order to reach the coveted prize. Nevertheless, with all his protestations of Republicanism, we cannot yet say that the pretender has clearly expounded his programme; he still remains vague, Sphinx-like, and fascinating. One important point to be noted is the scarification by the General of M. Floquet's project for the revision of the Constitution, and his severe ridiculing of the Cabinet, which hoped to confiscate to its own advantage the popularity of General Boulanger simply by adopting a Revisionist platform. Thus, M. Floquet is abandoned by the extreme Left, scoffed at by the Boulangist, and left in the lurch with a stillborn Bill in his arms, and no prospects.

Political matters are in more than their usual state of confusion, which all turns to the advantage of General Boulanger, who carefully preserves his character of a new and untried broom. The Income Tax Bill irritates all classes—commercial people and worldlings alike. The Cabinet and the Chamber are becoming more and more unpopular. The era of petty measures is beginning. Thus, Police orders have been issued for seizing and confiscating certain Boulangist pictures, portraits, and caricatures of the General, in which he is represented vanquishing the Chamber and putting the Deputies to flight. Propagandist pictures of the Comte de Paris and Victor Napoleon are likewise being seized. Instructions have also been issued by the Minister of the Interior concerning the swarms of Boulangist song-singers who have recently spread all over France and penetrated even into the remote communes with songs of an insulting nature about the President of the Republic. On the occasion of the marriage of the General's daughter, Mdlle. Marcelle Boulanger, to Captain Driant this morning, at the church of Saint Pierre de Chaillot, an unnecessary display of police force attracted to the ceremony more attention than it deserved. As the General has often said, he has only to wait and to take advantage of the mistakes of his adversaries.

Speeches on financial questions are not often attractive. We may therefore note that of M. Jules Roche, the reporter of the Budget of 1889, who depicted in striking terms the physiognomy which the events of 1870 have given to Europe. M. Roche contrasted the need and the power that all nations have at the present day of developing their well-being and their morality with the fatality which compels them to live, as in the Middle Ages, in an immense intrenched camp. The consequence is that the prodigies of modern science, instead of serving the advancement of civilisation, cause it to retrograde to the times of barbarism. Speaking of the extraordinary Budget, M. Roche explained that for several years to come France will have to spend a hundred million francs a year in order to put her defences in such a condition as the progress of artillery and fortification demands.

The hastily-elaborated decree, in virtue of which foreigners residing in France are required to register themselves at the Prefecture of Police, has received an additional clause, by which the time for inscription is prolonged until Jan. 1. Another recent decree, prohibiting the admission of foreign officers to study in the French military schools, is severely criticised by the press, because it will put an end to the growth of French influence in many minor States, who will henceforward send their officers to school in Germany. The case of Roumania is cited in particular.

A Frenchman, M. Jules Imbs, has, it appears, invented a new system of elevated cable railways, which will enable us to go from Paris to Calais in one hour, to Marseilles in two hours, and to St. Petersburg in eight hours. The car or boat will be very long and spindle-shaped, and capable of carrying 150 to 200 passengers. This new method of travelling at a speed of 250 miles an hour will be applicable only to long distances, or to a minimum of sixty miles. Experiments are to be made shortly in the environs of Paris.

The right of levying a tax of three sous for an arm-chair and one sou for a plain chair in the public promenades and gardens of Paris will be put up to auction shortly. The upset price for the period of four years from January, 1889, to January, 1893, is 45,000f. The city of Paris furnishes a minimum of 6700 chairs, which the lessee has to keep in good order.

Zola's new and reputedly chaste novel "Le Rêve" is being transformed into an opera by M. Gallet, the librettist, and M. Bruneau, a pupil of Massenet.—A new operetta by Leterrier and Vanloo, with music by Lacome, called "La Gardeuse d'Oies," has been produced with some success at the Folies Dramatiques. It is an absurd libretto in the style of "Girofle-Girofla," but the music has many pleasing *morceaux*.—The famous old ship La Belle Poule, which brought back the remains of Napoleon I. from St. Helena in 1840, is now being broken up at Toulon.

T. C.

The Emperor William, with a large suite, left Berlin on Oct. 25 for Blankenburg, in the Harz, to shoot with the Prince-Regent of Brunswick, returning on the following day. The Emperor has ordered his Foreign Office to convey to the Governments of the countries which he recently visited his thanks for the reception accorded to him. His Majesty received, on the 27th, the Municipal Deputation, which offered him a welcome on his return. In commemoration of his journey they propose to erect a fountain on the Schloss Platz. On the 29th his Majesty visited Hamburg, and was cordially greeted by the people. He drove through the streets to the spot where a stone was to be placed to commemorate the incorporation of the city in the German Customs Union. An address of welcome was read, and his Majesty then laid the stone. He afterwards inspected the ports. In the afternoon the Emperor was entertained at a banquet, and in the evening the city was illuminated; his Majesty proceeding to Friedrichsruh, where he was the guest of Prince Bismarck until the 30th, when the Emperor returned to Potsdam.—The decree of confiscation on Sir Morell Mackenzie's book in Germany has been suspended.—There has been a great fire at the small town of Huenfeld, near Cassel, 1500 persons having been rendered homeless.

The Queen of Portugal and the Duke of Oporto left Vienna on Oct. 25 for Lisbon.

King George, in opening the Greek Chamber, on Oct. 27, expressed satisfaction at the progress made by the nation since he took the oath to the Constitution twenty-five years ago; and also at being able to announce the betrothal of the Duke of Sparta to Princess Sophie of Prussia.

The Metropolitan of Servia has pronounced the dissolution of the marriage of King Milan and Queen Natalie.

THE LATE SIR HUGH OWEN.

The death, seven years ago, of Sir Hugh Owen, formerly Chief Clerk of the Poor Law Board, from which office he retired in 1872, was much regretted by his fellow-countrymen in Wales, to whom he had rendered great services by promoting institutions of popular education. He had also, during his residence in London, as a leading member of the British and Foreign School Society, and for three years a member of the London School Board, gained public esteem, and had taken an active part in religious and philanthropic efforts. In Wales, he gave valuable assistance to the establishment of the University College at Aberystwith, and the Bangor Normal College for Teachers, also the Cambrian Association for the Deaf and Dumb, while he was a zealous patron of the Eisteddfod and other national institutions.

The erection of a monument to commemorate the regard in which Sir Hugh Owen was held by Welshmen has been promoted by a committee whose chairman is Lord Aberdare; and on Monday, Oct. 22, a statue was unveiled in the town of Carnarvon by the Hon. Mrs. Wynne Jones, his Lordship's daughter, wife of the Vicar of Carnarvon. The present Sir Hugh Owen, K.C.B., Permanent Secretary to the Local Government Board, was among the company. Sir John Puleston, M.P., presided, and Mr. Lewis Morris, Captain Verney, and others spoke. The Aberystwith, Bangor, and Cardiff Colleges were represented, and other Welsh institutions. A procession was formed in Carnarvon Castle, comprising the magistrates and gentry of the district, Mayors of towns in North Wales, representatives of the Welsh colleges and of societies with which Sir Hugh Owen was connected, local Volunteers, friendly societies, and school-children. The statue, which is in bronze, is the work of Mr. Milo Griffith, and had been provided by public subscription,

STATUE OF THE LATE SIR HUGH OWEN AT CARNARVON.

the cost of the pedestal being defrayed by local subscriptions. On behalf of the subscribers, Sir J. Puleston presented the statue to the Mayor of Carnarvon. The ceremony of unveiling was performed by Mrs. Wynne-Jones, and the people, led by Mr. David Jones and the band, sang an old Welsh air.

The statue is placed in a well-chosen position in the great square of Carnarvon, and stands out well against the castle. The inscription upon the statue runs as follows:—

"Sir Hugh Owen, born 1804, died 1881. Erected by a grateful nation."

All the representatives of the Powers met at the Porte on Oct. 30 and signed the Suez Canal Convention.

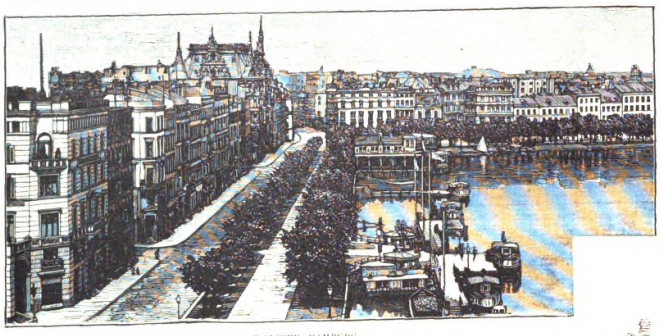
Lord Justice Clerk M'Donald was on Oct. 30 installed in the Court of Session, Edinburgh, as Lord Kinsburgh. The Lord Advocate and the Solicitor-General also presented their commissions.

At the Chester Diocesan Conference on Oct. 30, an address, signed by 382 clergy and 895 churchwardens and lay representatives of the diocese, was presented to Dr. Stubbs, on his translation to the See of Oxford. The Duke of Westminster made the presentation.

The Czar and Czarina and the Imperial family arrived at Sebastopol on Oct. 28, and continued their journey to Gatschina in the afternoon. Among those who greeted their Majesties on their arrival was a special Envoy from the Sultan of Turkey. An accident to the train in which the Czar was travelling on the 29th is reported from St. Petersburg. The second engine ran off the line, dragging with it four carriages. No member of the Imperial family or suite was injured.—The Russian Grand Dukes Paul and Sergius and the Grand Duchess Sergius left Cairo on Oct. 26 for Alexandria, whence they started for Athens, in order to attend the festivities in celebration of King George's accession.—There was a special religious service on the 25th at St. Petersburg to celebrate the fiftieth anniversary of the entrance of M. De Giers into the public service. A grand reception was held at the Foreign Office, where the heads of the Embassies and Legations presented M. De Giers with a gold inkstand.

THE DEPOSED GERMAN HANSE TOWNS, HAMBURG AND BREMEN.

The German Emperor visited the city of Hamburg on Monday, Oct. 29. It is with a half-feeling of regret that one hears of the closing of Hamburg and Bremen as free ports. In a few years the name of the Hanseatic League will sound as quaintly as that of the Vehm-Gericht. We shall think of the "League" as of some half-mystic mediæval institution, suggestive of secret guilds, of burghers' feasts, of stout-hearted citizens throwing down the gage to monarchs and nobles. But the life of Hamburg and Bremen is not likely to die out with the spirit of historical romance, as has been the case with old Ghent and Bruges.



On a bright winter or autumn morning, if you are standing on the deck of either of those famous liners, the Penguin or the Mavis, you will be struck by the busy aspect of the broad and flowing Elbe. Ocean-liners sweep proudly along, throwing up their after-wash on banks that are not so well kept as those of the "lazy Scheldt." Smaller craft, too, from Antwerp, Rotterdam, the Thames, Grimsby, and even Liverpool, bear you company. Some rather clumsy fishing-boats, less gaily painted and less quaint in form than those of the Dutch Maas, tack to and fro. But the Elbe has a charm of its own, possessed neither by the Maas nor by the Scheldt. The richly-wooded hills rising within view remind you, oddly enough, of the Bosphorus, mingled with a dash of the Upper Thames. On these heights are many pleasant villas of the rich Hamburg merchants. Leaving them behind, you soon find your way into the docks by the Kaiser Quay. On a bright, sunshiny day, the view of Hamburg from the river will be a surprise. Although much of the old city has been swept away, still, in the neighbourhood of the quays, there remains a good deal that is picturesque. Great peaked-roofed houses, with numerous windows glittering in the sun, overlook the broad canals and the lesser waterways that are not too suggestive of a perfect system of sanitation. The copper spires, too, of the churches, having turned to a brilliant green, add to the cheery aspect of the town. Yet, after all, Hamburg, despite its new Bonded Stores—which rival anything of the kind in England—has no architectural magnificence. Even the much talked-of new Post-Office is nothing to boast of greatly. As to the collection of pictures at the Museum, perhaps the less said about them the better. This remark does not apply to the five rooms of good paintings by the best English masters, presented to Hamburg by a wealthy citizen of great commercial renown.

Hamburg, in one respect, is almost unrivalled. Our View of the "Alster" Lake, surrounded by its boulevards and handsome buildings, imperfectly represents its aspect. The British tourist, standing on the steps of Streit's, cannot fail to be struck with the beauty of this city lake. The Jungfernstieg Quay, too, is spoilt by no dingy, clumsy craft moored against it. Only pretty little steamers take their passengers to the suburbs and pleasure gardens on the banks of the Alster. At nighttime these small craft darting to and fro in different directions, with their gaily-lit cabin windows, add a curious charm to the scene. Indeed the best sights in Hamburg are far from being the regulation shows of a great city. In public buildings it is poor indeed; but it affords rich opportunities for strolling about and seeing the place. Though guide-books have little to say about it, take, for instance, the quaint old street of "Bei den Hütten"; walk through it on a fine moonlight night, and the spirit of the Middle Ages is all around you. The pleasures of modern Hamburg also are not to be despised. St. Pauli, with its Bier Gartens and its perpetual fair of cheap shows, is well worth looking at, if only to pay a visit to the "Grotto," an arrangement of cork rockery, waterfalls, and electric lights, of its kind perhaps unequalled. But what will be the future of the old city, now that its historic "freedom" is at an end? The natives of Hamburg are emigrating year by year, and the Prussians are coming in. As a matter of fact, there are not above 150,000 born Hamburgians in the city. When the Municipality is swept away, Hamburg will become as much a part of Prussia proper as Berlin itself; the streets will be filled with blue uniforms and clanking sabres, and the rule of pipeclay and drill-sergeant will utterly banish the old sentiment of civic pride and civic good-fellowship.

We next proceed to Bremen, the quaint, clean, pretty town, where, standing by the crumbling Rolandssäule and looking towards the Rathhaus—if one is not thinking of a lunch in the Rathskeller—one is struck by the brisk, busy aspect of the market-place and its crowd of peasant dealers. The Bremen people, indeed, seem to be cheery, contented folk; and despite their cigar grievance with the German Chancellor, take, perhaps, a little more kindly to the bluecoats than the Hamburg people do. Immediately after the late war, strict orders were given to all Prussian officers to make themselves as agreeable to the citizens as possible. Etiquette was even to be waived in favour of the citizens. Duty calls were thus ordered to be paid *first* by the military to the civilians. The result of this is that many marriages have taken place between the well-dowered daughters of Bremen and the aristocratic, but not so wealthy, military "Vons." In the pretty gardens, laid out seventy years ago on the site of the old fortifications, beside the lake, and within sight of the odd-looking windmill, Prussian bluecoat and Bremen bonnet may be seen side by side. The young men of the city take very readily to military service, which they make an excuse for a few years' comfortable frolic with as good an allowance as an indulgent father can be expected to supply. Stern parents, however, do not always see the situation in this light, retaining many of their old prejudices against the Prussians. But, whatever political sentiment may be felt, it apparently has no saddening effect upon the bright cheerfulness of the city. Sauntering along, or taking the tram-car down the Oberstrasse, a more lively crowd of business people one could not wish to see. If, however, you want a more sombre experience, you cannot do better than pay a visit to the famous Bleikeller beneath the Dom. This cellar is remarkable for its power of preserving everything from decay that is placed within its gloomy walls. The collection of remains here is of a varied character, including those of a defunct English Countess (at least, so the guide tells you), and those of favourite dogs and cats. On emerging from this place you can take a stroll through the gardens, and, paying a visit to the Rathskeller, gaze at the mighty cask of the "Twelve Apostles" and other works of art, finishing with a regulation Bremen lunch of oysters, lampreys, "beefsteak," and Rheinwein. Bremen is well worth a visit, though no longer a Free Town of the Hanseatic League.

The Executive Committee of the Prince's Cinderellas announce the advent of the sixth series of these successful and high-class dances, which for the past five years have been held on behalf of the Chelsea Hospital for Women at the Prince's Hall, Piccadilly. These dances begin at eight and terminate as the clock strikes twelve. The committee intend to cancel all vouchers given in previous seasons, so that both old as well as new subscribers will have to obtain vouchers for introduction to the forthcoming series. Several new features are to be introduced this year. Further particulars may be had from the secretary at the Hospital in the Fulham-road.

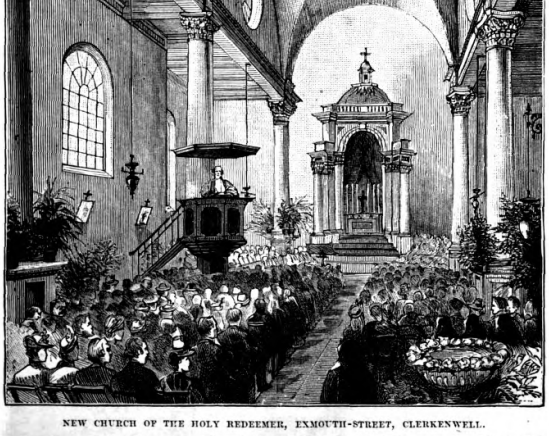
THE PLAYHOUSES.

There is some really admirable criticism scattered about Dr. Westland Marston's lively and scholarly description of "Recent Actors." For instance, in commenting on Mrs. Glover—who is contrasted with excellent skill with Mrs. Stirling in the character of Mrs. Malaprop, giving both the benefit of their style and characteristics in interpreting a character that some think "plays itself"—our author comments on the essential difference between success in tragedy and comedy. "In reviewing a number of performers," observes Dr. Marston, "whose merits are often alike in everything but degree, it becomes difficult to apply epithets which have not lost something of their force by repetition. To say simply that Mrs. Glover's main excellence was her truth to nature, though no doubt literally correct, would hardly tell anything. Edmund Kean for instance, Macready, the Kembles were of course generally true to the passions and characters they represented. But this truthfulness can only be general in tragedy, which represents the essential feelings men have in common, and rejects everything that savours of mere peculiarity. In comedy, however, which represents the idiosyncrasies of persons, and the modes in which men differ, the expression of vivid personality is often one of the highest merits." The absolute truth of this last statement, as applied to the highest form of comedy, is very striking when one comes to consider such a performance as that of the French actor Lafontaine in the play called "Un Fils de Famille." Few comedies that have been written during the last forty years have boasted so many able interpreters, whether we consider the original French or the various English adaptations. Lafontaine was the original martinet Colonel, a part subsequently played with remarkable skill by Benjamin Webster, John Ryder, and John Hare. Bressant was the original young Lancer, a part subsequently taken by Leigh Murray, David Fisher, and W. H. Kendal. Add to these names Robert Keeley as the trumpeter and Mrs. W. H. Kendal as the heroine, and it may be taken for granted that the comedy has lost nothing at the hands of its interpreters. And yet, as we see Lafontaine now, and as we have seen him more than once in the same part of the same play, he seems to stand head and shoulders above his followers and imitators. The last time that Lafontaine played the old Colonel in the "Fils de Famille" was very shortly before H.R.H. the Prince of Wales was attacked with typhoid fever. We remember him to have been present at the French Plays to see Lafontaine, at the St. James's Theatre, immediately before the Prince's illness. No actor is better able, by slight and delicate touches, to "express the idiosyncrasies of persons and the modes in which men differ." It is difficult to believe that it is the same man who is playing L'Abbé Constantin and the old Colonel Deshayes. Both men are essentially different in temperament; both are distinct types of idiosyncrasies or marked differences in temperament.

Lafontaine's Colonel shows himself in his true colours five minutes after he has stepped on the stage—an old gentleman who has not forgotten the gallantry of his youth; a strict disciplinarian who seldom neglects to observe the manners of a gentleman; a man testy, polite, severe, courteous, quick to resent an insult, and equally quick to forgive an injury. The scene at the piano is inimitable. The old Colonel, who is fooled to the top of his bent by an adulatory sister, has been asked to sing a song in order to ingratiate himself with a pretty widow. Though of a certain age, he possesses the remnant of a pretty voice and a style of singing foreign to the nature of a younger school. His rival with the widow is a young *fellow full of chaff and frivolity*, who has escaped from the ranks of the Colonel's regiment and is meeting him on a common platform. The Colonel all through this excellently-played scene shows his sensitiveness and apprehension. He thinks he has seen the young fellow before, but does not know where it was; he sniffs warfare afar off; he is desirous to pick a quarrel, but too polite to do so without a cause. The change from hectoring attack to polite retraction was admirably done, and from first to last it was a specimen of the highest comedy skill. Mr. Hare's Colonel Daunt, excellent idea as it was, seemed cast in a wholly different mould. Both are as good and as distinctly apart as the Mrs. Malaprop of Mrs. Glover and of Mrs. Stirling. The school of the highest acting of comedy is almost extinct in France. Bressant and Lafont are no more; Delaunay has retired from the Français; Bouffé is just dead, and Regnier very few can remember well; at this juncture no time should be lost in seeing Lafontaine, one of the last of the old school of actors, whose Abbé Constantin and Colonel are a revelation of fine comedy skill.

The visitors to Drury-Lane Theatre have now an opportunity of seeing arranged in the grand salon one of the most perfect and extensive collections of Elizabethan relics that have ever been brought together in this country. The Plymouth collection in the summer was fair enough; but this is infinitely better. Collectors and connoisseurs of old armour, admirers of old books and pictures, all who are learned in iron chests and bric-à-brac of every degree, will probably thoroughly enjoy the entr'actes when "The Armada" is going on, and will pause in wonder and horror before the steel torture-chair, which is the sensational gem in the thousands of objects secured by Mr. Augustus Harris. "The Armada," by-the-way, is going as well as ever; and Mr. Leonard Boyne has returned to work again after a long and severe illness.

Before this week has passed away we shall have seen the promised new burlesque "Faust up to Date," at the Gaiety by Mr. George R. Sims and Mr. Henry Pettitt; a new ballet at the Empire; and "Nadgy," the new comic opera at the Avenue, where Arthur Roberts is the hero of the entertainment. Next week we shall be more serious, for will it not be November? and the first important event will be Mr. Pettitt's drama, "Hands Across the Sea" at the Princess's.



The Bishop of Rochester, speaking at Sion College, said all that the Voluntary schools demanded was justice; those schools were the life of Christian thought and principle to the people of England.

NEW CHURCH IN CLERKENWELL.

The new Church of the Holy Redeemer, Exmouth-street, Clerkenwell, of which we give two Illustrations, is interesting from an art point of view as being, with the exception of the Oratory at Brompton, the only specimen of Italian or English Renaissance church architecture erected in the metropolis since the days of Sir Christopher Wren. In plan the church is cruciform, with nave aisles, but the transepts are shallow projections that do not rise above the roof of the aisles. The nave and chancel, about 150 ft. in length, are of uniform height, and are vaulted throughout. The width of the interior is 36 ft. Of the four bays which will compose the building when complete, only three are at present finished. The easternmost bay forms the choir, and against the temporary wall has a lofty baldachino, about 40 ft. in height, standing upon marble columns. There is some excellent carving, though simple in design, on the capitals of the pillars; and the general effect is light and at the same time impressive. The architect, Mr. J. D. Sedding, of 447, Oxford-street, may be congratulated on his design, which not only pleases the eye, but is more suggestive of the purpose of the building than the Countess of Huntingdon's chapel, on the site of which the Church of the Holy Redeemer now stands. The site was given by the Marquis of Northampton, and the cost of the building is about £7000.

NEW CHURCH OF THE HOLY REDEEMER, EXMOUTH-STREET, CLERKENWELL.

CAMP-BAGGAGE ELEPHANTS IN BURMAH.

To change quarters in Upper Burmah, to relieve a post, or to make even a short march, is often attended by some worries and anxieties about the conveyance of baggage. Of the means of transport there is frequently a choice, as carts, mules, ponies, and coolies are employed in this service, according to circumstances; and the elephant is also requisitioned for duty, especially in and about the neighbourhood of Mandalay, where the *stud of the deposed King Theebaw* was added to the animals of the Transport Department. Picking his way with careful tread along the slippery roads, or up the mountain paths of the Shan Hills, the intelligent and hard-working beast conveys on his capacious back 800 lb. or 1000 lb. weight of baggage; and, at the journey's end, kneels obediently at the word of command of the mahout, a preliminary, as he well knows, to biscuits or chupatties, the reward of his day's labour. Our Illustration is from a sketch by Lieutenant A. E. Congdon, of the 2nd Battalion Royal Munster Fusiliers at Maymyo, Upper Burmah.

In recognition of his public services during the past year the Queen has conferred the honour of knighthood on Mr. De Keyser, the retiring Lord Mayor.

The old Crimean colours of the 2nd Battalion Border Regiment (formerly the 55th) have been deposited in Kendal parish church, the regiment having recently been presented with new colours by the Duke of Cambridge.

BRITISH PROTECTORATE IN SOUTH AFRICA.

The accompanying Sketches show the progress of the British protectorate in tropical South Africa, to the north of Bechuanaland. In 1884 we took under our protection Khama's country, up to the 22nd parallel of south latitude. Last year, we limited this protection, on the north side of the Crocodile river, to a line running north from where the Macloutse river enters the Crocodile. The Boers were not slow to take advantage of this concession to make a route through to Matabeleland, where they, too, are intent on Mashona gold. They placed a pont on the Crocodile river, and sent Mr. Grobler as their Consul to Lobengulo. He passed by this pont, and entered Khama's territory between the Macloutse and Shashi rivers, violating thereby the British protectorate. The Matabele King refused to receive him; and Grobler returned by the same route, but was stopped by Khama's men for going through his country without leave, and by a route that Khama will not recognise, while the trade route through his town is free to all. Then ensued the fight in which Grobler and three of his party were wounded (Grobler has since died), and seven of the Bamangwato were wounded. This affray took place well within the protectorate. At the same time, another fight was going on at the pont, of which Francis and Chapman, with an armed party of Boers, had taken advantage to cross from the Transvaal, with a waggon laden with arms and ammunition, intent on getting to Matabeleland, to induce Lobengulo to support them against Khama about a concession in the disputed territory between the Macloutse and Shashi rivers. This party attacked Khama's men, but ultimately recrossed the river with their waggons.

To inquire into the disputed facts or conflicting stories put forward by the parties, Sir Sidney Shippard, K.C.M.G., the Administrator of British Bechuanaland, was commissioned to hold an inquiry on the spot. This inquiry was attended by delegates from the Transvaal—General Joubert and Mr. H. Pretorius, with their secretary, and two German officers of the Transvaal Artillery. On the other side, Khama, chief of the Bamangwato, was present with his brother Selechwe, and the Rev. Mr. Hepburn, a well-known missionary who has long resided in Khama's dominions. Sir Sidney Shippard had travelled up along the north bank of the Crocodile, as far as Baines' Drift, where the pont is placed, with an escort of fifty mounted police under Major Goold Adams. He was attended by Mr. Ashburnham, secretary to the Administrator of Bechuanaland; Major Goold Adams and Lieutenant Lockner, of the Bechuanaland Border Police, were also present at the Court of Inquiry. Our Illustration, from a sketch by Mr. E. A. Maund, shows the scene at a *sitting of this Court*, with most of the gentlemen seated on boxes, as there are few chairs in that part of the country. Many witnesses gave their evidence, some in Dutch, and some in the Sechuana language, interpreters being employed. The evidence will be referred to the consideration of the Crown lawyers. Another Sketch is that of the British Commissioner's camp, situated in the bush or forest on the banks of the Crocodile river, where the Union Jack was hoisted above Sir Sidney Shippard's tent. The flag of the Transvaal Republic was hoisted on the opposite side. Khama was encamped near with about 4000 men, of whom 300 were horsemen.

THE SPEAKER ON EDUCATIONAL EXAMINATIONS.

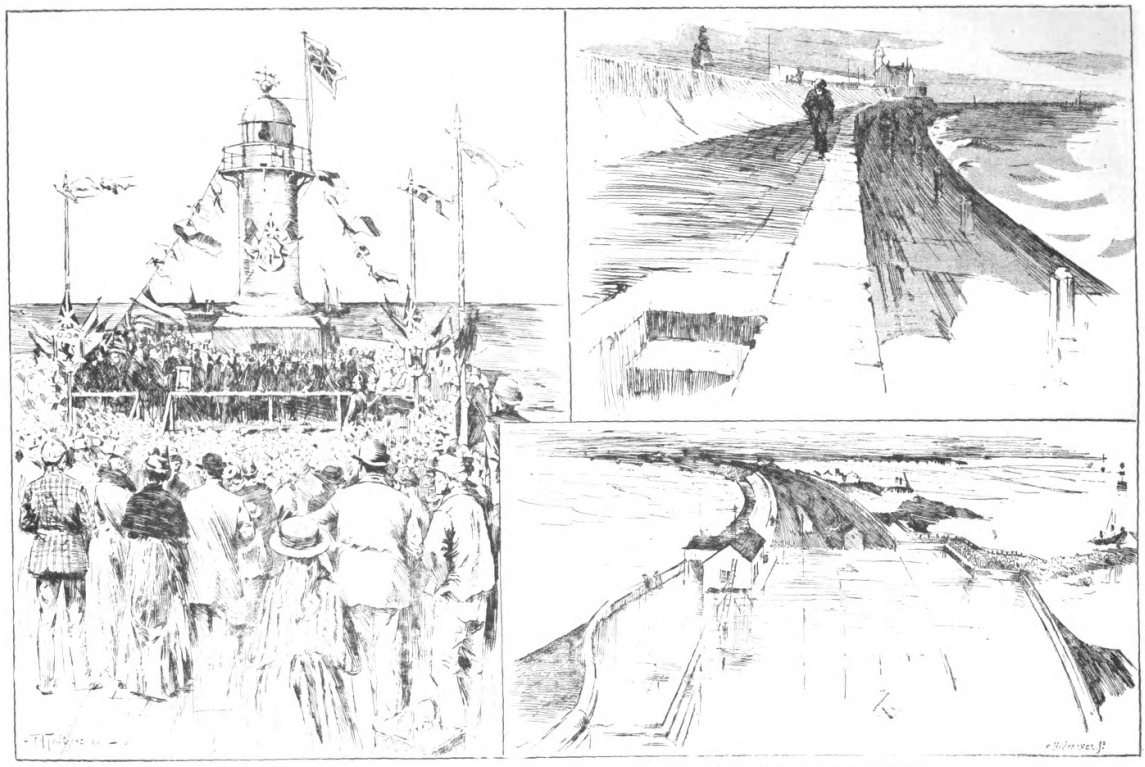
The Speaker presided at the annual prize distribution of Portland Wesleyan School, Leamington, on Oct. 29, and delivered an address on the sacrifice of education to examinations. The great subject of education was (he said) at this moment exciting an unusual amount of attention in the country. It threatened, even before long, to become a burning question. It was a very *curious thing* that this subject of education had been so long before the country. If any gentleman would go to the House of Commons and ask to see the Journals of that House he would find that the very *earliest entry* there was that of a Bill introduced in 1547, entitled "A Bill for the Bringing-up of Poor Men's Children." From that day to this they had had vast changes, certainly, in the educational system, but it was only recently that there had been anything like a national system of education. Public attention had been called in a leading review to the question of these examinations. About a month ago he was furnished with a document asking for his adhesion by signature to a series of statements to the effect that there were too many examinations, and that examinations were killing education. Prize-winning is a noble ambition, but that ambition in itself might degenerate into a downright vice. There was in the sporting world a person known by the name of the "pot-hunter." So it was with some boys and girls who were encouraged by their friends—held up as models by the school in which they received their training. There was, however, grave danger in the system. Were these prizes ends or were they means? If they were means to something else, well and good; let them be taken and enjoyed, and let those who win them get a proper meed of honour. What he disputed and deprecated was the habit of going in for prizes alone. Complaints were being made now that they were spread all over the country that the examinations were becoming too rigid, too systematised, and that they did not allow the play of individual minds to prove themselves, and the result was that they did not always get the best boys or girls for their examinations. He was not asking for the abolition of competition or of examination. That was impossible under the English system, unless they reverted to pure patronage and favour, which none of them wished to do. It was impossible to believe that the questions put to children in schools and young men entering public offices were exactly those which were best fitted to show they had profited by their education. There was a class of persons who played into the examiners' hands, and he was sorry to say the examiners played into their hands. It was known what kind of examination was to be held; and a class of people known as crammers crammed boys up for this special examination, and the result was an artificial system throughout. The examinations should and must be sensible examinations, and such as to elicit the whole mental calibre of the boy, and to detect and defeat a system of cramming.

THE GERMAN EMPEROR IN ITALY.

Some account has been given of the visit of the Emperor William II. to the King of Italy, and his Majesty's sojourn at Rome, and for two days at Naples, between Oct. 11 and Oct. 19, with the military review at Centocelle, the naval review and launch of a great war-ship at Castellamare, and other interesting spectacles provided for his entertainment.

The arrival of the King and his Imperial guest at Naples, on Oct. 16, was greeted with enthusiastic popular acclamations. Their Majesties, accompanied by Prince Henry of Prussia and the Dukes of Aosta and Genoa, were received at the railway-station by the Mayor of Naples and the civil and military authorities. The Royal party drove to the palace through the Strada Carriera, the Via Grande, the Strada Foria, the Corso Garibaldi, and the Via di Toledo, which is now called Via Roma. The Emperor and the King were everywhere received with the utmost enthusiasm by the crowds in the streets. The cortége was followed by the Workmen's Associations from the suburbs, headed by bands of music, as well as by the Fishermen's Company, in picturesque costumes. The Piazza del Plebiscito, in front of the Royal Palace, was crammed with spectators. On the appearance of the Emperor's carriage the applause became deafening, and continued as the Royal party entered the palace, the cries of "Long live the Emperor," and "Long live the King," being incessant. The Emperor and King Humbert, with the Royal Princes, shortly afterwards appeared on the balcony, when the acclamations of the people were renewed with increased vigour.

Very soon after his arrival the Emperor went out with the King to visit the Museum, where Signor Botticelli, the Minister of Public Instruction, was waiting to conduct their Majesties through the building and point out the principal objects of interest. The visit lasted an hour and a half, during which the Emperor conversed with the Ministers and Generals in attendance. In the evening the Piazza del Plebiscito, on one side of which the palace stands, was lighted up in very effective style. While a band played a serenade in front of the palace, the Emperor and King Humbert came out on the balcony and remained several minutes in view of the people.



At Rome, on the 18th, in the evening, after the return of their Majesties from Naples, the Emperor, Prince Henry, the King and Queen, and several members of the Italian Royal family went to the Palatine to view the illumination of the Coliseum, the Forum, and other monuments of the ancient city. The display of fireworks thrown up from the interior of the Coliseum, and casting, as they rose above its stupendous walls, a vivid glare of light on the ruins of Imperial Rome, was, indeed, a strange and marvellous exhibition.

THE PARNELL INQUIRY COMMISSION.

The sittings of the three judicial Commissioners, Sir James Hannen, Mr. Justice Day, and Mr. Justice A. L. Smith, appointed under an Act of Parliament to inquire concerning the charges and allegations set forth by the *Times*, and by the Counsel for its proprietor in the trial of "O'Donnell v. Walter," against Mr. Parnell and many Irish members of Parliament and others connected with the Land League and the National League, were resumed on Tuesday, Oct. 30, in the Probate Court, Royal Courts of Justice. The Attorney-General, Sir Richard Webster, the leading Counsel for the *Times*, had finished his speech on Friday, the 26th, having gone through all the matters of which he was prepared to bring evidence. The other Counsel on that side were Sir Henry James, Q.C., Mr. Murphy, Q.C., and Mr. W. Graham, of the English Bar, and Mr. John Atkinson, Q.C., and Mr. Ronan of the Irish Bar. Mr. Parnell was represented by Sir C. Russell, Q.C., and Mr. Asquith; and the other members of Parliament against whom charges have been brought by Mr. R. T. Reid, Q.C., Mr. F. Lockwood, Q.C., Mr. Lionel Hart, Mr. A. O'Connor, and Mr. A. Russell, of the English Bar, and Mr. T. Harrington, of the Irish Bar. Mr. Hammond (solicitor) represented Mr. Chance. Mr. Biggar and Mr. Davitt appeared in person. Sir Walter Phillimore and Mr. Fitzgerald appeared for the Hibernian Bank, and Mr. Wheeler, Q.C., for the National Bank. The first business on Tuesday, the 30th, was to decide on an application to enforce the order to produce the books of these banks for inspection of the National League banking accounts, as well as the cheques and other documents concerning those accounts. The Court resolved to enforce this order. The Attorney-General then called his first witness, Bernard O'Malley, a head-constable of the Irish Constabulary, to give evidence of speeches made in July, 1880, at Milltown Malbay, Clare, by Thomas Brennan, J. W. Nally, and others, and in Galway, a few months later, by Mr. Matthew Harris, Patrick Gordon, and others, inciting the people to fight, and threatening the landlords with violence. Evidence of the same kind was given by another head-constable named Irwin, and the Court adjourned for the day.

The four-light west window of the south aisle of Ruabon Church, North Wales, has been recently filled by the Dowager Lady Williams Wynn with some finely-painted glass to the memory of her late husband, Sir Watkin Williams Wynn, the sixth Baronet, who died at Wynnstay in 1885. Messrs. Ward and Hughes, of London, are the artists.

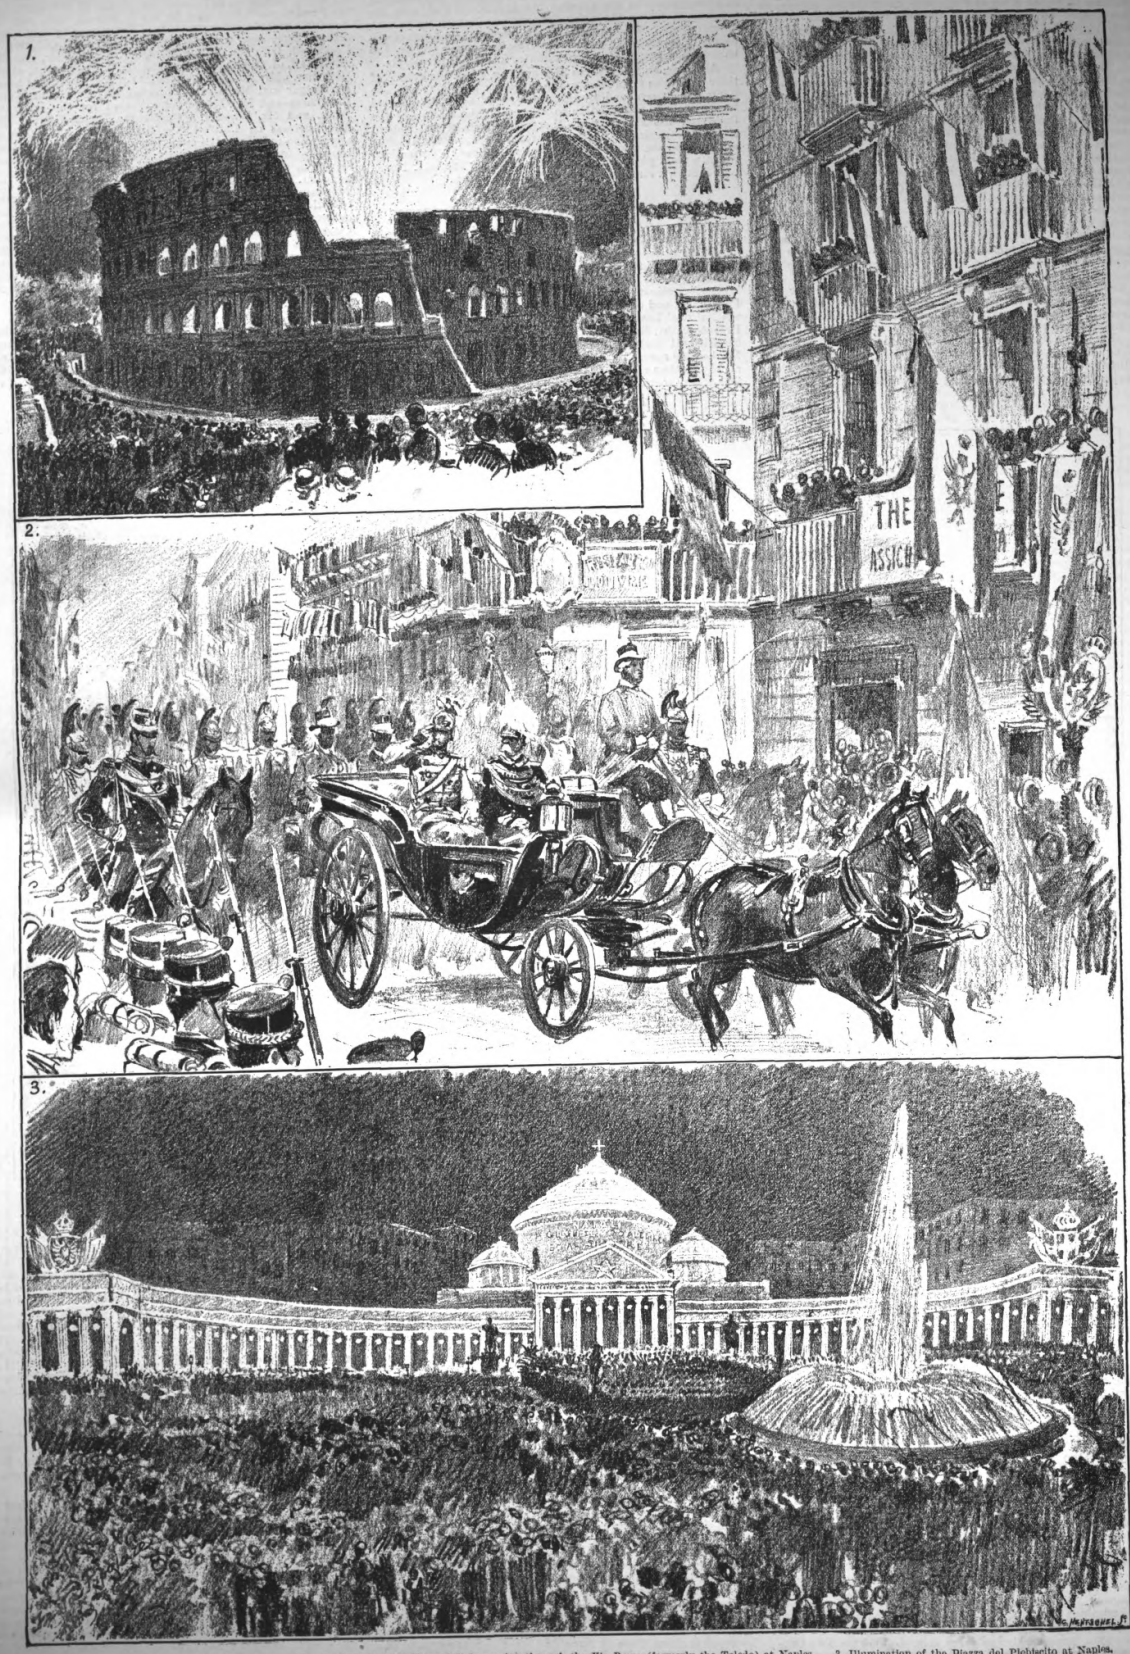
Opening Ceremony at the Light-house.

View along the Breakwater, from the Light-house.



THE RIGHT HON. W. H. SMITH OPENING THE SOUTH GARE BREAKWATER, AT THE MOUTH OF THE TEES, NEAR MIDDLESBROUGH.

NEW BREAKWATER AT MOUTH OF THE TEES.

A public work of much importance to the commerce of Stockton-upon-Tees, and the coal and iron districts of Middlesbrough and Cleveland, has just been completed. On Thursday, Oct. 25, the Right Hon. W. H. Smith, M.P., First Lord of her Majesty's Treasury, formally opened the South Gare Breakwater at the mouth of the Tees, which has been constructed at a net cost of £250,000. The improvement of that river reflects great credit upon the Tees Conservancy Commissioners, consisting of Sir Joseph Whitwell Pease, M.P., the chairman, and several other gentlemen largely interested in the industries of the district. Fifty years ago, Middlesbrough was a lonely hamlet, amidst a waste of marshes, sandbanks, and waters of the Tees estuary. The discovery of the Cleveland ironstone, the works of Messrs. Bolckow and Vaughan, established between 1840 and 1850, and since greatly extended, and more recently the working of rock salt, have brought a large industrial population, supported by capital to the amount of several millions sterling. The river has been greatly improved to meet the growing requirements of the iron and other trades. Miles of training walls and great breakwaters have been formed of millions of tons of slag, the waste product from the blast furnaces; and the wide estuary between Redcar and Seaton Snook has been converted into a spacious harbour of refuge, guarded by a corps of Marine Engineers, furnished with the most scientific electrical appliances. Vessels from all parts of the world come to Middlesbrough and find every accommodation in the docks. The borough has now a population of 75,000, and there are signs of further extension on every side. In 1852 the Tees Conservancy Commission was formed and took the management of the river, having for their engineer Mr John Fowler, who died very recently. Before they began operations there were three, and sometimes four, channels in the estuary, all very shallow, and, owing to the shifting sand-banks, subject to be frequently changed. The Commissioners selected the south channel, and by dikes and dredging made it safe and easily navigable. From Stockton Bridge to the mouth of the river twenty miles of low-water training walls have been erected for the purpose of confining the channel to one course, increasing the volume of water and its scouring power. By dredging in the bed of the river its depth from Stockton downwards has been increased. The total quantity dredged since 1854 has been about 22,700,000 tons, of which 2,129,750 tons were dredged last year. Several projections have been cut off, and the portion cut between Stockton and Newport has been widened. Dangerous reefs have been removed by blasting, and fourteen miles of high-water embankments have been constructed. About 2600 acres of land have been reclaimed, of which over 1000 acres have been sold. Graving and ship docks have also been built by the Commissioners. The most important, difficult, and costly work undertaken by the Commissioners was the breakwaters, the object of which, by fixing the sandbank, was to improve the passage over the bar and the channel of the river, while it would form a harbour of refuge in stormy weather. It was pointed out that by using the waste slag from the blast furnaces in the district the breakwaters might be constructed at a much less cost than of stone. Plans were prepared by Mr. Fowler, and it was resolved to proceed with the work, the Public Works Loan Commissioners lending the Tees Conservancy £80,000 with which to commence operations. The work was carried on under great difficulties, as heavy storms destroyed it from time to time. In 1873 it was resolved to protect the slag with concrete, adding greatly to the cost; but this appeared to be the only way in which the violence of the waves could be checked, heavy seas sometimes carrying away as much as 100 feet of slag from one side of the embankment. A circle of concrete blocks, weighing each from 40 tons to 300 tons, protects the toe of the end of the breakwater, upon which has been erected a light-house with an iron shaft. There is a wrought-iron lantern, with a revolving heliophotal apparatus of the fourth order, and the focal plane of the light is 35 ft. above the level of the sea. The total length of the South Gare Breakwater is about two miles and a half. In 1863 the depth at the bar at low-water was 3½ ft., and now it is 19 ft. The construction of the North Gare Breakwater was begun about seven years ago, and is making satisfactory progress.

The death is announced of the Dowager Maharanee of Indore. The Maharanee left the seals to the next senior dowager, and, previous to her death, informed the British Resident about the future succession, and also sent a telegram to the Viceroy.

The late Mr. H. S. Leifchild, a sculptor of much talent, left in his studio, at 13, Kirkstall-road, close to the railway-station at Streatham-hill, some works deserving the attention of those interested in ideal sculpture. These may be inspected by visitors during the next few weeks, and collectors or connoisseurs of such works of art should avail themselves of the opportunity. Examples of Mr. Leifchild's style, from the beginning to the end of his career, will be found in the studio. They include the marble statue (heroic size) of the Greek poetess Erinna, which was exhibited in the Royal Academy in 1864, and which has been purchased to be presented to Holloway College; also the grand figure of "Opportunity," exhibited in 1882; and many others, some of which are to be placed in the art galleries of the Castle Museum at Nottingham.

VISIT OF THE GERMAN EMPEROR TO ROME AND NAPLES.

THE NEW WAR GAME, "POLEMOS," AS PLAYED AT THE ROYAL UNITED SERVICE INSTITUTION.

THE NEW WAR GAME, "POLEMOS."

Professional and amateur students of the art of modern military tactics have recently had introduced to their notice a new game, invented by Dr. D. C. B. Griffith, of Brighton, which seems both interesting and instructive. Differing considerably from the "Kriegspiel" and other games of this kind, it is well adapted to represent, within a limited area, any kind of field-manœuvres in which a complete regiment is the recognised unit. The game is played on a cloth 10 ft. by 5 ft., divided into squares, each representing a distance of 400 yards, and can be set out on an ordinary dining-table. The opposing forces are represented by an equal number of regiments and batteries of artillery, each distinguished by its uniform and arms. The field of operations can be varied by the addition, in any form, of hills, rivers, redoubts, lines of intrenchment, and buildings—the possession of which may constitute the special object of attack or defence, or the winning-point of the game. Well-defined rules, which are quite consistent with all the general principles of warfare, determine the mode of advance (front or flank) of each regiment, in column or line, the time and space covered in a move, the delay caused by obstacles, and other points. Chance has no place in the game; the winning-point can be determined by mutual consent in any position, and no umpire is needed. A full description of the game can be obtained from Mr. Roles, 32, Duke-street, Brighton. It obtained a prize medal at the International Inventions Exhibition of 1885.

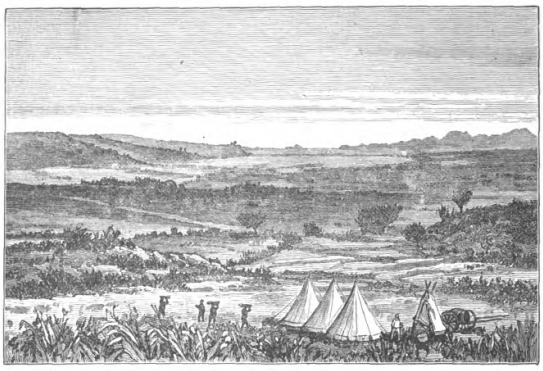
For a right understanding of this war-game, a critical position of which is shown in our Illustration, we must give a short description of what is taking place.

The tract of undulating country represented on the map or key-plan is about five miles by seven. Its chief feature is an impassable river, winding from left to right, between three hills from 600 to 800 ft. in height. The river is crossed by a bridge at B, and by another, several miles lower down its course, at C.

The opposing forces engaged are, roughly speaking, about 10,000 men of all arms on either side. They are here respectively distinguished on the table by flags with diagonal divisions of black and white, for the attacking force; and by flags displaying three perpendicular divisions, black, white, and shaded, for the defending force. On the key-plan, the squares of the defending force are black.

A town is supposed to be well away to the extreme left of the battle-field; the object of the defending force is to cover this town from a hostile force known to be about fifteen miles distant to the right, and to be rapidly advancing to the attack. This attacking force is reported to be divided. About one third of it is on the left bank, or further side, of the river, and is composed of one regiment of cavalry and three battalions of infantry. The main body is on the right bank, or near side, of the river, and consists of the staff, two batteries of artillery (of six guns each), one regiment of cavalry, and five battalions of infantry. Both divisions are making for the bridge at C, in order to effect a junction there.

The defending force, for their part, send forward one battery of artillery (six guns), one regiment of cavalry, and two battalions of infantry, to occupy the hill marked No. 1, on the left, or further bank of the river. On the right, or near bank, one battalion of infantry is ordered to occupy the hill marked No. 3, and to entrench itself there; and is accompanied by the staff, which takes up a commanding position on the top of the hill. The main body, consisting of one battery of artillery (six guns), one regiment of cavalry, and five battalions of infantry, meantime advances, and occupies the hill marked No. 2, and the plain to the right of it.



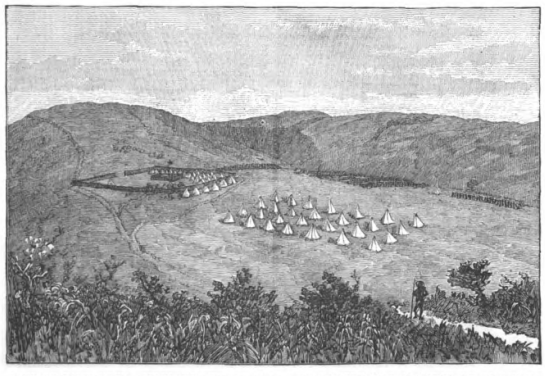
From its higher ground the defending force descries the enemy marching to capture the Bridge C. Orders are immediately given for the simultaneous advance of the troops on both sides of the river, from Hills 1 and 2, and from the plain to the right of Hill 2; in order to prevent, if possible, the seizure of Bridge C, and the consequent amalgamation of the hostile force.

The batteries and cavalry on both sides are soon in action; but the infantry of the attacking force, getting up to the support of their cavalry and artillery before the infantry of the defending force can come up on their side, after a sharp skirmish drive the defenders back, and they eventually retreat to their former positions on Hill 2 and the adjacent plain, where they at once commence entrenching themselves.

The assailants, having thus gained possession of Bridge C, proceed to throw up entrenchments for its protection on the right bank of the river and opposite Hill 2. When safely entrenched, a battery is despatched over the bridge to the assistance of their hard-pressed troops on the left bank. Thus reinforced, these are now enabled likewise to drive back the weaker force in front of them to Hill 1. The battery, the cavalry, and one battalion of infantry attack this hill in front, while the other two battalions of infantry succeed in working round to the far side of the hill, and attack it in flank. The defenders, being thus outflanked and outnumbered, are compelled to retire; they retreat over Bridge B, which they blow up, losing severely while doing this under a heavy fire from the hostile battery, which gains the summit of Hill 1.

The Hill 1 being thus captured, and that side of the river being cleared of the defenders, the staff proceeds to take up its position there; the attacking infantry push on some distance up the river and begin throwing a pontoon-bridge at A, and the cavalry are sent back over Bridge C to strengthen the main body of the assailants, now in its turn hard pressed. For, in the meantime, the defenders on and about Hill 2, observing that the force in front of them is weakened by the before-mentioned withdrawal over the river of one battery, and by the loss of the support of the troops which have gone forward to attack Hill 1, once more advance to the assault; but the enemy, being entrenched, succeed in repulsing them, though only after a close and severe struggle, in which they are for some time in the greatest jeopardy, and the defenders again fall back upon their old positions on and about Hill 2. It will be remembered that the left wing of the defenders' troops driven over Bridge B (which they blew up) consisted of one battery of artillery (now reduced to three guns), one regiment of cavalry, and two battalions of infantry, now considerably weakened. These are now ordered to take up the following positions. The battery advances down the river in the valley between Hills 2 and 3, and, although weak, attempts again to engage the enemy's battery posted on Hill 1. The cavalry ride over Hill 3 to cover the flank of the infantry on the plain below Hill 2. The two battalions march up the river to the rear, and endeavour to check the crossing of the river by the three hostile battalions over the Pontoon-Bridge A, and to preserve their communications with the town. It is this particular crisis in the game which was sketched by our Artist, and is represented in our Illustration.

The subsequent dénoûment and finale are as follow:—The enemy's battery on Hill 1 silences the defending battery in the valley between Hills 2 and 3. Descending to the river-bank, it then begins to fire across the river upon the flank of the defenders' troops, occupying Hill 3. This manœuvre compels



VALLEY OF THE UMVOLOSI, ZULULAND, LOOKING TOWARDS SOMKELI'S STRONGHOLD AND ST. LUCIA BAY.

the retirement of the two battalions in the extreme rear, closely pursued by the three hostile battalions, which have forced a passage over the Pontoon-Bridge A, and thus severed the defenders' communications. The Hill 3 being thus made untenable by the combined rear (infantry) and flank (artillery) attack, is captured and occupied; and the defenders are driven into the valley between Hills 2 and 3, where they become exposed to an enfilading fire from the battery on the other side of the river, which, in order to reach them, takes up a fresh position lower down. The main body of the enemy, lying before Hill 2, observing that Hill 3 is now held by its own battalions, at once advances from its intrenchments and makes a general attack upon the defenders, on Hill 2 and the outlying plain. The defenders, being thus surrounded, being exposed to three fires, and having lost their line of communications with the town in their rear, have no alternative but to surrender, to escape annihilation.

PLANTING IN BRITISH NORTH BORNEO.

The last British consular report from British North Borneo describes the progress which is being made there in the introduction of new plants. Last year pepper appeared for the first time among the exports, and much is expected in future from it. It is a remunerative crop, and is rapidly extending in the Bundoo district, where there is such a large infusion of Chinese blood that the people may almost be said to belong to that thriving and industrious race. In the neighbourhood of Sandakan Bay a British company is planting Manila hemp and pineapples for the fibre. The same company is also proceeding with the cultivation of Liberian coffee and pepper, and coffee estates are being laid out elsewhere. It is purposed shortly to give attention to indiarubber and rattans. Both of these plants are indigenous, growing wild in the forests, so that there can be no doubt of the suitability of the country for their production, while, owing to their growing

CAMP OF INDWANDWA, ZULULAND, WHERE THE CHIEF USIBEPU WAS ATTACKED BY DINIZULU.

under natural forest shade, their cultivation will not be attended with the expenses incident to the opening and maintenance of ordinary estates. During 1887 applications for 278,335 acres of land were received by the Commissioner of Lands, 218,000 by Dutch and about 60,000 acres by English planters or companies.

The preachers at Westminster Abbey for November are:—Sunday, 4th, at ten a.m., in choir, the Rev. J. H. Cheadle, Minor Canon; at three p.m., in choir, Canon Prothero. Sunday, 11th, at ten a.m., in choir, the Bishop of Bedford; at three p.m., in choir, Canon Prothero. Sunday, 18th, at ten a.m., in choir, Canon Maclure, Vicar of Rochdale; at three p.m., in choir, Archdeacon Farrar. Sunday, 25th, at ten a.m., in choir, Canon M'Cormick, Vicar of Hull; at three p.m., in choir, Archdeacon Farrar. Thursday, 1st, All Saints, at three p.m., in choir, the Dean of Windsor. Friday, 30th, St. Andrew, at three p.m., in choir, the Rev. S. Flood Jones, Precentor.

THE OUTBREAK IN ZULULAND.

The suppression of the brief outbreak of native warfare in Zululand, by the prompt action of the small British military force under command of Lieutenant-General Smyth, has been related in our Journal. It was successfully accomplished in the months of July and August, when the insurgent chiefs, members of the family of the late famous King Cetewayo, were forced one after another to surrender. These persons were Dinizulu, a son of Cetewayo, claiming to succeed him in the Royal authority, and his three uncles, N'Dabuko, Somkeli, and Tsingana, each of whom was the leader of several thousand warriors of the former Zulu army. They had given credit to a rumour last year that the British sovereignty or protectorate over Zululand was about to be withdrawn. Instead of this, Zululand was, in August, 1887, formally annexed to the British Empire. The disappointed partisans of a restored native Kingdom then began to attack Usibepu, a chief loyal to the British authority; and in June last there were gathering hosts of enemies in several parts of the country. Dinizulu assembled a considerable force of Usutus in the Cesa Bush, which is in the north-west corner of Zululand, near the frontier of the New Boer Republic. Tsingana established himself in a strong position on the Hlopekulu mountain; while Somkeli retired to his favourite stronghold of Douka-douka, amidst the swamps and morasses adjacent to the great St. Lucia lagoon, on the sea-coast. The police-station of Umsindusi, on the Lower Umvolosi, fifty miles north-east of Etshowe, in charge of Mr. Pretorius, Assistant-Commissioner of the Coast District, was closely besieged until July 8, when it was relieved by Major M'Kean, with 160 of his Inniskilling Dragoons, a company of the Inniskilling Fusiliers, and a company of the North Staffordshire Regiment, aided by John Dunn, the well-known "Zulu Englishman," with his "impi" of 2000 natives, and by 200 mounted Basutos. There was very little fighting. The General in command then established a line of military posts across the country from Etshowe, the basis of operations, a place noted for Colonel Pearson's stout defence of it during the Cetewayo war of 1879, to the advanced headquarters of his field-force at N'tonjaneni, of which we gave an Illustration. A fort, named Fort M'Kean, overlooking the Umsindusi valley, was rapidly constructed, and was left with a sufficient garrison, while the mounted troops, divided into three parties, were sent by different routes through the insurgent districts, where they soon broke up all large bodies of the enemy. We have been favoured by Mr. Joshua A. Nunn, F.R.G.S., veterinary surgeon, of the Army Veterinary Department, with the two Sketches now published. One is that of the stronghold of Somkeli in the marshes towards St. Lucia Bay; the other is that of Indwandwa, in the north of Zululand, where Usibepu was attacked by Dinizulu, and nearly all the men of his tribe were slaughtered, which was the occasion of the late war.

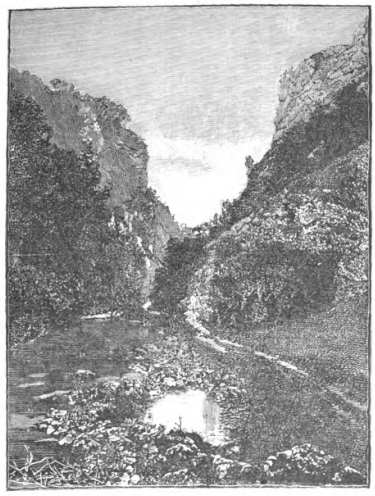
MUSIC.

The performances of the National Russian Opera Company at the "Jodrell" (late the "Novelty") theatre, have consisted of repetitions of Rubinstein's opera "The Demon," the production of which on the opening night of Oct. 22 has already been noticed by us. The dramatic and vocal excellence of M. Winogradow in the title-character has continued to be a special feature in the representations of Rubinstein's opera; and it is to be hoped that the theatrical performances of the company will be attended with a success that may compensate for the unsatisfactory results of the previous concerts given at the Royal Albert Hall. It is said that M. Winogradow has been engaged by Mr. Augustus Harris for five years in association with his forthcoming Italian Opera seasons.

The third of the new series of Saturday Afternoon Concerts at the Crystal Palace took place on Oct. 27, when the programme comprised several special features. Absolute novelties were a "Benedictus," by Dr. Mackenzie, and an "Offertoire," for organ, by Mr. J. F. Barnett. The first-named piece is for violins, with accompaniment of wind instruments, and contains some charmingly melodious writing, replete with graceful expression. It is an adaptation and amplification of one of a set of pieces for violin and pianoforte by the same composer. Mr. Barnett's organ piece was intended for performance at the recent Birmingham Festival. It is in an appropriate style of calm placidity, and gained deserved applause. It was ably rendered by the composer. Herr Grieg's concert-overture, "In Autumn" (given at the Birmingham Festival last August); and an effective scena, "At the cloister-gate," for two female voices, female chorus, orchestra, and organ (by the same composer), were features in the concert now referred to, which likewise included Mendelssohn's "Hymn of Praise," the solo vocalists in which were Misses Anna Williams and M. Curran and Mr. Lloyd—the ladies having been the soloists in Herr Grieg's scena, and the gentleman having contributed the "Preislied" from Wagner's "Die Meistersinger."

Mr. William Carter has begun a new series of his grand festival concerts at the Royal Albert Hall, the opening performance of which was of a Scottish character in celebration of Hallowe'en.

An important addition will be made to musical activity on Nov. 7, when the institution hitherto known as the Royal Albert Hall Choral Society will enter on its eighteenth season under the changed title of the "Royal Choral Society." The gigantic choir trained and conducted by Mr. Barnby has long ago attained special eminence by the excellence of its performances, and these will again be heard in Mozart's "Requiem" and Rossini's "Stabat Mater" on Nov. 7.



The recent provincial tour of the Marie Roze Opera Company has been attended with such special success that arrangements have been made by Mr. N. Vert for another series of performances, to be given in Scotland and Ireland as well as in England, commencing early in January. These performances will not change the date of Madame Marie Roze's departure for her projected tour in Australia, America, &c.

Mr. Pritchard Morgan has been elected member of Parliament for Merthyr Tydfil, in the place of the late Mr. Henry Richard. He polled 7149 votes, against 4956 given to Mr. Griffiths.

BY DERBYSHIRE STREAMS.

THE VALE OF THE DERWENT.

Away yonder to the north the moorland stretches for miles in shadow; but down here in the vale of the Woodlands the sunlight is peeping, touching the waters of the Derwent with silvery tints, glistening the wet breasts of the moss-grown stones against which the river's spray is ever tossing, and forming delicate often-changing traceries on pasture and rougher hillside—a graceful fretwork of foliage reflected by this shaft of sunlight as it moves through the woods. The leaves, flecked with gold and brown and ruddier hues, are gently fluttered by

THE STRAITS, DOVE DALE.

the west wind, reminded that there is a limit to life, and they fall to die in rich clusters, whispering as they go of the loveliness of the Ashopton glen.

With light knapsack, and lighter rod, you wander by the river-side, skirt the base of Winhill and the village of Hathersage, noted as the burial-place of Robin Hood's giantlike friend, Little John, and as the locality in which Charlotte Brontë's heroine, "Jane Eyre," sprang into literary being. The stream grows wider, deeper, and really attains the dignity of a river as it flows sedately through the wide-sweeping valley fringed by the high ridge of Froggatt Edge.

There is no prettier part of the Derwent's course than this in the whole of its fifty miles' wandering, from its source on the Yorkshire border to the county town. Whether viewed from the timeworn bridge at Grindleford, or the doorway of the Chequers' Inn, it is a delightful picture of fertile country, that seems in the sunshine to be clasped by a broad belt of silver—a picture of grey-stone homesteads and orchards and far-stretching pastures, sloped and bordered by rich woods, and fringed by great rocks and "a wilderness of heath."

The vale of the Derwent has a charm beyond its own beauty. It is the threshold, as it were, to much that is curious, and not a little that is historic. Castleton, with its strange caves and subterranean streams, is not far away; and Stoney Middleton, with its dark gritstone cottages clinging to the crags, and its legend of "The Lover's Leap," lies round the bend from Stoke Hall. While a little further away is Eyam, one of the quaintest villages of the Peak, with its memories of the piteous Plague, and its stories of heroism at that grievous time.

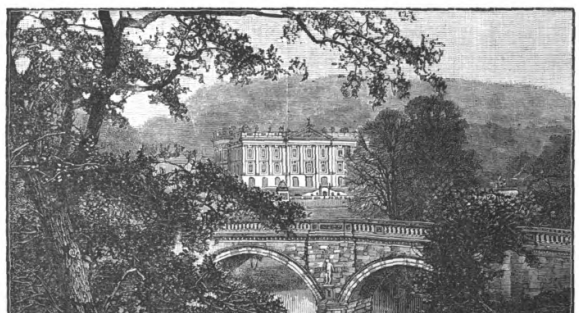
Along a quiet country road—almost a lane—getting glimpses now and then of the coy river, you have reached the village of Baslow, a well-known holiday haunt with the workers of Lancashire and Yorkshire. Go over the bridge, by the homely cottages, and on the narrow path into Chatsworth Park. The Derwent there is not difficult to wade, nor is fishing a mere tradition. But it is impossible to concentrate your thoughts entirely on the river, there is so much to see on its banks—the great house, rich in sculpture, painting, and literature, shining white and golden in the sunlight; the moat-rimmed, ivy-wreathed bower close by, associated with the captivity of the Scottish Queen; the arcadian village of Edensor, with its cosy houses and pretty gardens, and simple grave in the churchyard, around which gathered six years ago much that was distinguished in English political and social life, after the tragedy in Phœnix Park. Notwithstanding this sad memory you think the Cavendish domain a paradise, especially as you stroll through the gardens, along broad terrace, or narrow, shadowed path, by fountain and cascade, by tropical vegetation and familiar flowers, and the famous tree that, like a modern hypocrite, can turn on its tears at will. But, after all, Chatsworth is seen at its best from the wooded ridge that gives foothold to the hunting-tower and leads you by moss-grown steps and winding ways to forest depths. The picturesque stateliness of the scene from the ridge prompts the thought that the old Duke (famous for his dignified bearing and grandeur at the St. Petersburg Court) must have stamped the place with "the Devonshire manner."

ALONG THE WYE.

The Derwent flows by many a noted haunt after leaving Chatsworth. Through Darley Dale, within a stone's-throw of the ancient yew-tree; at the base of High Tor, at Matlock; near Lea Hurst—Florence Nightingale's old house; and by Belper, the nail-makers' workshop and factory of hosiery, to Derby, the thriving county town; but at Rowsley we must break away from the river, and saunter by another Derbyshire stream—the Wye. It is a winsome rivulet. It frolics through the Haddon pastures, joyously embracing the brook that comes tumbling down Latkill Dale, and has a fine story to tell the foam-flecked waters from the upland, of how, with strange caprice, it has been coquetting with the willows and rushes, and endeavouring to tie itself into a knot ever since it glided beneath the bridge at Bakewell, and danced over the weirs in its path. It is a smiling, pleasant, sylvan vale through which the Wye flows from the pleasant market-town, past Haddon Hall, until lost in the Derwent at Rowsley.

There are many worshippers of Haddon, the grey hall by the riverside in which the King of the Peak revelled with his friends and kicked his retainers. It is a real relic of the past, with its banqueting-hall and minstrels' gallery; and wainscotted ball-room, in which many a proud dame has tripped with courtly grace. But if you have the poetic temperament, the time to see Haddon is at night, when you have grassed your last grayling below the little bridge at the evening rise, and are free to watch the mists in their autumn manœuvres—how silently and adroitly they mass under their phantom leader, and sweep majestically over the country side in fantastic formation! Suddenly the mist squadrons are routed by the breeze, and the valley is bathed in a silvery light that etherialises the old hall. Then you can almost imagine you hear the sound of the harp and the rustle of brocade as the fair ladies dance, and the whisper amid the yews on the terrace—and that the hurrying figures yonder on the white road are the forms of John Manners and Dorothy Vernon, the runaway lovers.

At Haddon you get the romance of history; in Miller's Dale the romance of Nature! The Wye—born in the darkness of Poole's Hole, and curbed at Buxton to make tiny lakes in the gardens—hums tunefully about its own liberty as it leaps and eddies through Miller's Dale. Its waters break, pure white, against stubborn rock; or gently flow, like molten silver, over smooth boulder; or tumble foam-tipped on stony bed, making joyous cadence in their riot; or swirl beyond the current into some tiny inlet to lap the drooping flowers. The stream goes through a wild glen. Limestone crags hem in "the murmuring waters" and the rough path by the Wye. The great, high, grotesquely-shaped crags are always with you. Here, there is a rustic bridge; there, a grass-grown dell. In that cleft of the limestone the dark-green moss is sheltering. Yonder is a tangle of trailing foliage and bracken massed thickly. The trees cluster in nook and on slope, and the daring foliage creeps about the breast and brow of nearly every crag.



The sprite of autumn has touched the dale, mingling with the white and grey of the limestone the brilliant, but fleeting, glory of a myriad fading leaves. And in the midst of this russet and golden glow towers Chee Tor—lifts its head proudly above the rushing stream, and its mighty form is almost as bare as on the day, centuries ago, when the earth moved in volcanic unrest, and parted the crag from its mate, that stands disconsolately across the brook trying in vain to hide its ashen face with trailing verdure.

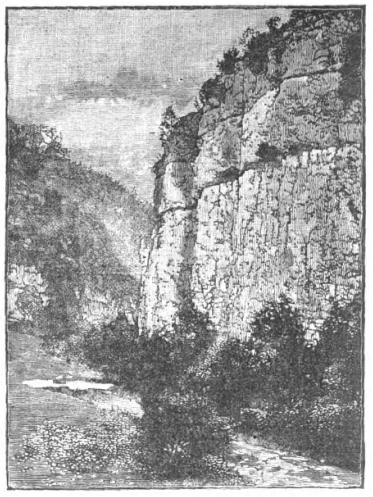
IN DOVE DALE.

Miller's Dale and its solitude are now far behind you. What a quiet hamlet is Hartington, at which you have slept through the stormy night, undisturbed by the wind and rain! The morning is radiant. Down yonder, in the tree-shadowed depths of Beresford Dale, Charles Cotton's fishing-house and the winding Dove are in a dazzle of sunlight. You will never—though sorrow, privation, and despair may fleck your life—forget this stroll by the river that Izaak Walton loved.

There are people who say that Dove Dale is gaunt and uninteresting. But you admire the bend of the stream, and the great, grim crags that stand half-clad, not a bit ashamed of their grotesque shape, just as if they were scorning their critics. The sunshine tries to oust the gloom from the greystone caves. The firs look less sombre in its beams. The dale is bright with the fitful colour of autumn foliage. The butterfly lingers in the genial solitude. The swallow skims the water sadly, loth to depart, yet conscious that it is time for his southern flight. The grayling, gleaming with purple and silver, rises unsuspectingly, with his tapering snout pointed to the surface of the stream. There is harmony in the life and colour all around you. Even the sedges seem to be moving with rhythm to the sweet voice of the Dove.

At "The Straits," the narrowest part of the dale, there will soon be the roar and spray-leap of the winter's torrent; but the river, in the few pleasant sunlit days that yet remain to us, ripples through a scene of exceeding beauty. Watching the golden shafts of light play on crag and frothing water, and cleft in which lichen and fern are hiding, you think how lovely is this "Sweet pass of the Dove, 'mid rock, river, and dingle"; and are scarcely surprised that Rousseau declared he would rather live in a rabbit-warren here than in the finest room in town.

CHATSWORTH HOUSE, ON THE DERWENT.



You are back in the city now, in the whirl of commerce, or striving for fame, or, maybe, struggling for bread; but neither toil nor care nor bitterest regret will ever blur the memory of your autumn saunter "By Derbyshire Streams." J. P.

Intelligence received from Alaska reports that thirteen whalers are icebound to the north of Behring's Straits, and the position of the ships, which have crews of over five hundred persons, is considered hopeless.

Mr. W. H. Smith has issued a circular to the supporters of the Government announcing the reassembling of Parliament on Nov. 6, and earnestly requesting their attendance on that date and during the remainder of the Session.

ART NOTES.

It is to the lasting honour of University College, London, that it was the first teaching body which opened its portals to women anxious to take their place as bread-winners. The example given by the Senate in Gower-street has been followed in all other seats of learning, and it is now within the reach of women to finish their education where and how they think fit. A harder trial of their faith in woman's rights to reap the fruits of her labour now awaits the decision of the same body. The Chair of Archæology is now vacant by the resignation of Sir Charles Newton, and amongst the candidates one of

CHEE TOR, MILLER'S DALE, ON THE WYE.

the most prominent is Miss J. E. Harrison, whose qualifications are generally recognised. Such as doubt her powers as a lecturer can judge for themselves at this moment from the course of lectures she is now giving on the "Monuments of Ancient Athens" at the South Kensington Museum. The only other competitor of repute whose name is mentioned in connection with the vacant chair is that of Mr. Stuart Poole. It is difficult, however, to believe that the Trustees of the British Museum, who practically obliged Mr. Sidney Colvin to give up his Slade Professorship, will allow Mr. Poole to hold the chair of Archæology in connection with his present post of Keeper of the Coins at the British Museum. It is unlikely, moreover, that they would be willing to be the first to fly in the face of the Royal Commission presided over by Sir M. White Ridley, which has just reported so strongly against Civil servants holding offices outside the service.

Some of the smaller exhibitions which at this season open to the public deserve a few words of passing notice; but they will be altogether out of proportion to the interest which some of these collections may afford. At the Fine Arts Society (148, New Bond-street) are to be seen 120 water-colours by various artists, whose works are usually to be seen only at the Old Society or at the Institute. The story goes that the Committees of those bodies expressly forbade under severe penalties any of their respective supporters to contribute to this show; but the warning has been unheeded, to judge from the interesting specimens of works sent by Messrs. Alfred Hunt, Albert Goodwin, W. L. Wyllie, Herbert Marshall, and Charles Gregory; by Mesdames Allingham and Cecil Lawson, and by Misses Kate Sadler and Anna Alma-Tadema, but the flowers in water-colours, by these latter, are somewhat unduly tried by their *rapprochement* with "M. Fantin Latour's" oils.

Messrs. Dowdeswells (160, New Bond-street) have a pleasant little collection of water-colour drawings illustrative of "Our Country and our Countryfolk," by Mr. Arthur Hopkins and Mr. C. Robertson. From South Devon to the east coast of Yorkshire the two artists have journeyed, like Dr. Syntax, in search of the picturesque; and it cannot be said that the journeyings have been fruitless. We are occasionally reminded of Walker and Mason by the one, and of Mrs. Allingham by the other; but there are many connoisseurs who will think that there is no harm in perpetuating, at the loss of originality, two such excellent schools of English art.

Messrs. Boussod, Valadon (Goupil Gallery, 116, New Bond-street) have a small but very choice collection of the French *paysagistes* of the best period. Troyon, Théod. Rousseau, the elder Daubigny, Corot, and Courbet show to what elevation of poetry landscape-painting can rise. Do such works serve no other purpose than the raising of a standard which is flouted and sneered at by the next generation? Such is a fair question to ask as we turn from this collection to the Continental Gallery (145, New Bond-street), where may be seen a certain number, not perhaps the best, but fairly typical works of the modern French school of realism. Unquestionably there is force, almost amounting to brutality, in such works as Réalier-Dumas' "Bonaparte," as a young man picking up the besmirched mantle of Royalty; in Govsky's treatment of the gruesome story of Kostomavoff; in Cousin's "Breton Procession"; or Friant's "Scullers of the Meurthe." The qualities which distinguish these painters have as little in common with their own countrymen of the last generation as they have with English art of the present time, and honestly we cannot wish to see their method adopted by our countrymen.

"Professor" Higgins, an Englishman, successfully imitated Mr. Baldwin's aeronautical feat on Oct. 27 by descending from a balloon by means of a parachute.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIDEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXXIII.

ON BOARD THE JOLLY THATCHER.

I LAY awake all night thinking of this plan. The more I thought upon it the more I was pleased with it. To fly from the country was to escape the pursuit of my husband, who would never give over looking for me because he was so obstinate and masterful. I should also escape the reproaches of my lover, Robin, and break myself altogether from a passion which was now (through my own rashness) become sinful. I might also break myself from the loathing and hatred which I now felt towards my wicked husband, and might even, in time and after much prayer, arrive at forgiving him. At that time—yea, and for long afterwards—I did often surprise myself in such a fit of passion as, I verily believe, would have made me a murderess had opportunity or the Evil One sent that man my way. Yea, not once or twice, but many times have I thus become a murderess in thought and wish and intention—I confess this sin with shame, though I have long since repented of it. To have been so near unto it—nay, to have already committed it in my imagination, covers me with shame. And now when I sometimes (my Lord, the master of my affections doth allow it) visit the Prison of Ilchester and find therein some poor wretch who hath yielded to temptation and sudden wrath (which is the possession by the Devil) and so hath committed what I only imagined, my heart goes forth to that poor creature, and I cannot rest until I have prayed with her and softened her heart, and left her to go contrite to the shameful tree. Nay, since, as you shall hear, I have been made to pass part of my life among the most wicked and profligate of my sex, I am filled with the thought that the best of us are not much better than the worst, and that the worst of us are in some things as good as the best; so that there is no room for pride and self-sufficiency, but much for humiliation and distrust of one's own heart.

Well, if I would consent to fly from the country; across the seas, I should find kith and kin who would shelter me. There should I learn to think about other things—poor wretch! as if I could ever forget the village—and Robin! Oh! that I should have to try—even to try—to forget Robin! I was to learn that though the skies be changed the heart remains the same.

How I fled—and whither—you shall now hear.

Mr. George Penne came to see me next morning, sleek and smiling and courteous.

"Madam," he said, "may I know your decision, if you have yet arrived at one?"

"Sir, it is already made. I have slept upon it; I have prayed upon it: I will go."

"That is well. It is also most opportune, because a ship sails this very day. It is most opportune, I say—even Providential. She will drop down the Channel with the coming tide. You will want a few things for the voyage."

"It will be winter when we arrive, and the winters in that country are cold: I must buy some thicker clothing. Will there be any gentlewoman on board?"

"Surely"—he smiled—"surely. There will be, I am told, more than one gentlewoman on board that ship. There will be, in fact, a large and a cheerful company. Of that you may be assured. Well, since that is settled, a great load of care is removed, because I have heard that your husband rode into Taunton with Judge Jeffreys, that he learned from someone—I know not from whom—of your presence in the town, and of your departure with me."

"It must have been the market-woman."

"Doubtless, the market-woman"—I have often asked myself whether this was a falsehood or not—"and he is even now speeding towards Bristol hoping to find you. Pray Heaven that he hath not learned with whom you fled!"

"Oh!" I cried. "Let us go on board the ship at once! Let us hasten!"

"Nay; there is no hurry for a few hours. But stay within-doors. Everything that is wanting for the voyage shall be put on board for you. As for your meals, you will eat with"—here he paused for a moment—"with the rest of the company under the care of the Captain. For your berth, it will be as comfortable as can be provided. Next, as to the money. You have, I understand, two hundred pounds and more?"

I took the bag from my waist and rolled out the contents. There were in all two hundred and forty-five pounds and a few shillings. The rest had been expended at Ilminster.

He counted it carefully, and then replaced the money in the bag.

"The Eykins of Boston, in New England," he said, "are people of great credit and substance. There will be no necessity for you to take with you this money should you wish it to be expended to the advantage of your brother and your friends."

"Take it all, kind Sir. Take it all, if so it will help them in their need."

"Nay, that will not do, either," he replied, smiling, his hand still upon the bag. "For, first, the Captain of your ship must be paid for his passage; next, you must not go among strangers (though your own kith and kin) with no money at all in purse. Therefore, I will set aside (by your good leave) fifty pounds for your private purse. So: fifty pounds. A letter to my correspondent at Boston, which I will write, will cause him to pay you this money on your landing. This is a safer method than to carry the money in a bag or purse, which may be stolen. But if the letter be lost, another can be written. We merchants, indeed, commonly send three such letters of advice in case of shipwreck and loss of the bags. This done, and the expenses of the voyage provided, there remains a large sum, which, judiciously spent, will, I think, insure for your friends from the outset the treatment reserved for prisoners of distinction who can afford to pay—namely, on their arrival they will be bought (as it is termed) by worthy merchants, who (having been previously paid by me) will suffer them to live where they please, without exacting of them the least service or work. Their relatives at home will forward them the means of subsistence, and so their exile will be softened for them. If you consent thereto, Madam, I will engage that they shall be so received, with the help of this money."

If I consented, indeed! With what joy did I give my consent to such laying out of my poor Barnaby's money! Everything now seemed turning to the best, thanks to my new and benevolent friend.

At his desire, therefore, I wrote a letter to Barnaby recommending him to trust himself, and to advise Robin and Humphrey to trust themselves, entirely to the good offices of this excellent man. I informed him that I was about to cross the seas to our cousins in New England, in order to escape the clutches of the villain who had betrayed me. And then I told him how his money had been bestowed, and bade him seek me when he should be released from the Plantations (wherever they might send him) at the town of Boston among his cousins. The letter Mr. Penne faithfully promised to deliver. (Nota bene.—The letter was never given to Barnaby.)

At the same time he wrote a letter for me to give to his correspondent at Boston, telling me that on reading that letter his friend would instantly pay me the sum of fifty pounds.

Thus was the business concluded, and I could not find words, I told him, to express the gratitude which I felt for so much goodness towards one who was a stranger to him. I begged him to suffer me to repay at least the charges to which he had been put at the inns and the stabling since he took me into his own care and protection. But he would take nothing. "Money," he said, "as payment for such services as he had been enabled to render would be abhorrent to his nature. Should good deeds be bought? Was it seemly that a merchant of credit should sell an act of common Christian charity?"

"What!" he asked, "are we to see a poor creature in danger of being imprisoned if she is recognised—and of being carried off against her will by a husband whom she loathes, if he finds her—are we to see such a woman and not be instantly fired by every generous emotion of compassion and indignation to help that woman at the mere cost of a few days' service and a few guineas spent?"

I was greatly moved—even to tears—at these words and at all this generosity, and I told him that I could not sufficiently thank him for all he had done, and that he should have my prayers always.

"I hope I may, Madam," he said, smiling strangely. "When the ship hath sailed you will remember, perhaps, the fate of Susan Blake, and, whatever may be your present discomfort on board a rolling ship, say to yourself that this is better than to die in a noisome prison. You will also understand that you have fallen into the hands of a respectable merchant, who is much more lenient than Judge Jeffreys, and will not consent to the wasting of good commercial stuff in jails and on gibbets."

"Nay, Sir," I said, "what doth all this mean?"

"Nothing, Madam; nothing. I was only anxious that you should say to yourself, 'Thus and thus have I been saved from a jail.'" Such was Mr. Penne's humanity!

"Understand it! Oh! dear Sir, I repeat that my words are not strong enough to express my gratitude."

"Now, Madam, no doubt, your gratitude runs high. Whether to-morrow"——

"Can I ever forget? To-morrow? To-morrow? Surely, Sir?"——

"Well, Madam, we will wait until to-morrow. Meantime, lie snug and still all day and in the afternoon I will come for you. Two hundred and forty-five pounds—'tis not a great sum, but a good day's work—a good day's work, added to the satisfaction of helping a most unfortunate young gentlewoman—most unfortunate."

What did the good man mean by still talking of the morrow?

At half-past twelve the good woman of the house brought me a plate of meat and some bread.

"So," she said—her face was red and I think she had been drinking—"he hath determined to put you on board with the rest, I hear."

"Hush! If you have heard, say nothing."

"He thinks he can buy my silence. Come, Madam; though, indeed, some would rather take their chance with Judge Jeffreys—they say he is a man who can be moved by the face of a woman—than with—well, as for my silence, there—— It is usual, Madam, to compliment the landlady, and though, I confess, you are not of the kind which do commonly frequent this house yet one may expect"——

"Alas! my good woman, I have nothing. Mr. Penne has taken all my money."

"What! you had money? And you gave it to Mr. Penne? You gave it to him? Nay, indeed—why, in the place where thou art going"——

She was silent, for suddenly we heard Mr. Penne's step outside; and he opened the door.

"Come," he said roughly; "the Captain says that he will weigh anchor in an hour: the tide serves—come."

I hastened to put on my hat and mantle.

"Farewell," I said, taking the old woman's hand. "I have nothing to give thee but my prayers. Mr. Penne, who is all goodness, will reward thee for thy kindness to me."

"He, all goodness?" asked the old woman. "He? Why, if there is upon the face of the whole earth"——

"Come, Child!" Mr. Penne seized my hand and dragged me away.

"The woman," he said, "hath been drinking. It is a bad habit she hath contracted of late. I must see into it, and speak seriously to her: but a good nature at heart. Come, we must hasten. You will be under the special care of the Captain. I have provided a box full of warm clothing and other comforts. I think there is nothing omitted that may be of use. Come."

He hurried me along the narrow streets until we came to a quay, where there were a great number of ships such as I had never before seen. On one of them the sailors were running about clearing away things, coiling ropes, tossing sacks and casks aboard, with such a "Yo-hoing!" and noise as I never in my life heard before.

"'Tis our ship," said Mr. Penne. Then he led me along a narrow bridge, formed by a single plank, to the deck of the ship. There stood a gentleman of a very fierce and resolute aspect, armed with a sword, hanging from a scarlet sash, and a pair of pistols in his belt. "Captain," said Mr. Penne, "are all aboard?"

"Aye; we have all our cargo. And a pretty crew they are! Is this the last of them? Send her for'ard."

"Madam," said Mr. Penne, "suffer me to lead you to a place where, until the ship sails and the officers have time to take you to your cabin, you can rest and be out of the way. It is a rough assemblage, but at sailing one has no choice."

Gathered in the forepart of what they call the waist there was a company of about a hundred people. Some were young, some old; some were men, some women; some seemed mere children. All alike showed in their faces the extreme of misery, apprehension, and dismay.

"Who are these?" I asked.

"They will tell you themselves presently. Madam, farewell." With that Mr. Penne left me standing among this crowd of wretches, and, without waiting for my last words of gratitude, hurried away immediately.

I saw him running across the plank to the quay. Then the boatswain blew a shrill whistle; the plank was shoved over; some ropes were cast loose, and the ship began slowly to move down the river with the tide, now beginning to run out, and a wind from the north-east.

I looked about me. What were all these people? Why were they going to New England? Then, as the deck was now clearer and the sailors, I suppose, at their stations, I ventured to walk towards the afterpart of the ship with the intention to ask the Captain for my cabin. As I did so, a man stood before me armed with a great cane, which he brandished, threatening, with a horrid oath, to lay it across my back if I ventured any further aft.

"Prisoners, for'ard!" he cried. "Back you go, or—by the Lord!"——

"Prisoner?" I said. "I am no prisoner. I am a passenger."

"Passenger? Why, as for that, you are all passengers."

"All? Who are these, then?"

He informed me with plainness of speech who and what they were—convicts taken from the prisons, branded in the hand and sentenced to transportation.

"But I am a passenger," I repeated. "Mr. Penne hath paid for my passage to New England. He hath paid the Captain"——

"The ship is bound for Barbadoes, not New England. 'Tis my duty not to stir from this spot; but here's the Mate—tell him."

This was a young man, armed, like the Captain, with pistols and sword.

"Sir," I said, "I am a passenger brought on board by Mr. Penne, by whom my passage hath been paid to New England."

"By Mr. George Penne, you say?"

"The same. He hath engaged a cabin for me, and hath purchased clothes—and"——

"Is it possible," said the Mate, "that you do not know where you are, and whither you are going?"

"I am going, under the special care of the Captain, to the city of Boston, in New England, to my cousin, Mr. Eykin, a gentleman of credit and substance of that town."

He gazed at me with wonder.

"I will speak to the Captain," he said, and left me standing there.

Presently he returned. "Come with me," he said.

"You are Alice Eykin?" said the Captain, who had with him a paper from which he read.

"That is my name."

"On a certain day in July, your father being a preacher in the army of the Duke of Monmouth, you walked with a procession of girls bearing flags which you presented to that rebel?"

"It is true, Sir."

"You have been given by the King to some great Lord or other, I know not whom, and by him sold to the man Penne, who hath put you on board this ship, the Jolly Thatcher, Port of London, to be conveyed, with a hundred prisoners, all rogues and thieves, to the Island of Barbadoes, where you will presently be sold as a servant for ten years; after which period, if you choose, you will be at liberty to return to England."

Then, indeed, the Captain before me seemed to reel about, and I fell fainting at his feet.

CHAPTER XXXIV.

THE GOOD SAMARITAN.

This was indeed the truth: I had parted with my money on the word of a villain; I put myself into his power by telling him the whole of my sad story; and, on the promise of sending me by ship to my cousins in New England, he had entered my name as a rebel sold to himself (afterwards I learned that he made it appear as if I was one of the hundred given to Mr. Jerome Nipho, all of whom he afterwards bought and sent to the Plantations), and he had then shipped me on board a vessel on the point of sailing with as vile a company of rogues, vagabonds, thieves, and drabs as were ever raked together out of the streets and the prisons.

When I came to my senses the Captain gave me a glass of cordial, and made me sit down on a gun-carriage while he asked me many questions. I answered them all truthfully, concealing only the reason of my flight and of my visit to Taunton, where, I told him truly, I hoped to see my unhappy friend Miss Susan Blake, of whose imprisonment and death I knew nothing.

"Madam," said the Captain, stroking his chin, "your case is indeed a hard one. Yet your name is entered on my list and I must deliver your body at St. Michael's Port, Barbadoes, or account for its absence. This must I do: I have no other choice. As for your being sold to Mr. George Penne by Mr. Jerome Nipho, this may very well be without your knowing even that you had been given to that gentleman by the King. They say that the Maids of Taunton have all been given away, mostly to the Queen's Maids of Honour, and must either be redeemed at a great price or be sold as you have done. On the other hand, there may be villainy, and in this case it might be dangerous for you to move in the matter lest you be apprehended and sent to jail as a rebel, and so a worse fate happen unto you."

He then went on to tell me that this pretended merchant, this Mr. George Penne, was the most notorious kidnapper in the whole of Bristol; that he was always raking the prisons of rogues and sending them abroad for sale on the Plantations; that at this time he was looking to make a great profit, because there were so many prisoners that all could not be hanged, but most must be either flogged and sent about their business, or else sold to him and his like for servitude. "As for any money paid for your passage," he went on, "I assure you, Madam, upon my honour, that nothing at all has been paid by him; nor has he provided you with any change of clothes or provisions of any kind for the voyage; nor hath he asked or bargained for any better treatment of you on board than is given to the rogues below; and that, Madam," he added, "is food of the coarsest, and planks, for sleep, of the hardest. The letter which you have shown me is a mere trick. I do not think there is any such person in Boston. It is true, however, that there is a family of your name in Boston, and that they are substantial merchants. I make no doubt that as he hath treated you, so he will treat your friends; and that all the money which he has taken from you will remain in his own pocket."

"Then," I cried, "what am I to do? Where look for help?"

"'Tis the damnedest villain!" cried the Captain, swearing after the profane way of sailors. "When next I put in at the Port of Bristol, if the Monmouth scare be over, I will take care that all the world shall know what he hath done. But, indeed, he will not care. The respectable merchants have nothing to say with him—he is now an open Catholic, who

DRAWN BY A. FORESTIER.

When I came to my senses, the Captain gave me a glass of cordial and made me sit down on a gun-carriage.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

was formerly conceived in that religion. Therefore, he thinks his fortune is at the flood. But what is to be done, Madam?"

"Indeed, Sir, I know not."

He considered a while. His face was rough and coloured like a ripe plum with the wind and the sun; but he looked honest and he did not, like Mr. Penne, pretend to shed tears over my misfortunes.

"Those who join rebellions," he said, but not unkindly, "generally find themselves out in their reckoning in the end. What the deuce have gentlewomen to do with the pulling down of Kings? I warrant, now, you thought you were doing a grand thing, and so you must needs go walking with those pretty fools the Maids of Taunton! Well; 'tis past praying for. George Penne is such a villain that keel-hauling is too good for him. Flogged through the fleet at Spithead he should be. Madam, I am not one who favours rebels; yet you cannot sleep and mess with the scum down yonder. 'Twould be worse than inhuman—their talk and their manners would kill you. There is a cabin aft which you can have. The furniture is mean, but it will be your own while you are aboard. You shall mess at my table if you will so honour me. You shall have the liberty of the quarter-deck. I will also find for you, if I can, among the women aboard, one somewhat less villainous than the rest, who shall be your grumeta, as the Spaniards say—your servant, that is—to keep your cabin clean and do your bidding. When we make Barbadoes there is no help for it, but you must go ashore with the rest and take your chance."

This was truly generous of the Captain, and I thanked him with all my heart. He proved as good as his word, for though he was a hard man, who duly maintained discipline, flogging his prisoners with rigour, he treated me during the whole voyage with kindness and pity, never forgetting daily to curse the name of George Penne and drink to his confusion.

The voyage lasted six weeks. At first we had rough weather with heavy seas and rolling waves. Happily, I was not made sick by the motion of the ship, and could always stand upon the deck and look at the waves (a spectacle, to my mind, the grandest in the whole world). But, I fear, there was much suffering among the poor wretches—my fellow prisoners. They were huddled and crowded together below the deck; they were all seasick; there was no doctor to relieve their sufferings, nor were there any medicines for those who were ill. Fever presently broke out among them, so that we buried nine in the first fortnight of our voyage. After this, the weather growing warm and the sea moderating, the sick mended rapidly, and soon all were well again.

I used to stand upon the quarter-deck and look at them gathered in the waist below. Never had I seen such a company. They came, I heard, principally from London, which is the rendezvous or head-quarters of all the rogues in the country. They were all in rags—had anyone among them possessed a decent coat it would have been snatched from his back the very first day; they were dirty from the beginning; many of them had cuts and wounds on their heads gotten in their fights and quarrels, and these were bound about with old clouts; their faces were not fresh-coloured and rosy, like the faces of our honest country lads, but pale and sometimes covered with red blotches, caused by their evil lives and their hard drinking; on their foreheads was clearly set the seal of Satan. Never did I behold wickedness so manifestly stamped upon the human countenance. They were like monkeys for their knavish and thievish tricks. They stole from each other what they could lay hands upon: pieces of rope, the sailors' knives when they could get them, even the marlinspikes if they were left about. When they were caught and flogged they would make the ship terrible with their shrieks, being cowards as prodigious as they were thieves. They lay about all day ragged and dirty on deck, in the place assigned to them, stupidly sleeping or else silent and dumpish, except for some of the young fellows who gambled with cards—I know not for what stakes—and quarrelled over the game and fought. It was an amusement among the sailors to make these lads fight on the forecastle, promising a pannikin of rum to the victor. For this miserable prize they would fight with the greatest fury and desperation, even biting one another in their rage, while the sailors clapped their hands and encouraged them. Pity it is that the common sort do still delight themselves with sport so brutal. On shore these fellows would be rejoicing in cock-fights and bull-baitings: on board they baited the prisoners.

There were among the prisoners twenty or thirty women, the sweepings of the Bristol streets. They, too, would fight as readily as the men, until the Captain forbade it under penalty of a flogging. These women were to the full as wicked as the men; nay, their language was worse, insomuch that the very sailors would stand aghast to hear the blasphemies they uttered and would even remonstrate with them, saying, "Nan," or "Poll"—they were all Polls and Nans—"'tis enough to cause the ship to be struck with lightning. Give over, now! Will sink the ship's company with your foul tongue!" But the promise of a flogging kept them from fighting. Men, I think, will brave anything for a moment's gratification; but not even the most hardened woman will willingly risk the pain of the whip.

The Captain told me that of these convicts, of whom every year whole shiploads are taken to Virginia, to Jamaica, and to Barbadoes, not one in a hundred ever returns. "For," he said, "the work exacted from them is so severe, with so much exposure to a burning sun, and the fare is so hard, that they fall into fevers and calentures. And, besides the dangers from the heat and the bad food, there is a drink called rum, or arrack, which is distilled from the juice of the sugar-cane, and another drink called 'mobbie,' distilled from potatoes, which inflames their blood and causes many to die before their time. Moreover, the laws are harsh, and there is too much flogging and branding and hanging. So that some fall into despair and, in that condition of mind, die under the first illness which seizes on them."

"Captain," I said, "you forget that I am also to become one of these poor wretches."

The Captain swore lustily that, on his return, he would seek out the villain Penne and break his neck for him. Then he assured me that the difference between myself and the common herd would be immediately recognised: that a rebel is not a thief, and must not be so treated; and that I had nothing to fear—nay, that he himself would say what he could in my favour. But he entreated me with the utmost vehemence to send home an account of where I was, and what I was enduring, to such of my friends as might have either money to relieve me from servitude or interest to procure a pardon. Alas! I had no friends. Mr. Boscorel, I knew full well, would move heaven and earth to help me. But he could not do that without his son finding out where I was; and this thought so moved me that I implored the Captain to tell no one who I was, or what was my history; and, for greater persuasion, I revealed to him those parts of my history which I had hitherto concealed, namely my marriage and the reason of that rash step and my flight.

"Madam," he said, "I would that I had the power of revenging these foul wrongs. For them, I swear, I would kidnap both Mr. George Penne and Mr. Benjamin Boscorel; and, look you, I would make them mess with the scum and the sweepings whom we carry for'ard; and I would sell them to the most inhuman of the planters, by whom they would be daily beaten and cuffed and flogged; or, better still, would cause them to be sold at Havana to the Spaniards, where they would be employed, as are the English prisoners commonly by that cruel people, namely, in fetching water under negro overseers. I leave you to imagine how long they would live, and what terrible treatment they would receive."

So it was certain that I was going to a place where I must look for very little mercy, unless I could buy it; and where the white servant was regarded as worth so many years of work; not so much as a negro, because he doth sooner sink under the hardships of his lot, while the negro continues frolick and lusty, and marries and has children, even though he has to toil all day in the sun, and is flogged continually to make him work with the greater heart.

Among the women on board was a young woman, not more than eighteen or thereabout, who was called Deb. She had no other name. Her birthplace she knew not; but she had run about the country with some tinkers, whose language she said is called "Shelta" by those people. This she could still talk. They sold her in Bristol; after which her history is one which, I learn, is common in towns. When the Captain bade her come to the cabin, and ordered her to obey me in whatsoever I commanded, she looked stupidly at him, shrinking from him if he moved, as if she was accustomed (which was, indeed, the case) to be beaten at every word. I made her first clean herself and wash her clothes. This done, she slept in my cabin; and, as the Captain promised, became my servant. At first she was not only afraid of ill-treatment, but she would wilfully lie; she purloined things and hid them: she told me so many tales of her past life, all of them different, that I could believe none. Yet when she presently found out that I was not going to beat her, and that the Captain did never offer to cuff or kick her (which the poor wretch expected) she left off telling falsehoods and became as handy, obliging, and useful a creature as one could desire. She was a great, strapping girl, black-eyed and with black hair, as strong as any man, and a good-looking creature as well, to those who like great women.

This Deb, when, I say, she ceased to be afraid of me, began to tell me her true history, which was, I suppose, only remarkable because she seemed not to know that it was shameful and wicked. She lived, as the people among whom she had been brought up lived, without the least sense or knowledge of God; indeed, no heathen savage could be more without religion than the tinkers and gipsies on the road. They have no knowledge at all: they are born; they live; they die; they are buried in a hedgeside, and are forgotten. It was surprising to me to find that any woman could grow up in a Christian country so ignorant and so uncared for. In the end, as you shall hear, she showed every mark of penitence and fell into a godly and pious life.

My Captain continued in the same kindness towards me throughout the voyage—suffering me to mess at his table, where the provisions were plain but wholesome, and encouraging me to talk to him, seeming to take pleasure in my simple conversation. In the mornings when, with a fair wind and full sail, the ship ploughed through the water, while the sun was hot overhead, he would make me a seat with a pillow in the shade, and would then entreat me to tell him about the rebellion and our flight to Black Down. Or he would amuse me with an serious talk (though his own conversation with his sailors was over-much garnished with profane oaths), listening with grave face. And sometimes he would ask me questions about the village of Bradford Orcas, my mother and her wheel, Sir Christopher and the Rector, showing a wonderful interest in everything that I told him. It was strange to see how this man, hard as he was with the prisoners (whom it was necessary to terrify, otherwise they might mutiny) could be so gentle towards me, a stranger, and a costly one too, because he was at the expense of maintaining me for the whole voyage, and the whole time being of good manners, never rude or rough, or offering the least freedom or familiarity—a thing which a woman in my defenceless position naturally fears. He could not have shown more respect unto a Queen. The Lord will surely reward him therefor.

One evening at sunset, when we had been at sea six weeks, he came to me as I was sitting on the quarter-deck and pointed to what seemed a cloud in the west. "'Tis the island of Barbadoes," he said. "To-morrow, if this wind keeps fair, we shall make the Port of St. Michael's, which some call the Bridge, and then, Madam, alas!"—he fetched a deep sigh—"I must put you ashore and part with the sweetest companion that ever sailed across the ocean."

He said no more, but left me as if he had other things to say but stifled them. Presently the sun went down and darkness fell upon the waters; the wind also fell and the sea was smooth, so that there was a great silence. "To-morrow," I thought, "we shall reach the port, and I shall be landed with these wretches and sent, perhaps, to toil in the fields." But yet my soul was upheld by the vision which had been granted to me upon the Black Down Hills, and I feared nothing. This I can say without boasting, because I had such weighty reasons for the faith that was in me.

The Captain presently came back to me.

"Madam," he said, "suffer me to open my mind to you."

"Sir," I told him, "there is nothing which I could refuse you, saving my honour."

"I must confess," he said, "I have been torn in twain for love of you, Madam, ever since you did me the honour to mess at my table. Nay, hear me out. And I have been minded a thousand times to assure you first that your marriage is no marriage, and that you have not indeed any husband at all; next, that since you can never go back to your old sweetheart, 'tis better to find another who would protect and cherish you; and thirdly, that I am ready—ay! and longing—now to become your husband and protector, and to love you with all my heart and soul."

"Sir," I said, "I thank you for telling me this, which indeed I did not suspect. But I am (alas! as you know) already married—even though my marriage be no true one—and can never forget the love which I still must bear to my old sweetheart. Wherefore, I may not listen to any talk of love."

"If," he replied, "you were a woman after the common pattern you would right gladly cast aside the chains of this marriage ceremony. But, Madam, you are a saint. Therefore, I refrained." He sighed. "I confess that I have been dragged as by chains to lay myself at your feet. Well; that must not be." He sighed again. "Yet I would save you, Madam, from the dangers of this place. The merchants and planters do, for the most part, though gentlemen of good birth, lead debauched and ungodly lives, and I fear that, though they may spare you the hardships of the field, they may offer you other and worse indignities."

I answered in the words of David: "The Lord hath delivered me out of the paw of the lion, and out of the paw of the bear: He will deliver me out of the hand of the Philistines."

"Nay; but there is a way: you need not land at all. It is but a scratch of the pen, and I will enter your name among those who died upon the voyage. There will be no more inquiry, any more than after the other names, and then I can carry you back with me to the Port of London, whither I am bound after taking in my cargo."

For a space I was sorely tempted. Then I reflected. It would be, I remembered, by consenting to the Captain's treachery towards his employers, nothing less, that I could escape this lot.

"No, Sir," I said; "I thank you from my heart for all your kindness and for your forbearance; but we may not consent together unto this sin. Again, I thank you; but I must suffer what is laid upon me."

He knelt at my feet and kissed my hands, saying nothing more: and presently I went to my cabin, and so ended my first voyage across the great Atlantic Ocean. In the morning, when I awoke, we were beating off Carlisle Bay, and I felt like unto one of those Christian martyrs, of whom I have read, whom they were about to lead forth and cast unto the lions.

(To be continued.)

THE LAND OF NOD.

There's a beautiful Land that the Children know,
Where it's Summer the whole year round;
Where chocolate-drops, and balls and tops,
Lie thick on the grassy ground;
Where the trees grow tarts and Banbury hearts,
And bull's-eyes pop from the pod,
And you never do wrong the whole day long—
They call it the Land of Nod!

When the clock strikes eight, and each curly pate
Lies low on the pillow white;
When the small mouse squeaks and the wainscot creaks,
And the shadows dance in the moonlight-streaks,
And the star-lamps jewel the Night;
When the soft lids close on the ripe check's rose,
And the tiny feet that trod
The nursery floor are heard no more—
Hurrah for the Land of Nod!

There they play in the puddles and steal from the stores.
They juggle with matches and knives;
And they poke *such* jokes at the grown-up folks,
Who daren't say "Don't" for their lives!
All the persons who teach by means of speech,
And whipped with a pickled rod,
And fed upon Dates, through dark dungeon-grates,
In the beautiful Land of Nod!

When the clock strikes eight, and each curly pate
Lies low in the darkened room;
When the small mouse squeaks and the wainscot creaks
And the shadows dance in the moonlight-streaks,
And the cricket chirps through the gloom;
When the soft lids close on the ripe cheek's rose,
And the tiny feet that trod
The nursery floor are heard no more—
Hurrah for the Land of Nod!

All the dear old dollies are mended there
That were broken in days that have flown;
All the kittens that died in their early pride
To beautiful cats have grown;
All the pleasures upset by the wind and the wet
Smile out in the sunshine broad;
And the meaning of "*dose*" not a youngster knows,
In the wonderful Land of Nod!

When the clock strikes eight, and each curly pate
Lies low on the dainty bed;
When the small mouse squeaks and the wainscot creaks,
And the shadows dance in the moonlight-streaks,
And the dull fire's core glows red;
When the soft lids close on the ripe cheek's rose
And the tiny-feet that trod
The nursery floor are heard no more—
Hurrah for the Land of Nod!

And it's O! for the dreams of the old, old days
That have fled for ever and aye!
For I watch and weep, as the dull dawns creep
Up the cold grey cliffs of the sky.
Could mine eyelids close on that blest repose,
Would the hearts that lie under the sod
Rise to greet the glad sound of my feet and beat
On my heart—in the Land of Nod?

When the clock strikes eight, and each curly pate
Lies low in the curtain's shade;
When the small mouse squeaks and the wainscot creaks,
And the shadows dance in the moonlight-streaks,
And the hearth-sparks glimmer and fade;
When the soft lids close on the ripe cheek's rose,
And the tiny feet that trod
The nursery floor are heard no more—
Hurrah for the Land of Nod!

CLO. GRAVES.

The students of the Royal Female School of Art, Queen-square, Bloomsbury, held a soirée on Oct. 29.

The Bishop of Carlisle on Oct. 25 reopened the parish church at Satterthwaite, which has been extensively restored, and a handsome oak reredos has been added by Mr. Ainslie, M.P. The church dates back to 1557.

Mrs. Charles Turner, of Liverpool, has given £20,000 towards the formation of a fund for pensioning Incumbents in the diocese of York who feel themselves incapacitated from further duty. The same lady had previously bestowed a like gift for the diocese of Liverpool.—Lord Grimthorpe has offered £3000 towards the promotion of a scheme for procuring a Bishop of Beverley as a Suffragan Bishop of York.

The outturn of the coffee crop in Coorg for the season 1888-89 is estimated at 5180 tons; the average annual exports for the last ten years having been 4590 tons. The Commissioner of Coorg writes:—"The total area of coffee plantations, European and native, is 80,389 acres, of which 59,124 acres are actually planted. Of this area 33,141 acres are held by Europeans, and forecast returns have been furnished for the bulk of these estates. The native holdings comprise 25,983, for the greater portion of which no returns are obtainable. The present forecast has been based, as far as practicable, on the returns furnished, and for the rest a rough estimate has been framed, giving a total of 5180 tons."

POSTAGE FOR FOREIGN PARTS THIS WEEK.

NOVEMBER 3, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

THE REVOLUTION OF 1688.

A BICENTENARY RETROSPECT.

The expulsion of James II. was a necessity, both in the interests of Protestantism and in those of good government. He was an embodiment of the most reactionary ideas of the Stuart dynasty. Before he came to the throne, his cruel treatment of the Scotch Covenanters, during his administration of the affairs of Scotland, showed what the people had to expect when the reins of government fell into his hands. Succeeding his brother in February, 1685, his reign was arbitrary from the beginning, and the Parliament he called was one of the most servile in English history. He suppressed with little difficulty Argyll's invasion of Scotland and Monmouth's invasion of England, but the insurgents were visited with most vindictive punishments. James then set himself systematically to work to achieve two ends—the overthrow of the Constitutional system of England, and the restoration of the Catholic religion. Strangely did he misread the temper of his people in these foolish undertakings. England had thrown off the yoke of Rome under the Tudors, and was never more to be in bondage to the Vatican; while the unfortunate history of his father should have taught James that Constitutional liberty had been permanently won for the British race by Pym, Hampden, Cromwell, and the other great patriots of the stirring period of the Civil War.

Gravely and profoundly interesting are those episodes in our history which the present memorable year recalls. They were swift and they were dramatic, four brief years being sufficient to bring to a conclusion James's inglorious career. He began his attempts to coerce the nation by requiring his pliable Parliament to repeal the Habeas Corpus Act and the Test Act. Now, these two great statutes were regarded as the bulwarks of the popular safety, and they were as much prized by the Tories as by all other subjects of the Crown, except the Roman Catholics. Parliament, therefore, though generally obedient, declined in this matter to bend to the King's will; neither did it regard with favour James's effort to establish a great standing army. Even the much more popular Charles II. had been unable to effect this. But the contest was very severe. Not only were new regiments levied, but the King gave commissions to Roman Catholic officers, which step was a distinct violation of the Test Act. The panic that seized upon the nation was reflected in the Council Board; and Lord President Halifax, who condemned his Sovereign's policy, was dismissed from his office. The Commons upon this ceased to be subservient to the Sovereign, and the disaffection spread to the House of Lords. The Government sustained two defeats, and in a fit of Royal anger the offending legislators were summoned to the bar, and dismissed to their homes, Nov. 20, 1685.

In everything, James was badly advised; for it was not difficult to find counsellors who readily encouraged his headstrong policy. England prided herself upon her independence in foreign affairs; but James was the paid servant of Louis XIV. of France, and was most superstitiously devoted to the Pope. His first favourite was Father Edward Petre, who found it an easy task in religious questions to keep the Monarch in leading-strings. Then, in home affairs, his principal advisers were the avaricious pervert, Sunderland, whose new-found Papist zeal enabled him to step into the chair of Halifax; Lord Castlemaine, the husband of an infamous woman; and the Earl of Tyrconnell, whose chief characteristic was a want of veracity. After proroguing Parliament from time to time, James ultimately dissolved it, being determined to govern without Constitutional means. He first endeavoured to use the Established Church against the Dissenters; but, discovering that the Episcopalians would not give him their aid, he sought to gain the Dissenters. A systematic *régime* of illegality began by the setting in motion of two great engines of tyranny. The first of these was the exercise of the dispensing power on the part of the King, by which Roman Catholics were placed in office in defiance of the law; and the second was the ecclesiastical supremacy, which took a new shape in the constitution of a High Commission Court, consisting of six persons, presided over by the notorious Lord Chancellor Jeffreys. So great was the hold which Romanism had obtained over James that he dismissed the two brothers of his first wife—Lawrence Hyde, Earl of Rochester, who had become Lord High Treasurer, and Henry Hyde, Earl of Clarendon, the Lord Lieutenant of Ireland. Lawrence Hyde was one of the principal founders of the High Church Tory party, and he declined to give up his Protestantism to maintain his high office.

James's most sensational act at this juncture was the issue of his First Declaration of Indulgence, dated April 4, 1687. Without authority of Parliament, he abolished by his own hand all those penal laws and tests which had long pressed heavily upon the Dissenters. When he ordained that no religious test should in future debar any man from the civil or the military service, and likewise forbade the disturbance of religious meetings, the act at first sight seemed one of a tolerant liberality; yet it was not that James liked the Dissenters, but that he loved the Papists more. The gift of religious freedom, in fact, divided the Dissenters into two camps. On the one side were men like Bunyan, Baxter, and Howe, who distrusted the King and his policy; while on the other were men like the distinguished Quaker William Penn, who highly lauded the Indulgence. Penn had immense influence over James; saw him as often as he wished; and held (says Ranke) the most confidential conversations with him for hours together at Whitehall, and also at Windsor, where he took a house in the neighbourhood of the castle. On July 2 the King dissolved Parliament, stating to the Papal Nuncio as his reason for this measure that it would not otherwise be possible to frustrate the intrigues of the Prince of Orange, and to rend asunder the bond which had been formed between him and the members of the Church of England. Next day there was a gorgeous procession at Windsor, in which the Nuncio, as the representative of the Papal power to which James had bowed the neck of England, was the most imposing figure.

The Universities were next assailed, the King, through his High Commissioners, trampling upon their privileges. The Cambridge Senate received the Royal command in February, 1687, to confer the degree of Master of Arts on Alban Francis, a Benedictine monk. The Senate replied that they would gladly do so if he would take the oaths; but this he declined to do. Vice-Chancellor Pechell and eight members of the Senate (including the celebrated Isaac Newton) were summoned to Westminster to answer for their contumacy, and, after being soundly rated by Jeffreys, the Vice-Chancellor was suspended from office. Still more violent was the action taken at Oxford. The Presidency of Magdalen, one of the wealthiest and most famous of the colleges, having become vacant, James commanded the Fellows to elect one Farmer, a Roman Catholic and a profligate, who was disqualified both by the law of the land and the arrangements of the founder. The Fellows would have none of him, but elected John Hough instead. The King then commanded them to elect Parker, Bishop of Oxford; but all his efforts and those of William Penn to persuade them were fruitless. The old Fellows were consequently ejected, and Roman Catholic successors appointed in their place. By this means the King had now secured three important colleges for the Catholics—viz., University, Christ Church, and Magdalen. Papal pressure also began to be felt elsewhere.

James, in order to show that he was not to be deterred from his purpose, next published his Second Declaration of Indulgence; but, as it fell very flat, he issued an order in Council, on May 4, 1688, directing the ministers of all churches and chapels in the kingdom to read it from their pulpits. On hearing the news, a number of Bishops proceeded to the capital, and at an assembly held at Lambeth Palace on May 18, a petition was drawn up setting forth that the Sovereign had no right to dispense with laws in matters of the Church. The King was furious when this petition was presented to him. The document afterwards got into general circulation, and James, acting mainly on the advice of Jeffreys, ordered the prelates to be arraigned for libel in the Court of King's Bench. The trial of the Seven Bishops caused the utmost excitement in London, and, indeed, throughout the country. A serious technical question arose as to the publication of the libel; but this was decided against the Bishops by the evidence of Lord Sunderland, who proved publication. On the weightier matter of the character of the petition, two of the Judges pronounced it a libel, and the remaining two declared it to be no libel. The case went to the jury, who were locked up all night. Next morning a verdict of "Not Guilty" was returned, and the popular enthusiasm knew no bounds. The news was quickly carried into the country, and James heard the shouts of triumph at Hounslow. As he was riding from the camp there, he heard a great noise behind him. "What is that?" he asked. "It is nothing," was the reply; "only the soldiers are glad that the Bishops are acquitted." "Do you call that nothing!" exclaimed the King. But his defeat only brought out the old Stuart obstinacy in him, and to the Spanish Ambassador, who counselled moderation, he said, "I will lose all or win all."

He was in a fair way to do the former, for he had now alienated all classes of his subjects. One of his last acts was to endeavour to supply the place of the English troops, whose temper proved unserviceable for his purposes, by draughts from the Catholic army which Tyrconnell had raised in Ireland. This was so mad a step that even the Roman Catholic Peers at the Council table protested against it, and the ballad of "Lillibullero," an attack on the Irish recruits and Tyrconnell's Government, was soon heard throughout the length and breadth of England. The disaffection was at its height when a son was born to the King. Popular rumour at

JUDGE JEFFERIES SEIZED IN A BEER CELLAR AT WAPPING.

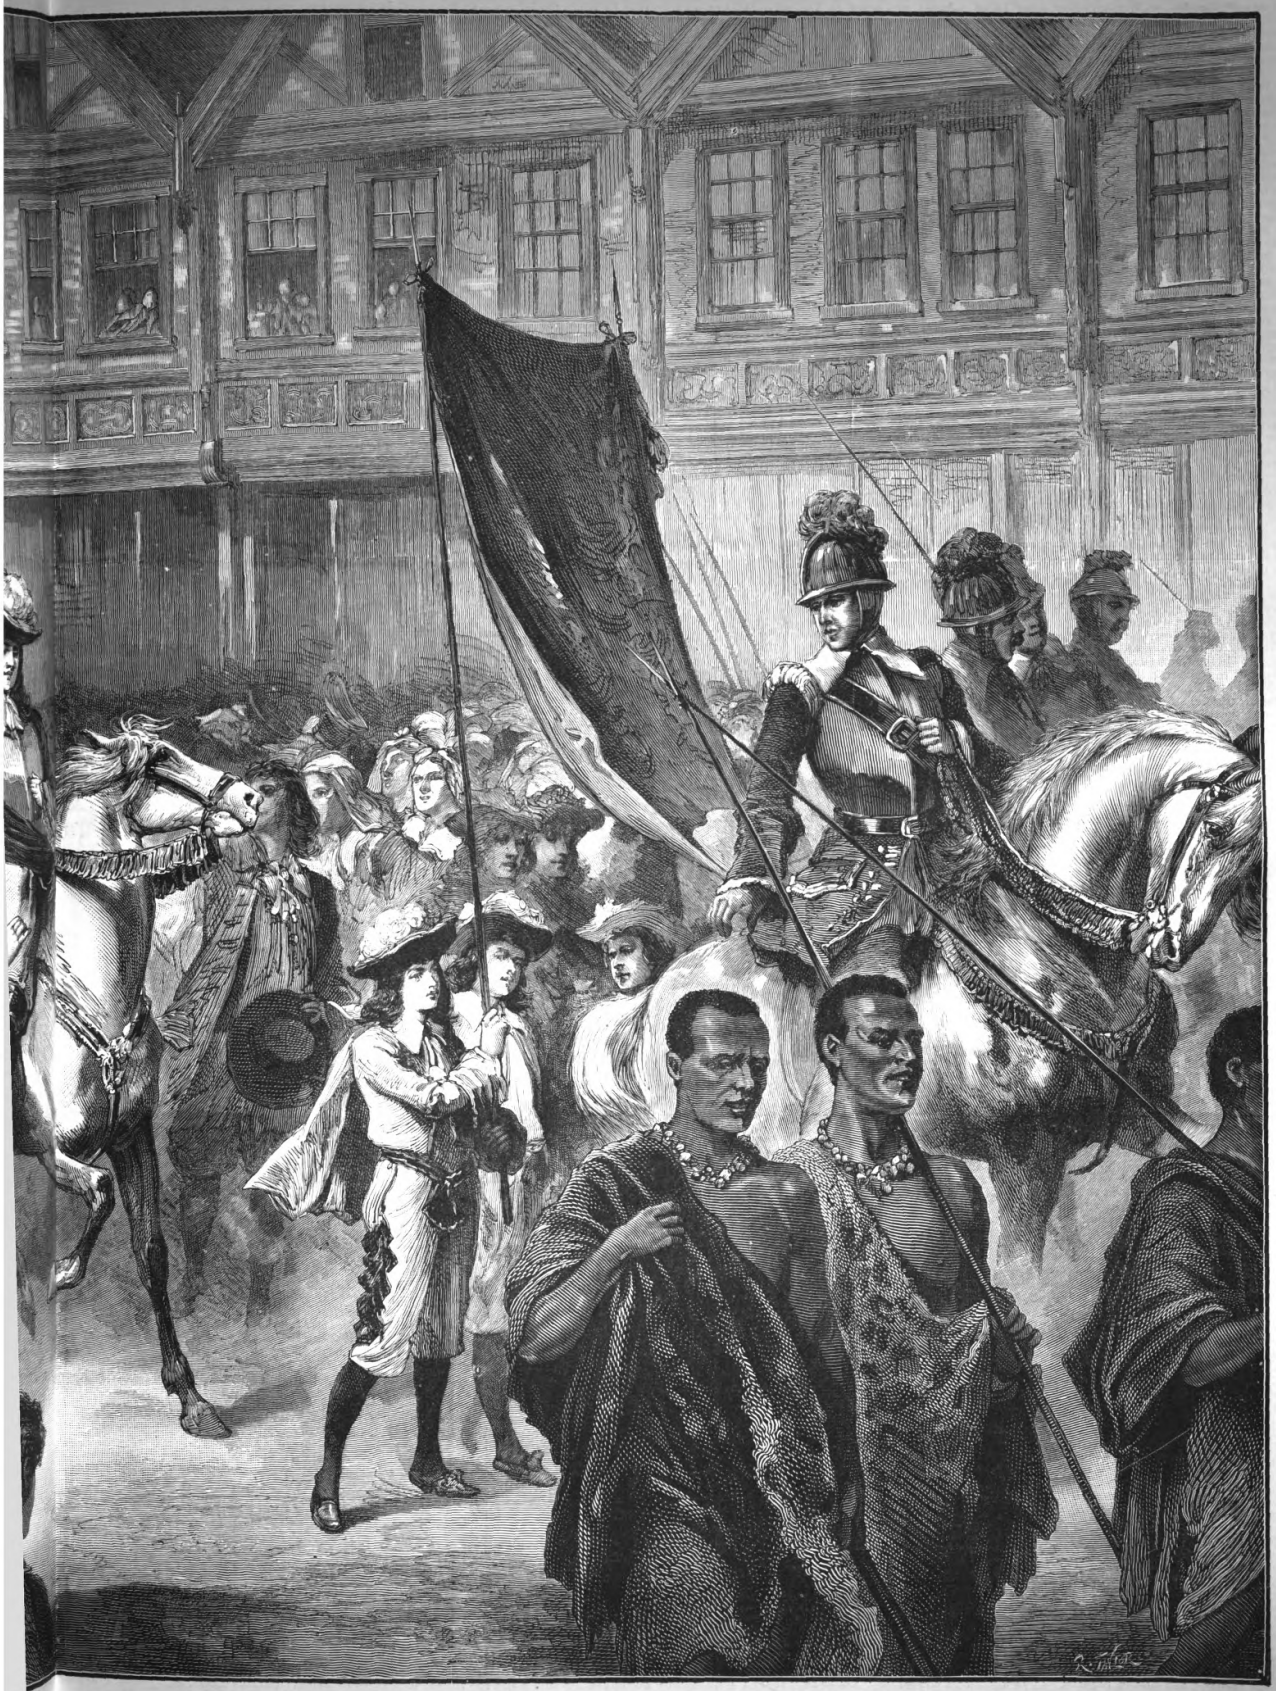
once pronounced this to be an imposture. Five years had passed since Mary of Modena was last announced to be pregnant, and many now asserted that the child ushered into the world as the Prince of Wales and heir to the throne was not the Royal offspring at all. In any case, the news completely overthrew the hopes of English Protestants, and correspondingly raised those of the Roman Catholics. The general expectation of a Protestant succession became null and void on the appearance of an heir to the throne who would, doubtless, be educated in the Catholic religion.

The crisis thus became acute, and the best friends of the Constitution, sinking for the time their political differences, banded themselves together to save the country. On June 30 a letter was dispatched to the Prince of Orange inviting him to come over. This historical document was signed by seven of the most influential men in England. First, there was Danby, one of the principal founders of the combination of the aristocracy and of Episcopalianism with the King's Government under Charles II., and one of the originators of the Tory party. Then there was the Earl of Devonshire, a leading Whig, who answered for the Nonconformists, who were satisfied with William's promise to secure them toleration. Compton, Bishop of London, who had a leading hand in drawing up the invitation, was the third signatory. Then there were Shrewsbury and Lumley, two recent converts from the Catholic faith, who now spoke in the name of the great body of zealous Protestants; and, finally, there were Edward Russell, cousin of Lord Russell, and Henry Sidney, brother of Algernon Sidney, whose antipathy to tyranny and love of patriotism were in all men's mouths. Many others were privy to the invitation, and certain individuals contributed £30,000 towards the preparations for the undertaking. The letter was carried to the Hague by Herbert, a popular British seaman, who had lost his command for refusing to vote against the test.

The invitation to William of Orange was from every point of view justifiable. English freedom and English Protestantism were imperilled, and as a struggle with James was inevitable, it was desirable to obtain the aid of the only Protestant Prince who had a right to the throne after its actual occupant. Moreover, James was in league with the natural enemies of England, and, if he had succeeded in subduing the people to his will, there would have been a close and slavish alliance with France, which would have been ignominious to England and menacing to the Protestant interests of Europe. James's defeat would mean also the freedom of the Continent from French supremacy. But it was necessary, now that the blow was to be struck, that the intervention should be vigorous and decisive; and the Prince of Orange was requested to land with an army strong enough to justify those who had called upon him to rise to arms. William had some powerful friends on the Continent. There was Marshal Schomberg, who had been a servant of France, but who now expressed a wish to see the Prince and Princess well established in England; he had long discerned that James II. was making himself impossible as a ruler. For the success of the Prince and Princess of Orange, Schomberg said, "I would sacrifice everything; it would give me great satisfaction if we ever found ourselves together on occasions on which we could do them service." Then there was the great Elector of Brandenburg, whose last words, "London, Amsterdam"—uttered as he died, on April 29, 1688—sufficiently testified to the ideas which occupied and engrossed his mind.

Holland agreed to the expedition—as, indeed, it could not well do otherwise, for its own interests were bound up in William's success. Having gained the assent of the States-General, the Prince, as Admiral and Captain-General, used every effort to gather a fleet and a sufficient force, ostensibly as a means of defence against the English fleet, which now appeared in the Channel, while the new Elector of Brandenburg engaged to supply the place of the absent Dutch forces by lending the States 9000 men. In England, William's cause soon made great progress, and many nobles went out to him at the Hague. The Earl of Shrewsbury took with him the substantial donation of £2000 towards the expenses of the expedition, and he was followed by the sons of Lords Winchester, Danby, and Peterborough, and by a well-known High Churchman, Lord Macclesfield. Danby, Devonshire, and Lumley prepared for a rising in the North of England. The Earl of Sunderland, still James's chief counsellor, discovered William's preparations, and promised to reveal all the secrets of his Royal master on the promise of a pardon for his despicable crimes. As for James himself, he still fancied his position secure, for he imagined that the Prince of Orange would be deterred from aiding any revolt in England by the threat of a French attack on Holland.

But when the King at length awoke from his dream and found to his dismay that war preparations were actually going forward, and that the storm was about to break over his head, irresolution seized upon him, and he gave way to panic. Diplomacy and concession were resorted to in order to heal the breach between the Monarch and his subjects. Against the Prince of Orange's demands, as he understood them, he instituted a temporising action. He was convinced that the best means for resisting the Prince of Orange lay in depriving him of the support of the Episcopalian party by doing justice to its demands. A union with the Tory party and the party of the Church was what he now aimed at when it was too late; and he sought to win assent for his plans from the coming Parliament by an abandonment of his recent policy. He issued a Proclamation with the object of restoring things to the same footing as when he succeeded to the Crown; and he relaxed some of the most stringent of those fetters which pressed upon freedom of conscience. Then he made overtures to the Bishops, and in an interview he had with them declared that he wished to learn from them what was necessary in order to secure religion in the realm; he would grant everything that was compatible with his prerogative. The Bishops were moderate in their requests, only demanding at once the abolition of the Ecclesiastical Commission, the immediate filling up of the vacant Episcopal Sees, the discontinuance of the administration of so-called Vicars Apostolic, the removal of Roman Catholic schools, and the restoration of the Protestant Fellows at Magdalen College. James dissolved the Ecclesiastical Commission, and Lord Chancellor Jeffreys went into the City to restore the charters, being solemnly received at Temple Bar. Magistrates who had been driven from office were replaced, and the franchises were restored to the towns. The Bishop of Winchester was dispatched to Oxford to reorganise Magdalen College in accordance with its statutes, and Catholic chapels and Jesuit schools were ordered to be closed.



No doubt James thought he was proceeding admirably with his policy of pacification; but concessions which are the result of fear and despair are apt to be distrusted, and there was destined to be written on all his efforts—"Too late!" Sunderland advised him to call a Parliament instantly; but the King knew that in the existing temper of the people a Parliament would declare against him, and, reproaching Sunderland with want of firmness and spirit, he dismissed him from office. Scarcely had the disgraced Minister left Whitehall before the Declaration of the Prince of Orange reached England. This historical manifesto recited all the wrongs and misgovernment under which the English people had recently suffered, and demanded the removal of grievances and the calling of a free Parliament which should establish English freedom and religion on a sure basis. The Declaration promised toleration to Protestant Nonconformists, with freedom of conscience to Catholics; and it remitted the question of the legitimacy of the Prince of Wales and the settlement of the succession, to Parliament. James was deeply wounded by the doubts thrown on the legitimacy of the Prince, for he had only just produced at a solemn assembly of the Peers, who were then in London, proofs of the Prince's birth which were of a satisfactory nature to unbiassed minds. Then he was much disturbed by the assertion that William of Orange had been invited to engage in his undertaking by spiritual and temporal Peers. While he thought it possible this might be an empty boast, he obtained a repudiation of it from Nobles and Bishops; but he proceeded further to require the Bishops publicly to declare their abhorrence of William's undertaking. This would manifestly have been a great point gained in his favour, but the Bishops replied that they must consult the Peers:—"They had no mind to make a declaration under their hands, except the temporal Lords would join with them." The King's pride was offended, and he told the prelates that, if they were not inclined to support him as he requested, he must stand upon his own feet and rely upon his arms. This was the crucial point of the struggle.

On his side, the Prince of Orange was supported by two classes of English clergymen. There were those, like Ferguson, who desired to invest the undertaking with the aspect of a thoroughgoing ecclesiastical and political transformation; while there were others, like the historian Burnet, who earnestly deprecated any quarrel with the English Church, in which the Prince of Orange had many of his best supporters; and these views were supported by Shrewsbury, Russell, and Sidney. Anxious not to repel the Dissenters, they yet wished most of all to place the Church of England under an obligation. There was a strong desire to maintain the interests of the Church in opposition to the Catholics, and William relied largely upon this feeling. Even many who were not Churchmen perceived the wisdom of this. Protestantism, to put the matter into a nutshell, underlay the whole struggle; but there was to be no oppression of the Catholics.

William of Orange, hoisting his flag, which displayed the arms of Nassau and of England, put to sea on Nov. 1, 1688, at Helvoetsluys. The Prince himself embarked on board the frigate Brill, whose flag displayed the inscription "For the Protestant religion, and for a Free Parliament." There were thirteen ships of war of more than thirty guns each, and a number of smaller vessels, bearing together about 14,000 men. William sailed with the full sympathy of his wife. While regretting the necessity for opposing and overthrowing the policy of her father, the King of England, her feelings and aspirations went entirely with her husband. It was expected that the English fleet would give battle in the Channel, but James's commander, Lord Dartmouth, was not strong enough

THE REVOLUTION OF 1688: WILLIAM III

WILLIAM III. ENTERING EXETER.

to do this, and he received orders only to harass the enemy. But even this was not feasible; so William's fleet, after being detained by ill winds and beaten back on its first venture by a violent storm, made its way down the Channel, and on Nov. 5—the anniversary of Gunpowder Plot—safely landed at Torbay, in Devonshire. As William's coming had been unexpected in the west, no great landowner went out to meet him, and the invasion wore at first a singularly quiet aspect. But in the course of a week the nobles and squires joined the Prince in great numbers, and Plymouth declared for him.

Macaulay furnishes a graphic picture of the entry of the invading army into Exeter. Bishop Lamplugh, as soon as he heard of the landing at Torbay, fled in terror to London. The Magistrates of Exeter were for King James, but the bulk of the inhabitants were for the Prince. The Magistrates ordered the gates to be shut; but when Lord Mordaunt threatened to punish further resistance with death, they were opened again. William arrived on the 9th, and made his entry into the city. It was a memorable day for Exeter. "From the West Gate to the Cathedral Close," observes the Whig historian, "the pressing and shouting on each side was such as reminded Londoners of the crowds on Lord Mayor's Day. The houses were gaily decorated. Doors, windows, balconies, and roofs were thronged with gazers. . . . The Dutch army, composed of men who had been born in various climates, and had served under various standards, presented an aspect at once grotesque, gorgeous, and terrible to islanders who had, in general, a very indistinct notion of foreign countries. First rode Macclesfield, at the head of two hundred gentlemen, mostly of English blood, glittering in helmets and cuirasses and mounted on Flemish war-horses. Each was attended by a negro, brought from the sugar plantations on the coast of Guiana. Then, with drawn broadswords, came a squadron of Swedish horsemen, in black armour and fur cloaks. Next, surrounded by a goodly company of gentlemen and pages, was borne aloft the Prince's banner. On its broad folds the crowds which covered the roofs and filled the windows read with delight that memorable inscription, 'The Protestant Religion and the Liberties of England.' But the acclamations redoubled when, attended by forty running footmen, the Prince himself appeared, armed on back and breast, wearing a white plume, and mounted on a white charger. With how martial an air he curbed his horse, how thoughtful and commanding was the expression of his ample forehead and falcon eye, may still be seen on the canvas of Kneller. Once those grave features relaxed into a smile. It was when an ancient woman, perhaps one of the zealous Puritans, who, through twenty-eight years of persecution, had waited with firm faith for the consolation of Israel—perhaps the mother of some rebel who had perished in the carnage of Sedgemoor, or in the more fearful carnage of the Bloody Circuit—broke from the crowd, rushed through the drawn swords and curvetting horses, touched the hand of the deliverer, and cried out that now she was happy. Near to the Prince was one who divided with him the gaze of the multitude. That, men said, was the great Count Schomberg, the first soldier in Europe since Turenne and Condé were gone; the man whose genius and valour had saved the Portuguese Monarchy on the field of Montes Claros; the man who had earned a still higher glory by resigning the truncheon of a Marshal of France for the sake of the true religion. It was not forgotten that the two heroes who, indissolubly united by their common Protestantism, were entering Exeter together, had twelve years before been opposed to each other under the walls of Maestricht, and that the energy of the young Prince had not then been found a match for the cool science of the veteran who now rode in friendship by his side. Then came a long column of the whiskered infantry of Switzerland, distinguished in all the Continental wars of two centuries by pre-eminent valour and discipline, but never till that week seen on English ground. And then marched a succession of bands designated, as was the fashion of that age, after their leaders—Bentinck, Solmes, Ginkell, Talmash, and Mackay. With peculiar pleasure Englishmen might look on one gallant regiment which still bore the name of the honoured and lamented Ossory. The effect of the spectacle was heightened by the recollection of more than one renowned event in which the warriors now pouring through the West Gate had borne a share." In one respect William's army was honourably distinguished from many other invading forces. Pillage and outrage were effectually discountenanced, and the troops were required to treat all classes with civility. "Those who had formed their notions of an army from the conduct of Kirke and his Lambs"—during the Jeffreys' Reign of Terror—"were amazed to see soldiers who never swore at a landlady or took an egg without paying for it. In return for this moderation the people furnished the troops with provisions in great abundance and at reasonable prices."

In Exeter Cathedral a solemn service was performed in honour of the safe arrival of the Prince, William going thither in military State. The Dean, like the Bishop, had taken to flight, and the Canons absented themselves from their stalls; but Bishop Burnet read out the Declaration, and at the close cried in a loud voice, "God save the Prince of Orange!" Many voices fervently answered, "Amen." A manifestation of feeling in favour of William now rapidly set in. Men of rank began to join his standard; and the first Peer of the realm who made his appearance at the quarters of the Prince of Orange was the Earl of Abingdon, who had previously been a supporter of arbitrary government, and a true friend to James at the time of the Exclusion Bill. But, like many others, the dread of Popery had driven him into opposition and rebellion. Lord Cornbury, eldest son of the Earl of Clarendon, next deserted the King; and when James heard the tidings, he turned away from his untasted meal and retired to his closet. The Queen and her ladies broke out into tears and loud cries of sorrow over the news; for where could the Royal cause find support if those who might have been expected to cling to it to the last thus abandoned it? The Bishops and a number of temporal Peers petitioned the King to call a free Parliament, and to open negotiations with the Prince of Orange. James, still not understanding that everything was sinking under him, was furious, and swore that the first messenger who arrived from the Dutch with flags of truce should be dismissed without an answer, while the second should be hanged.

In a violent temper, James set out for Salisbury, leaving behind a Council of five Lords to represent him in London. To two of these, Preston and Godolphin, no objection could be taken; but two of the others were Papists; while the fifth was Jeffreys, unquestionably the most unpopular and the best-hated man in England. Disastrous news followed the King. The head of the Seymours joined William; and the Earl of Bath, who commanded at Plymouth, placed himself and his troops at the Prince's service. All the south-west was now in William's favour. In the north, Danby conducted a great rising. Peers and gentry flocked to his standard at York, and from that city he marched on Nottingham and united his forces with those of Devonshire, who had mustered at Derby many great Lords of the midland and eastern counties. Churchill and Grafton deserted to William; the former stating that, while he owed everything to the Royal favour, he could not conscientiously draw his sword against the Protestant cause.

The King's camp at Salisbury broke up in confusion, and James proceeded to Andover. He was accompanied by his son-in-law, Prince George, and by the Duke of Ormond—both, however, conspirators against him. Prince George unwittingly furnished the humour of these stirring times. He was extremely stupid, and whenever any news was told him he would exclaim, in French, "Est-il possible?" As soon as he learnt that Churchill and Grafton were missing, the ejaculation was forthcoming, and when it was reported from Warminster that Kirke was no longer faithful to the King, he again exclaimed, "Est-il possible?" Charles II. once said, "I have tried Prince George sober, and I have tried him drunk; and, drunk or sober, there is nothing in him." But "Est-il possible" and Ormond had sufficient sense of what was good for them to leave the King before it was too late, and after James had retired to rest on the evening succeeding his arrival at Andover, they mounted their horses and rode off, accompanied by the eldest son of the Duke of Queensberry, a nobleman who was the recognised head of the Scotch Presbyterians. James was not so moved by the news of Prince George's defection as might have been expected. "What!" he said, "is 'Est-il possible' gone, too? After all, a good trooper would have been a greater loss." He was more enraged against Churchill, and immediately set off for London. Before he arrived there, Princess Anne had fled from Whitehall. Fearful of her father's vengeance, and moved by her idolatrous affection for her favourite, Lady Churchill, her resolution was soon taken. "I will jump out of the window," she cried, "rather than be found here by my father!" Accordingly, at dead of night, the Princess and her friend stole down the back stairs in dressing-gown and slippers. They gained the street, and entered a hackney coach that was in waiting. The coach was guarded by Compton, Bishop of London, the Princess's old tutor, and by the accomplished Lord Dorset. Resting for the night at the Bishop's palace in Aldersgate-street, next day the fugitives were safely conveyed to Dorset's mansion in Epping Forest. Thence she went to Nottingham, Bishop Compton assuming for the time a militant character and taking command of her escort, in a buff coat and jack-boots, with a sword at his side and pistols in his holster. The flight of the Princess caused great consternation at Whitehall. When the King arrived there in the evening, this last affliction caused him to exclaim: "God help me! My own children have forsaken me!"

James held a Council of his Lords. He was advised to negotiate, to announce the redress of national grievances, and

JAMES II. LEAVING WHITEHALL WITH THE GREAT SEAL.

to pardon those over whom he had really no longer any power. In a burst of indignation he exclaimed: "I cannot do it: I must make examples—Churchill, above all; Churchill, whom I raised so high. He, and he alone, has done all this. He has corrupted my army; he has corrupted my child. He would have put me into the hands of the Prince of Orange but for God's special providence. My Lords, you are strangely anxious for the safety of traitors. None of you troubles himself about my safety." Deluded Monarch, he still could not see that it was his own conduct which had precipitated events, and caused them to take a turn that neither Churchill nor anyone else could withstand. The King, nevertheless, did so far submit to counsel as to resolve to call a Parliament, and appoint Commissioners to treat with William. A Proclamation was also issued granting a free pardon to all rebels, and declaring them eligible for service in Parliament. But the negotiation was a feint, as James had no intention of yielding anything, and he told the French Ambassador that he was merely gaining time to ship off his wife and the Prince of Wales, and to secure that symbol of Kingly authority, the Great Seal. When these things were done, then he, too, would leave England, and take refuge either in Ireland or Scotland, or at the French Court.

But Lord Dartmouth, who was still in command of the Royal fleet, having learnt that the negotiation, the amnesty, and the Parliament were all a fraud, was naturally wroth at being deceived. He declared that, while he would risk his life in defence of the Throne, he would be no party to transporting the Prince of Wales into France. Meanwhile, events marched rapidly. Great agitation arose in London, and there were risings in various parts of the country. Newcastle declared for Protestantism and a Free Parliament, and the King's statue was hurled into the Tyne; Hull followed Newcastle; the Duke of Norfolk secured Norwich; Bristol opened its gates to Shrewsbury; and Oxford enthusiastically greeted Lord Lovelace, who had been released by the people of Gloucester after his capture by the Royal troops. William of Orange advanced to Salisbury, where he was joined by the Earls of Clarendon and Oxford, and other nobles, who had hitherto been regarded as ardent Royalists. The invader marched to Hungerford, where he arrived on Dec. 5. Negotiations were here opened with the King's Commissioners. The Prince's demands were put in writing and handed to Halifax. At a dinner at Littlecote, Halifax inquired of Burnet, "What is it that you want? Do you wish to get the King into your own power?" "Not at all," replied Burnet, "we would not do the least harm to his person." "And if he were to go away?" continued Halifax. "There is nothing," said Burnet, "so much to be wished."

Flight was the great solution of the difficulty favoured by the Whigs. At Whitehall James was busy about the safety of the Queen and the Prince of Wales. He confided them to the care of the Count of Lauzun, telling him that everything must be risked to carry them into France. Lauzun courageously accepted the task, and, with the aid of his friend Saint Victor, a gentleman of Provence, he conveyed the Queen and her little son in a skiff to Lambeth. Thence they went by coach to Gravesend, where they embarked in a yacht which they found waiting for them, and which had on board Lord Powis and his wife. On Dec. 10 James learnt that the Royal fugitives were safely on their way to France, and at the same time he received unexpectedly favourable proposals from the Commissioners at Hungerford. Instead of accepting them, however, he made preparations for flight, observing to his few remaining friends that Parliament would force on him concessions which he could not endure, while flight would enable him to return and regain his throne with the assistance of French forces.

Early on the morning of the 11th, James quietly disappeared through a secret passage at Whitehall, bearing the Great Seal in his hand. Sir Edward Hales was waiting for him with a hackney coach, in which he was conveyed to Millbank. Crossing the Thames in a small wherry, he threw the Great Seal into the river, from which it was accidentally recovered months afterwards. The King landed at Vauxhall, and made his way to the Isle of Sheppey, where a boy was in readiness to convey him to France. Intense excitement ensued in London when the flight became known. The actual Sovereign of England had departed, and the Prince of Orange had not arrived. It was a curious interregnum. Riots broke out in the Metropolis, and the Spanish Ambassador's house was sacked. The Lords met at Whitehall, and by a kind of Provisional Government endeavoured to preserve order. The infamous Jeffreys was arrested in the disguise of a common sailor at an ale-house in Wapping. He was conveyed to the Tower, where his life was destined to close in a fearful manner, but one righteously retributive for his diabolical actions. What is called by the historians an "Irish night" next succeeded in London, the whole city being thrown into a state of terror. But although much property was destroyed, not a single Roman Catholic lost his life, though the prejudice against the Irish Papists was exceedingly strong.

The King, during this exciting time, did not get away to France as he hoped. He was detained near Sheerness by some fishermen, who suspected him to be a Jesuit. When his identity was discovered, he threatened and implored by turns to be allowed to go. "Let me go," he exclaimed; "get me a boat. The Prince of Orange is hunting for my life. If you do not let me fly now, it will be too late. My blood will be on your heads. He that is not with me is against me." But a troop of Life Guards brought James back in safety to London. William was now at Windsor. He could offer no further terms to the King, whose only plan was to make a second and more successful attempt to escape. Some of the Tories, like Clarendon and Rochester, now hoped that things would blow over in James's favour. The Prince of Orange had done good service in overthrowing the King's design to establish a Catholic despotism; but this being achieved, there was no reason to fear that a reconciliation could not be effected between James and the new Tory Parliament that was to be summoned. But Halifax, perhaps the most far-sighted statesman of the times, had himself abandoned these hopes. He saw that the Revolution was practically accomplished, and he "pressed upon William the impossibility of carrying out a new system of Government with such a Sovereign as James." The Whigs, of course, took the same view, and the Prince was also brought to see that the time for compromise had passed, and that the fallen Monarch must depart.

One thing was clear; there could not be a King James at Whitehall and a King William at St. James's. Something must be done with the former. There was a consultation of Peers at Windsor, and it was decided that James must be sent out of London. It would be hard to depose him if he remained, and still more dangerous to keep him a prisoner. The Dutch troops now occupied Whitehall, and three English Lords—Halifax, Shrewsbury, and Delamere—delivered to the King a message to the effect that the Prince of Orange would be at Westminster in a few hours, and that his Majesty would do well to set out for Havre before ten the next morning. On Dec. 18, the King, who seemed paralysed by untoward circumstances, set out for Rochester instead, and while his barge made its way with difficulty down the river, which was somewhat rough, the Prince's troops poured into London. Notwithstanding the severe weather, a great crowd assembled near Albemarle House and St. James's to welcome the Prince, and all were adorned with an orange ribbon.

The Prince of Orange duly arrived at St. James's, accompanied by Schomberg. He had succeeded in his enterprise, but now began his Constitutional difficulties. Was he to assume the Crown by right of conquest, and then as King send out writs summoning a Parliament? This was what several eminent lawyers advised him to do, but there were obstacles in the way; so he decided upon calling together the Lords and the surviving members of the Parliaments of Charles I. They were appointed to meet at St. James's on Dec. 21, and about seventy attended. Before the assembly proceeded to business, a number of Royalists made one last effort to restore James. They sent assurances to him at Rochester that if even now, at the eleventh hour, he would abandon those designs abhorrent to his people, they would strenuously defend his interests. But James was so overcome by fears of personal danger that he was not able mentally to take in the situation. All he felt was that it was at his peril if he remained in England; so on the morning of Feb. 23 he embarked for France. His flight discomfited the Royalists, but in an equal degree rejoiced the Whigs.

The Revolution was now practically complete, for the most serious difficulty had been removed by the departure of the King. The two assemblies of Peers and Commoners requested William to take upon himself the provisional government of the kingdom, and to issue circular letters inviting the electors of every town and county to send up representatives to a Convention Parliament, which was to meet on Jan. 22, 1689. William pursued a tolerant policy, and would permit no interference with the elections. But, in truth, the people were so favourable to him, and had been so long waiting for this appeal to their suffrages, that no kind of coercion was needed on behalf of his cause. The City of London elected four great merchants, all zealous Whigs, and other towns imitated the example of the capital—the result being that a large majority of the shires and boroughs returned Whig members to the new Parliament.

James arrived at St. Germains, where he was received by the French King, and England began to adapt herself to the new condition of things. But the Convention Parliament was far from being harmonious in its early sittings. The Commons declared the throne to be vacant in consequence of the conduct and the virtual abdication of James; but the Lords, while admitting that James had ceased to be King, denied that the throne could be vacant, and affirmed that the Sovereignty was now vested in his daughter Mary. Nevertheless, William

declined to be Regent, or, as he said, "Gentleman-usher to his wife"; and Mary refused to accept the Crown save in conjunction with her husband. The difficulties were finally set at rest by the decision of the Houses that William and Mary should be acknowledged as joint Sovereigns, but that the actual administration should rest with William alone. The new King and Queen were proclaimed by the Convention Parliament on Feb. 13, 1689.

One great legislative act remained to be achieved before the grand results of the Revolution could be said to be finally secured. The famous Declaration of Rights was drawn up by a Parliamentary Committee, and adopted by both Houses. This important instrument recapitulated the misgovernment of James, his abdication, and the resolve of the Lords and Commons to assert the rights and liberties of English subjects; it condemned as illegal the Ecclesiastical Commission and James's resolve to raise an army without Parliamentary sanction; it denied the right of any King to suspend or dispense with laws, or to exact money without the consent of Parliament; it asserted the rights of petition and of the free choice of Parliamentary representatives, and demanded a pure and merciful administration of justice; it claimed liberty of debate for both Houses, demanded securities for the exercise of the Protestant religion, and bound the new Sovereign to maintain that religion as well as the laws and liberties of the nation; and it concluded by declaring the Prince and Princess of Orange King and Queen of England. The Declaration of Rights was accepted by William and Mary, and from their accession may be said to date the great paramount authority of the Commons of England. Limitations were placed upon the power of the Crown, and the real government of England henceforth lay in the hands of the people. Of all revolutions that the world has seen, there has never been one which, with so little bloodshed, achieved such great and enduring results as the Protestant Revolution of 1688.

G. BARNETT SMITH.

NOVELS.

The Ladies' Gallery. By Mrs. Campbell Praed and Justin M'Carthy, M.P. Three vols. (Bentley).—Combined authorship, even between two practised novel-writers, is apt to injure the harmony of æsthetic impression that should prevail in a work of high literary art. This is the more to be regretted when the main design is conceived and wrought out, in all essential passages of action and movements of feeling, by an author of such vivid and powerful dramatic imagination as Mrs. Campbell Praed. Supposing, as we are inclined to do, that the portions of this novel contributed by Mr. Justin M'Carthy are the comparatively trivial and insignificant descriptions of the precincts of the House of Commons, and the fantastic misdescription of the notorious riots in Trafalgar-square, it seems to us that the omission of those chapters would render Mrs. Campbell Praed's story one of the finest we have lately read. It would not then be entitled "The Ladies' Gallery;" and so much the better, for it is really no picture of the lives and labours of Members of Parliament, or of the instructed sympathies of their lady friends with the contests of political ambition. If Mr. Richard Ransom, a young Australian millionaire, utterly a stranger in Europe and ignorant both of public business and of English concerns, had the vanity to tell Mrs. Florence, whom he met on his way hither from Melbourne, that he should at once get into the House and would give her the first seat he could procure in the gallery, he was then behaving very unlike the modest and genuine hero represented in the more important parts of this story. The incident can only have been put in for the sake of giving to the novel a catching title which bears no relation whatever to its true subject, and which was certainly far from being needful or expedient to recommend a work of romantic fiction otherwise distinguished by great and rare merits. Its true interest, we are happy to assure the reader, may yet be enjoyed profoundly in spite of these blots and de acements, as it is fully developed with the quiet strength of artistic genius, with evenness and simplicity of style, and with an unfailing grasp of the dramatic intention controlling a few vital changes in the relative situations of the chief actors. Its subject is the position of an honourable man who, having contracted under circumstances of extreme peril and hardship an intimate friendship with another man, being indebted to him for thrice saving his life when they were destitute wanderers in the Bush of North Queensland, and for sharing with him a discovery of gold that suddenly enriched them both, a few years later meets at the Falls of Niagara a woman supposed by him to be a widow; he loves her instantly with a first and final, fatal love, and she, though firmly rejecting and resisting his suit, nevertheless, in a moment of apparent danger, at the impending collision of their ship with another steamer, involuntarily betrays her affection for him when death seems close at hand. This woman, Mrs. Florence, accompanied by her brother Anthony Strange, is also on her way from Australia; and she is the wife of the man now calling himself Joseph Binbian, the trusty comrade, sworn friend, and gold-mining partner of Richard Ransom, who knew that his friend was an escaped convict, and that he had been guilty of embezzling some money of Government; that he had formerly been a gambler, drunkard, and profligate husband; but who had seen, during five years of close companionship, the sincerity of his moral reformation. Ransom does not know the name that his friend had borne in another Australian colony—Queensland is a long way from Melbourne—before he was condemned to imprisonment, and got away into the wild region where they first met; where one shared with the other, dying of thirst, his last drop of water; one nursed the other for weeks in fever; one plunged into a raging torrent to save the other from drowning; one received in his own body a spear hurled by murderous savages at the other; and where the profits of a marvellous find of gold were faithfully shared between them. Surely, in such a situation there are elements of romance, of heroic tragedy, of that mysterious game of cross purposes between Fate or Fortune or Providence and the highest resolves and noblest emotions of the human heart, which makes the Drama, in any form—even in a prose narrative of common folk of our own days—incomparably the most interesting kind of literature? These three persons, Ransom, his partner "Binbian Joe"—a name taken from the Binbian Range, where they found the gold—and this man's lost wife, Berenice, who hates and loathes the memory of her brief and wretched married life, are the principal characters. And they are all noble, each in his or her own way; for she, dreading no evil so much as that of again meeting her husband, never thinks, except in one moment of frantic despair, and as a refuge from that horror, that she can give herself to the man she loves; while Joe, purified of every low habit and passion by intense suffering, and exalted by his brotherly friendship with Ransom, never thinks of the chance of finding her except for atonement and pardon, but like Enoch Arden, prefers that she shall believe him dead, so that she may be free. Such is the theme which Mrs. Campbell Praed has treated in a tale of so much imaginative force, refinement of feeling, and moral beauty that to label it with that silly title, "The Ladies' Gallery," and to mix up with it the mere commonplace London newspaper anecdotes to which we have referred, is a sad mistake between the joint authors. The sincerity of genius ought also to guard such an author as she here proves herself against ironically depreciating her own art by introducing the useless figure of Miss Philippa Dell: a lady novelist who practises flirtations with different men for the purpose of utilising her experiences in fiction to be paid for by the booksellers, and who sets down in her note-book as material for "copy" the tenderest or the painfullest things she hears among her friends. There is a grotesque unreality, too, in the manners of that amiable old couple, Sir Anthony and Lady Strange, living at the banking-house in Lombard-street; and young Tony's language is that of an excessively silly and vulgar boy, not at all amusing. As for the final catastrophe in Trafalgar-square, where Ransom and Binbian Joe, who together have five millions sterling in their pockets, appear as champions of the starving London poor, and Binbian is shot dead—we can only say that it is a shame to spoil a noble story by appending such a gross absurdity at the end. It would have been easy to devise another way for Binbian to die in performing an act of self-devotion; as it would have been easy to choose a better place than "The Ladies' Gallery" for one of the most critical moments in the revelation of the central fact of this story. Notwithstanding the blemishes that have been pointed out, we must declare it to be a good novel, almost a great one, and we can decidedly recommend it to our readers.

From Moor Isles. By Jessie Fothergill. Three vols. (R. Bentley and Son).—The readers of Miss Fothergill's new story will find it abundantly engaging and interesting; but its main concern is far removed from the few people belonging to "Moor Isles." That rather misleading name, instead of denoting a maritime situation, has by some perverted pronunciation of a local dialect word been given to an old farm-house among the inland hills between Lancashire and Yorkshire. In that neighbourhood, where old-fashioned rustic life still abides the admixture of a rather uncultured social element from the residences of thriving district manufacturers, the ruinous infatuation of Brian Holgate, and the unselfish constancy of Alice Ormerod, might afford sufficient motives for a pathetic tale. Up to a certain point, their history is developed with considerable effect, but its spring of interest is soon dried up by the exposure of Brian's contemptible moral weakness; and, though Alice presents a noble womanly figure, her action in the story has no important result. The person whose youthful affections and experiences command most attention is Ines Grey, an orphan girl, brought up from infancy under the generous protection of the eminent professional vocalist, Felix Arkwright, known as M. Félix in Paris and other foreign cities. Her mother, the widow of a young English gentleman who had been disinherited for marrying her, failed as a public singer and died in poverty; upon which Felix kindly undertook the care of the child. The characters and the behaviour of Mr. Felix and of his confidential friend, Madame Reichardt, an English lady of great benevolence and of high accomplishments, the widow of a German merchant at Irkford (evidently Manchester), are represented in the most pleasing light. They are perfectly consistent; and such rare examples of unaffected goodness, allied with tact and discretion, and with true refinement of taste and manners, are very possibly to be met with in the actual world, as both these congenial allies in well-doing are within the marriageable age between thirty and forty, and are in constant correspondence, besides occasional visits, one is inclined to hope that they will make a suitable match; but the demands of romance are preferred by allowing Ines Grey, when she grows up to womanhood, to feel an affection warmer than gratitude for her wise and faithful guardian. Becoming, as she presently does become, the real heroine of the story, Ines relates the most essential portion of it in chapters supposed to be written by herself, which have little connection with the affairs of the unfortunate dwellers at Moor Isles. Upon one occasion, indeed, when Mr. Felix, Mrs. Reichardt, and Miss Grey, accept Brian Holgate's invitation to spend an afternoon in his moorland home, where Alice Ormerod helps to entertain them, some links of mutual esteem are formed, which do not afterwards bind the separate fortunes of these parties closely together: Brian, an enthusiast about music, but a careless idler, never recognises the true worth of Alice, who loves him and would save him; but he falls a victim to the seductions of Lucy Barraclough, the wickedest little flirt in the country, takes to drink and gambling with her brother Jim and with the artful schemer, Dick Law; finally, loses all his money in the wild game of "poker," and goes to America by the assistance of Mr. Felix. We do not care much about him; and the concluding information that he has mended his life, and has found a new home and a wife in the United States, leaves us only content to know that he is never to become the husband of Alice. With regard to the other group of characters, their relations to each other excite lively and agreeable sympathy, of which Ines is naturally the centre. Among the best scenes are those of her being presented to her haughty grandfather, old Mr. Grey, and to her cousins, Maurice and Maud, at the Kirkfence (Leeds) Musical Festival; and her subsequent meeting with Maurice at an evening party in London. She has been educated with the highest intellectual advantages under learned professors, and is a scholar of the Oriental languages, Persian and Sanscrit, intending to earn her own livelihood by teaching or literary work. Resenting the former harsh conduct of her grandfather towards her own parents, and the long neglect of herself by all her paternal kindred, she declines the offer of a home with the Greys, who are a rich and aristocratic family; and she of course refuses the hand of Cousin Maurice, being half-unconsciously in love with Mr. Felix. The admirable self-denying arrangement made by her kind benefactor to wean her from this suspected attachment to himself, of which he thinks it would not be right to take advantage, is ultimately defeated. After leaving her two years under the care of Madame Prénat in London, neither seeing her nor writing to her during that time, Mr. Felix at length perceives, when Mrs. Reichardt and Ines join him in his American tour, that the girl's heart is fairly and irretrievably given to him; and then, putting aside his needless scruples, he at length obeys the prompting of his own heart by marrying Ines after all, with the sincere approval of Mrs. Reichardt. All this part of the story comes to an end very happily, and even with an intimation that "Moor Isles" is a place to be revisited now and then; but with a lonely prospect for Alice Ormerod, who was deserving of a better fate.

Broken Wings, by Avery Macalpine (Chatto and Windus), is a one-volume work by the author of "Teresa Itasca," and has all the charm of lifelike characterisation and vivid description which marked the previous book. Rouen, in which most of the incidents of this interesting story of French life occurred, is graphically described. The tale is romantic to the verge of sensationalism; yet it is thoroughly wholesome, its chief theme being the passionate, self-sacrificing love of a mother for her daughter, who is under training for a *danseuse;* while the other characters are drawn with dramatic power. The narrative is picturesque, and the style everywhere graceful and frequently poetical. Some illustrations by W. J. Hennessy adorn the work.

SCIENCE JOTTINGS.

OUR MONTHLY LOOK ROUND.

The old proverb about the hardships encountered by a fish out of water, might, of course, be paralleled by the case of a man in the sea. But just as there are fishes which (like the climbing perch of India and others) can live for prolonged periods outside the medium in which they naturally exist, so it would appear there are variations and degrees in the length of time which humanity can remain under water. M. Lacassagne has been studying this latter point of late, his chief subject being a celebrated diver. This man, it was alleged, could remain under water for 4 min. 14 sec., which, it must be confessed, is a great advance in duration over the period commonly believed to prove fatal to a completely immersed person. The study of this man revealed certain interesting and important points. In the first place, he expelled all the air from his lungs—that is all the air which breathing can expel from the lungs, for there always remains in the lungs an amount over and above that which can be exhaled in the deepest expiration—when he filled his lungs as completely as possible, and dived. While in the water, he swallowed about a litre of the fluid, a litre being nearly (1·76) two pints. On emerging from the water, it is said he "snorted" frequently, while his face was congested, his heart-beats slow and feeble, and his eyes flushed.

* * * * *

M. Lacassagne observed that this diver, in the course of his deep inspirations previous to his immersion, really swallowed a large amount of air; while, when under the water, he swallowed saliva, or the fluid of the mouth. During immersion, also, the movements of breathing proceeded at a regular rate of twenty to the minute; the cavities of the chest and abdomen diminishing proportionately in size. The explanation of the ability to remain below water for such a prolonged period appears to rest on the fact that the man's pharynx (the cavity which intervenes between the mouth and throat) acts as a reservoir of air. The air is drawn, it is supposed, from the stomach into the cavity first named, and is thence inhaled into the lungs. The faculty of successful diving would thus appear to rest upon a power of swallowing air in the first instance, this swallowed air serving as a store upon which the lungs may and do draw when the diver is below water. It would be interesting to learn what physiologists have to say to this theory of diving; but I am reminded that in certain fishes which can remain out of water for a length of time there exists a storehouse for water in the head. In other fishes, which seem actually to require in part to breathe air like ourselves from the atmosphere, and which perish if kept below water, the pharynx serves as a cavity wherein air is contained. The latter fishes in this respect resemble M. Lacassagne's diver in their possessing an aerial reservoir on whose stores they may draw for the vital supply.

* * * * *

The "omnipresent germ" is, day by day, extending its range of action. The latest information to hand regarding the work of bacilli, as the germs are named, and their neighbours, is to the effect that the phosphorescent light of certain animals is really a consequence of the action of these germs. There is a shell-fish called the Pholas, which burrows in rocks by means of its shells; and in this animal, M. Raphael Dubois tells us he has discovered a bacillus or germ, which, through the chemical changes it produces in the animal tissues, evolves the phosphorescent gleam. Some phosphorated substance being oxidised, to put the matter chemically, by the germ-action, we get the strange weird light of the sea produced. There is another point in this explanation worth recording, because it favours the views of the author I have just quoted. Phosphorescence is known to be frequently associated with decay of animal tissues. Now, decay really means the pulling to pieces of the dead animal by germ-action; and if this notion be correct, we are at no loss in such a case to connect the phosphorescence with a likely cause. Again, the germ-origin of these lights of the sea may serve to remove some of the difficulties which naturalists have felt in accounting for the utility and causes of the strange gleaming in animals whose deep-sea habits place them far beyond the influence of light.

* * * * *

One of the premonitions of earthquake has long been alleged to exist in the disturbed temper of the animal creation in the neighbourhood of the affected area. Professor Milne, whose observations on earthquakes are so numerous and interesting, says that animals are more widely affected during earthquakes than we have hitherto supposed. Not only do domestic animals exhibit consternation, but fishes experience what appears to be great alarm. In 1880, at Tokio, in Japan, the cats tried to escape from houses, foxes barked, and horses tried to break loose from their stables. Before earthquakes began, pheasants have screamed, and ponies threatened a stampede. Birds hide their heads beneath their wings, as if apprehensive of coming danger. In Calabria, the sand-eels left their burrows, and came to the top of the sand in multitudes. Probably, as Mr. Milne remarks, animals are highly sensitive to the slight premonitory tremors which herald the greater shock. When we consider how much more extensive and delicate than our own senses those of many lower animals are, we cease to wonder at such examples of their sensitiveness. A dog's sense of smell, for instance, must transcend immensely our own olfactory sense, and open up to the animal, worlds of odours and impressions all unknown to his master.

Great activity now reigns in our educational departments everywhere. The winter sessions and autumnal terms are in full swing, and from our Universities downwards to the night-classes for working-lads, the busy work of gaining knowledge proceeds apace. One cannot avoid the thought that with this wide diffusion of knowledge, the world, while it grows wiser, must grow better likewise. I am afraid, however, that until we succeed in acquiring "culture," as the method of applying our knowledge to making life happier and healthier, we shall not reap the full benefit of all our educational activity. I know of no word which has been more roundly and soundly abused than this same term "culture." Matthew Arnold's definition of it strikes me as being admirably succinct. Knowledge comes, but culture lingers—to parody the Laureate's lines; in truth, the "wisdom" of the poet is much the same thing as the "culture" of the philosopher. Let us get knowledge by all means—without it man would relapse into the savage state—but in all our educational aspirations let us strive after the culture that applies knowledge to its useful ends. Culture is only the successful utilisation of knowledge in the aim of increasing human happiness, after all. Let us be careful that, amidst all our acquirements, we at least learn the high art of putting our knowledge to useful ends.

* * * * *

I have received from various correspondents accounts of frogs and toads "in solid rocks," corroborative of the views expressed by me in "Science Jottings" for Oct. 13. But the "toad in the rock" is such a venerable institution that I doubt whether any criticism of a scientific kind can dispose of him. People dearly love their superstitions. ANDREW WILSON.

IN THE TIME OF THE EMPIRE.

The fashion of Parisian female dress, in the last years of the eighteenth century and at the beginning of this century, under the Directory of the French Republic and under the Consulate and Empire of Napoleon Buonaparte, affected a kind of simplicity which seemed to denote a reaction from the pompous attire customary under the old Monarchy. At first there was a rage for imitating the classical Greek and Roman costumes, with no waist, but a long loose garment fastened by a brooch at one shoulder; this was superseded by the short-waisted white frock of the "ingénue" or "jeune fille," with arms bare, except when a long silk mitten was drawn up beyond the elbow of the left arm, while the head was covered with a huge Leghorn bonnet, surmounted by a wreath of flowers. This innocent-looking dress, which is represented in the picture by an Italian artist, was actually worn for some time not only by girls, but also by ladies who perhaps were not so young as they had been, and who practised the airs of juvenile sprightliness and tenderness until they had passed middle age. It is so disagreeable to think of beginning to grow old.

"IN THE TIME OF THE EMPIRE."—AFTER THE PAINTING BY F. ANDREOTTI.

NEW BOOKS.

Life of Lord Stratford De Redcliffe, K.G. By Stanley Lane Poole. Two vols. (Longmans).—The biography of that eminent diplomatist and statesman, who during nearly half a century bore an active part in British policy, and in the East of Europe had great influence over its affairs, cannot fail to be of much historical interest. His commanding personality, as well as the deference long paid to his wishes and opinions, which rose to its height at the time of the Crimean War, make him almost as great a figure as some of the rulers of considerable States. It is questionable whether he could have attained much authority at home, or the rank of Prime Minister, in any case, as a Parliamentary statesman. Though an able councillor and a masterly administrator, he, perhaps, lacked the sympathetic insight, as he lacked the peculiar experience, needful for success in popular government. His public-spirited uprightness, with his extraordinary force of purpose, secured the assent of Lord Palmerston and other political leaders to his own views, which he undoubtedly believed to be wise and just. Some of us, in this year 1888, may think, as some did in 1854, that the policy of playing guardian and tutor to the Turkish Empire was not the true English policy, and that very little good has come of the immense sacrifices we have made for its sake. Yet we hold the memory of Sir Stratford Canning, Lord Stratford De Redcliffe, in sufficient esteem to greet Mr. Stanley Lane Poole's "Life" of him with real satisfaction, which is enhanced by the perusal of a work so good in literary composition, so well arranged, and so full of exact information, characteristic anecdotes, and valuable details concerning momentous transactions. Stratford Canning, nephew to the Right Hon. George Canning, but only seventeen years his junior, was born in 1786, in the City of London, the son of a not very successful merchant, was brought up by his widowed mother at Wanstead, was educated at Eton and partly at King's College, Cambridge, was placed in the Foreign Office by his uncle's influence, was sent to Copenhagen, and soon afterwards to Constantinople, as Secretary of a Legation, and in 1810, at the age of twenty-three, was acting as Minister Plenipotentiary to the Porte, then beset with Russian and French intrigues in the midst of our great war with Napoleon I. His biographer candidly observes that this easy and rapid advancement in the diplomatist's career accounts for his "exceeding masterfulness"—which some have called high-handed arrogance and occasional insubordination—his want of the faculty of "getting on with others"; his impatient, menacing temper, and a disposition to be suspicious which came from the nest of intrigues that surrounded him at Constantinople. These faults in an English statesman at home would have been fatal to high political usefulness; but there are some indiscriminating admirers of "the Great Eltchi" who seem to regard them as the best qualifications for a British Minister dealing with Turkey and Russia. Most readers of the biography, who are likely to be somewhat acquainted with the history of our foreign affairs from 1824 to 1858, will have formed an opinion long ago upon the manner in which "the Eastern Question" was handled. This may even be extended to the events of 1878, under the Beaconsfield Administration; but happily, in the present situation of Europe, it is not of urgent practical need to correct any misapprehensions that may have been entertained on that score. Ten years ago, thirty years ago, sixty or seventy years ago—what is it all to us now but past history, worth studying, of course, for example and instruction, but with no imperative bearing on the actual interests and duties of this time? These two volumes, apart from the concerns of the Turkish Empire, of Greece, of Navarino, of Asia Minor, of Syria, of Egypt, of "the Danubian Principalities," of Servia, of Montenegro, of the Unkiar Skelessi and other Treaties, of the Czar Nicholas and Prince Mentchikoff, of the result of the Crimean War, the Hatti Humayoun, the manifold breakings and patchings of the rotten Imperial garment of Ottoman rule, contain much that will interest readers who have given all that up as a bad job. The brilliant figure of George Canning is naturally prominent in some chapters of the first volume. His generous sympathy with struggling nationalities of old renown was effectually proved, during his Ministry, by his friendly efforts at European intervention on behalf of Greece. These had the zealous co-operation of Stratford Canning, in Constantinople, from 1826 to 1832; and we are inclined to regard them as the brightest achievement of both the Cannings, from first to last. Stratford Canning, however, was not Minister in Turkey, but in the United States of America, from 1820 to 1823, when he privately wrote, "I wish with all my soul that the Greeks were put in possession of their whole patrimony, and that the Sultan were driven bag and baggage into the heart of Asia"; much the same wish that Mr. Gladstone expressed in favour of the Bulgarians eleven years ago! It has never, indeed, been possible for any English statesman, Conservative or Liberal, to entertain a feeling of positive hostility to the cause of national independence in the countries under Turkish rule; but some of our statesmen have too often thought fit to postpone such claims to their chief object, that of thwarting Russian influence among the populations attached to the Greek and other Eastern Churches. Leaving, once more, the not very agreeable consideration of such topics, and the costly errors of our foreign policy which are not likely to be repeated, we commend Mr. Stanley Lane Poole's work as a piece of history, as a biography, and as the narrative of a great and dignified Englishman's public and private life. It has some domestic and personal interest. Sir Stratford Canning sat many years in the House of Commons, and as Lord Stratford De Redcliffe many years in the House of Lords, dying in 1880, a "Grand Old Man," at the age of ninety-three. He was certainly deserving of a book to be written about him, and here is a good one.

The Long White Mountain. By H. E. M. James (Longmans).—Manchuria is not unknown to us, but few travellers have explored it. Mr. H. E. M. James, of the Bombay Civil Service, has lately spent his holidays in a seven months' journey in that country, the result of which is now published in this volume, and is full of fresh and interesting matter. Its chief feature is the exploration, for the first time, of the Ch'ang-Pai-Shan, which is the Chinese for the "Long," or "Old" White Mountain. The present dynasty which rules in China is Manchu; its ancestors come from the region of this mountain, and there is a fabulous legend which ascribes their first origin to it; so to them it is very sacred, and it presents us with an instance of a mountain being a kiblah, or shrine, towards which prayer is offered. The Emperor Kanghi visited Kirin in 1682, and when he came in sight of the mountain he alighted from his horse, and bowed thrice by way of salutation. The present Military Governor of the district has once a year to perform a ceremony of praying, looking to this sacred mountain of the dynasty. It was supposed to be of great height, and that its whiteness was from the eternal snow on its summit; Mr. James's exploration gives us now the real account of it. The mountain is only about 8000 ft. high; it is, no doubt, covered with snow in winter, and a few patches were seen in the clefts, but the colour is that of the rock, which is pumice-stone. The top is an old volcano, and the crater is formed of this pumice-stone, standing up in jagged peaks and perpendicular sides, in the centre of which, in the old crater, is a pellucid pool of deep blue water, about six or seven miles in circumference. This is the Lung-Wan-T'an, or the "Dragon Prince's Pool." The visitors could not descend the steep sides of the crumbling pumice-stone, but Lieutenant Younghusband managed to ascend the top of the highest peak. Amongst the principal towns visited were Moukden, Kirin, Tsitsihar, Sansing, Ningtu, and Hun-Ch'un, which are described, as well as the rivers and roads, with the manners and customs of the various races to be found in Manchuria. Mr. James was accompanied by Mr. H. Fulford, of the Chinese Consular Service, and by Lieutenant Younghusband, of the King's Dragoon Guards, who has since returned to India by way of Mongolia, the great desert of Gobi, to Kashgar and Yarkand, and got safely into Kashmir by way of the Mustagh Pass, the crossing of which has been already related before the Royal Geographical Society.

Sketches of Hindoo Life. By Devendra N. Das, B.A. (Chapman and Hall).—It will tell people in England what a great change has taken place in India, and how far our language has progressed in that country, when we note how many have learned to speak and write English, and the large numbers of the better classes who come to our universities to complete their education. It is even more significant to find that many of these gentlemen are becoming authors, and producing books. There are learned authors in India, such as Dr. Rajendralala Mitra, who has written a number of works in English on Indian literature and archæology. He is only one of many authors, and few will dissent from the hope that the number of these native Indian scholars may increase. Devendra N. Das has lately contributed a number of Sketches of Hindoo life to the daily papers, and one of them, rather longer than the others, had the honour of appearing in the pages of the *Nineteenth Century*. These have now been published in a volume; and they give a very good account of the everyday life and customs of the natives of India. The sketches are evidently written to be popular in this country, and to attain this the author has avoided almost all Hindostanee words and phrases. Perhaps he has carried his abstinence of reference to Indian ideas a little too far. For example, his account of the "Yogee" would not have suffered, if he had just hinted that the practice of these ascetics was founded on the Yoga Philosophy, which dates back to a remote period; and that a celebrated author, known as Patanjali, has left a work on the subject as old as 200 B.C. Nor would it have interfered with the spirit of his purpose had he told us that one Vatsyayana wrote a book, about 1800 years ago, on which the domestic and social life of the Hindoos is moulded, as it teaches the science of life. The author of "Sketches of Hindoo Life" evidently writes from his own experience, and this gives a value to his descriptions. The whole is very fresh, and the work is a contribution to our knowledge of the daily existence of the people of India, a subject on which we have not as yet many books of authority to refer to.

THE NEW EXTENSION OF HAMPSTEAD-HEATH: THE EAST PARK ESTATE AND PARLIAMENT HILL FIELDS.

THUN.

Thun is just the place for anyone who, tired of the noise and racket of London life, seeks simplicity and the calm enjoyment of beautiful walks amidst the most delightful scenery. Of course it does not boast the rugged grandeur of glaciers and snow-capped mountains, such as we meet with more in the heart of Switzerland; but in its quiet beauty of river, lake, and wooded hills, with the loftier heights of the Eiger, the Mönch, and the Jungfrau in the distance, it is not to be surpassed.

The little town itself is charmingly situated on the river Aare, about three-quarters of a mile from the point where it issues from the Lake of Thun, and is quite a typical Swiss town. Many of the houses are very old, for the most part built of wood, and often curiously carved, with great overhanging eaves, high gables, and queer-shaped roofs of many-coloured tiles and numerous pinnacles. There are two or three quaint old covered wooden bridges across the river, which is extremely rapid and of the deepest blue-green hue; it is said, too, that its waters are excessively cold, but of this I cannot speak from experience.

The main street of Thun is very curious. No two houses in it are alike, and the effect of the different styles, fancifully adorned fronts, and diversity of colouring, is most picturesque. A row of shops, generally rather inferior ones, or such as are used for the sale of very homely articles, project in front of the houses on the ground-floor, the footway being made over their flat roofs, and in front of the better class of shops. An arcade, such as is often met with in old Swiss and German towns, extends part of the way above this footpath. I constantly found myself descending into the roadway in order to have a good look at the lower shops, many of which contained a great deal of copper-ware, some of the vessels being made in shapes quite strange to our eyes, while in others were odd-looking tubs and wooden utensils of every description, homespun linens, &c., all interesting to a stranger's eye. This walking in the roadway is, however, not always pleasant, as it is not very broad, and though the amount of traffic is not very great, some of the vehicles are extremely clumsy and unwieldy, and the driving is most promiscuous, so that I had to keep a pretty sharp look out.

Thun, for the most part, is built on the steep side of a hill; the church, the schools, and many of the houses being at a very considerable height above the river. It is, in fact, quite a pilgrimage up to the church, the usual way of reaching it being up a flight of between two and three hundred wooden steps, roofed in almost to the top, and forming a most quaint and curious approach. The last part of the ascent is made by a flight of stone steps between walls with gardens on the other side, and when I was there some vegetable-marrow plants had been trained across from side to side, and formed quite a pretty green bower, while huge yellow marrows hung down over the heads of the passers-by. Hung, I say—but one came down on the steps with a crash the instant after I had passed, and its size and weight were quite enough to make me thankful it did not come down upon my head. The result, if nothing worse, must have been a headache for the rest of that day.

A little turret is built out at each corner of the churchyard, each commanding a most exquisite view of the lovely valley (the Aare here divides itself into two branches), with the impetuous river hurrying along through the most verdant meadows, the wooded sides of the Stockhorn, the sterner Niesen, the triple peaks of the Blümlis-alp, and the distant snow-capped Jungfrau; or, again, of the quaint-looking town below us, the castellated villas in their beautiful gardens that seemed to rise out of the water, and, a little further on, the glittering lake shut in by lofty mountains. All this makes a veritable feast for the eyes that one would never tire of. The curious old square tower with a pinnacled turret at each corner—part of the former castle of Zähringen-Thyburg—stands a little higher up than the church, the views from it being almost identical with those just described.

Thun seems a very busy little place. One of its principal trades consists of porcelain, the manufacture of which is carried on at Heimburg, a village a little way out of the town. I paid a visit to these porcelain works, and was much interested in what I saw. The pottery is made by men, who also attend to the baking of it; but almost the whole of the painting, and of the fine stencil-work one sees on much of it, is the work of girls, who execute the designs entirely according to their own fancy. The "Thun ware," as it is called, is of several kinds: some, very fine, and of exquisite shades of colour, and with a dull surface, is considered the best, and is fashioned into elegant vases of classical shapes; another sort, the ground of which is often black, while the embossed pattern upon it is painted in bright tints of blue, red, and yellow, is made upon the models of vessels found by Dr. Schliemann in his recent excavations; while a third, less costly kind, is generally glazed on the surface.

Coppersmiths and bellfounders also form an important part of the manufacturing population of Thun. Bells of every description, from the weighty and sonorous church-bell to the tiny tinkling things which the Swiss are so fond of placing about their harness, are made here; and we were told that cow-bells, as well as bells for sheep and goats, so universally hung round the necks of all these animals in Switzerland, are made in greater numbers at Thun than in any other place; while large quantities of them are yearly exported to America and several other countries.

Thun is also the great market for the Gruyère cheeses, which are chiefly made in the neighbouring "Simmenthal," and hundreds of which are brought to the great cheese fair held there from time to time. One of these fairs took place while I was there. It was amusing to see the rough-and-ready way in which the cheeses, varying in size from the circumference of a moderate-sized cart-wheel to that of an infant's perambulator, were brought into the town on the rude waggons of the country, generally drawn by oxen, and then rolled and tumbled about like so many logs of wood, till they are placed on open stalls along the street. Of course, intending purchasers were freely invited to taste of these, as well as of the various other sorts of cheeses (some of very *decided aroma*, to say the least of it!) displayed, while the vendors tried to outdo one another in shouting the praises of their own especial dairy. The Gruyère cheeses are not, as is generally supposed in England, made entirely of goats' milk—the best, at least, being composed of a mixture of goats' and cows' milk. Many of them are made during the short summer when the flocks and herds are grazing on the "Sennen," or heights, whence the cheeses are brought down to the valleys on the backs of stalwart young men, as is shown in our Illustration. The frame in which the cheese is placed resembles a glazier's frame somewhat, though much narrower, and is fastened by straps round the shoulders. A portion of the woman's head-dress is made of black lace or gauze, stiffened, and in some instances even held up by wires. It is attached to the back part of the head-gear.

There are charming drives to be had around Thun, and, for those who do not mind going uphill, most delightful walks. I must content myself with mentioning one or two of the latter only.

An instinctive feeling always leads me to try and get high up wherever I am, and this had already induced me to establish myself at a nice, quiet hotel a good way up the hill-side, whence I could overlook the town. Still, I wanted to get higher; so, on starting out for my first walk, I naturally turned my face upwards.

The path led at first past two or three pretty little villas, just then the abode of English residents, and on by cosy-looking châlets, inhabited by well-to-do peasants, standing in gardens gay with bright autumn flowers of every hue, foremost among them being zinnias and asters of various shades, and shaded by pear and walnut trees bowed down with their load of fruit. The stillness was broken only by the hum of innumerable bees that were busy among the heather and wild thyme at my feet, varied by the occasional chirp of a grasshopper or the buzz of mosquitoes. It was very hot, and I was not sorry when I reached the shade of the beech and pine woods which clothe the Grüsisberg. Here it was cooler, and I wandered up and up, stopping ever and anon to contemplate the exquisite views that continually presented themselves at some opening made at a salient point, till I reached the Rabenfluh, nearly 4000 ft. above the lake. This spot commands a wide prospect of the rich, fertile valley nearly as far as Berne, in the one direction, of the lake of Thun, backed by the Stockhorn, the Niesen, Blümlis-alp, and the far-away Jungfrau in the other.

Having rested a while and enjoyed to the full the beauty of the scenery, I set out on my return, which was more easily accomplished than the ascent had been. I followed the path by which I had gone up till I reached a sign-post with "Kohlerenschlucht" on it, and as I thought "schlucht" (or ravine) sounded promising, I took the direction in which it pointed.

Descending rapidly, the path now led through a lovely wood carpeted with the softest mosses of many sorts, into which my foot sank at every step, while on all sides were ferns of most luxuriant growth, among which the English maiden-hair and the Asplenium Rathumarania were conspicuous. Fungi, too, abounded, some of them of very curious shapes, and nearly all of brilliant hues. Tiny rills and miniature cascades, clear as crystal and cold as ice, came tumbling over

the rocks at every turn, all hurrying down to join their waters with those of the Hünibach, a small mountain stream, which here forces its way through a deep, rocky ravine, where it makes several waterfalls, one or two of them of considerable height and volume. One, the largest, if I remember rightly, was very picturesque, and seemed to have taken the form of a huge ostrich-feather. Following the course of this stream, which I crossed and recrossed by little rustic bridges, and passing by three or four poor cottages on its very brink, I soon came to the hamlet of Kohleren, and found myself on the Goldiwyl road, within a couple of miles of Thun. This road, running parallel with the Aare, from which it is only separated by the width of a meadow, is pleasantly shaded by great walnut-trees, now laden with fruit; while the pastures on the other side were thickly sprinkled with autumn crocuses. As I neared the town my attention was drawn to two or three of the handsomest wooden houses I have seen in Switzerland. Both the colour of the wood and the richness of the carving were very remarkable, and one or two had not merely a *motto*, which is often seen on the front of Swiss dwellings, but a whole poem, or several verses of a psalm, cut in large letters on them—words expressing some patriotic or, still more often, some pious sentiment.

Space forbids, or I should tell of other delightful walks I took in this pretty neighbourhood, the remembrance of which must ever be of the pleasantest. L. T. M.

The Duke of Westminster has been appointed Lord Lieutenant of the newly-created county of London.

An exhibition of Elizabethan relics connected with the Armada Tercentenary is held in the Grand Saloon of Drury-Lane Theatre. It was opened by the Earl of Winchilsea and Nottingham.

At an influential meeting held at Plymouth it was determined to invite the Royal Agricultural Society to hold its annual meeting in 1890 in that town, and upwards of £2000 was subscribed in the room.

The Hon. W. H. B. Portman on Oct. 25 opened the Victoria Jubilee Nursing Institute, which has been erected and endowed at Taunton, at a cost of £10,000. The institute adjoins the Taunton and Somerset Hospital, which was erected as a memorial of the Jubilee of George III. The scheme of enlarging the usefulness of this institution has been promoted by Dr. Edward Liddon; and on an appeal being made for subscriptions, an anonymous donor gave £5000. The whole of the sum desired has been raised. The architect was Mr Houghton Spencer, of Taunton.

THE EXTENSION OF HAMPSTEAD HEATH.

All Londoners may congratulate themselves on the completion of a business which has, during three or four years past, engaged the active efforts of many public-spirited persons, and which has been brought to a successful result, securing in perpetuity for the enjoyment and recreation of the people a large addition to the open ground of Hampstead Heath, under the official care of the Metropolitan Board of Works, in future of the new London County Council. It may indeed be considered that this addition was necessary to preserve the advantages hitherto derived from the common use of the East Heath, the part extending from near the railway-station at South-End green to the Vale of Health and the Spaniards Road.

That portion of the heath, which is frequented more than any other by holiday folk of the working classes, fronts towards Highgate a beautiful rising ground, known as the Parliament Hill Fields, with the noble woods of Lord Mansfield's park to the left hand, and to the right hand an elevated knoll, commanding a vast panoramic view which embraces nearly the whole of London, with the Surrey Downs, Shooter's Hill in Kent, and the hills in Essex beyond Walthamstow and Wanstead closing the prospect. The nearer views from the Parliament Hill Fields are certainly more beautiful than any others within ten miles of London. There is Caen or Ken Wood, the park of Lord Mansfield, covering a long ridge of high ground with a thick belt of magnificent foliage; there is the open eastern side of the picturesque little town of Hampstead, ascending the brow of the East Heath to the Flagstaff summit near Jack Straw's Castle, below which, in a deep grassy hollow, the quaint hamlet called "The Vale of Health" is marked by a tall castellated building, which was designed for a grand hotel, and the upper part of which has an imposing effect. But the most delightful view is across the Highgate Ponds, and over the still rural hedges of Millfield-lane, to the West Hill of Highgate, which from Swain's-lane, the quiet, tree-shaded avenue to Highgate Cemetery, rises steeply to the summit crowned by Highgate Church, and is clothed with foliage by Holly Lodge Park, the residence of Lady Burdett-Coutts, and by the groves and shrubberies of the villas in Fitzroy Park. The purchase from Lord Mansfield of these Parliament Hill fields, with the remnant of the Gospel Oak fields, a lower piece of level ground adjacent to the railway, admirably suitable for cricket, football, and lawn-tennis, is an acquisition of the greatest value. They would otherwise, probably, at no distant time, have been covered with houses, like all the land between Kentish Town and Holloway, which we can remember to have been open fields. The enormous increase of population in those districts of North London which are not within an easy distance either of Regent's Park or of Finsbury Park, makes the opening of the Parliament Hill fields an event likely to contribute to the health and happiness of vast numbers of families; we have only now to urge that those fields should be rendered more accessible, from Kentish Town, by constructing an inexpensive foot-bridge over the North London Railway near the Gospel Oak Station, to save walking nearly a mile round.

It has been observed, however, that the hitherto existing attractions of the East Heath at Hampstead, to which we now return, would have been liable to entire destruction, if the recent extension had not been effected at the present time. This can be readily explained with a little attention to the topography. The lower edge of the East Heath is bounded for the most part by a deep ravine, ancently the channel of a stream of which the water is now collected in the Hampstead Ponds. On the opposite bank of this ravine, almost the entire slope of the rising ground, up to the Parliament Hill Fields, forms the East Park estate, part of the large Hampstead property of Sir Spencer Maryon Wilson. Many years ago, in the time of his predecessor, Sir Thomas Maryon Wilson, there was a plan of building houses along the whole length of this strip of land; a terrace road, now abandoned and grass-grown, was made ready to be lined with rows of trim villas, which would have completely shut out every view of rural nature from that side of Hampstead Heath. This plan was happily not carried into effect; but a large portion of the ground, as it consisted of good brick-clay, was leased to a brick-maker, who held it until about two years ago, and by whom it was cut down, chopped, and carved in a manner utterly destructive of its natural form, which was that of a hill gracefully swelling with a fine outline, while the very pretty avenue of trees, at the public footpath from Hampstead to Highgate, was ruthlessly despoiled. The mischief can never be repaired; but since the East Park estate, as well as the Parliament Hill Fields, is now purchased on public account, and the ugly traces of clay-cutting and brick-making may be partly veiled by the springing-up of wild grass and brambles, we hope that in time a rough natural thicket will hide the unsightly disfigurement of the once beautiful hillside. If trees were planted there which would grow to a large size, flourishing as they would do in that sheltered situation, our children or grandchildren would find it a charming strip of woodland; but we do not expect that the Metropolitan Board of Works—beg pardon, the London County Council—will go to such an expense. At any rate, the ground is saved from the house-builders, to whom it was actually offered for sale last year or the year before; and this means no less than the saving of Hampstead East Heath from the deprivation of any natural pleasantness that it has been deemed to possess. It was bad enough, in years long past, to have allowed the erection of the South Hill Park houses at one end, and of the misplaced cluster of odd buildings in the Vale of Health, at the other, by which the eastward view is fatally interrupted, and the succession of soft landscape outlines, that charmed the eye of many a poet and many an artist, has been irretrievably spoilt.

To the north-west of the land called the East Park estate, adjacent to that romantic side-path, overhung by trees, which descends skirting the edge of the heath, from the corner by "The Elms," not far from Erskine House in the Spaniards Road, another piece of land, in itself perhaps the most beautiful, has been obtained by the recent arrangements. It is of small extent, but the intimate charm of its scenery, which is due to the meadow-ground falling into dells and sequestered hollows, adorned with various clumps of trees, has remained intact; few public or private parks can boast of a lovelier spot. This ground has never been accessible to unprivileged feet, but it could be admired by looking over the fence. Our Artist, Mr. W. H. J. Boot, a resident at Hampstead, has devoted to its features a due share of his attention, while he has, in other Sketches, delineated the lesser bridge in the East Park estate; the view from the bottom of the East Heath looking towards Highgate; the familiar stile at the entrance to the Parliament Hill Fields; and the view of Parliament Hill from the Highgate Ponds, close to Millfield-lane, looking in the south-west direction. The opposite spires of Highgate and of Christ Church, Hampstead, are seen, rising amidst trees, from one point of view on the East Park estate. Those well acquainted with the neighbourhood will anticipate our admission that these Sketches do not comprise all that has been won for public pleasure; but we may take another opportunity of showing what London has gained by the Hampstead Heath Extension.

WILLS AND BEQUESTS.

The will (dated March 17, 1883), with three codicils (dated Feb. 20, 1886; May 19, 1887; and Feb. 24, 1888), of Mr. Richard Elliston Phillips Balston, late of Thornhills, Maidstone, who died on Sept. 22 last, was proved on Oct. 19 by Thomas Balston (the brother), Richard James Balston (the son), and Robert Lake Cobb, the executors, the value of the personal estate amounting to upwards of £343,000. The testator gives and devises his piece of land in Gladstone-road, Maidstone, upon trust, either to the Ecclesiastical Commissioners, in or towards the payment or endowment of the Vicar or perpetual Curate of St. Paul's, Maidstone; or for the erection of a church, chapel, or elementary schools; £3000 to the Vicar and churchwardens of St. Paul's, Maidstone, upon trust, to pay the income to the Vicar for his own use; and £2000 Three per Cent Consolidated Stock to the said Vicar and churchwardens, upon trust, to apply the income in or towards payment of the stipend of a second Curate, and when there is no such second Curate, for the good of the poor. The goodwill, machinery, and capital of his business of a paper maker at Springfield, together with the mills, warehouses, dwelling-houses, and lands he leaves to his son, Richard James Balston but charged with the payment of an annuity of £4000 for his son William Edward Balston. He devises his two messuages at Thornhills, with the gardens and premises, to his daughter, Mary Mansfield Balston, and also bequeaths to her his plate, glass, furniture, pictures, carriages and horses; £500 to his niece, Mary Mansfield; £1000 to his god-daughter, Mary Mansfield Cobb; £1000 to Edward Prentice; £150 to each executor, and other legacies to friends and servants. The residue of his real and personal estate he leaves as to one third each to his son William Edward and his daughters Mary Mansfield and Mrs. Catherine Letitia Whitehead.

The will (dated June 18, 1879) of Mr. Robert Roskell, late of Park House, Fulham, and New Bond-street, one of the firm of Hunt and Roskell, jewellers, who died on July 22 last, was proved on Oct. 24 by Allan Roskell and Charles John Roskell, the sons, and Philip Witham, the executors, the value of the personal estate amounting to upwards of £277,000. The testator, under certain covenants contained in two indentures of settlement, gives £10,000 to the trustees of the marriage settlement of his son Nicholas Robert Roskell; £7500 to the trustees of the marriage settlement of his daughter Mary, Lady Codrington; £5000 each to his sons, Charles John, Nicholas Robert, and Richard; £10,000, upon trust, for his son Charles, and then to his children; £15,000, upon like trusts, for his son Nicholas Robert; £7500 to his daughter, Lady Codrington, for life, and then to her children; £10,000, upon trust, for his grandson, William Robert Codrington; £500 and an annuity of £1000, and the use, for life, of his house, furniture, horses, &c., to his wife, Mrs. Mary Roskell; £200 each to his nephews, John and James Kendal; and legacies to servants and executors. The residue of his real and personal estate he leaves, upon trust, for his sons Nicholas Charles and Allan, in equal shares, for their respective lives, and then for their children.

Letters of Administration of the personal estate of Miss Mary Catherine Ann Myers, late of No. 4, Tilney-street, Park-lane, who died on Sept. 24 last, a spinster, without parent, brother or sister, uncle or aunt, nephew or niece, and intestate, were on Oct. 15 granted to the Most Hon. William, Marquis of Abergavenny, K.G., of Eridge Castle, Frant, Sussex, the lawful cousin-german, and one of the next-of-kin, the value thereof amounting to upwards of £169,416.

The will (dated Aug. 6, 1885) of Miss Emily Coates, late of Upper Terrace Lodge, Hampstead, who died, on Sept. 26, at Looe, Cornwall, was proved on Oct. 22, by Miss Marian Julia James, the sole executrix, the value of the personal estate amounting to upwards of £83,000. The testatrix bequeaths £2000 each to her cousins, Mrs. Flora Elizabeth Robinson and Mrs. Eleanor Kathrine Miller; £500 to the London Domestic Mission Society, having stations at Spitalfields and St. Luke's; and £200 to the Society for the Prevention of Cruelty to Animals. The residue of her real and personal estate she leaves to her friend, Miss Marian Julia James, for her own use and benefit.

The will (dated March 6, 1888), with a codicil (dated March 13, 1888), of Mr. Thomas Holt, formerly of New South Wales, and a member of the Legislative Council of that colony, but late of Halcot, Bexley, who died on Sept. 6, was proved on Oct. 19 by Mrs. Sophia Johanna Charlotte Holt, the widow, Joseph Edwin Crawford Munro, and Alice Sophia Ellen Holt, Annie Isabella Holt, and Emmeline Augusta Holt, the daughters, the executors. The value of the personal estate in England exceeds £37,000, the bulk of the testator's property being in Australia. The testator bequeaths £1500 and the use of his house and furniture, an annuity of £150 for life, two annuities of £850 and £2500 during widowhood only, and a further annuity of £150 in the event of her marrying again, to his wife, Mrs. Sophia Johanna Charlotte Holt; £10,000 each to his daughters Alice Sophia Ellen, Annie Isabella, and Emmeline Augusta; and legacies to his executors. He gives and devises his estate called "Arthursleigh," in Australia, to his son Arthur William for life, with remainder over to his first and other sons in seniority in tail male; his estate called "Sutherland" to his son Frederick Samuel Ellis, with a like remainder; and his "Pitt-street Property," Sydney, between his three sons and three daughters, in equal shares; but these devises are conditional upon the payment of part of the annuities to his wife. The residue of his property, both in England and Australia, he leaves between his three sons, in equal shares.

The will (dated Feb. 28, 1871), with two codicils (dated Feb. 28, 1871, and July 7, 1882), of Mrs. Harriet Langford Cotton, late of The Convent, Kingsgate, Isle of Thanet, Kent, who died on Sept. 21, was proved on Oct. 19 by Thomas William Oliver, R.N., the nephew, Alexander Forbes Tweedie, and Richard Walter Tweedie, the executors, the value of the personal estate exceeding £29,000. The testatrix bequeaths £1000 to her sister, Mrs. Charlotte King; £1000 to Henry Oliver; £7000, upon trust, for Thomas Langford Oliver, for life, and then to his children; her leasehold estate at Kensington to Henry Horace Powell Cotton; £50 each to the poor of the parish of St. Peter's, Isle of Thanet, and the parish schools; £25 for the schools at Broadstairs under the superintendence of the Vicar; 200 guineas to each of her executors; and numerous other legacies to relatives and servants. The residue of her property she leaves to her nephew, Thomas William Oliver, absolutely.

The Scotch Confirmation, under the seal of the Commissariot of Selkirk, of the trust, disposition, and settlement (dated Feb. 13, 1885) of Mr. James Johnstone, J.P., D.L., M.P. for the county of Clackmannan from 1851 to 1857, late of Alva, Stirling, and Hangingshaw, Selkirk, who died on Feb. 24, granted to Fletcher Norton Menzies and Robert Blachford Mansfield, the accepting executors nominate, was resealed in London on Oct. 17, the value of the personal estate in England and Scotland exceeding £7000.

The Newark Town Council have elected Mr. F. B. Foottit, solicitor, as Coroner for the borough in place of Mr. W. Wallis, solicitor, who has mysteriously disappeared from Newark.

CHESS.

Communications for this department should be addressed to the Chess Editor.

W. H. HAYTON.—No, one solution is enough; but the discovery of others, when they exist, shows more careful analysis of the position.

C. W. W. (Plymouth).—Thanks for game, which shall have attention.

MRS. W. J. HARRIS.—Your inference is wrong, but your judgment is right. The earlier problem was not published on account of the "split" of two-move problems from which we suffer; but, as your turn comes next, we will print the one now sent, which we certainly like better.

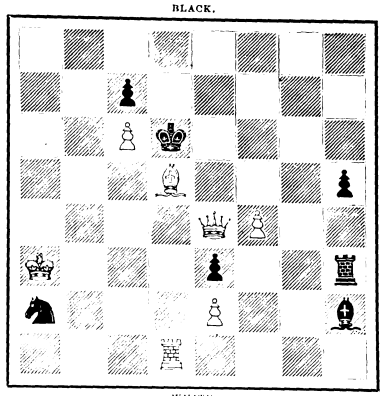
B. W. LA MOTHE (New York).—Thanks. We attach no importance to the flaw you mention, and think the position a very good one.

W. PARSONS.—The manner is correct; the matter, unfortunately, possesses no strategical interest.

G. P. NEVOLET, C. E. P., AND OTHERS.—Q to B 4th will not solve No. 2323. P to K 3rd is sufficient answer for Black.

PROBLEMS received with thanks from J. W. Pybus, W. Gleave, Mrs. W. J. Baird, and B. W. La Mothe.

CORRECT SOLUTIONS OF PROBLEM No. 2320 received from E. J. Bohnstedt; of No. 2321 from E. J. Bohnstedt, Blair, H. Cochrane, W. Porter, and Amateurs of Weddle's Hotel; of No. 2322 from A. G. de K. B., P. C. The Hague), Charles Etherington, Joseph T. Pullen, and W. H. Hayton; of No. 2323 from F. C. Cook (Reading), A. W. Hamilton Gell, and Amateurs of Weddle's Hotel.



CORRECT SOLUTIONS OF PROBLEM No. 2324 received from Amateurs of Weddle's Hotel, W. J. (Victoria), Howard A. Thomas (Chown (Brighton), E. Casella (Paris), D. McCoy (Galway), C. E. P., J. Hare, Jupiter Junior, J. Ross (Whitby), Peterhouse, Columbus, Shadforth, Percy Ewen, L. Desanges, J. Dixon (Colchester), E. Phillips, A. W. Hamilton Gell, R. Worters (Canterbury), G. W. (Brentwood), E. Field (Sorbiton), W. R. Raillem, Pembroke, Wilson (Grange-on-Sands), Martin F. Mrs Kelly, Dawn, Blair, H. (Godstone), Julia Short (Exeter), E. J. Winter Wood, J. Hepworth Shaw, W. S. (Sheffield), T. G. (Ware), J. T. Pullen, R. F. N. Banks, E. Louden, J. Thorn, J. Garkin, J. J. H. (Hallingbury) Dr. F. St., W. H. Hayton, G. J. Veale, Dane John, F. C. Cook, T. Roberts, and Nugel.

SOLUTION OF PROBLEM No. 2322.

WHITE.	BLACK.
1. P takes P	
2. Q to Kt 2nd (ch)	B to B 4th
3. P or Q mates accordingly.	K or Kt moves

If Black play 1. K to B 6th, then 2. Q takes B (ch); if 1. P to Q 3rd, then 2. Q to Kt 4th (ch); and if 1. Kt to B 5th, then 2. P takes Kt, &c.

PROBLEM No. 2326.
By J. PIERCE, M.A.
BLACK.

WHITE.
White to play, and mate in three moves.

CHESS BY CORRESPONDENCE.

An interesting game played in Mr. Fraser's Tourney, between Mr. J. H. BLAKE, of Southampton, and Mr. G. W. LENNOX, of Cardiff. Notes by Mr. Fraser.

(Scotch Gambit.)

WHITE (Mr. B.)	BLACK (Mr. L.)
1. P to K 4th	P to K 4th
2. K Kt to B 3rd	Q Kt to B 3rd
3. P to Q 4th	P takes P
4. Kt takes P	B to Q B 4th
5. B to K 3rd	Q to B 3rd
6. P to Q 3rd	K Kt to K 2nd
7. Q to Q 2nd	P to Q R 3rd

Black may also Castle here with perfect safety.

8. P to K R 4th	P to Q 3rd
9. P to K B 2nd	B to Q 2nd
10. Kt to B 2nd	Castles (Q R)

The usual reply is 10. B takes B, but the text move appears far preferable.

11. B to K 2nd	P to K 5th

White obviously cannot, without disadvantage, play P to Q Kt 4th here.

11.	P to K R 4th
12. Kt to Q 2nd	B takes B
13. Kt takes B	P to K Kt 4th
14. P to B 5th	Kt to K 4th
15. Castles (Q R)	B to R 5th

All this is played with great accuracy and vigour.

16. Q R to K sq	P to Q 4th

WHITE (Mr. B.)	BLACK (Mr. L.)
17. P takes P	Kt takes Q P
18. Kt to K 4th	

White originally purposed to exchange Knights here, but at the last moment departed from his intention. He would certainly have had a better game—e.g., 18. Kt takes Kt, R takes Kt; 19. Kt to K 6th, Q to R 3rd (he cannot, we believe, allow the K Kt P to be captured); 20. Kt to Q B 5th, with a good game.

18.	Q to Q B 3rd
19. Kt takes Kt	Q takes Kt
20. Q to K 3rd	

There is apparently no move, now, to save the game, although Q to R 7th would considerably prolong it. For, 20. Q to R 7th, Q takes Kt; 21. Q to B 8th (ch), K to Q sq; 22. R to Kt 5th (ch), B takes R; 23. Q takes B (ch), R takes Q; 24. R takes Q, Kt to Q 6th (ch); 25. K to Q 2nd, Kt to B 7th; 26. R to Q 4th (ch), Kt to K 5th; 27. R takes R (ch), K takes R; and Black must win.

20.	Q takes R P
21. Kt to Q 6th (ch)	B takes Kt
22. Q to K 4th	Q to R 8th (ch)
23. Q to Kt sq	Q takes Q (ch), and White resigns.

BLINDFOLD CHESS.

One of eight simultaneous games played by Mr. BLACKBURNE at Trowbridge.

(Hampe Allgaier Gambit.)

WHITE (Mr. Blackburne).	BLACK (No. 7 Board).
1. P to K 4th	P to K 4th
2. Q Kt to B 3rd	P to Q B 3rd
3. P to B 4th	P takes P
4. Kt to B 3rd	P to Q 3rd

Black is evidently unacquainted with this opening.

5. P to Q 4th	P to K Kt 4th
6. P to K 5th	P to Kt 5th
7. Kt to Kt 5th	P to K R 3rd
8. Kt takes P	K takes Kt
9. B takes P	B to K 2nd
10. Q to R 5th (ch)	K to Kt 2nd
11. Castles	B takes P
12. B takes P	

A reply to Black's last move that is quite à la Blackburne.

WHITE (Mr. Blackburne).	BLACK (No. 7 Board).
12.	Q takes B
13. R to B 7th (ch)	K to Kt 3rd

Black's game is lost, but the forced mate is a fine piece of blindfold play.

14. P to K 5th	Q to Q sq

White now announced mate in eight moves.

15. Q to Q 3rd (ch)	K to R 4th
16. R to B 5th	B takes R
17. Q takes B (ch)	B to Kt 4th
18. B to R 7th (ch)	K to R 5th
19. P to Kt 3rd (ch)	K to R 6th
20. Q to B sq (ch)	K takes P
21. Q to B 2nd (ch)	K to R 6th
22. Q to R 2nd.	Mate.

In addition to the important forthcoming English work on the openings to which we alluded some time ago, another treatise on the same subject is announced by Mr. Steinitz. Some novelties of treatment are promised, the chief of which is an explanation of the principles on which each particular analysis is based. If the author's intentions are fully carried out, the book will rank as the best of its kind yet published, and we hope nothing will prevent the speedy completion of the manuscript by the end of the year. A work from so eminent an exponent of the game as Mr. Steinitz will create as much stir in chess circles as that caused by the first appearance of Mr. Staunton's "Handbook" in 1848.

The Windsor Chess Club, under the presidency of the Hon. and Rev. Canon Courtenay, has commenced its winter programme. Meetings will be held every Thursday at Layton's Rooms from three to twelve p.m., and some of the London masters are expected to be present occasionally.

A match between the Hampstead and Somerset House Chess Clubs, played on Oct. 22, resulted in the victory of the latter team by six games to two.

Mr. Gunsberg visited the East London Chess Club, Mile-End-road, on Oct. 20, and gave an exhibition of simultaneous play in the Lecture Hall of the People's Palace. Meeting 24 opponents, he won 19, lost 2, and drew 3. Messrs. H. Cudmore and W. H. Pullinger were his successful antagonists.

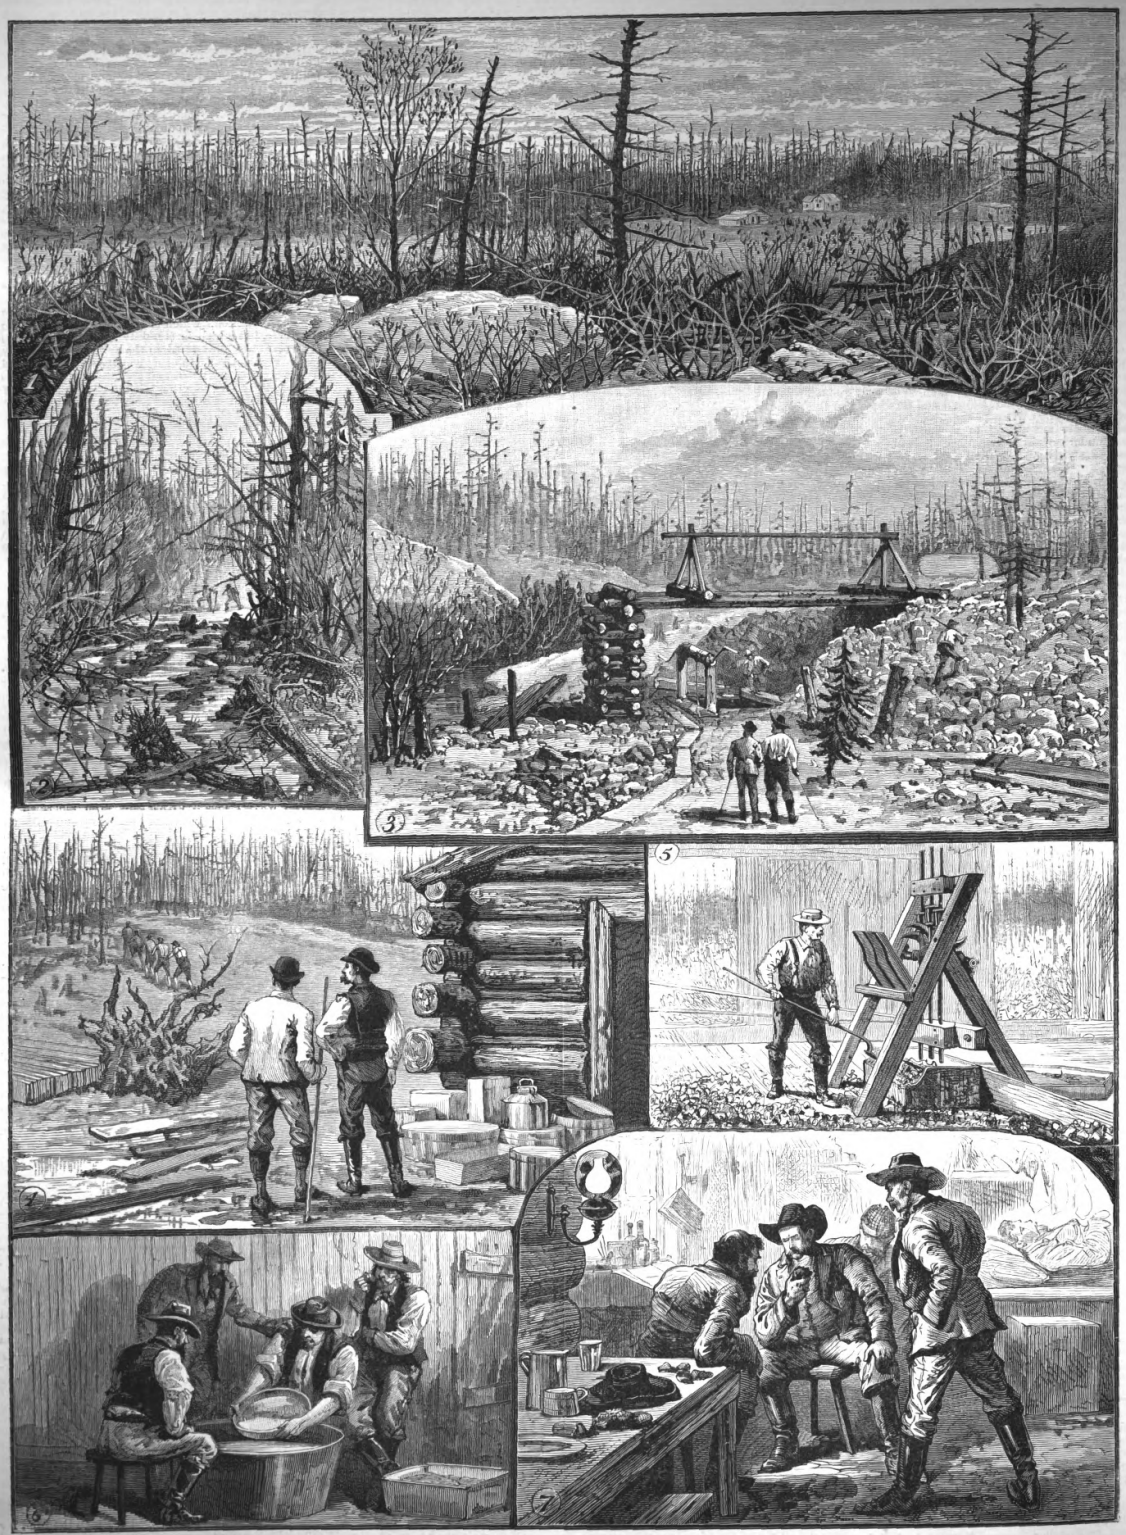
Mr. Alderman Whitehead, Lord Mayor-Elect, has been presented to the Lord Chancellor, in accordance with custom, and has received her Majesty's approval of the choice of the citizens.

THE DENISON GOLD-MINES, ALGOMA, UPPER CANADA.

Our Special Artist, Mr. Melton Prior, who was sent to Australia from England "Across Two Oceans," travelled by a somewhat indirect and lingering route: after visiting the West Indies, and making sketches of the Panama Canal works, our Illustrations of which have been published, he proceeded to New York, and thence to Montreal, with the purpose of crossing the North American Continent by the Canadian Pacific Railway. This purpose was accomplished, with particular facilities allowed him for seeing and sketching the most interesting places along that line, from Ottawa by Lake Nipissing, and north of Lake Superior, to Manitoba, to the North-West prairie-lands, to Calgarry and Banff, on the Bow River, thence over the Rocky Mountains and through the highlands and forests of British Columbia, to the Pacific coast. We shall present to our readers an interesting series of Illustrations of the main line; but there is a branch line, running 120 miles in a south-west direction, from the Sudbury Junction by Spanish River to Algoma, at the head of Lake Huron, by which Mr. Prior went to see the new Canadian gold-fields, situated in the township of Denison, not more than twenty-two miles along the Algoma line. The gold-mines there have already become so famous that our Illustrations of this subject may be worth giving apart from those of the main route to the Great West; and our Special Artist was enabled, by the assistance of the consulting engineer, Mr. Charles Dobson, to obtain precise information.

The "Tough and Ranger" gold-mine, henceforth to be called "The Vermilion," which is expected to be one of the richest anywhere, but which is certainly remunerative to its fortunate owners, was discovered in the summer of 1887 by Mr. Ranger, a French Canadian of much experience, furnished with an outfit of necessary stores and appliances by Mr. Robert Tough, and employed on the terms of sharing the proceeds of any successful find he could make. Gold was found on a plot of land which Mr. Tough purchased; and the first portion of the claim was sold to Mr. Duncan, now Vice-President of the Vermilion Mine Company. Several American capitalists at Chicago and New York joined in forming the company, and operations were commenced, which have so far been very successful. Our Special Artist, accompanied by Mr. Dobson, after alighting from the railway freight-train which conveyed them from Sudbury, had to walk three miles, in pouring rain, through forest and swamp, along a path which was often so deep in mire that they could only get on by walking on the fallen trunks of trees. We give the remainder of the description in Mr. Prior's own words:—

"The country all round, for miles and miles, has been ravaged by fire; and only the stumps and sticks of spruce and fir trees remain. The Vermilion Mining Company have put up a few shanties and a house, and are now sinking shafts and crushing the quartz, still on quite a small scale; but the whole township of Denison, so rich in gold, will soon be full of stamping and crushing mills; and no doubt a town will spring up in this wild and burnt forest wilderness. Everything is very primitive at present; the shaft is about thirty-two feet deep, and only two men can work at a time, filling a bucket, which is then carried over to the crushing-machine, and for washing. Extraordinary finds of gold are made; and very rich specimens of ore are constantly brought up. I chanced to arrive just at such a time, and made a sketch of the experts examining a fine piece of quartz.



"So great is the excitement about this particular district that people of all classes are flocking to the spot. Men who have bought lots in the township are to be seen and heard of all over the place. I met a great banker, an alderman of Toronto, and an independent gentleman, travelling with an expert, to find out if their property had any gold upon it; and I made a sketch of the party of prospectors starting from the Ranger Lode hut in search of the precious metal. They had seven miles to walk through a burnt forest, with impediments at every step; and I only hope they will have returned perfectly satisfied with their land purchase."

THE MARQUIS OF LONDONDERRY AT SEAHAM HARBOUR.

The Lord Lieutenant of Ireland paid a visit to Seaham Harbour, on Oct. 27, to fulfil, with the Marchioness, some important duties. His Lordship has had erected a magnificent new drill-hall for the 2nd Durham Artillery Volunteers, of which he is the Colonel-Commandant, in succession to his father. Preceded by the band, sixty strong, his Lordship led the brigade to the Vicarage Field, where an inspection took place. They afterwards marched to the new Londonderry Drill-hall, which Lady Londonderry declared open. The Marquis of Londonderry, the Hon. Lieutenant-Colonel Lord Herbert Vane-Tempest, Lady Helen Vane-Tempest, Colonel Walkey, inspecting officer of the district, and a number of the gentry of the neighbourhood were also present. Lady Londonderry also presented the prizes won by the brigade in its regimental competition and at Shoeburyness and the Scottish camp. The Marquis, addressing those present, said the opening of the new hall marked an epoch in the history of the 2nd Durham Artillery Volunteers. He need hardly say that the reason for their deserting their old quarters was the increase, both rapid and marvellous, in the numbers of the regiment. In 1860 the number of men forming the 2nd Durham Artillery Volunteers comprised four batteries and 204 men, who were at the review held by her Majesty in Hyde Park. In 1880 the strength of the regiment had increased to 788; and in 1888 it was 925. He was also glad to recognise their skill in repository drill, and their soldierly and military bearing in the field. The reports of the inspecting officers for many years had been most satisfactory. This was, no doubt, due to the zeal energy, and perseverance with which they had espoused the cause of the Volunteer movement. They must also feel it was their duty as a regiment to be progressive, and he trusted they would in the future manifest the same zeal, energy, and perseverance in discharging their duties that they had hitherto done. Major Warham having handed to his Lordship a silver salver, and purse containing £65, subscribed by the officers and men of the regiment, the Marquis of Londonderry presented the silver salver and purse of gold to Adjutant-Major R. Hardcastle on his retiring from service under the terms of the Act of Parliament, he having been seventeen years Adjutant of the regiment. His Lordship attributed much of the success of the regiment to the ability and untiring zeal of Major Hardcastle. Major Hardcastle briefly acknowledged the presentation.

An anonymous donor has forwarded £500 to the fund for maintaining the cruising hospital-ships of the Mission to Deep-Sea Fishermen.

Mr. John Walker, of Cheltenham, has given £5000 to endow a canonry in Gloucester Cathedral, to be permanently associated with the office of diocesan missioner, and to form a memorial of the late Mr. Gambier Parry, of Highnam, the painter of Gloucester and Ely Cathedrals and Tewkesbury Abbey.

1. View of the Tough and Ranger Mine. 2. The Tamarac Swamp, on the Road to the Ranger Mine. 3. Entrance to the Shaft, Tough and Ranger Mine.
4. Mining Prospectors on their Journey. 5. Stamping-Mill for Crushing the Gold-bearing Quartz. 6. Washing and Testing the "Tailings." 7. Examining a Fine Nugget just found.

AUTUMN EXHIBITIONS.

The adjoining galleries of Mr. McLean and Messrs. Tooth, which, in friendly rivalry, usually open on the same day, have not, this year, departed from the time-honoured custom. As the managers of both galleries are recognised adepts in catering for the varying taste of the public, it is interesting to study their points of contact and divergence. Both galleries show a marked predominance of works by foreign artists. At Messrs. Tooth's, scarcely more than one third of the 150 exhibited works bear the names of English painters; whilst at Mr. McLean's smaller exhibition the disproportion is still greater. It may be said that British artists have elsewhere abundant opportunities of showing their work, and that they are satisfied with the publicity thus obtained; but it is worthy of notice that the two dealers who are regarded as the most experienced and astute in the trade should thus interpret public feeling in art.

Mr. McLean's *pièce de résistance* (he always has one, at least, in his bill-of-fare) is Mdlle. Rosa Bonheur's latest work, "Pasturage in the Pyrenees" (29), a mountain-top bright with Alpine roses, on which stands a magnificent rough-haired bull, surrounded by his somewhat numerous family of cows and calves. In her rendering of animals Rosa Bonheur stands almost alone amongst foreign artists, and it is enough to say that in the present work she shows no signs of failing powers; whilst in the distant landscape, fringed with snow-touched mountains, she strikes a note of poetry which has too often been absent from her powerful but somewhat prosaic inspirations. It is interesting to contrast Rosa Bonheur's work with that of another past master in the craft, E. Van Marcke, whose "Dutch Pasture Land" (17) is, in its treatment, as far removed from the French lady's as the Pyrenean mountains are from the polders of Holland. If there be those who prefer the realism of the latter, we can find no cause for quarrel, for Van Marcke, in his own line, is as distinctive and praiseworthy as Rosa Bonheur. Amongst the other foreign pictures, Julius Zuber's "In Love" (14) shows that the artist can do something besides Egyptian cafés, and can throw into Western life not a little of that mingled sentiment and humour which distinguished his studies in the streets of Cairo. Señor Barbudo's "First Communion" (16) ought to be studied in conjunction with Señor Gallegos' "Baptism," in Messrs. Tooth's exhibition; for both are the results of Fortuny's teaching or example. In both we have the same crowd of prélates, richly dressed men and women, with clouds of muslin floating in all directions, and in both we have the same minute study of details, the same carefully-finished backgrounds which destroy all sense of repose. From each of these pictures, at least three might be carved without violence to the whole; and we venture to think that in each case the sections would give a fairer idea of each artist's technical skill and sense of colour. Herr Neubert's "Approaching Storm" (33) and "A Fine Evening" (44) are very much like half-a-dozen other works he has produced every year for some time past. Herr Max Todt, Herr Poetzelberger, and Mons. Clays are, as usual, distinguishable by careful work without much imagination.

Amongst the English artists Mr. J. B. Burgess's "Impertinent Students of Salamanca" (15) is a happy return to a style in which he earned his spurs many years ago; and although he may not hope to catch, like John Philip, the richer tones of Spanish colour, he has a keener sense of Spanish humour, which is not, even in these days, devoid of a certain stateliness. The fault of this picture, in our eyes, is the undue importance given to the brazier at which the girls are warming their feet. It occupies the centre of a rather large canvas, and draws away the eye from the laughing girls, the scandalised duenna, and the enterprising young students who have forced their way into the house. In Mr. J. W. Godward, whose single work at Burlington House last summer passed almost unnoticed, Mr. McLean has discovered an artist who has studied Alma Tadema to some purpose. In "The Tiff" (22) and in "Waiting for the Dance" (25) the painter's object has been apparently to show, in the first place, his delicate sense of colour—especially in the single figure of the standing girl; and secondly, his marvellous dexterity in reproducing Mr. Alma Tadema's rendering of marble, leopard's skin, and bronze-work. In time, we hope, Mr. Godward will trust a little more to his own imagination, and a little less to Mr. Tadema's; but meanwhile he will, doubtless, find considerable profit by bringing his work to this high level of technical skill. Mr. Burton Barber is never at a loss for a fresh combination of his chubby child and patient fox-terrier. The present arrangement, "Trying" (21), shows with what more-than-human sweetness the dog submits to be dressed in Dolly's clothes, and how thoroughly he seems to enter into the child's game without losing sense of his own dignity. He seems to wish to convey that he is quite aware that when he likes he can be a much better companion to the child than her doll or her nurse, or even her elder sister. Mr. Peter Graham's "Banks of a Scotch Loch" (11) is painted with his usual dash; but it is sad to find in L. B. Hurt's "Cloudy Day in Glen Sligachan" (39) a reproduction of so many of Mr. Graham's mannerisms with less of his skill.

In Messrs. Tooth's galleries the honours may be said to be more equally divided between our own and foreign artists—Frank Holl, L. Deutsch, and Dagnan-Bouveret. The now well-known picture, "Besieged" (124), by the first-named, was painted in the rare intervals of leisure he could snatch from portrait-painting, and represents another episode in the "Idyll of Suffering," which he never lived to complete. The mother, whose husband is perhaps a prisoner in Germany, or fighting in the snow on the frontier, has just come back to her two children with a scanty scrap of food, and, sick with fear and apprehension at the prospect for the morrow, seems about to abandon as useless the struggle for life. M. Dagnan's "Pardon" (56) is a fine bit of realistic work, representing one of those quaint Breton customs, where men and women, old and young, make the circuit of the church or cloisters, sometimes on their knees imploring in a low melancholy dirge pardon for the faults of their seemingly unchequered lives. Herr Deutsch's "La Jeune Favorite" (90) is chiefly noteworthy for its subdued colour, and for the powerful painting of the four eunuchs in white dresses, who salute the new favourite as she enters the private apartments of her lord. The attendant, in yellow silk, who guards the doorway is also a clever bit of painting; whilst the almost childlike figure of the girl is not without a certain pathetic interest. Mr. L. Raven Hill is, if we mistake not, like Mr. Ridgway Knight, an American by birth and a French artist by education. Both of them are seen here to advantage, the former in "A Little Gipsy" (30), a child surrounded by fallen leaves, and the latter in his Salon work "Left in Charge" (118), a bit of Seine scenery soft and delicate in colour, though showing, perhaps, too much imitative work to attract sufficient notice from the Parisian public. M. Léon Lhermitte in "La Veillée" (129) shows a more joyous side of Breton life, and depicts the custom of many a village where the women, to save fire and light, assemble in one another's cottages to pass the long winter's evenings—spinning and winding their wool in merry companionship. Here, as at Mr. McLean's, are to be found specimens of Mr. Burton Barber's work "Mischief" (12), and of Mr. Godward's "Ianthe" (23), showing how both dealers recognise the current of popular taste. Of Señor Gallegos' "Baptism" (74) we have already spoken; but we may add that, in addition to many other points in common with Señor Barbudo's work, it would seem as if, in many cases, the same models had sat to both artists. In strong contrast with all this foreign work or work modified by foreign influence, are two pictures, "Sympathy" (64) and "Little Lord Fauntleroy" (122), by Mr. G. B. O'Neill, which seem to carry us back forty years in English art. Simple and direct in intention and treatment, they belong to a school of which we regret to see the almost total disappearance, even whilst admitting the progress our painters have made, and the good they have learned from their neighbours on all sides. Among the remaining works, which will repay an extra amount of attention, are Eugène De Blaas' "C'est lui" (1); Mr. David Farquharson's "Glen Muick" (4) and "Lochnagar" (104), a very remarkable bit of landscape; M. Julien Dupré's "Haytime" (44); Charles Meissonier's "Improvisatore" (95), in reality a man with a hurdy-gurdy; Mr. John Philip's "New Ballad" (117), painted in 1863; and several typical works by Mauve, Artz, Israels, amongst the foreigners; and by Messrs. Leader, T. Collier, and Heywood Hardy amongst our own fellow-countrymen.

DUAL NOVEMBER.

November has a twin aspect of which each phase is utterly unlike. Hence comes the complete dissimilarity, not to be found of any other month in the year, which exists between the portraiture of November by the urban and rural pen respectively. In description, a London November is usually found as a clear proof of the conventional Frenchman's supposed idea of the month as one promoting general suicide from Waterloo Bridge. And it must be confessed that even the most determined lover of the sweet shady side of Pall-mall, who contemns all rural dwellers as

> Crawling from window to window to see
> A goose on a common, a crow on a tree,

finds his admiration of town much strained when subjected to the test of this particular month. The too common experience of fog, thick, nauseous, and gloomy, which insinuates itself everywhere in combination with slushy, greasy, gloomy streets, which even when the early lamps are lighted merely gains a twinkle of light here and there through the mephitic vapour wreaths of "London particular," the rasping air and biting wind, the general chilliness, dampness, darkness, and ill-temper; the constant performances among all one's friends and acquaintances on "the light catarrh"; the short days and long nights, when the enterprising burglar once more demonstrates how admirable is our system of allowing the night police to announce their progress half a mile off by the regulation boots; the whole aspect of London under a vast canopy of foul-smelling fog, which fills the most carefully warmed room in a most insinuating but effective manner—all these things make a picture of the month which too frequently proves the correctness of Hood's famous lines on November.

And as such is the experience of the town writer, what wonder that in the list of months this one has achieved a reputation of the gloomiest? Can anything be found attractive in its name? may well be asked. Yet, on the same day and within half an hour, you shall see the dual aspect in brilliant contrast—the self-same day, which lours so grimly and depressingly over London, shall, within a few miles out of the metropolitan boundaries, be a picture which is full of charms. Take the train, and run a few miles in whichever direction you will out of town limits—start from the farthest suburb to the edge of the nearest really rural district—why it is like the pantomime transformation from the Cave of Dullness to the Realm of Sunshine! Behind lies London, as you gaze, a blurred, huge mass seen through a grimiest robe of foul black or yellow vapour, with fantastic images here and there, magnified through the fog. You are but a few miles out, yet round you is the other aspect of the month — the rural November. Bare and leafless, indeed, are the trees; but behind them is a background of azure sky, and through their interlacing tracery of boughs the winter sun gleams on every twig. "The air bites shrewdly," it is true; but the clammy rawness of the mephitic fog you have left behind; the keenness is bracing, and the blood circulates anew under it. Look round, and confess that the most inveterate prejudices which have been fostered by town-limners of the month must melt before the scene. Glance at the cottages where some hardy flowers still brave the winter, and notice how rich and beautiful in tint, from bright to dark green and deep crimson, is the Virginia creeper, which so generally clusters round the wall, and enwreathes door and window. Is there woodland near? It is likely the woodman's axe is heard; for the felling of timber, copse, and underwood, is part of the work of the time. In the bare brown fields where the wild November partridges, splendid in condition, where you can get a shot, whirr up a hundred yards before the gun, the clink of the plough-horses' harness is heard, and the hovering cloud of rooks, with, perhaps, a bevy of sea-gulls from the nearest coast mingling with them, attests the progress of the plough. In the turnip-fields, kept for the purpose, the sheep penned in are feeding, and the cattle stand in the straw-yards lazily munching from the troughs. Cold though the sweeping winds that scatter the carpet of leaves lying thick in the copses and ditches, the sun is gleaming, the air is clear, and all the sights and sounds of active, rural life are in full evidence around, while the workers feel none of the sickly depression which characterises those of London who are breathing, coughing, and sneezing fog in every direction. In some places, where apples and pears abound, the cider-press is at work on the inclosed green in front of the farm-house; while, where the root-crops are ample and valuable—and stock-raising *vice* wheat-raising makes them annually more so—the harvesting of swedes and mangolds is busily going on. Be the air keen—"a nipping and an eager air"—yet all is blithe activity. Yet you are only a few miles out of London, which this self-same morning is groaning gloomily against murky November.

Nor is it only in farm-life that the maligned month has its charms. The shooter ranges the fields pretty sure, if birds are scarce and wild, to have a chance of finding a woodcock, and certainly snipe; while if pools or streams lie in his way it is even betting that some scattered individuals of the duck race will rise with heart-stirring quack and flapping of wings to dart swift as an arrow upwind, presenting as thrilling a target for the choke-bore as can well be wished. Of horse and hound we say nothing, for who knows not the exciting glimpse in the course of a brisk November walk of pink as the field stream away in the distance, and the maddening music of the pack as they flash across the fallows, the woodlands echoing their cry! To the honest angler, who thinks Izaak Walton greatest of English men, the month has its own particular charm, for it is the special feeding time of the pike—"the tyrant of the watery main"—who finds his appetite keen in proportion to the air, and trolling or spinning, despite wet lines and freezing fingers, is at its best in this month. Wild as is the aspect of the month, with winds roaring many a time and oft through the woods, while leaves fly in clouds and twigs fall in crowds—was not the greatest storm ever known in England that tremendous one of Nov. 27, 1703, when in Kent alone 250,000 trees were blown down?—wild, we say, as sometimes the aspects of the month, the wayfarer who has eyes, and uses them, often sees sights not seen in tamer times. High aloft, for instance, if you be near the sea, may you now and again hear the echoing "hank, hank!"—wild trumpet-cry of the wild geese—and see that curious wedge-formation of theirs as they cleave the air with their strong pinions. Far oftener will you behold the Indian file of the wild ducks going at express speed, or, turning by some field, start a huge bevy of fieldfares or a vast cloud of starlings, which wheel and turn like an animated sheet of glossy feathers. In the woodlands you shall see the stock-dove, far rarer and less known than the ordinary wood-pigeon, which arrives this month from more northern regions, being one of the latest birds of passage. And in the fields, if haply you be not above studying the ground beneath your feet, you shall see one of the most curious of sights if investigation of a specimen be made—a mole's nest. The moles this month make the nests in which they intend to pass the winter and in the spring to deposit their young; they are of larger size than the ordinary mole-hill, and lined with grass and leaves. But this is only one of the interesting things which make the "harvest of a quiet eye," and prove how much there is to charm in the rural phase of the aspect of November.

F. G. W.

Earl Dudley (with the Countess, his mother) paid a visit to Worcester on Oct. 29 to receive an address from the Mayor and Corporation of that city on the attainment of his majority. The occasion was made a public holiday, the bells of the principal churches were rung, and flags floated in the chief streets.

SCENES AND INCIDENTS ON BOARD A CUNARDER FROM LIVERPOOL TO NEW YORK.

Of all the great Atlantic steam-ship lines the Cunard still stands without a rival in popularity. Its steamers are not only the fastest, but excel all in comfort and general attendance. Life on board one of these floating palaces is not, as some may suppose, one of dull routine, but full of incidents; acquaintances are quickly made, friendships are established of which many interesting tales are told in after years. A late United States Consul at one of the English ports relates the following:—"On my last voyage from England, on one of the Cunard steamers, I noticed one morning, after a few days out of port, a young man hobbling about on the upper deck, supported by crutches, and seeming to move with extreme difficulty and no little pain. He was well-dressed, and of exceedingly handsome countenance; but his limbs were emaciated and his face sallow, which bore traces of long suffering. As he seemed to have no attendant or companion, he at once attracted my sympathies, and I went up to him as he leaned against the taffrail looking out on the foaming track which the steamer was making. 'Excuse me, my young friend,' I said, touching him gently on the shoulder, 'you appear to be hardly able or strong enough to trust yourself unattended on an ocean voyage; but if you require any assistance I shall be glad to help you.' 'You are very kind,' he replied, in a weak voice, 'but I require no present aid beyond my crutches, which enable me to pass from my state-room up here to get the benefit of the sunshine and the sea breeze.' 'You have been a great sufferer, no doubt,' I said; 'and I judge that you have been afflicted with rheumatism, whose prevalence and intensity seem to be on an alarming increase both in England and America?' 'You are right,' he answered; 'I have been its victim for two years, and after failing to find relief from medical skill, have lately tried the springs of Carlsbad and Vichy; but they have done me no good, and I am now on my return home to Missouri to die, I suppose. I shall be content if life is spared me to reach my mother's presence. She is a widow, and I am her only child.' There was a pathos in this speech which affected me profoundly, and awakened in me a deeper sympathy than I had felt before. I had no words to answer him, and stood silently beside him, watching the snowy wake of the ship. While thus standing, my thoughts reverted to a child—a ten-year old boy—of a neighbour of mine, residing near my Consulate residence, who had been cured of a stubborn case of rheumatism by the use of St. Jacobs Oil, and I remembered the steward of the ship had told me the day before that he had cured himself of a very severe attack of the gout in New York, just before his last voyage, by the use of the remedy. I at once left my young friend and went below to find the steward. I not only found him off duty, but discovered that he had a bottle of the Oil in his locker, which he had carried across the ocean in case of another attack. He readily parted with it on my representation, and, hurrying up again, I soon persuaded the young man to allow me to take him to his berth and apply the remedy. After doing so, I covered him up snugly in bed, and requested him not to get up until I should see him again. That evening I returned to his state-room and found him sleeping peacefully and breathing gently. I roused him, and inquired how he felt. 'Like a new man,' he answered, with a grateful smile. 'I feel no pain, and am able to stretch my limbs without difficulty. I think I'll get up.' 'No, don't get up to-night,' I said; 'but let me rub you again with the Oil, and in the morning you will be much better able to go above.' I then applied the Oil, again rubbing his knees, ankles, and arms thoroughly, until he said he felt as if he had a mustard-poultice all over his body. I then left him. The next morning, when I went up on deck, I found my patient waiting for me with a smiling face, *and without his crutches*. I don't think I ever felt so happy in my life. To make a long story short, I attended him closely during the rest of our voyage—some four days—applying the Oil every night, and guarding him against too much exposure to the fresh and damp spring breezes; and on landing at New York he was able, without assistance, to mount the hotel omnibus and go to the Astor House. I called on him two days later, and found him actually engaged in packing his trunk, preparatory to starting for his home that evening. With a grateful smile he welcomed me, and pointing to a box carefully done up in thick brown paper, he said:—'That is a dozen bottles of St. Jacobs Oil, which I have just purchased from Hudnut, the chemist across the way, and I am taking them home to show my good mother what has saved her son's life and restored him to her in health. If you should ever visit Sedalia, in Missouri, I will show you a bottle of St. Jacobs Oil enshrined in a silver and gold casket, which we shall keep as an ornament, as well as a memento of our meeting on the Cunard steamer.' We parted, after an hour's pleasant chat, with mutual goodwill and esteem, and a few weeks afterwards I received a letter from him telling me he was in perfect health, and containing many graceful expressions of his affectionate regards."

VAN HOUTEN'S PURE Soluble BEST AND GOES FARTHEST. COCOA

EASILY DIGESTED.—MADE INSTANTLY.

LANCET.—"Delicate aroma."—"PURE and unmixed."

The acute pain is quickly relieved, and cured in a few days by this celebrated Medicine.

These Pills, which are perfectly harmless, require no restraint of diet during their use, and are certain to prevent the disease attacking any vital part. Sold by all Chemists at 1s. 1½d. and 2s. 9d. per Box.

THE LADIES' COLUMN.

The little season of London is beginning—that season which runs from about November to Easter, preceding the full season, between May and July. The parties of that winter *demi-saison* are often more interesting than those more formal ones which come in the busier time. They are less crowded, and the people who are there are more certain to know each other, because the country visitors who introduce such an element of novelty are not now in town; hence the winter parties are rather less ceremonious. It is not "good form" to stop very late at them. It is not "good form" to give a big supper or to have extensive decorations. Even at these parties, however, the amateur musician and entertainer is no longer considered sufficient. The days when the daughters of the house played their "pieces," and their young lady friends, after much pressing, "obliged the company"; when Stokes, though dull and unimportant, was asked to endless parties because he sang a comic song, and Jenkins because he recited Owen Meredith and Browning—those days are over. Now, it may be little entertainment that is given to supplement the conversation; but what is provided must be good, and that usually means—professional. The problem for all hostesses is, therefore, how to get something fresh and something superior; and, for the poor or the mean ones amongst them, how to get that something cheaply. The professional musicians and readers frequently find it hard to avoid being almost forced to give their really valuable services for naught in society, and some of the richest people are the most stingy in this matter.

Mr. George Grossmith tells how he once met such an attempt on him from a very great lady. He was invited to dinner, and it was intimated by the gentleman bringing the invitation that he would be expected to sing afterwards; on which the artist mentioned his fee. "Oh, Lady Dash thought if you came to dinner you would not think of asking a fee!" said the emissary. Mr. Grossmith replied that he could not possibly eat and drink more than half-a-guinea's worth, and that his fee was much more; but if the lady liked, that charge for his dinner might be deducted! Improving on this, an eminent pianist, who had dined out one evening last season, was met after dinner at the drawing-room door by his hostess, who said, graciously but firmly, pointing to the music-stool: "Now, your place is *there!*" The outraged German *maestro* forthwith fumbled a sovereign out of his vest-pocket, and declared, "I vill pay for mine dinner." The lady, of course, refusing to take the coin—though in principle she had demanded it—he trundled off down-stairs, seized his hat, and departed, handing the piece of gold, as he left, to the footman who opened the street-door. An eminent lady singer of my acquaintance has elevated her meek and obedient husband into the position of a dragon to guard her from such imposition. When her hostess says sweetly, "Oh! Madame So-and-So, will you oblige us with just one of your beautiful songs?" the prima-donna replies, "I should *lore* to—I love singing in a drawing-room; but Mr. Smith would be *so* angry, he positively will not let me use my voice on my free nights!" Many good-natured professional artists still "oblige" under such circumstances; but when the host is a rich man, it is really discreditable for him to allow such a tax to be levied on a guest in return for his meat and drink.

A young lady whose semi-religious novels have been very successful in certain circles, has had to issue a protest against the assumption of her pen-name by some impostor, who has been doing all manner of tricks under the designation of "Edna Lyall." It may be some consolation to the young writer to reflect that in enduring this annoyance she is in first-rate company. When Harriet Martineau was at the height of her fame, a drunken woman used to give that name for hers when called on in the police-court to answer for her disorderliness. George Eliot's earlier books were claimed by one Liggins, a Methodist parson; and an innocent country friend wrote, in all seriousness, to the real author about the characteristics of the sham one:—"A deputation of Dissenting ministers went over to ask him to write for the *Eclectic*, and they found him washing his slop-basin at the pump. . . . One of them said that he inspired them with a reverence that made any impertinent question impossible. He calls himself 'George Eliot.' It is strange to hear the *Westminster Review* doubting whether he is a woman, when here *he is so well known!*" A similar experience befell the Brontë sisters, who had to divest themselves of their pseudonymity as "The Brothers Bell" because a certain person stated that they were one, and that that one was a man. As to the impudent claims of impostors to have written poems which they have only copied out, the instances of that sort of trick are innumerable.

"The Life and Letters of Mrs. Shelley," the wife of the famous poet, is a forthcoming work that promises to be of great interest. Shelley's wife was the daughter of Godwin and Mary Wollstonecraft. She was herself as clever and uncommon a woman as such a parentage should have made her. "Frankenstein," her singular novel, has passed into a classical place in English literature. Her first connection with Shelley was not free from blame; but during her long life as his widow she held an unblemished position, and her son, Sir Percy Shelley, who has authorised and aided the writing of the "Life," feels with all justice that by telling the truth about her he is rendering homage to the memory of a mother to whom he was devoted.

An effort is being made to induce some well-known ladies to stand for election to the London County Council. The effort seems to me futile, as it appears clear that women are excluded from seats in that body by the Act of Parliament, though female householders are entitled to vote at the elections. When the measure was passing through the House of Commons an appeal was made to me to raise the question of the eligibility of women for membership of the Councils, and I declined to trouble about it on the ground that women are evidently not ready yet for taking up such offices. The membership of the London School Board, which is open to women, is peculiarly a duty which many of them ought to undertake, for the sake of the girls in the schools and the female teachers. Yet, amongst all the women of means and leisure in London, scarcely any are found willing to put their hands to this work. The nominations for the next election must be made by Nov. 2, and I hear of only some half-dozen ladies as possible candidates for the whole of the Metropolis.

In the sense of having any chance of election, indeed, perhaps even some of those who are named are *im*possible. The electors will not return persons who hold the most impracticable and mischievous Socialistic views, or persons who do not appear to have any qualification of ability or educational experience, merely because those persons are women; nor ought they to do so. It is not to the advantage of the girls or the female teachers, or of education generally, to have either a foolish or an unconscientious woman made a member of the School Board. But there are very many ladies who have proved their suitability for the work, whether by their experience on local management committees for the schools, by general philanthropic or public services, or by their writings or other intellectual records. While womanhood should not be counted as alone a sufficient qualification to satisfy the electors, it should at least be considered as a great additional recommendation for one representative in each division, if a lady candidate otherwise suitable can be found. There are many such ladies; but it is difficult to induce them to undergo the trouble and to meet the considerable cost of a public election. The money is, indeed, a great obstacle in many cases. Mr. E. N. Buxton told the House of Commons Committee on Cumulative Voting that each of his School Board elections had cost him £700. This was extravagance, though; for my three elections to the London School Board cost only between one hundred and one hundred and fifty pounds each; but this amount, I think, must be counted as the minimum cost of "running to win." Printing and advertising to address 60,000 or more electors will absorb nearly all that money, services as canvassers and secretaries and the use of many school-rooms and halls being freely given by supporters and friends to a popular candidate.

FLORENCE FENWICK-MILLER.

Mr. Parnell's action, in the Scottish Court of Session against the *Times*, came before Lord Kinnear on Oct. 27, when the question of jurisdiction was discussed, and after considerable argument the matter was sent to the procedure roll.

The annual summary of British contributions to foreign mission work, just completed by Canon Scott Robertson, shows that for the financial year of 1887 the sum voluntarily given thereto in the British Isles was £1,228,759. Of this total, the sum of £461,236 was given through Church of England societies; £187,043 through joint societies of Churchmen and Nonconformists; £367,115 through Nonconformist societies in England and Wales; £202,940 through Scotch and Irish Presbyterian societies; and £10,420 through Roman Catholic societies.

The Printers' Almshouses at Wood-green were the scene of an interesting gathering on Oct. 27, the occasion being their inspection by the Lord Mayor, Mr. Alderman and Sheriff Gray, and Mr. Sheriff Newton. The visitors were conducted round the buildings, with the appearance and general arrangements of which much satisfaction was expressed. A complete tour having been made, the party adjourned to the board-room, where a meeting was held, the business consisting of a proposition to raise the sum of £5000 for the purpose of erecting and endowing on the ground now vacant another set of buildings sufficient to accommodate four more families of pensioners. The proposal met with general approval, and it was resolved that a petition be presented to the Corporation of London on the subject. The Lord Mayor, on behalf of himself and Sheriffs, promised to contribute to the object 100 guineas. Other sums were announced during the afternoon, including one of £1000 from an anonymous friend of the local visitor, Mr. W. H. Collingridge.—The Lord Mayor and Sheriffs also inspected the Fishmongers' and Poulterers' Asylum, which are adjacent.

Pears' Soap

I have found it matchless for the hands and complexion
Adelina Patti

Since using Pears' Soap I have discarded all others.
Lillie Langtry

For preserving the Complexion, keeping the skin soft, free from redness and roughness, and the hands in nice condition, it is the finest Soap in the world.
M. Fortescue

Good Complexion! AND Nice Hands!

NOTHING adds so much to personal attractions as a bright, clear complexion, and a soft skin. Without them the handsomest and most regular features are but coldly impressive, whilst with them the plainest become attractive; and yet there is no advantage so easily secured. The regular use of a properly prepared Soap is one of the chief means; but the Public have not the requisite knowledge of the manufacture of Soap to guide them to a proper selection, so a pretty box, a pretty colour, or an agreeable perfume too frequently outweighs the more important consideration, viz.: *the Composition of the Soap itself*, and thus many a good complexion is spoiled which would be enhanced by proper care.

A most Eminent Authority on the Skin,
Professor Sir Erasmus Wilson, F.R.S.,
Writes in the JOURNAL OF CUTANEOUS MEDICINE:—

"THE use of a good Soap is certainly calculated to preserve the Skin in "health, to maintain its complexion and tone, and prevent its falling "into wrinkles. PEARS is a name engraven on the memory of the "oldest inhabitant; and PEARS' Transparent SOAP is an article of the "nicest and most careful manufacture, and one of the most refreshing "and agreeable of balms for the Skin."

TO persons whose skin is delicate or sensitive to changes in the weather, winter or summer, PEARS' TRANSPARENT SOAP is invaluable, as, on account of its emollient, non-irritant character, *Redness, Roughness and Chapping are prevented, and a clear appearance and soft velvety condition maintained, and a good, healthful and attractive complexion ensured.* Its agreeable and lasting perfume, beautiful appearance, and soothing properties, commend it as the greatest luxury and most elegant adjunct to the toilet.

Testimonial from
Madame Adelina Patti.
"I HAVE found PEARS' SOAP matchless for the Hands and Complexion."
Adelina Patti.

PEARS' Transparent SOAP.

TABLETS & BALLS:

MONTE CARLO AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a delightful vegetation, yet the summer heat is always tempered by the sea breezes. The rainfall is small, and with the clear skies, Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, for its special fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe. In short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the St. Gothard line. Through-carriages, Sleeping-Cars from Ostend to Milan. Buffet on Through-Carriages. Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's Offices.

THE HIGHLANDS OF BRAZIL.
SANATORIUM, in one of the finest all-the-year-round climates known. Inland, Sea-coast. 2,000 ft. above sea-level, just within the Southern Temperate Zone; good summer and winter climate; no change of residence in short. Nomad Invalid by the advance of the seasons. English society, English church. The voyage from England or the United States is a favourite fair-weather ocean trip. Terms, 10s. to 12s. per diem. Circular, with further particulars, from CHARLES WILLIAM JONES, Esq., 30, Rumford-buildings, Liverpool; or ARTHUR E. JONES, The Sanatorium, S. Paulo, Brazil.

AUTUMN TOUR IN THE MEDITERRANEAN.
The Orient Company will dispatch their large, full-powered Steam-ship GARONNE, 3,876 tons register, 3,000-horse power, from TILBURY DOCK, on SATURDAY, NOV. 17, for a Five Weeks' Cruise, visiting Lisbon, Tangier, Gibraltar, Algiers, Palermo, Naples, Civita Vecchia for Rome, Leghorn, Genoa, Nice, for Riviera, Malaga, &c., arriving in London on Dec. 22.
The GARONNE is fitted with the Electric Light, Hot and Cold Baths, &c. Cuisine of the highest order. Number of passengers strictly limited.
An experienced Surgeon will be carried.
Managers: F. GREEN and CO., ANDERSON, ANDERSON, and CO., Fenchurch-avenue, E.C.
For Terms and particulars apply to the latter firm; or to West-End Agents, Grindlay and Co., 55, Parliament-st., S.W.

TAYLOR'S CIMOLITE, OR PREPARED WHITE FULLER'S EARTH, is the only reliable and thoroughly harmless SKIN POWDER. It is prepared by an experienced Chemist, and under its Latin name of "Terra Cimolia" is constantly prescribed by the most eminent Dermatologists, and was especially recommended by the late Sir Erasmus Wilson, F.R.S., and by the late Dr. Tilbury Fox. For general use it is simply invaluable, and is the purest and best Toilet Powder compound. It is the Best Dusting-Powder for Infants. Formerly used in the Nurseries of her Majesty the Queen, the Princess of Wales, the Duchess of Teck, &c., and now extensively employed in the Nurseries of her Imperial Majesty the Empress of Russia, the Duchess of Edinburgh, our own Royal Princesses and Duchesses, H.R.H. the Duchess of Cumberland, and most of the Aristocracy. Recommended by the family. The eminent physician, Dr. Routh, says—"I feel I cannot too highly recommend it." I cannot afford to be without it."—Dr. Bainbridge. A lady writes:—"Here in India, for 'Prickly Heat,' I found it worth a guinea a tea-spoonful." Post-free. Send 14 or 36 penny stamps.
Ask for "Taylor's Cimolite." See that the Trade Mark, Name and Address, are on every Parcel, and do not be persuaded to take imitations.
Introduced into medical practice and prepared by JOHN TAYLOR, Chemist, 13, Baker-street, London, W.

WARD, LOCK, and CO.'S NEW SERIAL PUBLICATIONS.
Catalogue and Prospectuses post-free on application.

IN MONTHLY PARTS, SIXPENCE EACH.
Part I. now ready. (To be completed in about 20 Parts.)
ENGLAND'S BATTLES BY SEA AND LAND.
With Full-page Illustrations.
The Publishers have great pleasure in announcing a Re-Issue, in a cheap and attractive form, of the valuable work, "ENGLAND'S BATTLES BY SEA AND LAND," which will be found replete with information about the notable events of the campaigns by which the British power has been built up, conveyed in an interesting, full, and intelligible style.
With Part I. will be PRESENTED GRATIS a PRESENTATION PLATE, representing "THE DECISIVE CHARGE OF THE LIFE-GUARDS AT WATERLOO."
From the celebrated Picture by Luke Clennel.
Specimen Copy of Part I., with Plate, post-free, 7d.

RE-ISSUE IN SIXPENNY MONTHLY PARTS.
Part I. now ready. (Complete in 6 Parts.)
GOD'S GLORIOUS CREATION; or, The Wonders of Land, Sea, and Sky. Translated from the German by J. MINSHULL.
BEAUTIFULLY ILLUSTRATED WITH ORIGINAL HIGH-CLASS ENGRAVINGS.
The publishers feel, in announcing a new and cheap issue of "GOD'S GLORIOUS CREATION," giving an account of the wonders of the Earth, Sea, and Sky, that it is scarcely necessary to commend the work to a large section of the public. Suffice it to say that whatever quarter of the globe the reader may seek information about as to its surface, its seas, its rivers, its animals, its plants, its climate, he will find it in this work.
Specimen Copy, post-free, 7d.

IN SIXPENNY MONTHLY PARTS.
Part I. now ready. (To be completed in about 10 Parts),
THE LAND OF THE BIBLE: Its Holy Sites and Sacred Story.
PROFUSELY ILLUSTRATED WITH MAPS AND WOOD ENGRAVINGS.
This well-known work is woven into a Connected Narrative of Bible Events, with EXPLANATORY DESCRIPTIONS, and incidentally gives accounts of the Great Empires of the East in their connection with the Jews. Sunday-school teachers, as well as scholars and fathers and mothers who give their own children religious instruction, will find this work capable of affording them much help.
Specimen Copy, post-free, 7d.

COUGHS, COLDS, ASTHMA,

BRONCHITIS, and NEURALGIA.

DR. J. COLLIS BROWNE'S CHLORODYNE.—Vice-Chancellor Sir W. Page Wood stated publicly in Court that Dr. J. Collis Browne was undoubtedly the inventor of Chlorodyne; that the whole story of the defendant Freeman was deliberately untrue, and he regretted to say it had been sworn to.—See the "Times," July 13, 1864.

DR. J. COLLIS BROWNE'S CHLORODYNE.—The Right Hon. Earl Russell communicated to the College of Physicians and J. T. Davenport that he had received information to the effect that the only remedy of any service in cholera was Chlorodyne.—See "Lancet," Dec. 31, 1853.

DR. J. COLLIS BROWNE'S CHLORODYNE.—Extract from the "Medical Times," Jan. 15, 1866.—"It is prescribed by scores of orthodox practitioners. Of course, it would not be thus singularly popular did it not supply a want and fill a place."

DR. J. COLLIS BROWNE'S CHLORODYNE is the best and most certain remedy in Coughs, Colds, Asthma, Consumption, Neuralgia, Rheumatism, &c.

DR. J. COLLIS BROWNE'S CHLORODYNE is a certain cure in Cholera, Dysentery, Diarrhœa, &c.

OBITUARY.

SIR EDMUND ARTHUR WALLER, BART.

Sir Edmund Arthur Waller, fifth Baronet, of Newport, in the county of Tipperary, died at St. Heliers, Jersey, on Oct. 22. He was born March 16, 1846, the only son of Sir Edmund Waller, fourth Baronet, by Rebecca, his second wife, youngest daughter of Mr. Arthur Guinness, of Beaumont, in the county of Dublin, and sister of Sir Benjamin Lee Guinness, first Baronet, and succeeded to the title on the death of his father, March 9, 1851. He was educated at Eton, and served for some years in the 84th Foot. He married, firstly, March 4, 1869, Annie, daughter of Mr. George Parsons, which lady died Dec. 27, 1876, and secondly, Sept. 2, 1878, Jessie Marian, daughter of the late Mr. Henry James Purbrook, of Brighton, but left no issue. He is succeeded by his uncle, now Sir Charles Waller, sixth Baronet, who married, in 1830, Maria, daughter of Mr. Nicholas Burgher, of New York, and has three sons and five daughters.

SIR JOHN WALLIS ALEXANDER, BART.

Sir John Wallis Alexander, fourth Baronet of Belcamp, in the county of Dublin, died at his residence, 27, Eaton-square, S.W., on Oct. 25, after a long illness. He was born Oct. 1, 1800, the second son of Sir Robert Alexander, second Baronet, by Eliza, his wife, daughter and heiress of Mr. John Wallis, and succeeded his brother March 31, 1873. He married, first, May 18, 1858, Lady Lepel Charlotte Phipps, youngest daughter of Henry, first Earl of Mulgrave, and sister of Constantine, first Marquis of Normanby (she died Jan. 29, 1869); and secondly, Aug. 22, 1877, Mary Kathleen, second daughter of the Rev. John Dreaper, of Manchester, but had no issue. The baronetcy, created Dec. 11, 1809, has consequently devolved on his cousin, Sir William Ferdinand Alexander, fifth Baronet, who was born Oct. 15, 1845, and married, Nov. 27, 1884, Edith, second daughter of Mr. George Heriot La Fargue, of Bosworth Hall, Leicestershire.

GENERAL SIR EDMUND HAYTHORNE.

General Sir Edmund Haythorne, K.C.B., Colonel 1st Battalion Hampshire Regiment, died at Silchester House, near Reading, on Oct. 18. He was born in 1818, the son of the late Mr. John Haythorne, of Hill House, in the county of Gloucester, and was educated at Sandhurst. He entered the Army in 1837, became Captain in 1844, Major in 1849, Lieutenant-Colonel and Colonel in 1854, Major-General in 1863, Lieutenant-General in 1877, and General in 1879. He served with distinction in the China War, 1841; in the Punjaub Campaign, 1848-49; was present at the forcing of the Kohat Pass, under Sir Charles Napier, 1850; and at the siege and fall of Sebastopol, 1855. He received for his gallantry four medals with clasps, fifth class of the Medjidieh, and the Turkish medal, and was several times mentioned in despatches. He was made K.C.B. in 1873. The distinguisned General married, in 1862, Eliza, daughter of Mr. J. Thomas.

We have also to record the deaths of—

Mr. Thomas Chandos Leigh Benedict, on Oct. 22, aged seventy-five.

Captain Robert Charles Whyte, R.N., at Instow, North Devon, on Oct. 18, aged seventy-five.

The Rev. Thomas Boston Wilkinson, M.A., Rector of East Harling, Norfolk, since 1829, on Oct. 15, aged ninety.

Mary, Lady Soame, widow of Sir Peter Buckworth Hearne-Soame, seventh Baronet, and daughter of Mr. William Bradshaw, at 7, Tregunter-road, on Oct. 17, aged eighty-eight.

Major-General Allan Hamilton Graham, late Royal Artillery, at Graham House, Malvern Wells, on Oct. 22, aged seventy-one.

The Rev. William Bousfield, M.A., late Fellow of Lincoln College, Oxford, and for thirty-five years Rector of Cublington, Bucks, at Aylesbury, on Oct. 21, aged seventy.

Colonel Arthur Chichester Crookshank, C.B., of wounds received in the skirmish at Kotkai recently. A portrait of the Colonel, with a memoir, was given in our issue for Oct. 20.

The Rev. James Fleming, on Oct. 27, at Troon, in his ninety-sixth year, and the seventieth year of his ministry. Associated with Dr. Chalmers he had written a number of works on Church affairs.

Mr. Henry Digby Sheffield, at Jacksonville, Florida, on Oct. 22, aged fifty-five. He was the second son of Sir Robert Sheffield, fourth Baronet, by Julia, his wife, daughter of Sir John Newbolt, Chief Justice of Madras.

Mr. Robert Charles Catling, F.S.I., of Needham Hall, Cambridgeshire, on Oct. 13, aged seventy-six. He was a J.P. and D.L. for Cambridge, High Sheriff for that county in 1880, and Captain, 5th Cambridgeshire Rifle Volunteers.

Mr. John Walter De Longueville Giffard, M.A., Judge of Exeter County Courts, after three days' illness, on Oct. 23. He was the eldest son of Mr. Stanley Lees Giffard, LL.D., and brother of Hardinge Stanley, first Lord Halsbury, Lord Chancellor of Great Britain.

Captain Charles Harold Beley, D.S.O., 25th Punjaub Native Infantry, killed in action while serving with the Black Mountain Expedition, India, on Oct. 5, aged thirty-three. A memoir and portrait of Captain Beley appeared in our issue for Oct. 13.

Mr. John Harward Jessop, of Marlfield, Cabinteely, in the county of Dublin, J.P., High Sheriff of Longford in 1853, at Weymouth-street, Portland-place, of inflammation of the lungs, on Oct. 18, aged sixty-five. He was the only son of the Rev. Robert Jessop, Rector of Kilglass, by Catherine, his wife, daughter of Sir Thomas Fetherston, Bart.

Mr. William Wallace Rodger Cunliffe, of Hadlow Castle, Kent, after a short illness, on Oct. 23, aged forty-one. He was the eldest son of Mr. Robert Rodger, of Hadlow Castle, J.P., and assumed in 1887 the additional name of Cunliffe, under the will of his maternal grandfather.

Captain Thomas Fraser Sandeman, of Stodham, Hants, J.P., late 73rd Regiment, on Oct. 18, in his eighty-second year.

Lady Brownlow Cecil (Charlotte Alexandrina Mabella), wife of Lord Brownlow Montagu Cecil, brother of the present Marquis of Exeter, and daughter of Mr. Edward Thompson Curry, British Consul at Ostend, at Dover on Oct. 17, aged sixty-three.

Lieutenant-Colonel Henry John Peet, Bengal Infantry, Deputy-Commissioner at Assam, on Sept. 21 at Calcutta, aged forty-six. He entered the Army in 1860, and became Lieutenant-Colonel in 1886. He served with the Bhootan Expedition in 1864-65, and was present at the recapture of Dewangiri (medal with clasp).

Major Thomas Bayley Graves, late Royal Welsh Fusiliers, at 3, Burwood-place, Hyde Park, on Oct. 14. He entered the Army in 1862, became Captain in 1874, and Honorary Major in 1882. He embarked for the Gold Coast with his regiment and served in the Ashantee War in 1874, including the Battle of Amoaful and the capture of Coomassie, for which he was several times mentioned in despatches, and received a medal with clasp.

Vice-Admiral Sir W. Graham has been appointed President of the Royal Naval College, Greenwich, in the room of Vice-Admiral Sir T. Brandreth.

The Rev. H. W. Webb-Peploe, at the morning and evening services at St. Paul's Church, Onslow-square, on Sunday, Oct. 28, brought before his congregation the claims of the Consumption Hospital, Brompton, and urged upon his hearers that the institution was in their own parish, and it was their duty and privilege to give it their liberal support. There had been about 38,000 in-patients and about 350,000 out-patients under treatment for periods of a few weeks to several months. The letters, which through the kindness of the congregation were placed in his hands, were extremely valuable to the many poor sufferers who applied to him. Mr. Webb-Peploe impressed upon his hearers the great importance of annual subscriptions, and alluded, in eloquent and feeling terms, to the great benefits conferred by the hospital. The Rev. A. B. G. Lillingston also preached in the afternoon in aid of the charity. The collections amounted to £103 5s. 5d., including several annual subscriptions.

BIRTHS.

On Oct. 23, at Norman House, First Tower, Jersey, the wife of N. R. Pogson, C.I.E., Government Astronomer, Madras, of a daughter.

On Oct. 27, at South Collingham, Newark, the wife of Charles Constable Curtis, of a son.

DEATH.

On Oct. 8, at Springfield House, St. Christopher, West Indies, the Hon. Charles Monroe Eldridge, President of St. Christopher-Nevis, aged sixty-three.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

With his Sea Chest, 8 in. by 3 in.

Containing three Suits of Clothes, five Hats, all to take on and off. A SLOOP, "THE PINAFORE," 8 in. long, with sails, rudder, crew, cargo, small boat, oars, &c., and a well-written Booklet, called "He would be a Sailor," by Mrs. Hayes.

The whole Toy comprising upwards of SIXTY ARTICLES, the like of which has never before been seen for ONE SHILLING.

4d. Extra for Packing and Carriage.

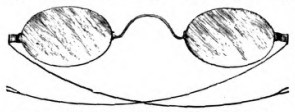
HINDE'S NEW PATENT.

A Beautiful Doll's House

For ONE SHILLING.

A real Doll's House with rooms, frontage, 1 ft. 4 in. The Drawing-room is 8 in. wide by 10 in. long, and very lofty, 11 in. high. A most attractive double-fronted Residence, known as "DIMPLE VILLA." Imitation Red Brick and Stone Facings, Bay Windows, green Venetian Blinds, &c. A practical house to put furniture in. This Toy is sure to be a favourite with little girls, and all old friends of "DOLLIE DAISIE DIMPLE." It is quite a large Doll's House, and takes the place of a Doll's House usually costing ten times the money. Price ONE SHILLING complete.

GIVEN AWAY, a beautifully Illuminated Toy-Book, twelve pages, large size, with a score of brightly-coloured Illustrations for the Children, sent gratis and post-free to applicants.



The Three Toys, One Shilling each, may be had of all important Toy Houses in the World. The GIRL DOLL, One Shilling; the BOY DOLL, One Shilling; and the DOLL'S HOUSE, complete, One Shilling, and 4d. extra on each article for packing and postage; 6d. on two articles, and 8d. on the three, to any address in the United Kingdom or Continent. Cash by Postal Note preferred. Applicants should write very distinctly their Postal Address. Last year several hundred toys were returned by the Post Office "address not known."

HINDE'S LONDON SAMPLE-ROOM, 1A, CITY-ROAD, LONDON, E.C.

Though found quite unnecessary, the Patentees still adhere to their practice of Money willingly returned if any dissatisfaction. Drapers will find these Toys an attractive Christmas Novelty.

CHOCOLAT MENIER.—Awarded Twenty-Eight PRIZE MEDALS. Consumption annually exceeds 26,000,000 lb.

CHOCOLAT MENIER. Paris, London, New York. Sold Everywhere.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all parasites or living animalcules, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco smoke; being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry; sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

VALUABLE DISCOVERY for the HAIR. If your hair is turning grey, or white, or falling off, use "The Mexican Hair Renewer;" for it will positively restore in every case Grey or White Hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair charmingly beautiful, as well as promoting the growth of the hair on bald spots, where the glands are not decayed. "The Mexican Hair Renewer" is sold by Chemists and Perfumers everywhere, at 3s. 6d. per Bottle.

COCKLE'S ANTIBILIOUS PILLS.
COCKLE'S ANTIBILIOUS PILLS. FOR LIVER.
COCKLE'S ANTIBILIOUS PILLS. FOR BILE.
COCKLE'S ANTIBILIOUS PILLS. FOR INDIGESTION.
COCKLE'S ANTIBILIOUS PILLS. FOR HEARTBURN.

GOLDEN HAIR.—Robare's AUREOLINE produces the beautiful golden colour so much admired. Warranted perfectly harmless. Price 5s. 6d. and 10s. 6d., of all Agents, R. HOVENDEN and SONS, 91 and 32, Berners-st., W.

TOWLE'S PENNYROYAL and STEEL PILLS for FEMALES. Sold in Boxes, 1s. 1½d. and 2s. 9d., of all Chemists. Sent anywhere on receipt of 15 or 33 stamps by the LINCOLN and MIDLAND COUNTIES DRUG CO., Lincoln.

WALKER'S CRYSTAL CASE WATCHES. An Illustrated Catalogue of Watches and Clocks at reduced prices sent free on application to JOHN WALKER, 77, Cornhill; and 220, Regent-street.

HOLLOWAY'S PILLS and OINTMENT. The Pills purify the blood, correct all disorders of the liver, stomach, kidneys, and bowels. The Ointment is unrivalled in the cure of bad legs, old wounds, gout, rheumatism.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

THROAT IRRITATION and COUGH. Soreness and dryness, tickling and irritation, inducing cough and affecting the voice. For these symptoms use EPPS'S GLYCERINE JUJUBES. In contact with the glands at the moment they are exerted by the act of sucking, the glycerine in these agreeable confections becomes actively healing. Sold in Tins 1s. 1½d., labelled "James Epps and Co., Homœopathic Chemists, London."

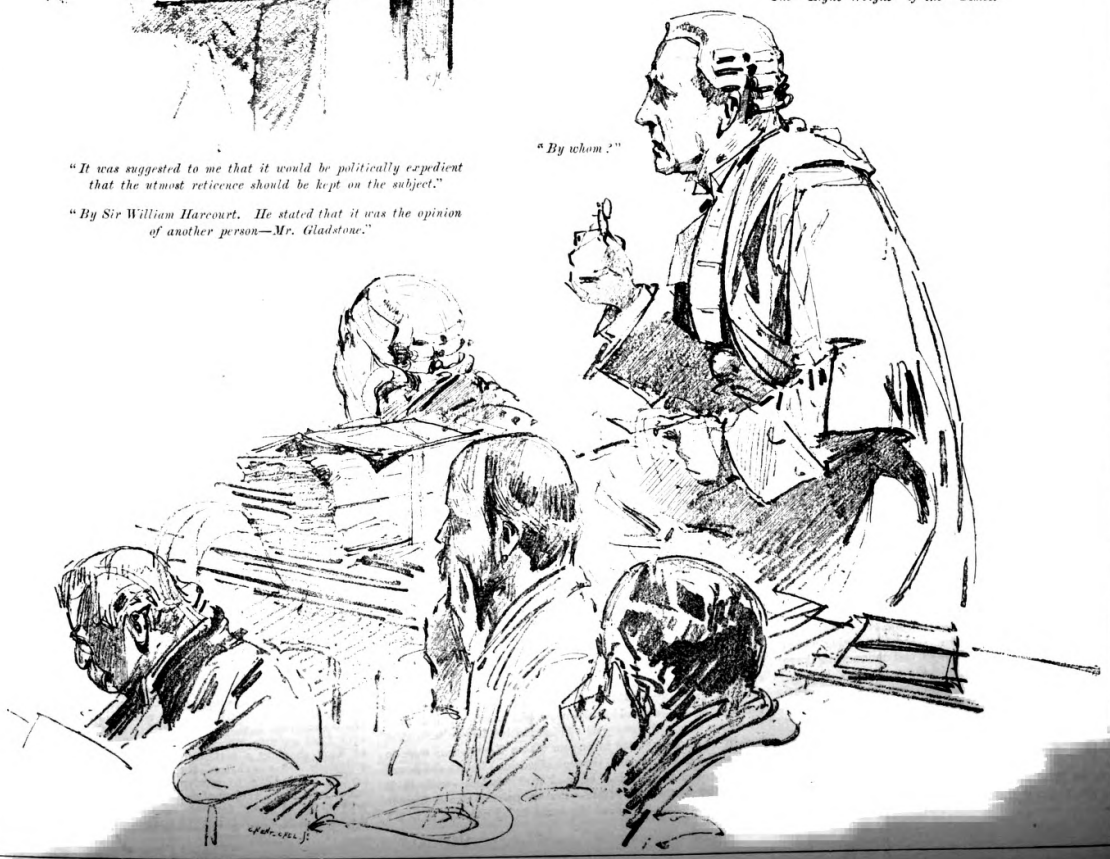
THE ILLUSTRATED LONDON NEWS

REGISTERED AT THE GENERAL POST-OFFICE FOR TRANSMISSION ABROAD.

No. 2586.—VOL. XCIII. SATURDAY, NOVEMBER 10, 1888. TWO WHOLE SHEETS SIXPENCE. By Post, 6½d.



"It was suggested to me that it would be politically expedient that the utmost reticence should be kept on the subject."

"By Sir William Harcourt. He stated that it was the opinion of another person—Mr. Gladstone."

The "Light Weight" of the "Times."

"By whom?"

OUR NOTE BOOK.

BY JAMES PAYN.

A number of eminent persons have been denouncing competitive examinations, and most offensive things they doubtless are, especially to those who have to pass them. I confess that, without being deeply impressed with the intelligence of the young gentlemen I have had the pleasure to meet who win the prizes, I am amazed at the information which they temporarily carry about with them; even those who are beaten seem to be miracles of learning; and when they show me their examination-papers there is not a question which (in their own phraseology) would not "utterly stump" me. If my own time were to come over again, I feel that not a messengership—far less a civil appointment in the land of the pagoda-tree—would be within my educational grasp. But then, somehow, something, which is not vanity but commonsense, tells me that as a boy I was not such an utter fool, though I knew none of these things; and a similar conviction is borne in upon most persons who have made their way in the world, without one-tenth of the "ologies" that are now necessary at starting. At a time when persons of great literary distinction were pressing upon the attention of young persons their Hundred (I had almost written their hundredweight, for they seemed to be selected for their ponderosity) Best Books, I ventured to remark that it was possible to educate people beyond their wits; and this, it seems, has now been accomplished. Our youths are absolutely "stodged" with dates and facts and book-lumber of all kinds. If you ask a boy at any crammer's how many hours his classical or mathematical nose is kept to the grindstone, his answer throws the slavery revealed by the Factory Act into the shade; whereas everyone acquainted with intellectual toil is aware that no real benefit, but the reverse, is derived from "overtime" work: nothing comes of it but mist and muddle.

On the other hand, it cannot be denied that competitive examinations have, on the whole, given us more competent public servants; there is not so much shirking of work in our Government offices as there used to be; not so many "Queen's hard bargains"; and especially it is certain young men take a greater pride in their professions, and more interest in them, than they did in the days of patronage and purchase. Moreover, the other side will doubtless have their word to say. I remember one who has had a vast experience of military education telling me that the cry about the physical inferiority of candidates for the army under the present system is simply the clamour raised by the dullards (or their friends) who have failed to pass. "If you choose to add raising weights with their teeth," he said, "to the present tests, I will back the lads who win in the other subjects to make the most marks in that too." He illustrated, if I remember right, his contention that the physical and intellectual powers on the whole went hand in hand, by the fact that the youth of the scientific corps (i.e., at Woolwich Academy), though inferior in numbers to the cadets at Sandhurst, held their own with them and something more, at cricket and football. What seems to me would be a great improvement in our competitive training is to make it less a matter of drudgery and slogging, and more an exercise of the intellectual faculties; it is not easy to make a young gentleman learn, but the process for making him think has not as yet been discovered. If a Royal Commission can do it, I shall believe in the Divine Right of Kings; but at all events, let us try *something*; there must surely be some middle course between cramming our boys like chickens, and letting things slide.

If, as at home, the abdication of a head-master at the Antipodes means extra holidays, the public schoolboy in New Zealand must be having a high time. In the seven oldest schools in the colony no less than twenty-two head masters have thrown up the reins of office, or had them snatched from them by their "governing committee," in as many years. The *Post* (not the *Morning Post*, but a Wellington paper) gives the items of this very unfashionable intelligence:—so many "Worried to death," so many "Badgered into resigning," so many "Driven away," and so on. One, it is pleasant to find, "Still survives, but sorely baited." This is certainly not the way public schoolmasters are treated in the old country, and to the mathematical mind, if to no other, it may afford some satisfaction as tending to restore the balance. These unfortunate gentlemen, we are told, were "nearly all chosen by first-rate men at home, on the ground of special fitness for their posts, and from a long list of candidates." It would have been better for them to have failed in obtaining these Antipodean prizes. The fault seems to lie in divided government. I once had a friend who edited a magazine conducted by a committee of divines, and *his* experience was not encouraging. They objected to everything except the articles they wrote themselves, and which they insisted on his inserting. He was a lean man; but in six months he lost more than a stone in weight, and would doubtless have been a living skeleton had he not thrown up his appointment. But the case of these unhappy New Zealand schoolmasters seems far harder.

In Mr. Shaw Lefevre's interesting paper in the *Nineteenth Century* on the "Public Buildings of London," he insists on the necessity of "relieving the pressure which has arisen from crowding Westminster Abbey with monuments." He called attention to the fact, he tells us, six years ago, "during which no fewer than eighteen statues, busts, and monuments have been added." One a year seems to be the amount of bust (or otherwise) required by public opinion, but three times this allowance has been awarded to deceased claimants. It is now proposed to add a monumental chapel—an annexe, which if not the rose shall be near the rose—by pulling down certain houses on the north side of Old Palace-yard.

This is as it should be, and let us make haste about enlarging the National Walhalla so that there may be room and verge enough when our time comes to be put there. It is not a case where "business" can be "carried on during the alterations." There is "snug lying in the Abbey," but it is too snug: there might be written over its doors what is so constantly seen over those of our omnibuses—"Full inside." It is not a question of "Si momentum requiris, Sir-come-spy-see"; there are only too many monuments, and no standing place for another, nor even a niche in the wall for one's tablet. It is not a matter of choice as it was in St. Paul's, where the poet warns us against inartistic monumental neighbourhoods:—

> It should not be there, nor nearer the door,
> Where the Man and the Angel have got Sir John Moore,
> And are quietly letting him down through the floor,

and so on. In Westminster there is really no room for anybody, whether in eligible situations or not. It is not egotism—for I don't care where they put *me*, unless it 's in a draught, and I dare say even *that* won't matter, only it is so difficult to get rid of a life-long prejudice—but a sincere desire that much more eminent persons may find a resting-place suitable to their merits that causes me to add my feeble voice to this cry of "Enlarge the Abbey!" We are told, on good authority, that "not more than fifteen or twenty burials, at most," can possibly now take place there; and when we consider the uncertainty of life—in the case of some of us who are getting on in years one might put it even a little stronger—there is evidently not an hour to lose in providing the necessary accommodation. Of course, as a temporary measure, one could be embalmed, and wait; but literary persons, at all events, have no money to spend in luxuries of this kind. There was a time when a great man, on the eve of a great deed, could exclaim, "Westminster Abbey or a Peerage!" without evoking a smile from his contemporaries. But the area of aspiration is now more limited; nobody wants to be a Peer (or, at least, he says he doesn't), and, in any case, we are told that the Peerage is played out. In a few more years there will be nothing *but* Westminster Abbey for the reward of genius. It will never, I hope, be contemplated to take people out of it in order to make room for more worthy claimants; the idea of a committee sitting upon the merits of Departed Worth, and deciding which of them is to go, is too painful to dwell upon; there is therefore clearly nothing for it but to enlarge the Abbey.

The Jews seem thankful for small mercies. In one of their organs the opinions of one Emperor and a King regarding them are quoted this week with much apparent satisfaction. In a recent conversation between the young Emperor William and King Humbert, the former is said to have observed, "The Jews are an intelligent element, and I am not prejudiced against them in particular"; to which his Majesty of Italy replies, "I think as you do. Good and bad individuals are to be found in every religious denomination." This is not the sort of praise to which one would apply the epithet "fulsome," but, when one considers who are the speakers, I suppose little more could be expected of them. With the Emperor of Russia, on the other hand, the Caucasian race (as might have been expected from his geographical position) have distinctly scored. The love of religious freedom is not, however, the leading feature of some of his subjects; and a young Jew, though he had distinguished himself in scholarship, was refused admission the other day into the University of Kieff on account of his creed. Upon this "he took the extreme step" (and so it seems, indeed; good Heavens!) of telegraphing to the Czar, and petitioning for his good offices. In a few days he received a message from the Rector of the University that he was admitted into its orthodox bosom. This is, so far, satisfactory; but it would be interesting to learn how this young Hebrew scholar has been welcomed by his brother-students, and whether University life at Kieff has the charms for him which it would have at Oxford or Cambridge.

At the Grand Masonic Lodge of Scotland at its last quarterly (and Edinburgh) meeting, a most terrible outrage was brought to the notice of the authorities. Three "brethren" had been so forgetful of their vows as to introduce two members of the other sex to hear, and "partially through a closed door" to behold, the proceedings of a certain lodge "when tyled in the third degree." The expression is a little vague to the outsider, and reminds one of the locking and "double locking" the door, a superfluous caution peculiar to novelists; but it no doubt signifies some apartment thoroughly roofed in, and intended to exclude spectators. These audacious persons, however, we are informed, actually "broke the tyling," so that an opportunity for inspection must have been afforded similar to that of a skylight. For my part, I know nothing of these mysteries except from report; but what I exceedingly resent is that these sacrilegious persons have been only punished with "expulsion" *from* the order, and "special censure." One had reasonably looked forward, from all one has ever heard of Freemasonry, to some penalty ("humorous and lingering" as Mr. Gilbert terms it) like boiling oil, or the being put to death to slow music (the bagpipes would hardly have been too bad for them) at the very least. Humanity is all very well, but it is terrible to be thus deprived of our illusions. There is still a chance, of course, that the offenders may mysteriously disappear, when we shall be at liberty to hope for the worst; but to find that, for introducing females to the secrets of Masonry, offenders are only expelled (as they might be from an anti-tobacco club for smoking a cigarette) is a blow from which the lovers of legend and believers in the Vengeance (with a big V) of a violated cult will not easily recover. As for the ladies, who seem to have escaped (thanks, I suppose, to their nationality) scot free, I tremble to think what, under an older régime, might have been their fate. Everyone knows the story of the inquisitive female who shut herself up in a cupboard in a room where Freemasons were to meet and was discovered (through sneezing) before she heard anything worth speaking of, and nevertheless—well, it is almost too horrible to relate—was on pain of death herself sworn a Mason, but without the secret being confided to her—a refinement of cruelty that, so far as we know, though he was very cruel to women, never entered into the brain of Torquemada himself.

Some people are always complaining that they have been born before their time, with what seems to their friends very little reason. But I wish I could have my life at a public school over again, not so much with the object of being a better boy, as because, at one of them at least, it is no longer necessary to learn Greek. Mr. Welldon (a capital name), the Head-Master of Harrow, has come to the conclusion that boys who may be expected to advance enough to profit by Greek literature, will know quite as much about it at eighteen if they learn it at fourteen as though they had begun it earlier; while the immense majority, "who never get beyond stumbling through the Iliad with the help of a crib and a lexicon," had very much better not begin it at all, but give their attention to something more useful. Here is common-sense at last in a classical seminary. But in the mean time what have I, and thousands like me, "kept from the playground oftentimes upon no ground whatever," suffered from what I am afraid we used to call "that beastly language"! and how can we ever obtain compensation? The hours of sunshine spent in looking out its filthy roots, which we might have passed in the open air, or in reading story-books; the headaches, the vertigos, its irregular verbs engendered; the consonantless shrieking (those much-admired "cries of females without") in its terrible plays—I protest, when I think of them, I hate it with a hate that I have never been able to develop against a fellow-creature who has injured me! It is wrong to speak of the dead with such bitterness, but not of a dead language.

THE COURT.

The Queen, who is in good health at Balmoral, went out on the morning of Nov. 1 with Princess Beatrice. Her Majesty, accompanied by the Princess, drove in the afternoon. Sir Algernon and Miss Borthwick lunched at the castle, and Miss Borthwick afterwards had the honour of being received by the Queen. Princess Frederica and Baron Pawel-Rammingen dined with the Queen and the Royal family. Miss Trotter, in attendance on Princess Frederica, the Rev. A. Campbell, and Captain Davidson, commanding the Guard at Ballater, had the honour of being invited. Lieutenant M'Kerrell and Lieutenant Wolrige-Gordon dined at the castle, and were received by the Queen in the evening. On the morning of the 2nd the Queen went out, attended by the Hon. Marie Adeane. In the afternoon her Majesty drove with Princess Beatrice and Princess Frederica. Prince Henry of Battenberg left the castle for London. Prince Arthur and Princess Margaret of Connaught took leave of her Majesty, and left for London on their way to India. The Queen went out, with Princess Beatrice, on the 3rd. In the afternoon her Majesty drove out, attended by the Dowager Duchess of Roxburghe and the Hon. Marie Adeane. Princess Frederica and Baron Pawel-Rammingen dined with the Queen. Lord Knutsford, who arrived at the castle as Minister in attendance, had the honour of being included in the Queen's dinner-party. Divine service was performed at the castle on Sunday morning, the 4th, in the presence of the Queen, Princess Beatrice, and the Royal household. The Rev. A. Campbell officiated. In the afternoon her Majesty and Princess Beatrice visited Princess Frederica at Abergeldie Mains. The Queen and Princess Beatrice went out on Monday morning, the 5th, attended by the Dowager Duchess of Roxburghe; and in the afternoon her Majesty and the Princess drove out, attended by Miss M'Neill. Princess Frederica and Baron Von Pawel-Rammingen dined with the Queen, and Lord Knutsford had the honour of being invited.

The Prince of Wales, attended by General Sir Charles Teesdale and Sir Francis Knollys, arrived at Sandringham on Friday night, Nov. 2, for the winter season. Prince Albert Victor, attended by Captain Holford, arrived at Sandringham next day. The Prince and Princess, with Prince Albert Victor, and Princesses Louise, Victoria, and Maud, attended by the ladies and gentlemen of the household, were present at Divine service at the church of St. Mary Magdalene on the morning of Sunday, Nov. 4. The Rev. F. Hervey, M.A., Rector of Sandringham, Domestic Chaplain to the Prince and Princess of Wales, and Chaplain to the Queen, officiated. The Prince and Princess have accepted an invitation, forwarded through Dr. James Williams, the late Mayor of Brecon, to attend the National Eisteddfod at Brecon in 1889.—Prince Albert Victor has been granted long leave of absence from his military duties, and leaves London for Copenhagen, to represent the Prince and Princess of Wales at the celebrations in honour of the twenty-fifth anniversary of the accession of the King of Denmark to the throne.

Princess Louise on Nov. 5 visited Newcastle, and opened the Durham College of Science. An enthusiastic welcome was accorded her Royal Highness, on whose behalf the Marquis of Lorne acknowledged two addresses presented to her, first by the Corporation and afterwards by the Council of the College.

Prince Arthur Patrick and Princess Margaret of Connaught left Charing-cross by the Continental express-train, on Nov. 6, for India, to join their parents.

Prince Christian, who has been spending the vacation on the Continent, returned on Nov. 4 to Cumberland Lodge, Windsor Great Park, from Germany.

THE RUSSIAN ARMY.

Some of the Vienna papers have lately circulated alarming reports that preparations are being made in the West Russian provinces, close to the German and Austrian frontiers, for the arrival of considerable numbers of troops, which are to be transferred from the interior of Russia to those frontier provinces. On the other hand, it was understood months ago that the division from the Caucasus, frequently mentioned last spring, would reach the Western frontier late in the autumn; and a recent communication from St. Petersburg refutes as completely incorrect the statement concerning the alleged movement of the Caucasus Division in the direction of the western frontier of Russia. It is added that no such orders have been received by the division referred to; and that the movements of troops which are taking place are merely connected with concentration which was carried out in the camps of exercise lately held, and which is now discontinued, the manœuvres having terminated. We have received, however, from our own correspondent, sketches made by M. Baruch at Kiev, showing a certain degree of activity in military preparations. One is that of the Russian conscripts assembling at the Kiev dépôt, to receive their arms and uniforms; the other is that of a review of mounted Cossacks of the Caucasus, previously to their farther march westward, the precise destination of which is not yet known.

THE PARNELL INQUIRY COMMISSION.

The Special Commissioners, Sir James Hannen, Mr. Justice Day, and Mr. Justice A. L. Smith, holding the Court of judicial inquiry concerning the charges and allegations set forth by the *Times* against Mr. Parnell and other Irish members of Parliament connected with the Irish Land League and the Irish National League during eight or nine years past, have continued their sittings at the Royal Courts of Justice in

the Strand. The proceedings on Tuesday, Oct. 30, which was the sixth day of sitting, Wednesday, and Thursday, Nov. 1, were enlivened by some characteristic incidents, as the witnesses called by the Attorney-General, Sir Richard Webster, who was, with Sir Henry James and Mr. Murphy, leading counsel for the *Times*, were cross-examined by Sir Charles Russell, counsel for Mr. Parnell, and by Mr. T. Healy, Mr. Davitt, and others, who appeared for themselves or for clients on the Parnellite side. The first witnesses belonged to the class of official reporters of speeches made in Ireland at the League meetings; they were head-constables or other officers of the

Royal Irish Constabulary, who could take notes in shorthand, and who were sometimes called upon to compare their notes with the reports published in the newspapers of the time. Mr. Healy, at the beginning of this course of evidence, declared that he had read the reports of his own speeches as they appeared in the *Freeman's Journal*; he added, "I admit having made them, and I am proud of them." At the sitting on Wednesday, Oct. 31, Captain W. H. O'Shea, formerly a

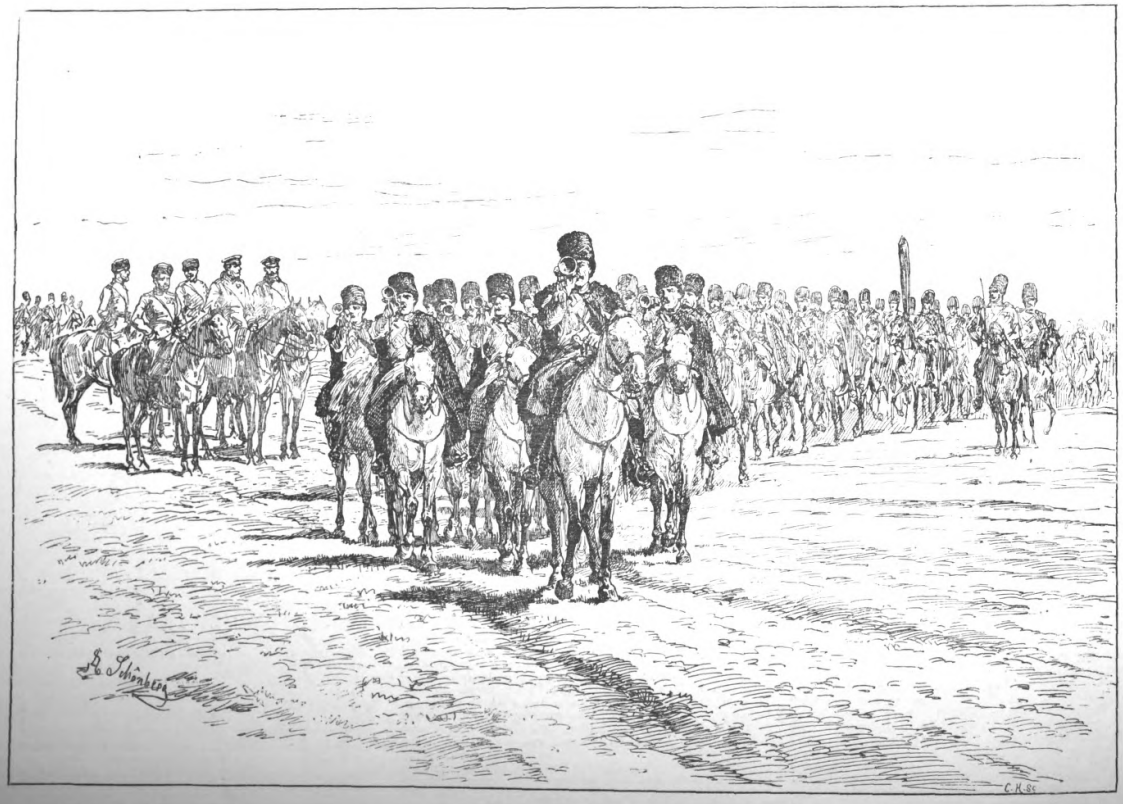
friend of Mr. Parnell and M.P. for Clare until 1885, was examined at great length with regard to the negotiations which he privately carried on, in April, 1882, with the assent of Mr. Chamberlain and Mr. Gladstone, to ascertain what promise Mr. Parnell could be induced to give, in case of his liberation from prison, that he would use his influence to stop outrages and acts of violence. This was the transaction called at the time, by some opponents of Mr. Gladstone's Government, "the Kilmainham Treaty." Considerable sensation was now excited by Captain O'Shea's statement that he destroyed some of his memoranda concerning these negotiations in 1883 because, as he said, "it was suggested to

me that it would be politically expedient that the utmost reticence should be kept on the subject." Sir Charles Russell, who was then cross-examining the witness, asked, "By whom?" to which Captain O'Shea answered, "By Sir William Harcourt (much laughter); "he stated that it was the opinion of another person, Mr. Gladstone." The President of the Court rebuked the laughter with which the name of Sir William Harcourt was greeted. Captain O'Shea, in reply to other questions, said that no suggestion of the kind was made by Mr. Chamberlain, and certainly not by Mr. Parnell; it was at the time when there was danger of a Select Committee being appointed to inquire into "the Kilmainham Treaty." He produced the letters and papers remaining, and related his conversations with Mr. Parnell, who desired him to speak about procuring liberty for Brennan, Egan, Boulton, and Sheridan, saying that he could induce them to put down outrages and boycotting. Captain O'Shea was then shown the original of the alleged letter of Mr. Parnell, dated May 15, 1882, [illegible] the Phœnix Park murders of May 6, and the object [illegible] assert that the signature was Mr. Parnell's hand-

A Witness reading Speeches.

writing. The eighth day's sitting was chiefly occupied with further reports of Land League meetings and speeches. The Court then adjourned to Tuesday, Nov. 6, when Mr. Albert Chester Ives, special correspondent of the *New York Herald*, who in December, 1879, had long conversations with Mr. Parnell on board an Atlantic steamer, produced his report of those conversations, as published at the time. They chiefly related to the distress then prevailing in Ireland, for the relief of which the *New York Herald* gave £20,000, and raised a subscription fund of nearly £50,000; but Mr. Parnell explained the plan and objects of the Land League, on which he was going to lecture in America, and said that there was nothing secret or illegal in its proceedings. He remarked, however: "A true revolutionary movement in Ireland should, in my opinion, partake of both a constitutional and an illegal character. It should be both an open and a secret organisation, using the constitution for its own purposes, but also taking advantage of its secret combination." Mr. Parnell said that his own party was constitutional, and that he would not belong to any illegal body. The Attorney-General next put in the certificate of registration, in July, 1881, of *United Ireland*, proving that Mr. Parnell and Mr. Patrick Egan were the principal proprietors of that newspaper, each holding 237 shares. Evidence of the perpetration of agrarian outrages, from May, 1880, was then produced; the Attorney-General undertaking to show that these outrages were connected with the local branches of the Land League, or with the speeches and published writings for which the Land League was responsible. The Counsel on the other side, Sir Charles Russell, Mr. Reid, and Mr. Lockwood, objected to this evidence as not expressly connected with Mr. Parnell and the other persons incriminated; but the Judges held it to be admissible. John Rafferty, of Castlegrove, Galway, a tenant of nine or ten acres, then described how he was pulled out of his bed at night, and his back was "carded," or scraped with a board in which nails

"I submit, my Lord, that you have no jurisdiction."



were fixed, because he had taken a bit of land. Mrs. Dempsey related the murder of her husband, in May, 1881; and Mrs. Connors, another widow, told a similar sad story. Acts of malicious damage to property, and the practice of boycotting, from 1880 to 1887, were proved by landowners and county magistrates. The Court adjourned to the next day.

"I admit having made them, and am proud of them."

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, Nov. 6.

This is a week of *causes célèbres*. Prado is being tried at Paris and Henri Chambige at Constantine, and both cases interest the public deeply. Prado is accused of having assassinated a woman named Marie Agnetan in 1886; he is the hero of the mystery of the Rue Caumartin, a sort of second Pranzini, a man of energy and violence, who has been all over the world, exercised all sorts of trades, and lost all scruples while acquiring all vices. Prado is a brute, a predestined criminal, and a consummate comedian. Yesterday, the first day of the trial, he astounded Judges and public alike by the prodigious energy of his defence, by the force of his savage eloquence, by the vehemence of his attacks upon his Judges. In truth, it was not the Bench that directed the proceedings; it was the bold adventurer called Prado, whose antecedents, history, and real name are veiled in mystery; who questioned and cross-questioned his Judges and talked and gesticulated to his heart's content, for nothing could resist his vigorous determination. The case of Henri Chambige is still more mysterious and strange: it is a drama of passion in which the rôle of the victim—a charming lady of thirty—remains unexplained and provocative of contradictory hypotheses. In January, 1888, a young man of twenty—Henri Chambige—entered a villa near Constantine with a young woman, Madame Grille. Two hours later four shots were heard. The door was forced, and the young woman was found laid on a bed which had not been disordered, with two bullets in her head and a bunch of violets on her breast. The young man lay on the floor bleeding with wounds from the other two balls. Henri Chambige was a law student, who had written a novel, and had literary aspirations. He also possesses singular hypnotic power, and figures as a subject in one of Paul Marguerite's books. Madame Grille was a lady above reproach. What can be the key of this mystery? Whatever it may be, the victim and the hero are not commonplace.

The great event of the theatrical week has been the production of "Pepa," a new piece by MM. Meilhac and Ganderax, at the Comédie Française. The piece is rather a vaudeville than a comedy, although it contains many clever notes of the manners and ways of those Hispano-American people of wealth and leisure whom the Parisians call *rastaconères*. At the same time the principal subject of the piece is the situation of a divorced couple who determine to get remarried together after thinking for a moment of contracting each a new and independent union. It is easy to pick holes in "Pepa," and to demonstrate that it is an inferior piece; nevertheless the dialogue is so sprightly, and some of the scenes are so clever, that it constitutes a most agreeable spectacle, especially as it is played to perfection by Mdlle. Febvre, Feraudy, Lebargy, and Mesdames Reichemberg and Bartet. "Pepa" is a piece to see and to be seen only at the Comédie Française. If it were played by other actors it would be null.

At the very interesting semi-private Théâtre Libre a drama called "Rolande," by M. Louis De Gramont, has created quite a sensation in the literary world, both on account of the remarkable talent displayed by the author and of the extreme audacity of the subject, which turns on the irresponsible depravity of a man of the type of Baron Hulot, in Balzac's "Cousine Bette." In the way of realism on the stage this is the strongest and at the same time the most vehemently uncompromising thing we have yet seen, far beyond anything that Zola or Daudet have risked in their revolutionary pieces.

In accordance with the touching Parisian custom, the first two days of November were devoted to visiting the various cemeteries of the capital, on the occasion of the Fête of the Dead, as it is called. The number of persons who visited the ten cemeteries of the capital amounted to more than 200,000. The municipal statistics show that during 1887 there were 51,514 burials at Paris, and that the city treasury received nearly a million francs in funeral taxes and nearly 2½ millions for the sale of burying-ground in the cemeteries. It appears that the number of non-religious burials is decreasing. In 1887 they were 11,000, as compared with 11,200 in 1882.

A terrible explosion of fire-damp in a mine at Campagnac, Department of the Aveyron, has killed forty-eight miners and injured three.—M. Maurice Richard, one of the most respected and influential representatives of the Bonapartist camp, died this week at the age of fifty-six. M. Richard entered political life in 1863, and was Minister of Fine Arts in the Ollivier Cabinet in 1869.—The Eiffel tower has reached the height of 178 mètres. The remaining 122 mètres will be finished next January at the rate of 11 mètres a week.—Paris is full of Royal and noble visitors. The Russian Grand Dukes Nicolas, Alexis, and Wladimir may be seen breakfasting every morning in a well-known restaurant in the Avenue de l'Opéra, and other members of the Russian Imperial family have taken up winter quarters in the south of France. T. C.

The celebration of the Royal Jubilee at Athens began on Oct. 31 with a State procession to the cathedral. King George and the Duke of Sparta were on horseback, while the other members of the Royal family and the English, Russian, and Danish guests drove in Court carriages. On the arrival of the Royal party a "Te Deum" was sung, at the conclusion of which a salute of 101 guns was fired. Both in going and returning from the cathedral the King was loudly cheered by the vast crowd which had assembled. The Athens Exhibition was opened on Nov. 1 by the King, who was accompanied by Queen Olga and all the members of the Royal family, as well as by the Royal guests now staying here. The ceremony was conducted with much pomp, and the Exhibition affords evidence of the great development and progress of the industrial arts in Greece. The Royal fêtes concluded on the 3rd with a general illumination at Athens and a display of fireworks. King George has conferred the Order of the Grand Cross on the Envoys who have brought him congratulations from foreign Courts. The King and Queen and the members of the Royal family, together with a number of other guests, were entertained at luncheon on the 5th by the Duke of Edinburgh on board the Alexandra, the flag-ship of the Mediterranean Squadron. The Duke left with the squadron for Malta on the 7th; but the Duchess and Prince George of Wales remained as guests of the Greek Court for a few days longer.

The Czar and Czarina returned on Nov. 4 to St. Petersburg, the streets of which were gaily decorated. Their Majesties were enthusiastically cheered by vast crowds. It is now officially announced that, in the accident which occurred to his train, the Czar was injured on the foot and the Czarina in the hand, but they were not prevented from going about to attend to those who had received more serious injuries.—A telegram received at St. Petersburg announces the death of the famous Russian explorer, General Prjevalsky.

General Benjamin Harrison has been elected President of the United States by a large majority over President Cleveland.

A cyclone took place recently in the Madras Presidency. A steamer carrying coolies was disabled, five of the coolies being killed and several seriously injured. A train of twenty-two carriages was blown off the line, the engine alone remaining.

THE LATE SIR EDMUND HAYTHORNE.

General Sir Edmund Haythorne, K.C.B., who died on Oct. 18 at Silchester House, near Reading, was educated at Sandhurst, and entered the Army in 1837 as Ensign in the 98th Regiment. He was with the expedition to the north of China in 1842, including the operations in the Yang-tse-Kiang, the attack and capture of Chin-kiang-foo, and the operations before Nankin. He served as Brigade-Major to the Chusan Field-Force, and under Brigadier-General Campbell, from July, 1843, until the island was given up to the Chinese authorities. In India, he acted as Aide-de-Camp to Sir Colin Campbell, commanding the third division of the army in the Sikh War of 1848-9, and was present at the passage of the Chenab and the battles of Sadoolapore, Chillianwallah, and Goozerat, and in the pursuit of the Afghans to the Khyber Pass. In 1850, as Major, commanding flank companies of the 98th Regiment, he was present at the forcing of the Kohat Pass, under Sir Charles Napier. During this service he commanded a detached column for the reduction of two villages and towers. In 1851, as Aide-de-Camp to Sir Colin Campbell, he was present at the operations against the Momund tribe on the North-West Frontier. In 1855 he proceeded to the Crimea with drafts and took command of the 1st Battalion Royal Regiment at the siege of Sebastopol, afterwards serving as Assistant Adjutant-General of the Highland Division until the evacuation of the Crimea. In 1859, when in command of the garrison of Hong-Kong, he was Chief of the Staff of the army for service in the north of China, and had the sole responsibility of the organisation of this force until the arrival of Lieutenant-General Sir Hope Grant. The rank of K.C.B. was conferred on him in 1873. His services, which had several times been mentioned in despatches, were specially recognised by Lord Herbert, Secretary of State for War, in proposing a vote of thanks to the troops in the House of Lords. He was Adjutant-General of the British forces in India from May, 1860, to February, 1863, when he became Adjutant-General of the Army, which office he held till November, 1865; and was instrumental in carrying out the reorganisation and amalgamation of the Indian Army, which was effected during that period. His name is several times mentioned in the "Life of Lord Clyde," who had great esteem and affection for him. Several of his comrades-in-arms attended his funeral, amongst whom were General Sir Donald Stewart, Bart., General Sir Martin Dillon, K.C.B., and General Ravenhill, R.A.

THE MONTROSE MEMORIAL, EDINBURGH.

This monument has been erected in the cathedral of St. Giles, at Edinburgh, in memory of the "Great Marquis of Montrose," who was executed on May 21, 1650. The Clan

THE MONTROSE MEMORIAL IN ST. GILES'S CHURCH, EDINBURGH.

Graham and their friends have subscribed the money for the memorial, which cost £1100. Dr. Rowand Anderson, F.R.I.B.A., was the designer of the work; and Messrs. J. and W. B. Rhind, of St. Helen's, Cambridge-street, Edinburgh, were the sculptors. Their recumbent figure, in white marble, of the Marquis in armour, and bearing a bronze sword grasped in his right hand, forms a dignified composition, resting on a black marble bier which rises from the sarcophagus, mounted on a pedestal. The central panel of the frieze of the sarcophagus is thus inscribed:—

> Scatter my ashes, strew them in the air,
> Lord, since Thou knowest where all these atoms are;
> I'm hopeful Thou'lt recover once my dust,
> And confident Thou'lt raise me with the just.

The principal feature of the design is a semi-circular arch, deeply recessed, and flanked by two Corinthian pillars in black and gold marble, with alabaster bases and caps. The wreaths in the middle of the columns are also of alabaster. These piers carry a frieze, entablature, and cornice, crowned by boys supporting shields over the columns. Floral wreaths and panels enrich the frieze. Rising over the cornice in the middle is a central panel within a columned and pedimented niche, quartered with the full coat of the Graham arms. The arched recess behind the monument proper is divided into three panels, formed with alabaster mouldings, with a sculptured inscription in the centre compartment. The width of the composition is 9 ft., and the height 16 ft. The style chosen is the Renaissance of the seventeenth century.

The directors of the Gaslight and Coke Company have resolved from and after Jan. 1 next to reduce the price of gas to private consumers on the north side of the Thames to 2s. 6d. per 1000 cubic feet for common gas, and to 3s. 1d. per 1000 cubic feet for cannel gas.

Amongst the passengers by the British and African Company's steamer Calabar, which left the Mersey on Nov. 3 for the West Coast of Africa, was Bishop Crowther, well known on the coast for his missionary and other work, principally in the Niger district. Bishop Crowther, who is an African native, is an octogenarian.

THE RAILWAY ACCIDENT TO THE CZAR.

A Russian officer, who was an eye-witness of the perilous accident on the Azov Railway, between Taranovka and Borki, on Oct. 29, by which the lives of the Emperor Alexander III. and the Empress were greatly endangered, sends us a Sketch of the Imperial train breaking up and falling off the embankment. It happened at noon, when the train was approaching the Borki station. The train was drawn by two engines, and was composed of several carriages, besides the Imperial saloon carriage, which was of massive construction. There is a steep incline, down which the Imperial train travelled at a moderate pace: but it seems certain that the disaster was due to the bad state of the line. The railway officials had superficially repaired the line, instead of replacing some worn rails by new ones, and the existing rails were not strong enough to support the weight of the locomotives and large saloon carriages. It was the carriage in which the Minister of Roads was travelling that ran off the line. The Czar and Czarina, and all their children, except the Grand Duchess Olga, were in the Imperial saloon-carriage. The Emperor was just about to take coffee, which had been handed to him by a footman. The latter was killed, likewise the dog, which was lying at his Majesty's feet. The flooring of the carriage collapsed, and all the occupants were precipitated on to the ground. Fortunately, the train stopped immediately, its speed being only about twenty-six miles an hour. The Grand Duchess Olga, who happened to be in the next carriage, which was overturned, was thrown out to a distance of several yards without being hurt. Tears stood in the Czar's eyes when he found his entire family were safe. He and the Empress lost no time in helping the wounded. The Director of the Caucasian Railways, M. Alexnikoff, who was to have been dismissed on account of the disaster, is reported to have shot himself in his office, leaving a letter addressed to the Emperor Alexander. The persons killed were Captain Bresch, Staff-Captain in the courier service, a physician, a secretary, and another official, two couriers, a chamber Cossack, a Chasseur, five railway servants, and six soldiers of the Railway Battalion. Eighteen other persons were injured. Baron Stjernval, Chief Inspector of Railways, received a severe shock. The Emperor has ordered provision to be made for the families of those killed and injured. Their Majesties continued their journey next day, arriving at Charkov on Oct. 31, where they visited the patients in the hospital; thence proceeding to Moscow, and reaching Gatchina, their home near St. Petersburg, in safety.

THE SIKKIM EXPEDITION.

The brief history of the expedition successfully conducted by Colonel W. Graham (Brigadier-General) from the Sikkim territory in the Himalayas, north of Darjeeling, over the lofty mountain passes of the Thibet frontier to Chumbi, has been brought to a satisfactory conclusion. The hostile Thibetans were speedily driven from those passes, at Tukola and Nimla, at Jalapla and Pemberingo, in about a week's marching and fighting, towards the end of September: and, little show of defence being offered at Rinchingong, on the eastern side of the mountain range, Chumbi, the Thibetan residence of the Rajah of Sikkim, was speedily occupied. The force then returned to Gnatong, the newly-constructed fort in Sikkim, where the Rajah—who had not been hostile, but had been under apparent compulsion as a vassal of the Lamas of Thibet, though he owes equal allegiance to the British Indian Government—soon arrived to declare his loyalty; and the Chinese Envoys in Thibet undertook to bring the Lamas to terms of peace and amity. The fighting on Sept. 23, when General Graham attacked the enemy's position, defended by 7000 or 8000 men behind a wall, on the Tukola Ridge, was the principal engagement. Four guns, three companies of the Derbyshire, and most of the Ghoorkas formed the left wing, where the main attack was intended. Colonel Sir Benjamin Bromhead, Bart., with 300 Pioneers, formed the centre; and the remainder of the Pioneers, with their two guns and G Company of the Derbyshire, the right wing. It was a stiff climb up the hill. The Pioneers and Ghoorkas behaved capitally, and it was a very pretty sight to see them advancing. The Thibetans, however, did not wait until they got to close quarters, but abandoned the wall and fled across the open towards the Nimla Ridge. The pursuit was carried on as far as the Nimla Ridge; the road was strewn with killed and wounded, shot down as they were running away. Colonel Sir B. Bromhead, armed only with a walking-stick, jumped off his pony and called on two Thibetans to surrender. Instead of doing so they attacked him with swords, nearly severing his right wrist, and slashing his right arm and leg. The hand has been amputated at the wrist, and the elbow joint of the right arm has been taken out. This gallant officer, whose Portrait we give, served with high credit in the Afghan War, and has been, since 1885, a Lieutenant-Colonel on the Bengal Staff Corps, and in command of the 32nd Bengal Native Infantry. He is the fourth Baronet of an ancient family, the Bromheads of Thurlby Hall, Lincolnshire, near Newark; his father was a Waterloo officer, and his grandfather, Sir Gonville Bromhead, was a Lieutenant-General. Major Bromhead, of "Rorke's Drift," the hero of a famous incident in the Zulu War of 1879, is his younger brother.

The photographs taken recently in Sikkim, which are copied in our Illustrations, have some interest; one represents General Graham with several of his officers seated, and with men of the Royal Artillery standing behind; the other is a view of Gnatong.

Messrs. Marion and Co., of Soho-square, have just brought out a new hand or detective photo-camera invented by McKellen. The novel feature of this ingenious instrument is that the user can, at the very moment of taking the picture, see exactly what he is going to get. Thus all disappointment or error is avoided.

Another valuable addition has been made to the effective strength of the Royal Navy by the completion for sea of the new armour-plated cruiser Immortalité. She has a displacement of 5000 tons, and is armed with two 22-ton guns, ten 5-ton guns, sixteen quick-firing guns, and Whitehead torpedo-tubes. The Immortalité is one of the fastest armed cruisers afloat, having attained a speed of 19·5 knots per hour at her trial off Sheerness.

In compliment to Baron Henry De Worms for his endeavours to abolish the foreign sugar-bounty system, he was recently entertained by the sugar-trade of Greenock in the Townhall Saloon, Provost Binnie, of Gourock, presiding. In the evening of the same day a public meeting was held in the Townhall, when a handsome casket was presented to the Baron by the Corporation. On the front of the casket is a view of the Municipal Buildings, with arms and monogram of Baron De Worms; on the back is a view of sugar-refining by the vacuum-pan, and of a sugar-cane mill; and on the ends are views of Custom House Quay and Prince's Pier. The casket was manufactured by Messrs. R. and W. Sorley, of Glasgow; who also made the cylinder containing an address from the working-men of Greenock, presented at the same meeting.

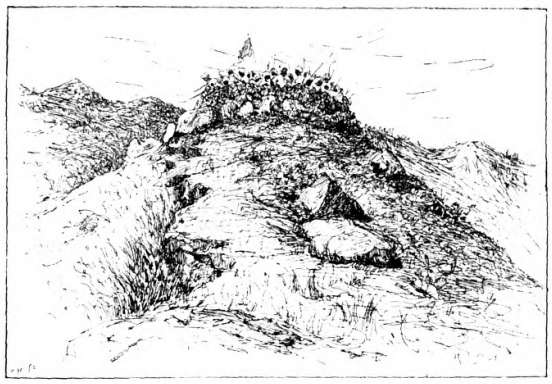
THE SILENT MEMBER.

With the Marquis of Salisbury smiling like Father Christmas as he entered the House of Lords, red despatch-box under his arm, the Ministry may be said to have resumed their Parliamentary labours cheerfully enough on Tuesday, the Sixth of November. There was the customary ripple of self-satisfaction round the plump cherubic face of the Lord Chancellor. With Lord Cross and Lord Cranbrook (fresh from unveiling the white marble statue of the late Earl of Iddesleigh in the Central Hall of the Houses of Parliament), the Duke of Rutland and Earl Cadogan, and one or two other Ministers on the Ministerial bench near the Prime Minister, the Government put a bold front to the Opposition. Deserted and lonely, indeed, looked the shadowy figure of Earl Granville in the centre of the front Opposition bench. Their Lordships, having met, found there was little business to detain them, and arranged to meet for the remainder of the Session on Tuesdays only.

Lord Salisbury adroitly and discreetly avoided comment on Lord Sackville's slip by briefly referring Lord Granville to the papers on this diplomatic storm in a tea-cup. The noble Marquis spoke out boldly regarding the question of joint action with Germany on the east coast of Africa. The Earl of Harrowby seemed desirous that the ill odour incurred by the German settlers in their conflicts with the natives should not extend to Englishmen; and the Bishop of Carlisle hoped that any contemplated action on the part of the Government would not injuriously affect the University Mission in that quarter of Africa. Lord Salisbury pretty soon showed that he was in fine voice. He spoke with accustomed clearness of style and distinctness of delivery. It was with a view to firmly grapple with the reviving Slave Trade, and to extinguish that deplorable traffic, he explained, that her Majesty's Government had decided to join hands with Germany in a strong endeavour to suppress it, the co-operation of England being limited to naval action. It is to be hoped, however, that in the event of any collateral advantages being within reach, the German "elephant" will not leave the English "whale" in the lurch.

Mr. Gladstone, conspicuous by his absence from the front Opposition bench of the House of Commons on the Sixth of November, was nevertheless more prominently before the public than any other statesman. The right hon. gentleman, hale, erect, and hearty, lightly bore the weight of his seventy-eight years, and set out with Mrs. Gladstone from Hawarden Castle, the previous day, to pay his promised visit to Birmingham. Mr. Gladstone, who met with an enthusiastic reception from the populace that thronged the streets, opened his oratorical campaign the same day in the Birmingham Townhall, and struck a sympathetic keynote when he heartily expressed the hope that Mr. John Bright would soon be enabled to rise from his bed of sickness, and be restored to health and vigour. With a dialectical skill unimpaired by his great age, Mr. Gladstone on this occasion, and in his subsequent speeches to various large audiences in Birmingham, pleaded for Irish Home Rule. He touched on other reforms; but that was the burden of his argument: Ireland; Ireland; always Ireland.

The Right Hon. Arthur Wellesley Peel, the Speaker, was, happily, in good health when he took the Chair on the Sixth of November, the day the Commons reassembled for the winter session. There was a thin attendance of members; but many familiar faces, imbued with health, were to be seen. The Recess had evidently braced Mr. W. H. Smith and Mr. Goschen, Mr. Henry Matthews and Mr. Edward Stanhope, Lord George Hamilton and Sir Michael Hicks-Beach, Mr. Ritchie and Mr. Raikes. Sir Richard Webster alone, when he stole in from the Parnell Commission, and joined his colleagues on the Treasury bench, looked pale and worn. In pallor, Sir Charles Russell almost equalled Sir Richard on the front Opposition bench, whereon were presently to be also noted the Marquis of Hartington, flanked by Mr. C. R. Spencer instead of Mr. Joseph Chamberlain (away on a connubial trip to America, *on dit*); Sir William Harcourt, beaming from Birmingham, Mr. Arnold Morley, and Mr. Stansfeld. It was pleasant to see Lord Randolph Churchill, Mr. Hanbury, Lord Charles Beresford, Mr. Dillwyn, Mr. Henry Labouchere, and Mr. Bradlaugh likewise in their places. Mr. H. W. Cross having taken his seat as the new member for the West Derby Division of Liverpool, the Speaker read letters announcing the imprisonment in Ireland of Mr. O'Kelly and Messrs. W. and J. Redmond. The First Lord of the Treasury then so far resolved himself into a counterfeit presentment of Oliver Twist that he asked for "more" in the shape of "Supply." In Committee, various members of the Ministry and of the Opposition had full opportunity of demonstrating the benefits they had derived from their holidays, and defended and criticised the estimates with ability. And thus wags the world of Parliament.



I may add that the Prime Minister lost no time in laying on the table the papers referring to the Sackville incident; and that the Report of the Royal Commission on the Metropolitan Board of Works censures Mr. Fowler and Mr. Saunders for the malpractices revealed; but, at the same time, recognises the valuable services the Board, as a whole, had rendered to London. Neither the deponent nor anyone else knows when the Parnell Commission will be in a position to deliver their report.

THE DURHAM COLLEGE OF SCIENCE AT NEWCASTLE.

Her Royal Highness Princess Louise, Marchioness of Lorne, on Monday, Nov. 5, visited Newcastle-upon-Tyne, to open the first-erected portion of a building for the Durham College of Science. This institution, representing the faculties of science and engineering in the University of Durham, is designed for the educational service of the North of England—comprising Northumberland and Durham, Cumberland, most of Westmorland, and the Cleveland district. It is established at Newcastle, as the commercial centre of the mining and manufacturing district, and in a convenient local situation between that of the University Colleges at Leeds, Manchester, and Liverpool, to the south and south-west, and that of Edinburgh and Glasgow, to the north and north-west. It is an incorporated body, with numerous Governors and a Council, of which the Warden of Durham University, the Very Rev. Dean Lake, is President; Lord Armstrong, Sir Lowthian Bell, and other well-known persons, are members of the Council. The College provides teaching in literary and classical studies for the Arts Faculty of the University, as well as complete courses of instruction in mathematics, physics, chemistry, electricity, mechanics, geology, natural history, mining, engineering, metallurgy, and some branches of technical instruction, but not to supersede workshop training in the use of tools. Its students will alone be eligible to the science degrees of the University and diplomas in engineering. The Principal of the college is Dr. W. Garnett, Professor of Mathematics. The accommodation in the buildings of the Institute and Coal Trade Chambers, at the Wood Memorial Hall, and in the College of Medicine, has been found very inadequate. A plot of six acres was therefore obtained, at Lax's-gardens, near the end of Northumberland-street, between Barras Bridge and Castle Leazes, towards Jesmond, within three-quarters of a mile of the Central Railway Station. Two acres of this land are to be occupied by the college premises, while the remainder will have a high commercial value. Mr. Robert J. Johnson, of Newcastle, is the architect of the buildings, which have been carefully designed after inspecting, with the Principal and other professors, many colleges of the same kind. The wing that has already been built, at a cost of £23,000, is about one-third of the intended buildings. Externally, it is of the English Jacobean style of architecture, partaking in some features of the Tudor style: the front towards the Leazes will be rather more ornate, with a row of pilasters, tall bay-windows surmounted by gables, and a triple-arched portico, and a tower. The present block of buildings contain the physical laboratory, the electricity testing-room and preparation-room, the lecture-theatre for physics and mathematics, an advanced lecture-room, and various subsidiary apartments, constructed on the most advantageous plan.

THE PLAYHOUSES.

It was scarcely to be expected that there would be no regrets, no comparisons, or sighs, remembering what has been when the Gaiety reopened for its annual burlesque season. Playgoers are loyal as a body, they stick fast to their old friends, and it was not surprising that Miss E. Farren should be sorely missed, since she was absent from her accustomed post for the first time for twenty years. Think of that! Miss Farren helped to open the Gaiety in the year 1868, and here she has been dancing, singing, and winning new admirers ever since. Mr. George Edwardes, like a careful manager, did his utmost to provide a pleasant party. He could not give us the sparkle of a Farren, or the humour of a Leslie, or the grace of a Sylvia Grey or Letty Lind; but he gave "the boys" instead Miss Florence St. John, the very best singer on the lighter operatic stage, and an excellent actress into the bargain. He promoted the energetic Mr. Lonnen to the first comedian's place. He showed us one of the prettiest and neatest burlesque actresses of recent times in Miss Jennie M'Nulty, who abjures the vulgarities and coarse methods of the modern music-hall school, and reminds one of the departed days of Marie Wilton and her Strand companions. And what with Mr. Stone, a new-comer called Fanny Robina, and three or four clever girls who will dance themselves into favour some day, a very fair compromise was made. The subject of the burlesque was as old as the hills. Mr. George R. Sims and Mr. Henry Pettitt played a safe card with the eternal Faust. It, at any rate, saved the audience the trouble of unravelling the mystery of the story; the danger was that if it was proved that the Gaiety "boys" knew the Frankenstein legend too little there was just the chance that they might know that of "Faust" too well. But both authors are experienced in stagecraft. It would be difficult for them to make a mistake. Mr. Sims can rhyme as well as Orlando, Rosalind, Touchstone, and Autolycus combined. Versification is with him a natural gift; and if some regrets are expressed that the story of "Faust" is played very low down—to the life of barmaids and bookmakers—it may be presumed that so experienced an author has studied and understands his audience. The young gentlemen in the stalls who stand up and shriek like the wildest and most untutored gallery boys at Drury-Lane at pantomime time, and who, disguised in evening dress, imitate the manners of the cheery lads in shirt-sleeves, have clearly no wish for an entertainment of a very advanced kind. Gretchen as a barmaid, and a running fire of sporting slang, are good enough for such patrons of the play. So the burlesque went as well as was expected.

BLACK MOUNTAIN EXPEDITION: MANAKI DANA, WHERE THE ENEMY MADE THEIR FIRST STAND.

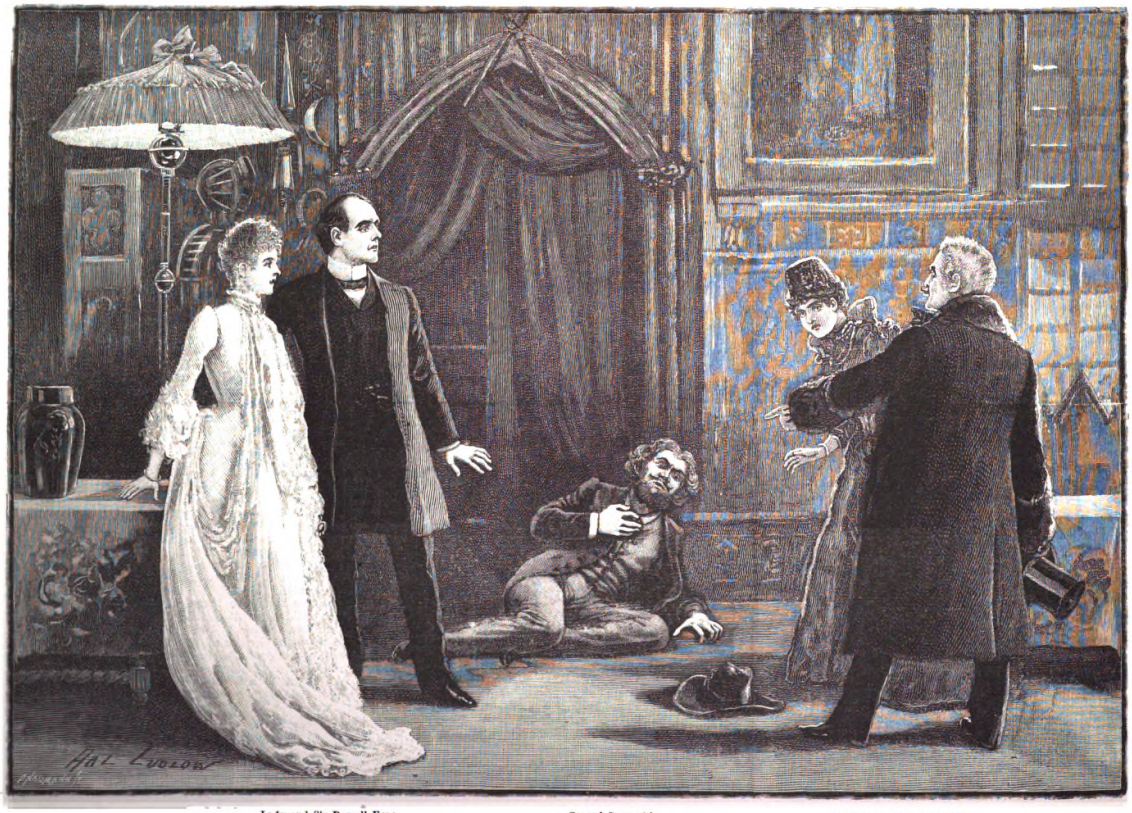
CHARGE OF NORTHUMBERLAND FUSILIERS AND 3RD SIKHS DOWN THE LUNDHA SPUR.

THE BLACK MOUNTAIN EXPEDITION.

The news to the end of October from the expedition against the hostile league of tribes in the mountains above Hazara, on the northern frontier of the Punjaub, shows that nearly all of them had been forced to submit, and to pay the fines imposed upon them. On the 28th, a detachment under General Channer entered Thakot. The road was less difficult than had been anticipated, and there was no opposition, keeping the promise made by the mountaineers to their Moollah: so the British force only paraded through the villages, the pipers of the Seaforth Highlanders (Ross-shire Buffs, the Duke of Albany's) leading. They encamped at Dora, the first village on the return journey, belonging to a river tribe of Thakotees living near the Indus, here about 150 yards broad. Sharp firing was opened in the afternoon behind some rocks. Next day the force returned to Serai, as previously arranged, after burning Dora and destroying with guns the town on the opposite side of the river, to punish the unprovoked attack. The rear-guard was followed up by the enemy. On the 30th, the detachment retired farther, rejoining the column at Maidan, preparatory to an advance against the Aliwals, unless their submission be made by Nov. 13. But this tribe has sent a deputation to General M'Queen asking for peace, and the expedition began to return on Nov. 5.

We have received from Captain F. C. Carter, field intelligence officer with the first column of the Hazara Field-Force, some further Sketches, which we now present; one is that of the men of the 2nd Battalion Northumberland Fusiliers, numbering about sixty, and forty men of the 3rd Sikhs, on Oct. 6, charging the enemy down the Lundha spur of the mountain, after the capture of Doda. The enemy, who numbered about 300, skirmished in splendid style after their charge was repulsed. They lost twelve killed and about thirty wounded. The loss on our side was two wounded. "One of our gallant foes," says Captain Carter, "met his death by a Martini-Henry bullet in the act of trying to carry off a wounded comrade under fire." The other Sketch is that of the hillock at Manaki Dana, where the enemy made their first stand; to the left-hand, in the background, the Chittabut Peak rises 9000 ft. high; to the right, along the ridge of hills, the enemy are seen advancing from Bilandkote and Trund. They were dislodged from this position by shell fire.

"THE MONK'S ROOM."



When the theatre-goer is sated with a round of thrilling melodrama, diverting farcical comedy, and more or less comic opera and burlesque, a welcome change of dramatic diet may be found at the Globe Theatre. Though the menu may be drawn up on somewhat old-fashioned lines, there is a "grip," there's a power in Mr. John Lart's ragoût of "The Monk's Room" that is eminently satisfying to the palate. This weird play has the advantage of being enacted by an exceedingly strong company, including that admirable artist, Mr. E. S. Willard, Mr. Hermann Vezin, Miss Alma Murray, Miss Marion Lea, and Mr. Ivan Watson. These form the effective closing tableau our Artist has chosen for Illustration. It is a tragic story that is set forth in "The Monk's Room." Returning to this gloomy, mystic chamber after many years of absence abroad, Sir Darrell Erne (Mr. Willard) soon realises that, in the words of Hood (quoted in the playbill):—

> O'er all there hung a shadow and a fear;
> A sense of mystery the spirit daunted,
> And said, as plain as whisper in the ear,
> The place is haunted!

It is haunted indeed! In an old oak chest here Sir Darrell's grandfather had deposited a woman he had murdered, an ancient servitor, Jabez Kulp, alone sharing the dead secret; and the legend goes, according to lugubrious Jabez, that the tragedy may be repeated. Left alone with this comforting assurance, Sir Darrell Erne is in no mood to be confronted in this dismal room with the evil genius of his life, the wife who had striven to betray him, a Russian Nihilist beauty by the name of Clotilde (Miss Marion Lea). They quarrel. She snatches up the knife that had been murderously used by Sir Darrell's respected relative. In the struggle Clotilde unwittingly stabs herself. Obviously, no handier place than the aforesaid oaken chest as a hiding-place for her body. Clotilde is no sooner dropped therein than a change takes place in the ancestral portrait above, and Sir Darrell stands aghast at the sight of what he believes to be the reproving look on "the Monk's" face sternly regarding him. Now, the key of the play is that Sir Darrell is persecuted by an inflexible Nihilist, Conrad Lazanski (Mr. H. Vezin), the confederate of Clotilde; and that this Lazanski uses the secret he knows Sir Darrell would guard from the world to wreck his connubial happiness, break the heart of his faithful young wife (Miss Alma Murray), and thus complete his revenge. The scene depicted shows how the wily conspirator is defeated in the end by the opportune appearance of a Russian nobleman, Count Zoroff (Mr. Ivan Watson) in company with Clotilde, who survived her injuries, and who turns out to have been married before she was espoused to Sir Darrell. Whilst Lazanski falls to the ground, dying from heart disease, Sir Darrell Erne and his young wife learn with relief that their clouds have rolled by at last.

THE DURHAM COLLEGE OF SCIENCE, NEWCASTLE-ON-TYNE.

Lady and Sir Darrell Erne (Miss Alma Murray and Mr. Willard). Conrad Lazanski (Mr. Hermann Vezin). Clotilde and Count Zoroff (Miss Marion Lea and Mr. Ivan Watson).

SCENE FROM "THE MONK'S ROOM" AT THE GLOBE THEATRE.

"SAUCE FOR THE GOOSE."—DRAWN BY G. E. ROBERTSON.

MAGAZINES FOR NOVEMBER.

Nineteenth Century.—The alleged baneful effects of competitive prize cram examinations on education at schools and colleges and at the Universities have elicited an argumentative protest, filling five pages, with fourteen pages of signatures, many being those of eminent physicians and surgeons; with a petition to the Queen for a Royal Commission of Inquiry, and a request that the authorities of Oxford and Cambridge and other Universities, and the head-masters of public and endowed schools, may also set on foot an inquiry into this subject. Professor Max Müller, Professor E. A. Freeman, and Mr. Frederic Harrison contribute forcible statements of their opinions adverse to the present examination system. In opposition to another educational project or tendency of this day, that of giving technical instruction in specific trades and industries in the popular schools, Lord Armstrong has written a second paper, replying to Sir Lyon Playfair. The recent progress of architectural design with reference to the public buildings at Westminster is reviewed by Mr. Shaw Lefevre. "A Scheme for the Unemployed," put forward by the Rev. S. A. Barnett, of Whitechapel, is that of sending destitute able-bodied men, who cannot get work in London, to labour for some months on a training-farm, established and managed by the Poor-Law guardians, with a view to agricultural emigration. Mr. Gladstone furnishes to the student of English history a minute analysis of Queen Elizabeth's acts of legislation and administration regarding the Church Establishment; but his concluding hint, that this part of our national institutions may perhaps be "assailable enough," is calculated to rouse fresh political alarms. Mr. "Montagnie Crackenthorpe," a gentleman not seeking to disguise his identity, recommends the complete amalgamation of Conservatives and Hartington Liberals in a solid Unionist party. The other articles are by Mr. R. E. Prothero, on the late Emperor Frederick and "the New Germany;" by Baron Ferdinand Rothschild, on the memoirs of a Comte de Brienne, who saw much of Cardinal Mazarin and of the early part of the reign of Louis XIV.; by Dr. Villiers Stanford, a reply to certain rude attacks on Wagner, the musical and dramatic composer; and by Mr. W. L. Rees, a friend of the deposed King Malietoa, of Samoa, bringing grievous accusations against the official agents of the German Empire in their conduct towards that unfortunate native monarch. Certainly, if the French had anywhere in the Pacific islands behaved with such apparent treachery and high-handed violence, we should have heard loud expressions of indignation; but "one man may steal a horse, while another may not look over the hedge."

Contemporary Review.—The published fragments of the late Emperor Frederick's diary, written by him when Crown Prince of Prussia during the French war, are examined by Mr. Archibald Forbes, with a view to disprove the notion that he was the originator of the project of the German Empire, which Mr. Forbes believes, we think rightly, to have been a cherished idea of the Crown Prince's father, King William, from the beginning of his reign in Prussia, confirmed by the victory over Austria in 1866. Dr. R. W. Dale's impressions of Australia, which he recently visited on behalf of the Congregational Union, are very bright and pleasant. The report of the Commission on Elementary Education is discussed by the Rev. Canon Gregory, with a moderate restatement of the claims of schools established by voluntary efforts in which there is definite religious teaching. Sir Robert Ball, an eminent Dublin professor of astronomical and physical science, describes the tremendous volcanic eruption of Krakatoa, in the Straits of Sunda, five years ago. "The Religious Novel," by the Very Rev. Dr. Randall Davidson, Dean of Windsor, is a tardy and not very effective deprecation of "Robert Elsmere." Mr. Albert Shaw explains the financial and political position of the tariff question in the United States. A weighty, learned, and comprehensive essay by the Rev. Principal Fairbairn, dealing with a vital theme of theological history, "The Genesis of the Puritan Ideal," will command the attention of earnest thinkers on religious questions. The account which Mr. J. Theodore Bent gives us of a Turkish gentleman, Hamdi Bey, Director of the Museum at Constantinople, a man of European education, an artist and an enthusiastic archæologist, has a piquant air of novelty, in contrast with common notions of the hidebound Turkish mind. If anybody still wants materials for the dreary controversy on the Irish Land Question, the statistical labours of Archbishop Walsh may serve a political purpose.

National Review.—Remedies for the evils of the "sweating system" in the manual industries of the East-End of London are discussed by Mr. Arthur Baumann, M.P., who advocates restrictions on foreign immigrants, factory inspection of all workshops, and sanitary regulations, which by transferring much of the work to country villages, would relieve the pressure in London. Mr. James Munro discourses of deer-shooting in Scotland. The sectarian violence of some Welsh newspapers is complained of by Mr. Edmund Vincent. A French estimate of Lord Randolph Churchill is translated from the *Revue des Deux Mondes*. Two medical men, Dr. Roy and Mr. Adami, jointly defend the wearing of stays and waist-belts, in the paper read before the British Association and here printed. The Rev. Dr. F. G. Lee relates the history of aid given in England to the exiled French clergy. Mr. W. Seton Karr censures the Indian Government of Lord Ripon for its dealings with grants for ecclesiastical purposes. "The Oratory of the House of Commons" is rather feebly satirised by Mr. C. W. Radcliffe-Cooke, M.P., whose parliamentary experience is not very old. Mr. E. Salmon enlarges on the benefit that might be gained by making the theatre an instrument of good moral teaching for the people. The revenue and expenditure of the University of Cambridge are analysed by the Rev. Professor G. F. Browne, who has met persons in society marvellously ignorant of this matter, one believing that the Universities and Colleges have about £300 a year of revenue for each undergraduate! but what was said may have been misunderstood.

Fortnightly Review.—No question concerning the administration of our national affairs is now more urgent than "What our Navy should be?" Three high authorities, Admiral Sir Thomas Symonds, Admiral Sir Geoffrey Phipps Hornby, and Admiral Lord Alcester, here deliver their testimony, declaring that, in case of war, we could neither blockade the French ports nor protect our maritime trade; that we need thirty new ironclads, 250 more fast cruisers, and a large number of smaller vessels, with 5000 more sailors and as many Royal Marine Artillery, and great enlargement of naval docks. Meantime, let us avoid quarrelling with France. The Rev. Canon Taylor follows up his criticism of the management of the Church Missionary Society by contrasting the scale of its financial expenditure, and the work done for it, with the vastly greater efficiency of the results obtained by the Universities Mission to Central Africa at a much smaller cost. "Where is Stanley?" is the question on which Mr. H. H. Johnston, who has been up the Congo with Stanley, writes in a hopeful strain, believing that Stanley has for months past been sojourning with Emin Pasha, and suggesting the likelihood of his returning westward through Darfur and Wadai to the Niger. Mr. William Morris discourses on the revival of artistic handicraft as an element of social reform. Lord Compton relates a visit to the ruins of Palmyra, dwelling on the romantic history of Queen Zenobia's fall. The actual performances of British official skill and integrity in the internal improvement of Egypt since 1883 are precisely indicated by an anonymous writer. Mr. Frederic Harrison's earnest and reverent explanation of the religious sentiments which he finds compatible with the Positivist mode of thought cannot but enhance our personal esteem for him, though readers who commend his spirit may still consider his views to be erroneous or inadequate to solve the problem of the spiritual life. The recent severe criticism of Mr. Rider Haggard's romances is smartly vindicated by its writer against the "ipse dixit" of Mr. Andrew Lang.

Blackwood's Magazine.—The story of "A Stiff-necked Generation" reaches its thirty-third chapter; we shall soon read it in three volumes. Mrs. Oliphant is evidently the author of "On the Dark Mountains," a solemn and pathetic religious prose-poem, in which "The Little Pilgrim" is again introduced. A memoir, or the review of a biography, of the late Major-General Sir Charles MacGregor does ample justice to his merits as a good soldier and practical adviser of military affairs on the Indian frontier. The administration and discipline of female convict prisons, described by an official visitor, but in a spirit of sympathetic compassion, are the subject of an article called "Scenes from a Silent World." Mr. W. W. Story's poem, "The Death of Antony," is the imaginary address of the dying Roman to Cleopatra: but it is not an excellent specimen of poetry. "Professions for Dogs" is a curious title; but Miss C. F. Gordon-Cumming justifies its use by her account of the different special crafts and employments to which the various kinds of those useful animals have been trained; as hunters, as house-guards, as kitchen turnspits, as shepherds' assistants, as drawers of carts, as smugglers, as military sentinels, as carriers of letters, as trackers of criminals, and in the police service. "On the Wallaby Track" is, of course, a tale of adventures in the Australian Bush. An interesting study of antiquarian topography is presented in Mr. John Russell's description of the "Catrail," or Picts' Wark Ditch, running from Gala Water, on Tweedside, to Peel Fell on the Cheviots, and supposed to have been constructed by the Picts after the Roman garrison withdrew from Britain early in the fifth century. There is a review of Mrs. Oliphant's "Life of the late Principal Tulloch."

Murray's Magazine.—Sir Charles Warren, the Commissioner of Metropolitan Police, rather haughtily lectures the inhabitants of London, and especially the London Press, on their alternate needless panics at the failure to detect the perpetrators of hideous crimes, and apprehensions of some defect in the existing police organisation, contrasted with fits of applause for the occasional examples of signal bravery and loyalty characteristic of policemen as a class of public servants. These sentiments, however, may be reconciled more easily than he seems to think by considering, as many do, that the defect to be remedied lies in the detective staff or in its methods of procedure; and his minute detail of the legal powers and ordinary duties of his force, much of which had been set forth in the "Manual" of Mr. Howard Vincent with equal precision, does not furnish all the information that we desire on that part of the subject. The author of "The Silence of Dean Maitland" continues "The Reproach of Annesley." Mr. F. L. Moir, one of the managers of the African Lakes Company, pleads for British help to fight the slave-trading Arabs and their marauding native allies, whose atrocious cruelties have been abundantly exposed. "Beertown-upon-Trent," we need hardly say, is Burton, and here is a striking description of the great beer manufacture of that town. Mr. A. M. Wakefield, relating the early history of English music, treats of the old carols. There is a short tale, "An Unexpected Visit"; several chapters of another, "A Good Old Family"; and a wise little moral essay on Hesiod's very true saying, that "the half is more than the whole."

Macmillan's Magazine.—Mr. Bret Harte's "Cressy" is continued; and Mr. W. Clark Russell commences "Marooned," which sailors' word, signifying the situation of being put ashore on a desolate island by pirates or mutineers, promises to be verified in the experiences of the gentleman embarking on board a sailing-brig to escort a young lady from London to Rio Janeiro. Mr. Arthur Benson's study of the poet Gray, and a lively critical essay on historical romances and poems, have some literary interest. "Seas and Rivers" will attract the sentimental lover of Nature. The description of Mount Pentelicus and Marathon, and Greek peasant life, has an agreeable freshness.

Longman's Magazine.—Chapters are added to Mr. D. Christie Murray's tale, "A Dangerous Catspaw." A scheme to supersede "payment by results" in Government aid of elementary schools is expounded by Mr. J. H. Yoxall. Messrs. Walter Pollock and Brander Matthews combine to produce a short tale called "Mated by Magic." Miss May Kendall's "Barbara" is a tenderly humorous picture of the mental vagaries of some academical young ladies bewildered with "higher education." Frogs and herrings are described by competent naturalists.

Time.—Church-work and church-workers are discussed by the Rev. Harry Jones, a well-known London clergyman. There are strictures on a recent article by Mr. George Moore concerning the habits of actors and actresses. Mr. Henry Jephson recommends Ireland for the sport of grouse-shooting. Two young ladies, not too young but "in their twenties," have enjoyed a walking tour in Derbyshire. "A Forgotten Corner of England," which is the peninsula of Selsey, in West Sussex, is agreeably described. "The Novelists of the Restoration," including Mrs. Manley and Mrs. Aphra Behn, may be allowed a very small niche in literary history. "Kophetua XIII." approaches its conclusion.

English Illustrated Magazine.—Mr. H. Ryland's designs to illustrate the "Morte d'Arthur," with the analytic commentary on that old romance, and Mr. A. McCormick's sketches of antiquated buildings in Southwark, associated with Dickens's stories, will engage the reader's notice. "The House of the Wolf," an historical romance of the French Huguenots, and Mr. F. Marion Crawford's Roman story, "Sant' Ilario," are continued.

Cornhill Magazine.—"French Janet" and "A Life's Morning" are proceeding; there is also a short tale, "Chaloner's Best Man." "A Coach Drive at the Lakes," is a title needing no explanation. The "Notes by a Naturalist" are those of an autumn ramble over the hills of West Surrey.

Gentleman's Magazine.—"Shakspeare without End," by Mr. H. Schütz Wilson, is a gathering of a few personal details from the researches of Mr Halliwell-Phillipps. The useful St. John Ambulance Association is compared with the Crusading Order,—that of Jerusalem, Cyprus, Rhodes, and Malta—from which it takes its name. The Rev. S. Baring Gould relates the tragical murder of Winckelmann, the learned German art-critic, by a robber's hand at Trieste in 1768. Mr. Alexander C. Ewald revives the reminiscences of irregular marriages in the Fleet Prison. The great English novelist, Henry Fielding, had a sister, Sarah Fielding, of whose contributions to that kind of literature we learn something from Miss Clementina Black. Dr. A. H. Japp supplies an instructive treatise on quinine and the chinchona plant.

Temple Bar.—We have already reviewed "From Moor Isles." Mr. W. E. Norris is near putting an end to "The Rogue," and "The Ugly Miss Lorrimer" has come to her end. There are several brief tales here; an article on New York; one on Montserrat, in the West Indies, and one on the mud-bath establishment of Franzensbad, in Bohemia.

Belgravia.—This magazine is filled with stories, including the latter chapters of "Undercurrents," by the author of "Phyllis" and "Molly Bawn"; and Miss Sarah Tytler's "Blackhall Ghosts."

Woman's World.—This elegant magazine for ladies, edited by Mr. Oscar Wilde, maintains its pretensions as a journal of taste and fashion and feminine charities; but it may be doubted whether an article on Guy de Maupassant is quite in place. Mrs. Eliot-James writes of "Shopping in London"; Mrs. Fawcett, of "Women's Suffrage"; and Lady Wilde, of Irish peasant tales. Ostrich-rearing in South Africa, feather-fans, embroidery, hair-dressing, and housewifery are treated by different writers. There are many good engravings.

The Theatre.—Mr. Clement Scott's monthly review of dramatic and musical entertainments has a serviceable function to perform. It is adorned with photographs of Miss Edith Woodworth and Mr. Richard Mansfield. The editor writes a feeling personal memoir of the late Mr. J. M. Levy; there is also an account of Talma, the great French tragedian, who died in 1826.

The Century.—We are glad that American readers of this excellent magazine should have so good an account of the City Companies or Guilds of London, written by Dr. Norman Moore, warden of Bartholomew's Hospital, with illustrations by Mr. Joseph Pennell, an American artist. A portrait of Lord Nelson, the frontispiece to this number, accompanies the publication of twenty-four private letters, never before printed, which he wrote to Admiral Sir Thomas Troubridge from the Baltic in 1801, before and after the bombardment of Copenhagen. The Rev. Dr. Robinson's topographical dissertation on the probable site of Calvary is based on the views of Mr. Fisher Howe, so long ago as 1871, confirmed by later examinations. The descriptions of Russian convict prisons in Siberia, and the history of the American Civil War, are continued.

Harper's Monthly.—Some of the wood-engravings are exquisitely fine in execution. The scenery of the Lower St. Lawrence is described in the first article. Mr. Theodore Child gives an account of the museum of the history of Paris, in the Hôtel Carnavalet, once the residence of Madame De Sévigné. Elk-hunting in the Rocky Mountains, the Tagus with the Portuguese boats and boatmen, the Bench and Bar at New Orleans, and the New York Real Estate Exchange, are topics sufficiently wide apart. Mr. and Mrs. Pennell end their "Journey to the Hebrides" by going round to the east coast of Scotland.

Scribner's Magazine.—In his estimate of the late Matthew Arnold's literary work, Mr. Augustine Birrell shows not an unfriendly spirit, but he disparages, more than sufficiently, the merits of that accomplished master of free-thinking criticism, while doing justice to his poetry. The late General Sheridan's narrative of his observations as a witness of the German military exploits from Gravelotte to Sedan is of some historical value; it is accompanied by a good portrait of that distinguished soldier. The everyday life and labours of railroad men in the United States are described in an article furnished with nineteen special illustrations. Mr. R. L. Stevenson contributes the first chapter of a new Scottish story, "The Master of Ballantrae," and reminiscences of his own youthful experiences at Wick, as pupil to an engineer.

"SAUCE FOR THE GOOSE."

One is tempted now and then to provoke the anger of pedantic etymologists by wantonly hazarding a suggested derivation of some word that one knows to be more than questionable; it may serve as a sort of pun, which is no inapt weapon of defence against those who are too serious about trifles. Let this be the apology for boldly declaring that "sauce" and "souse" are just the same; and that to pour a bucketful of cold water over a living bird is a similar operation to the introduction of a spoonful of savoury condiment into the dish or the dinner-plate containing a portion of its flesh. The proper "sauce" for goose—not the human goose, who is often saucy enough by nature—may be determined by gastronomic art or science; we prefer apple-sauce, but that is a matter of opinion, not of "reason," like the "roasting of eggs." If anybody were minded deliberately to eat gander, instead of goose, as some have been reported to eat bull-beef—it is to be hoped with plenty of mustard—the precepts of natural equity, as between the sexes, would recommend the application of the same kind of sauce to which the goose is accustomed, or rather to which, more strictly speaking, she has to look for her final beatification and consecration to the human feast. But we are assured by a knowing poet—the author of the "Essay on Man," who might with equal wit and wisdom have written an "Essay on Goose," treating these subjects with much philosophic analogy from a moralist's point of view—that the feathered biped of the farmyard has no idea of serving or being served, with or without any sauce, for the gluttonous repast of that silly race, the "two-legged animals without feathers," who take the trouble to feed her and to fatten her as long as she lives:—

> While Man exclaims, "See, all things for my use!"
> "See Man for *mine*!" replies a pampered Goose.

We shall not pretend—being neither Pope nor moral philosopher—to decide whether the goose or the man is the greater goose, when it comes to that extreme of artificial epicurism, the manufacture and consumption of a "paté de foie gras," one of the foolishest things invented since the Roman's dish of nightingales' tongues. All that need be said in excuse for Sim Meeks, an Englishman of the seventeenth century, to judge from his costume, who is detected in the act of ducking a goose, or at least drenching one with the water from his ready pail, stands already patent in the humorous artist's drawing. This honest fellow keeps a stall of kitchen vegetables, the innocent produce of industrious gardening, which he is anxious to protect from the rapacious beaks of immoral and unmannerly customers of the poultry persuasion, mere Communists and Anarchists, rebelling against both Episcopalian and Presbyterian doctrine—a sort of Anabaptist professors of universal license, odious to sober Roundheads in the time of the Commonwealth. So he lifts his bucket, with the approval of his faithful partner, and gives them a cooling 'souse," which will admonish them to behave more prudently, and by which, though less than "immersion," something more than "sprinkling," the original sin of their nature may for a time be chastened, if not effectually subdued. This goose, at any rate, will not say of England, with the Frenchman, "What a country, to have five hundred religions, and only one sauce!"

LADY ARTISTS AT THE LOUVRE, PARIS.

The method and practice of professional instruction for artists in Paris may now be considered the most efficacious, for intelligent and industrious students, to be found in any European city; and the high degree of technical skill, by which a number of French painters are distinguished, proves the general excellence of their training. At the same time, Sir J. E. Millais, on a recent occasion, gave a warning to some of our own art-students against being led too far in the direction of Parisian discipleship. "There is among us," he said, "a band of young men who, though English, persist in painting with a broken French accent, all of them much alike, and seemingly content to lose their identity in their imitation of French masters, whom they are constitutionally unable to copy with justice either to themselves, or to their models." It may be true that the legitimate function of art-schools is that of teaching the processes, and not the effects, of art; but the learning of processes is the very advantage to be gained by the custom, frequent among notable French artists, of admitting pupils to their studios and allowing these to see them at work. The practice of attempting to copy great and admired works in the public Galleries may be commendable at a certain stage of the artist's education; and the noble collections in the Louvre, perhaps more abundantly than our own National Gallery, present examples suitable to form the style of a modern painter. It is one thing to learn the history of Art; another to acquire practically, by experiment, some knowledge of the means by which its finest effects have been produced, and of the extent to which these means are still available for the uses of the present day. Descending, however, from these serious considerations, we have merely to notice the constant attendance of students at the Louvre; especially the devoted zeal of the lady students, who belong to various nationalities, and who come armed with their palettes, bundles of brushes, and mahlsticks, in a rather formidable array. They are so terribly in earnest, and have so little time to spare—many of them being dependent on scanty and precarious earnings—that small heed is taken of the niceties of feminine dress, and coquetry is banished from their department; but we nevertheless applaud their industrious toil.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XXXV.

THE WHITE SLAVE.

WHEN we dropped anchor in the port or road of Carlisle Bay we were boarded by a number of gentlemen, who welcomed the Captain, asked him the news, and drank with him. I meantime kept in my cabin, knowing that I must shortly come forth; and presently I heard the boatswain's pipe, and the order to all the prisoners to come on deck. Then one knocked softly at my door. It was the Captain.

"Madam," he said, with a troubled voice, "it is not too late. Suffer me, I pray you, to enter your name as one of those who died on the voyage. It is no great deception; the villain Penne will alone be hurt by it; and I swear to take you home, and to place you until better times with honest and Godfearing people in London."

"Oh! Sir!" I replied, "tempt me not, I pray you. Let me go forth and take my place among the rest."

He entreated me again, but finding that he could not prevail, he suffered me to come out. Yet, such was his kindness to the last that he would not place me with the rest, but caused his men to give me a chair on the quarter-deck. Then I saw that we were all to be sold. The prisoners were drawn up standing in lines, one behind the other, the men on one side and the women on the other. The hardships of the voyage had brought them so low that, what with their rags and dirt, and their dull scowls and savage faces, and their thin, pale cheeks, they presented a forbidding appearance indeed.

Three or four gentlemen (they were, I found, planters of the island) were examining them, ordering them to lift up their arms, stretch out their legs, open their mouths, and, in short, treating them like so many cattle; at which the women laughed with ribald words, but the men looked as if they would willingly, if they dared, take revenge.

"Faugh!" cried one of the planters. "Here is a goodly collection indeed! The island is like to become the dust-heap of Great Britain, where all the rubbish may be shot. Captain, how long before these bags of bones will drop to pieces? Well, sweet ladies and fair gentlemen"—he made a mock bow to the prisoners—"you are welcome. After the voyage, a little exercise will do you good. You will find the air of the fields wholesome; and the gentlewomen, I assure you, will discover that the drivers and overseers will willingly oblige any who want to dance with a skipping-rope."

There were now twenty or thirty gentlemen, all of them merchants and planters, on board, and a man stepped forward with a book and pencil in hand, who was, I perceived, the salesman.

"Gentlemen," he said, "this parcel of servants" (he called them a parcel, as if they were a bale of dry goods) "is consigned to my care by Mr. George Penne, of Bristol, their owner. They are partly from that city and partly from London, though shipped at the port of Bristol. A tedious voyage, following after a long imprisonment in Newgate and Bridewell, hath, it is true, somewhat reduced them. But there are among them, as you will find on examination, many lusty fellows and stout wenches, and I doubt not that what you buy to-day will hereafter prove good bargains. They are to be sold without reserve, and to the highest bidder. Robert Bull"—he read the first name on the list—"Robert Bull, shoplifter. Stand forth, Robert Bull."

There arose from the deck where he had been lying a poor wretch who looked as if he could hardly stand, wasted with fever and privation, his eyes hollow (yet they looked full of wicked cunning). The planters shook their heads.

"Come, gentlemen," said the salesman, "we must not judge by appearances. He is at present, no doubt, weak, but not so weak as he looks. I warrant a smart cut or two of the whip would show another man. Who bids for Robert Bull?"

He was sold after a little parley for the sum of five pounds. Then the speaker called another, naming his offence as a qualification. No pillory could be more shameful. Yet the men looked dogged and the women laughed.

The sale lasted for three or four hours, the prisoners being knocked down, as they say, for various sums, the greatest price being given for those women who were young and strong. The reason, I have been told, is that the women make better servants, endure the heat more patiently, do not commonly drink the strong spirit which destroys the men, and, though they are not so strong, do more work.

Last of all, the man called my name. "Alice Eykin, Rebel. Stand forth, Alice Eykin, Rebel."

"Do not go down among them," said the Captain. "Let them see at once that yours is no common case. Stand here."

He led me to the top of the ladder or steps which they call the companion—leading from the waist to the quarter-deck.

"Madam," he said, "it will be best to throw back your hood."

This I did, and so stood before them all bareheaded.

Oh! ye who are women of gentle nurture, think of such a thing as this: to stand exposed to the curious gaze of rough and ribald men; to be bought and sold like a horse or an ox at the fair! At first my eyes swam and I saw nothing, and should have fallen but that the Captain placed his hand upon my arm, and so I was steadied. Then my sight cleared, and I could look down upon the faces of the men below. There was no place whither I could fly and hide. It would be more shameful still (because it might make them laugh) to burst into tears. Why, I thought, why had I not accepted the Captain's offer and suffered my name to be entered as one of those who had died on the voyage and been buried in the sea?

Down in the waist the gentlemen gazed, and grasped in astonishment. It was no new thing for the planters to buy political prisoners. Oliver Cromwell sent over a shipload of Irishmen first, and another shipload of those engaged in the rising of Penruddock and Grove (among them were gentlemen, divines, and officers, of whom a few yet survived on the island). But as yet no gentlewoman at all had been sent out for political reasons. Wherefore, I suppose, they looked so amazed, and gazed first at me and then at one another and then gasped for breath.

"Alice Eykin, gentlemen," said the salesman, who had a tongue which, as they say, ran upon wheels, "is a young gentlewoman, the daughter, I am informed, of the Rev. Comfort Eykin, Doctor of Divinity, deceased, formerly Rector of Bradford Orcas, in the county of Somerset, and some time Fellow of his college at Oxford, a very learned Divine. She hath had the misfortune to have taken part in the Monmouth Rebellion, and was one of those Maids of Taunton who gave the Duke his Flags, as you have heard by the latest advices. Therefore, she is sent abroad for a term of ten years. Gentlemen, there can be no doubt that her relations will not endure that this young lady—as beautiful as she is unfortunate, and as tender as she is beautiful—should be exposed to the same hard treatment as the rogues and thieves whom you have just had put up for sale. They will, I am privately assured"—I heard this statement with amazement—"gladly purchase her freedom, after which, unless she is permitted to return, the society of our Colony will rejoice in the residence among them of one so lovely and so accomplished. Meantime, she must be sold like the rest."

"Did Monmouth make war with women for his followers?" asked a gentleman of graver aspect than most. "I, for one, will have no part or share in such traffic. Are English gentlewomen, because their friends are rebels, to be sent into the fields with the negroes?"

"Your wife would be jealous," said another, and then they all laughed.

I understood not until afterwards that the buying and selling of such a person as I appeared to be is a kind of gambling. That is to say, the buyer hopes to get his profit, not by any work that his servant should do, but by the ransom that his friends at home should offer. And so they began to bid, with jokes rude and unseemly, and much laughter, while I stood before them still bareheaded.

"Ten pounds," one began; "Twelve," cried another; "Fifteen," said a third; and so on, the price continually rising, and the salesman with honeyed tongue continually declaring that my friends (as he very well knew) would consent to give any ransom—any—so only that I was set free from servitude: until, for sixty pounds, no one offering a higher price, I was sold to one whose appearance I liked the least of any. He was a gross, fat man, with puffed cheeks and short neck, who had bought already about twenty of the servants.

"Be easy," he said, to one who asked him how he looked to get his money back. "It is not for twice sixty pounds that I will consent to let her go. What is twice sixty pounds for a lovely piece like this?"

Then the Captain, who had stood beside me, saying nothing, interfered.

"Madam," he said, "you can put up your hood again. And harkee, Sir," he spoke to the planter, "remember that this is a pious and virtuous gentlewoman, and"—here he swore a round oath—"if I hear when I make this port again that you have offered her the least freedom—you shall answer to me for it. Gentlemen all," he went on, "I verily believe that you will shortly have the greatest windfall that hath ever happened to you, compared with which the Salisbury Rising was but a flea-bite. For the trials of the Monmouth rebels were already begun when I left the port of Bristol, and though the Judges are sentencing all alike to death, they cannot hang them all—therefore his Majesty's plantations, and Barbadoes in particular, will not only have whole cargoes of stout and able-bodied servants, compared with whom these poor rogues are like so many worthless weeds; but there will also be many gentlemen, and perhaps gentlewomen—like Madam here—whose freedom will be bought of you. So that I earnestly advise and entreat you not to treat them cruelly, but with gentleness and forbearance, whereby you will be the gainers in the end, and will make their friends the readier to find the price of ransom. Moreover, you must remember that though gentlemen may be flogged at whipping-posts, and beat over the head with canes, as is your habit with servants both black and white, when the time of their deliverance arrives they will be no longer slaves but gentlemen again, and able once more to stand upon the point of honour and to run you through the body, as you will richly deserve, for your barbarity. And in the same way any gentlewomen who may be sent here have brothers and cousins who will be ready to perform the same act of kindness on their behalf. Remember that very carefully, gentlemen, if you please."

The Captain spoke to all the gentlemen present, but in the last words he addressed himself particularly unto my new master. It was a warning likely to be very serviceable, the planters being one and all notoriously addicted to beating and whipping their servants. And I have no doubt that these words did a great deal towards assuring for the unfortunate gentlemen who presently arrived such consideration and good treatment as they would not otherwise have received.

The island of Barbadoes, as many people know, is one of the Caribby Islands. It is, as to size, a small place, not more than twenty miles in length by fifteen in breadth, but in population it is a very considerable place indeed, for it is said to have as many people in it as the City of Bristol. It is completely settled, and of the former inhabitants not one is left. They were the people called Indians or Caribs, and how they perished I know not. The island hath four ports, of which the principal is that of St. Michael or the Bridge, or Bridgetown, in Carlisle Bay. The heat by day is very great, and there is no winter, but summer all the year round. There is, however, a cool breeze from the sea which moderates the heat. A great number of vessels call here every year (there is said to be one every day, but this I cannot believe). They bring to the island all kinds of European manufactures, and take away with them cargoes of Muscovada sugar, cotton, ginger, and logwood. The island hath its shores covered with plantations, being (the people say) already more thickly cultivated than any part of England, with fewer waste places, commons, and the like. The fruits which grow here are plentiful and delicious—such as the pineapple, the pappau, the guava, the bonannow, and the like—but they are not for the servants and the slaves. The fertility of the country is truly astonishing; and the air, though full of moisture, whereby knives and tools of all kinds quickly rust and spoil, is considered more healthy than that of any other West Indian island. But, for the poor creatures who have to toil in the hot sun, the air is full of fatigue and thirst: it is laden with fevers, calentures, and sunstrokes. Death is always in their midst; and after death, whatever awaits them, cannot, I think, be much worse than their condition on the island.

After the sale was finished, the Captain bade me farewell, with tears in his eyes, and we were taken into boats and conveyed ashore, I, for my part, sitting beside my purchaser, who addressed no word at all to me. I was, however, pleased to find that among the people whom he had bought was the girl Deb, who had been my maid (if a woman who is a convict may have a maid who is a sister-convict). When we landed, we walked from the quay or landing-place to a great building like a barn, which is called a barracoon, in which are lodged the negro slaves and servants before they go to their masters. But at this time it was empty. Hither came presently a certain important person in a great wig and a black coat, followed by two negro beadles, and carrying a long cane or stick. After commanding silence, this officer read to us in a loud voice those laws of the colony which concern servants, and especially those who, like ourselves, are transported for various offences. I forget what these laws were; but they seemed to be of a cruel and vindictive nature, and all ended with flogging and extension of the term of service. I remember, for instance—because the thought of escape from a place in the middle of the ocean seemed to me mad—that, by the law, if anyone should be caught endeavouring to run away, he should be first flogged and then made to serve three years after his term was expired; and that no ship was allowed to trade with the island or to put in for water, unless the captain had given security with two inhabitants of the island in the sum of £2000 sterling not to carry off any servant without the owner's consent.

When these laws had been read, the officer proceeded, further, to inform us that those who were thus sent out were sent to work as a punishment; that the work would be hard, not light; and that those who shirked their work, or were negligent in their work, would be reminded of their duties in the manner common to Plantations; that if they tried to run away they would most certainly be caught, because the island was but small; and that when they were caught, not only would their term of years be increased, but that they would most certainly receive a dreadful number of lashes. He added, further, that as nothing would be gained by malingering, sulking, or laziness, so, on the other hand, our lot might be lightened by cheerfulness, honesty, and zeal. A more surly, ill-conditioned crew I think he must have never before harangued. They listened, and on most faces I read the determination to do no more work than was forced from them. This is, I have learned, how the plantation servants do commonly begin; but the most stubborn spirit is not proof against the lash and starvation. Therefore, before many days they are as active and as zealous as can be desired, and the white men, even in the fields, will do double the work that can be got out of the black.

Then this officer went away, followed by his beadles, who cast eyes of regret upon us, as if longing to stay and exercise their wands of office upon the prisoners' backs. This done, we were ordered to march out. My master's horse was waiting for him, led by a negro; and two of his overseers, also mounted and carrying whips in their hands, waited his commands. He spoke with them a few minutes, and then rode away.

They brought a long cart with a kind of tilt to it, drawn by two asses (here they call them assenegoes), and invited me courteously to get into it. It was loaded with cases and boxes, and a negro walked beside the beasts. Then we set out upon our march. First walked the twenty servants—men and women—newly bought by the master; after them, or at their side, rode the overseers, roughly calling on the laggards to quicken their pace, and cracking their whips horribly. Then came the cart in which I sat. The sun was high in the heavens, for it was not more than three of the clock; the road was white and covered with dust; and the distance was about six or seven miles, and we went slowly, so that it was already nigh unto sunset when we arrived at the master's estate.

Thus was I, a gentlewoman born, sold in the Island of Barbadoes for a slave. Sixty pounds the price I fetched. Oh! even now, when it is all passed long since, I remember still with shame how I stood upon the quarter-deck, my hood thrown back, while all those men gazed upon me, and passed their ribald jests, and cried out the money they would give for me!

CHAPTER XXXVI.

THE FIRST DAY OF SERVITUDE.

Thus began my captivity. Thus I began to sit beside the waters of Babylon, more wretched than the daughters of Zion, because they wept together, while I wept alone. I looked for no release or escape until the Lord should mercifully please to call me away by opening the Gate of Death. For even if I were released—if by living out the ten years of servitude I could claim my freedom, of what use would it be to me? Whither could I fly? where hide myself? Yet you shall hear, if you will read, how a way, terrible at first and full of peril, was unexpectedly opened, and in what strange manner was wrought my deliverance.

We arrived at our new master's estate—which was, as I have said, about seven miles from the port—towards sundown. We were marched (rather, driven) to a kind of village, consisting of a double row of huts or cottages, forming a broad street, in the middle of which there were planted a large number of the fruit-trees named here bonanows (they are a kind of plantain). The green fruit was hanging in clusters, as yet unripe; but the leaves, which are also the branches, being for the most part blown into long shreds, or rags, by the wind, had an untidy appearance. The cottages looked more like pigsties for size and shape; they were built of sticks, withs, and plantain-leaves both for sides and for roof. Chimneys had they none, nor windows; some of them had no door, but an opening only. Thus are housed the servants and slaves of a plantation. The furniture within is such as the occupants contrive. Sometimes there is a hammock or a pallet with grass mats and rugs; there are some simple platters and basins, in each but there are two, three, or four occupants.

Here let me in brief make an end of describing the buildings on this estate, which were, I suppose, like those of every other. If you were to draw a great square, in which to lay down or figure the buildings, you would have in one corner the street or village of the people; next to the village lies the great pond which serves for drinking-water as well as for washing. The negroes are fond of swimming and bathing in it, and they say that the water is not fouled thereby, which I can not understand. In the opposite corner you must place the Ingenio, or house where the sugar-canes are brought to be crushed and ground, and the sugar is made. There are all kinds of machines, with great wheels, small wheels, cogs, gutters for running the juice, and contrivances which I cannot remember. Some of the Ingenios are worked by a wind-mill, others by horses and assenegoes. There is in every one a still where they make that fiery spirit which they call "kill-devil." Near the Ingenio are the stables, where there are horses, oxen, assenegoes, and the curious beast spoken of in Holy Writ called the camel. It hath been brought here from Africa, and is much used for carrying the sugar. The open space around the Ingenio is generally covered and strewed with trash, which is the crushed stalk of the cane. It always gives forth a sour smell (as if fermenting), which I cannot think to be wholesome. In the fourth corner is the planter's house. Considering that these people sometimes grow so rich that they come home and buy great estates, it is wonderful that they should consent to live in houses so mean and paltry. They are of wood, with roofs so low that one can hardly stand upright in them; and the people are so afraid of the cool wind which blows from the east that they have neither doors nor windows on that side; but will have them all towards the west, whence cometh the chief heat of the sun—

*All Rights Reserved.

DRAWN BY A. FORESTIER.

"Madam," he said, "it will be best to throw back your hood." This I did, and so stood before them all bareheaded.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

namely, the afternoon heat. Their furniture is rude, and they have neither tapestry, nor wainscoted walls, nor any kind of ornament. Yet they live always in the greatest luxury, eating and drinking of the best. Some of the houses my master's among them—have an open verandah (as they call it: in Somerset-shire we should call it a linney) running round three sides of the house, with coarse canvas curtains which can be let down so as to keep out the sun, or drawn up to admit the air. But their way of living—though they eat and drink of the best—is rude, even compared with that of our farmers at home; and a thriving tradesman, say, of Taunton, would scorn to live in such a house as contenteth a wealthy planter of Barbadoes. Behind the house was a spacious garden, in which grew all kinds of fruits and vegetables, and all round the buildings on every side stretched the broad fields of sugar-canes, which, when they are in their flower or blossom of grey and silver, wave in the wind more beautifully than even a field of barley in England.

On the approach of our party and the voices of the overseers, a gentlewoman (so, at least, she seemed) came out of the house and stood upon the verandah, shading her eyes and looking at the gang of wretches. She was dressed splendidly in a silken gown and flowered petticoat, as if she was a very great lady, indeed; over her head lay a kerchief of rich black lace; round her neck was a gold chain; when she slowly descended the steps of the verandah and walked towards us I observed that she was of a darker skin than is customary to find at home; it was, indeed, somewhat like the skin of the gipsy people; her features were straight and regular; her hair was quite black, her eyes were also black, and large, shaped like almonds. On her wrists were heavy gold bracelets, and her fingers were loaded with rings. She seemed about thirty years of age. She was a woman of tall and fine presence, and she stood and moved as if she was a Queen. She presently came forth from the verandah and walked across the yard towards us.

"Let me look at them—your new batch," she said, speaking languidly, and with an accent somewhat foreign. "How many are there? Where do they come from? Who is this one, for instance?" She took the girl named Deb by the chin, and looked at her as if she were some animal to be sold in the market. "A stout wench, truly. What was she over there?"

The overseer read the name and the crimes of the prisoner. Madam (this was the only name by which I knew her) pushed her away disdainfully.

"Well," she said, "she will find companions enough here. I hope she will work without the whip. Hark ye, girl," she added with, I think, kindly intent, "it goes still to my heart when I hear that the women have been trounced; but the work must be done. Remember that! And who are those—and those?" She pointed with contempt to the poor creatures covered with dirt and dust, and in the ragged, miserable clothes they had worn all the voyage. "Street sweepings; rogues and thieves all. Let them know," she said grandly, "what awaits those who skulk and those who thieve. And whom have we here?"—she turned to me—"Is this some fine city madam fresh from Bridewell?"

"This prisoner," said the overseer, "is described as a rebel in the late Monmouth rising."

"A rebel? Truly?" she asked with curiosity. "Were Monmouth's soldiers women? We heard by the last ship som thing of this. Madam, I know not why you must needs become a rebel; but this, look you, is no place for gentlewomen to sit down and fold their arms."

"Madam," I replied, "I look for nothing less than to work, being now a convict (though I was never tried) and condemned—I know not by whom—to transportation in his Majesty's Plantations."

"Let me look at your hands," she said sharply. "Why, of what use are these little fingers? They have never done any work. And your face—prithee, turn back your hood." I obeyed, and her eyes suddenly softened. Indeed, I looked not for this sign of compassion, and my own tears began to flow. "'Tis a shame!" she cried. "'Tis a burning shame to send so young a woman—and a gentlewoman, and one with such a face—to the Plantations! Have they no bowels? Child, who put thee aboard the ship?"

"I was brought on board by one Mr. Penne, who deceived me, promising that I should be taken to New England, where I have cousins."

"We will speak of this presently. Meantime—since we must by the law find you some work to do—can you sew?"

"Yes, Madam, I can perform any kind of needlework, from plain sewing to embroidery."

"What mean they," she cried again, "by sending a helpless girl alone with such a crew? The very Spaniards of whom they talk so much would blush for such barbarity. Well, they would send her to a convent where the good Nuns would treat her kindly. Madam, or Miss, thou art bought, and the master may not, by law, release you. But there is a way of which we will talk presently. Meanwhile, thou canst sit in the sewing-room, where we may find thee work."

I thanked her. She would have said more; but there came forth from the house, with staggering step, the man who had bought us. He had now put off his wig and his scarlet coat, and wore a white dressing-gown and a linen nightcap. He had in his hand a whip, which he cracked as he walked.

"Child," said Madam, quickly, "pull down your hood. Hide your face. He hath been drinking, and at such times he is dangerous. Let him never set eyes upon thee save when he is sober."

He came rolling and staggering, and yet not so drunk but he could speak, though his voice was thick.

"Oho!" he cried. "Here are the new servants. Stand up, every man and woman. Stand up, I say!" Here he cracked his whip, and they obeyed, trembling. But Madam placed herself in front of me. "Let me look at ye." He walked along the line, calling the unhappy creatures vile and foul names. O shame! thus to mock their misery! "What!" he cried. "You think you have come to a country where there is nothing to do but lie on your backs and eat turtle and drink mobbie? What! You shall find out your mistake." Here he cracked his whip again. "You shall work all day in the field, not because you like it, but because you must. For your food, it shall be lobbollie, and for your drink, water from the pond. What, I say! Those who skulk shall learn that the Newgate 'eat' is tender compared with her brother of Barbadoes. Tremble, therefore, ye devils all; tremble!"

They trembled visibly. All were now subdued. Those of them who swaggered—the dare-devil reckless blades when first we sailed, were now transformed into cowardly, trembling wretches, all half-starved, and some reduced with fevers, with no more spirit left than enabled them still to curse and swear. The feeblest of mortals, the lowest of human wretches, has still left so much strength and will that he can sink his immortal soul lower still—a terrible power, truly.

Then Madam drew me aside gently, and led me to a place like a barn, where many women, white and black, sat sewing, and a great quantity of little black babies and naked children played about under their charge. The white women were sad and silent; the blacks, I saw with surprise, were all chattering and laughing. The negro is happy, if he have enough to eat and drink, whether he be slave or free. Madam sat down upon a bench, and caused me to sit beside her.

"Tell me," she said kindly, "what this means. When did women begin to rebel? If men are such fools as to go forth and fight, let them; but for women"—

"Indeed," I told her, "I did not fight."

Then nothing would do but I must tell her all, from the beginning—my name, my family, and my history. But I told her nothing about my marriage.

"So," she said, "you have lost father, mother, brothers, lover, and friends by this pretty business. And all because they will not suffer the King to worship in his own way. Well, 'tis hard for you. To be plain, it may be harder than you think, or I can help. You have been bought for sixty pounds, and that not for any profit that your work will bring to the estate, because such as you are but a less and a burden; but only in the hope that your friends will pay a great sum for ransom."

"Madam, I have indeed no friends left who can do this for me."

"If so, it is indeed unfortunate. For presently the master will look for letters on your behalf, and if none come I know not what he may threaten or what he may do. But think—try to find someone. Consider, your lot here must be hard at best; whereas, if you are released, you can live where you please; you may even marry whom you please, because beautiful young gentlewomen like yourself are scarce indeed in Barbadoes. 'Tis Christian charity to set you free. Remember, Child, that money will do here what I suppose it will do anywhere—all are slaves to money. You have six months before you in which to write to your friends and to receive an answer. If in that time nothing comes, I tell thee again, Child, that I know not what will happen. As for the life in the fields, it would kill thee in a week."

"Perhaps, if the Lord so wills," I replied helplessly, "that may be best. Friends have I none now, nor any whom I could ask for help—save the Lord alone. I will ask for work in the fields."

"Perhaps he may forget thee," she said—meaning the master. "But, no; a man who hath once seen thy face will never forget thee. My dear, he told me when he came home that he had bought a woman whose beauty would set the island in flames. Pray Heaven, he come not near thee when he is in liquor. Hide that face, Child. Hide that face. Let him never see thee. Oh! there are dangers worse than labour in the fields—worse than whip of overseer!" She sprang to her feet, and clasped her hands: "You talk of the Lord's will! What hath the Lord to do with this place? Here is nothing but debauchery and drinking, cruelty and greed. Why have they sent here a woman who prays?"

Then she sat down again and took my hand.

"Tender maid," she said, "thy face is exactly such as the face of a certain Saint—'tis in a picture which hangs in the chapel of the convent where the good Nuns brought me up long ago, before I came to this place—long ago. Yes, I forget the name of the Saint: thou hast her face. She stood, in the picture, surrounded by soldiers who had red hair, and looked like devils—English devils, the Nuns said. Her eyes were raised to Heaven, and she prayed. But what was done unto her I know not, because there was no other picture. Now she sits upon a throne in the presence of the Mother of God."

The tears stood in her great black eyes—I take it that she was thinking of the days when she was young.

"Well, we must keep thee out of his way. While he is sober, he listens to reason, and thinks continually upon his estate and his gains. When he is drunk no one can hold him, and reason is lost on him."

She presently brought me a manchet of white bread and a glass of Madeira wine, and then told me that she would give me the best cottage that the estate possessed, and for my better protection, another woman to share it with me. I thanked her again, and asked that I might have the girl called Deb, which she readily granted.

And so my first day of servitude ended in thus happily finding a protector. As for the cottage, it was a poor thing; but it had a door, and a window with a shutter. The furniture was a pallet with two thick rugs and nothing more. My condition was desperate, indeed; but yet, had I considered, I had been, so far, most mercifully protected. I was shipped as a convict (it is true) by a treacherous villain, but on the ship I found a compassionate Captain, who saved me from the company among whom I must otherwise have dwelt. I was sold to a drunken and greedy planter; but I found a compassionate woman who promised to do what she could; and I had for my companion the woman who had become a most faithful maid to me upon the voyage, and who still continued in her fidelity and her love. Greater mercies yet—and also greater troubles—were in store, as you shall see.

(To be continued.)

The Registrar-General's quarterly return of marriages, births, and deaths has been issued. It states that the population of the United Kingdom in the middle of 1888 is estimated at 37,440,505 persons; that of England and Wales at 28,628,804, of Scotland at 4,034,156, and of Ireland at 4,777,545. In the United Kingdom, 270,720 births and 139,821 deaths were registered in the three months ending Sept. 30, 1888. The natural increase of population was, therefore, 130,899. The registered number of persons married in the quarter ending June 30, 1888, was 124,920. The birth-rate in the United Kingdom in the third quarter of 1888 was 28·7, and the death-rate 14·8 per 1000. The marriage-rate in the second quarter of 1888 was 13·4 per 1000.

MATRIMONY.

I think it was the *Times* newspaper—then sole monarch of the journalistic world now so Republican—which started, in years gone by, the "silly season" discussions of matters interesting to the public at large by that public itself. Now a younger rival has made itself chief master of the secret of "tapping the reservoir," as it has been well called, of middle-class feeling and opinion: and provides, in the letters it publishes, invaluable documents for the social history of the England of our time.

Its discussion this year has been perhaps the most noteworthy yet started: full to the brim of signs and self-revelations of the times. Probably a good many of the letters are not genuine—the roar of those "young lions," as they used to be called, is often to be recognised: but great numbers of these confessions, complaints, outbursts of ill-temper or of conceit, are as real as they can be; and some, let us hope, of the records of happiness—though I think that, as a rule, when a man has a happy home he does not blow a trumpet to proclaim the fact.

And how curious it all is: how like Le Sage's story, in which the "Devil on Two Sticks" shows his hero the world of Paris—with the roofs off. Here we see nagging wives, drinking husbands, lonely bachelors—and British newspaper-readers of to-day, and the editors who provide reading for their tastes.

This is almost the most instructive part of it. Has anyone noticed that there are many among these letters which a British editor of even ten years ago would not have dared to publish at all? Cautiously beginning with a wholesale onslaught on this Mrs. Mona Caird, whom they have so suddenly made famous, the adroit managers of the discussion have found themselves able to publish, unrebuked, letters advocating what we may call experimental matrimony, and letters describing at first hand experiments therein—doubtless instructive and valuable, but in no way sanctioned by Church or Law.

And Mrs. Grundy has not arisen and torn the *Daily Telegraph* to pieces! What does it mean? Is she sleeping? or is she still on a journey—perhaps to Boulogne, and other places where things shocking are but the sights of the country, and as such to be stared at! Or may we hope that she is at last growing old and toothless, and that the forgotten virtue of telling the truth may be expected to "come in" next season, or the season after?

If this were so indeed there might be hopes of improvement in many things—and in matrimony not least. These letters in the main confirm what is, I think, the judgment of most men whose views are not too strongly biassed by personal experience: that misery in marriage is more often caused by an apparent lack of money than by anything else (except drink).

And, if Mrs. Grundy do but lose her power, the sensible minority who are happy with only money enough to pay for food, warmth (of shelter and clothing), and education, will gain a great following: and much nagging, many lies, and many tears will be saved. Moreover, more men and women would marry; and so would come a great addition to the world's stock of happiness.

For here is a point, which has been curiously overlooked by every writer on this question. Even though, as I am inclined to think, marriages are now happier than ever they were—because the woman is taking her fair place in the household—yet, year by year, marriage is more and more a failure.

This is no paradox, but a mere arithmetical truth. For, if every marriage in England were a perfectly happy one, but only one per cent of the adult population got married, I think it would be admitted that matrimony as an institution had broken down—had, indeed, ceased to be a regular "institution" altogether.

And we of the middle-class are going that way, and going quickly. Nearly every working-man has his wife—and so have a good many working-boys; and the aristocracy seem to marry early and often. But, though statistics could hardly prove whether marriage is a failure in the case of the married, I think they would show clearly enough that it fails to attract as large a proportion of the middle-class as it did a century or half a century ago. Look at the immense number of unmarried men of thirty—and think what that means in spinsters!

Perhaps as far as this reluctance to marry is caused by lack of money to keep up appearances, it may tend to disappear with the decay of Mrs. Grundy—and, indeed, I think she is beginning to dodder a little; but that is not all. People are getting cautious, in the world's old age: boys escape later from their parents' control, and have often passed the first period of hasty impulse before they are really their own masters. And then, they think, and sigh, and hesitate: and youth goes by, and even middle-age; and they remain alone, unloved. The old ties break, as years roll on, and new ones are not formed. It is sad, after all. Even looking at a "jolly old bachelor" of fifty—before the last loneliness has set in—one cannot help thinking of the prayer of Victor Hugo: that he, and those he loved, and even his enemies "triumphant in wrongdoing," might never see—

> L'été sans fleurs vermeilles,
> La cage sans oiseaux, la ruche sans abeilles,
> La maison sans enfants.

Only, what is to be done! Schemes, visions, theories of Utopia, come to very little; whatever is done in this matter, as in most other matters, will, in the main, do itself; but in time, no doubt, something *will* be done. Matrimony has known many forms, during the lifetime of this elderly planet, and will know many more. The Hebrews were strongly in favour of a plurality of wives, and it is noteworthy that the wisest of them had most: King Solomon rejoiced in seven hundred—a number which seems to have excited some wonder even then.

But the serious objection to his proceedings was that many of these ladies, though highly eligible on social grounds (for they were Princesses, all of them) were foreigners, belonging to the heathen nations across the borders. This was as directly against the laws of the Hebrews as marrying any member of one's own tribe was with some other primitive peoples. Even so, in our own time and country, it is not at all the thing to marry your own sister, your mother-in-law, or even your grandmother; while in polite circles in (I think) the South Sea Islands, the crime of wedding any but a very near relation indeed is one hardly to be alluded to before ladies.

Now-a-days in England you can marry when you like, or not at all; it is only the dissolution of partnership which is difficult. But in Greece, by the laws of Lycurgus, criminal proceedings might be taken against you if you married too late or unsuitably—or, of course, if you were a hardened offender and did not marry at all. And in Rome—where a Roman citizen could only legally marry the daughter of a Roman citizen—the idea of a complete personal unity of husband and wife was acted upon so strictly, that the mere dissent of either party (when formally expressed) could dissolve the marriage. Indeed, one may pretty safely say that, whatever system has been devised by Mrs. Mona Caird as a substitute for modern matrimony, the one thing certain about it is that it will be no novelty.

E. R.

ACROSS THE FURKA PASS.

It was on a warm sunny morning in the third week of September that I started from Martigny to visit the Rhone glacier and cross the Furka Pass. Several people had hinted to me that it was too late in the year for the expedition, but I had not been able to accomplish it earlier, and as it was one to which I had long looked forward, I was determined to carry it out, if possible; nor was I in any way disappointed at the result.

The first part of the journey, from Martigny to Brieg, a distance of about forty-five miles, was by the railway which traverses the lower and least interesting part of the Rhone Valley, much of which shows unmistakable traces of repeated inundations, though there is much that is romantic and even grand. Lofty mountains, some clothed with forests, but mostly bare and rugged, enclose the valley on both sides, snow-capped peaks being occasionally seen in the distance, while the aspect of several of the small towns and villages, with their ruined castles and ancient houses, is decidedly picturesque. Especially noteworthy is Sion, the capital of the canton of Valais, with its old Roman towers and walls, which give it the appearance of being strongly fortified.

From Brieg the journey was made by carriage. The road, at first nearly level, runs for some distance along a green and fertile tract of country, passing by one or two prosperous-looking villages, after which it ascends rather steeply through a narrow ravine, down which the Rhone rushes wildly over its rocky bed; then crossing two or three wooden bridges, whence lovely views are obtained, reaches Lax, the point from which travellers generally start to ascend the Eggischhorn. After passing Fiesch the character of the country becomes somewhat different, the road here traversing a wide, pastoral valley in which the people were busily endeavouring to get their crops housed.

By far the greater part of the land here is utilised for feeding cattle, the pasture being of the same rich description and vivid green as elsewhere in Switzerland, the cows literally standing far above their hoofs in the lush growth. No wonder that the animals themselves are so sleek, and the milk they yield so sweet and creamy. Here and there were little, sorry-looking patches of corn being cut, as it seemed to me before it was anything like ripe; but the poor people were, no doubt, anxious to get it in, for the weather often changes suddenly in these high regions, and they knew that if it once broke their chance of harvesting would be gone. Men and women were working together, the latter taking their full share of the labour, cutting both corn and fodder and putting it into the large hempen sheets which they spread on the ground for the purpose, and then tie up by the four corners, after which they often carry the heavy bundles on their backs or heads for a considerable distance, not infrequently up or down the side of some steep incline. The work is considerably easier when the bundles have to be brought downhill instead of being carried up, as a vigorous kick, rightly administered, will often set them rolling for a long way.

We next passed through a succession of villages so near to each other that they almost joined—so close, in fact, that I was rather surprised to find each of them possessing not only a church, but also a mortuary chapel. This is rendered necessary by the scanty accommodation afforded in the houses, which are very poor at this part (and mostly built on piles, with the double purpose of protecting them from the floods caused by the melting snow in spring, as well as from the rats which abound), far more space in them being devoted to the cattle and the stores than to the human occupants; besides which, the windows are small and few, the idea in this region, where winter is so rigorous, being rather to exclude than to admit the outer air.

The churches hereabouts struck me as ugly, high-shouldered-looking buildings, with little slits of windows very high up in them; all had one—several, three or four—small metal pinnacles, I must call them for want of a better word. Of course, no one would expect the churches in such a remote district to be otherwise than plain; but these were as desolate-looking in the interior as they were outside, the altars and chapels being as hideous and trumpery as the shrines we so frequently passed on the road, where the representations of the Saviour and the Virgin Mary were so grotesque as to be almost repulsive. Münster is the last of this series of villages, and by far the largest; and, while the horses rested, we paid a visit to the church, the largest in the valley, and one which is regarded by the people somewhat in the light of a cathedral. It is certainly more decorated than any of the others, and can boast of some stained glass; but this is of an ultra-modern type, and I could not see much to admire. The porch is adorned with some horribly realistic frescoes. The view from the churchyard is, however, well worthy of note, commanding the wide valley we had just traversed, with range upon range of mountains in the background. Most of the graves had a simple wooden cross at the head, and nearly all a stone, mortar-like vessel beside it. I supposed this was intended for holy water, though I had never before seen them thus placed, and my conjecture was confirmed by a peasant woman and her daughter who came up at the moment, bringing with them a friend, who I afterwards learnt belonged to the neighbouring canton of Unterwalden. The elder woman had evidently been very good-looking in her youth, and her eyes were still handsome and expressive; but hard work and poor food soon leave their traces upon these villagers, and the women look old very early. She replied to my questions about life in this out-of-the-way place without any complaint, yet a half melancholy tone pervaded her words and aspect—a tone that I also observed among the men. This woman told me that they had quite enough to do to get in their crops during the short summer; but when I asked if they did not find the winter long, she quickly answered that there was more than work for all hands; the men and boys tending the cows and cutting and carving wood, the women minding their household duties, spinning their thread, weaving it into material and afterwards making it into garments. "Besides which there are always the stockings to knit," she added, as if this were conclusive. Her patois was much easier to understand than that of many of the people with whom I talked, but she seemed to think it strange that I should be English, as I told her I was, and yet able to speak German, and she finished by expressing her surprise that so many foreigners should come to her country, "where there was so little to see." The rushing river, glorious mountains, and other natural beauties, among which she had always lived, were as nothing in her eyes, so true is the old adage that "Familiarity breeds contempt."

After passing through Ulrichen, a rather dismal-looking place, where we saw a priest haranguing his flock in the street, and one or two other villages still higher up the valley, the road began to wind steeply up the mountain-side, at first between pine-woods, the scent of which was delicious, till at length we seemed to get above the region of trees and found ourselves climbing the wild and narrow gorge down which the Rhone forces its way. It was a grand scene, but so lonely and desolate-looking as to make us feel almost glad to have overtaken another party of travellers whose destination was the same as our own—viz., the Rhone Glacier Hotel. Our driver had been walking for a long time beside the patient horses that toiled steadily on, only now and then stopping to rest for a minute or two at one of the many bends in the road which sometimes almost overhang the yawning depths below, while at other places the mighty rocks looked as if they would fall and bury us beneath them, while the river roared and thundered over huge boulders hundreds of feet below. I was getting very cold by this time, and was not sorry when the man remounted, saying, "We shall be there in five minutes!" Another turning, and the mighty glacier lay before us.

It was a wonderful sight, never to be forgotten, filling the soul with reverent awe. There was no need for words; it would have seemed like sacrilege to speak in the presence of such a scene. So grand, so pure, so silent, the vast field of ice rose before us like a huge frozen torrent, and as I looked the words of the poet came into my mind—

> Ye icy falls! Ye that from the mountain's brow
> Adown enormous ravines slope amain—
> Torrents, methinks, that heard the mighty Voice,
> And stopped at once, amid their maddest plunge!
> Motionless torrents! silent cataracts!
> Who made you glorious as the gates of heaven
> Beneath the keen full moon? Who bade the sun
> Clothe you with rainbows? Who with living flowers
> Of loveliest blue spread garlands at your feet?
> God! let the torrents, like a shout of nations,
> Answer; and let the ice-plains echo—God!

But I have lingered so long over this first part of my journey as to leave myself but short space to speak of the remainder of the ascent, and it is a long way from the Rhone glacier to the top of the Furka Pass.

Starting by eight o'clock the next morning, we soon found ourselves winding up steeper gradients than any we had yet ascended, and now it was, as we neared the top of the glacier, that we gained some idea of its great extent, its actual length from top to bottom being no less than six miles, rising in a series of terraces of colossal ice-pillars one above another. The glacier loses none of its grandeur in the daylight, though it seemed less appalling. Goats were browsing at its very brink, and some cows, too, were making the best of the coarse grass which grew close to its edge, climbing about the almost perpendicular declivities that looked as if they could scarcely afford a foothold to any living creature.

VALAIS WOMEN SHOWING THEIR GRAVEYARD TO A FRIEND FROM UNTERWALDEN.

A toilsome ascent of more than two hours brought us to the top of the pass, nearly 8900 ft. high, and here we paused to take a last view of the magnificent scene we were leaving. The glacier had long ago disappeared from sight, hidden by the shoulder of the Galenstock, over which we had just come; but the whole of the Upper Rhone Valley stretched before us, inclosed on all sides by ranges of lofty mountains: the Finsteraarhorn and the Eggischhorn prominent in the front, the snow-clad peaks of the Schreckhorn, the Jungfrau, the Breithorn, and even the far-distant Mönch and Wetterhorn rising clear and distinct behind them; while the glittering points of the Weisshorn and the Matterhorn, completed the picture on the other side. It was a view of marvellous beauty and grandeur, one that our driver told us we were unusually fortunate in obtaining, as it was seldom so clear as then.

Once over the pass the scene was a very different one as we rapidly descended the windings of the road.

Below and before us lay the Urserenthal, watered by the clear, green Reuss, which flows rapidly between lovely pastures, ever and anon being fed by fresh streams from the mountains on both sides. Soon we passed Hospenthal, where the road from the St. Gothard joins ours, and hurrying on through Andermatt, which stands in the midst of fertile meadows, we soon reached the fearful defile of the Schöllenen, crossed the far-famed Devil's Bridge, and were at Göschenen, ready for the train that was to carry us away from this region of loveliness.

L. T. M.

The Bishop of Marlborough on Nov. 1 consecrated the new church of the Holy Cross in Cromer-street, King's-cross.

The representatives of the Universities Mission to East Africa have been officially informed that, in view of active operations to be begun by her Majesty's Government against the slave-traders on the Zanzibar Coast, it is desirable that all Europeans should be at once withdrawn from stations on the mainland.

The private chapel attached to St. Saviour's Hospital for Diseases of Women in Osnaburg-street, Regent's Park, was on Nov. 2 reopened with an impressive service. The building had been closed for some four months for the work of fitting up the carved oak interior which the treasurer of the institution, Mr. Edward Howley Palmer, presented in June last.

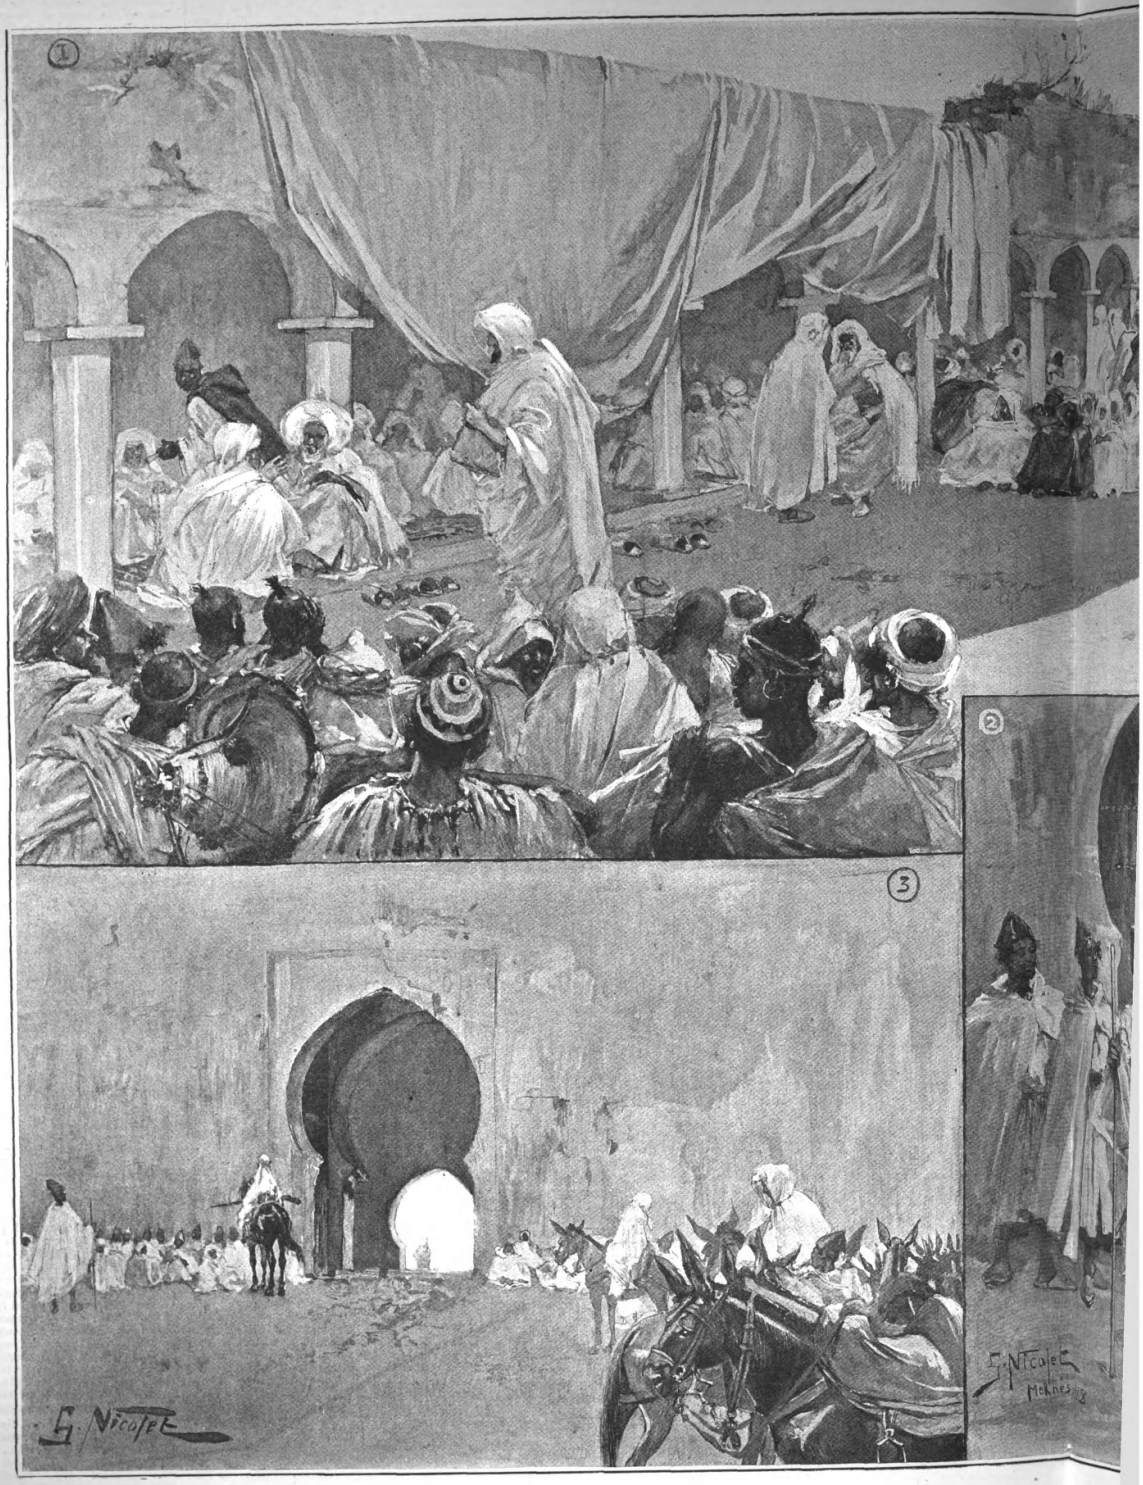
THE COURT OF THE SULTAN OF MOROCCO.

At Mequinez, one of the three capitals of Morocco, where the Sultan was residing before he started on his expedition this year against the revolted tribe of the Beni M'Guild, all the business of State affairs was then transacted in one of the numerous courtyards, surrounded by high walls, built by Christian slaves during the reign of Muley Ismaël. The bare uniformity of these walls, only broken by some large gateways opening into other courtyards, is a most characteristic feature of the architecture at Mequinez. The courts form a never-ending maze of gigantic buildings. During the few weeks previous to the moving of the Moorish army, the Maghzen, as it is called, was the scene of many picturesque assemblies. Those which our Artist has chosen to represent include the Minister's Court, with some faithful tribes bringing their contingent to be armed and equipped for the Sultan's military service. Others are soliciting to have some old quarrel forgiven, and are probably receiving an order to be sent to prison. The proud Minister and Court official, wrapped in his supreme dignity and in a white muslin "haïk," sits perched on a fat mule, and is hurrying, with a touch of his sharp stirrup-spur, to escape the kissing of the ragged suppliants. The entrance to the Sultan's pavilion is shown in another Sketch, with the people outside waiting for whatever may be decided, whether good or evil, behind the thick walls of the inner dwelling, the temporary abode of that despotic potentate on whose will their fate depends.

MUSICAL PUBLICATIONS.

"Yes, I love you" is the title of a song by F. L. Moir, in which protestations of affection are expressed in smooth melodious phrases that lie well for any voice of ordinary compass. A good variety of rhythm is given by changes of tempo from three-four to six-eight. Another love-song, but in a more playful style, is that by Theo Marzials, entitled, "Never laugh at love." The quaint humour of the lines (by Mike Beverly) is well reflected in the vocal strains, which are bright and piquant without being flippant. Both the songs just named are issued by Messrs. Boosey and Co., from whom also we have "Margarita," a very pleasing song, with an expressive and flowing melody by F. N. Löhr; "In sweet September," a ballad by Hope Temple, which is simple and unaffected in style without being commonplace; and "How dear thou art to me," a song, by Lovett King, in which expressive sentiment is successfully realised in smooth vocal strains that effectively alternate between six-eight and three-four tempo.

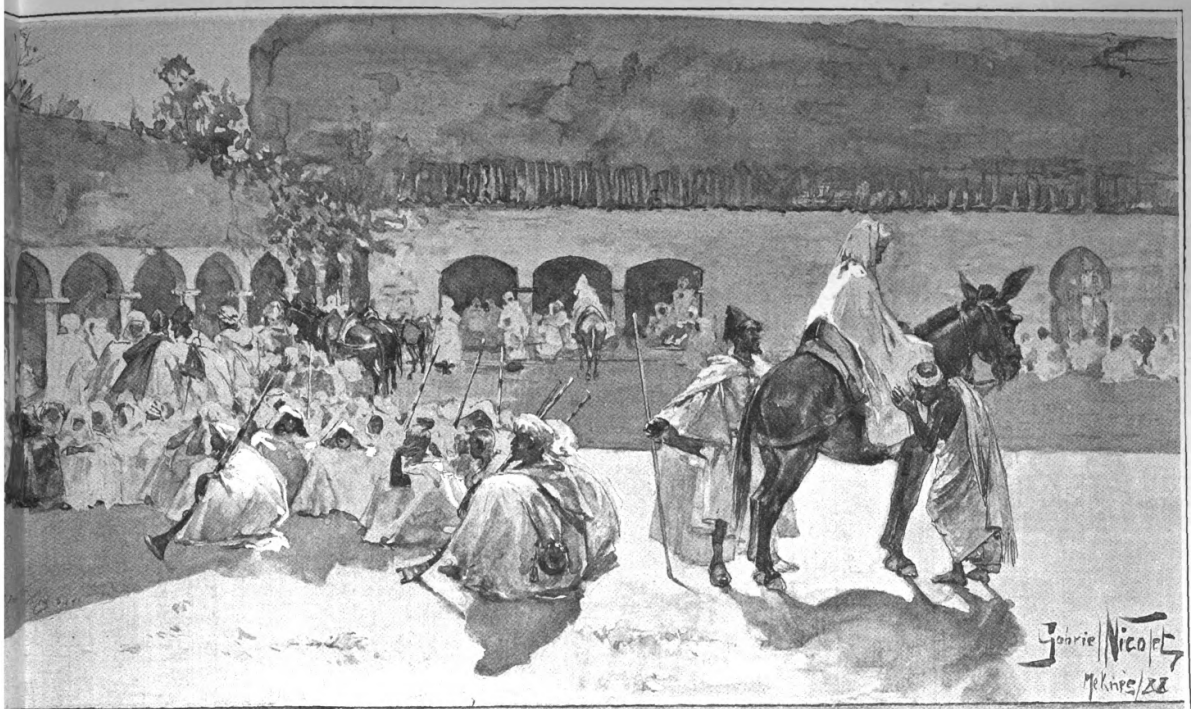
From among publications by W. Morley and Co. we may specify the following: "The Bell Rock," an effective song in the declamatory style, with good suggestions of ocean storms and dangers, composed by J. L. Roeckel; "A Ribbon and a Flower," a setting by Joseph Barnby of some graceful lines of a pathetic kind by Mary Mark Lemon. Mr. Barnby's music is, as it should be, unaffected in style, yet capable of thoroughly realising the sentiment of the words, and demanding from the singer earnest expression rather than any exceptional skill or vocal compass. "Ask not" and "The Ripple of the River" (also from Messrs. W. Morley and Co.) are songs by, respectively, Maude Valérie White and Frank L. Moir. The first is a very effective piece, which, although presenting small difficulty, has occasional passages somewhat more florid than is usual in the ordinary run of songs. The accompaniment is well written, and the piece altogether is above the common average. Mr. Moir's song is of a serious cast, but is neither dull nor uninteresting. The solemnity of the opening and incidental phrases in the minor key is well contrasted by the alternate use of the major key with a more florid accompaniment. It is altogether a musicianly and effective song.



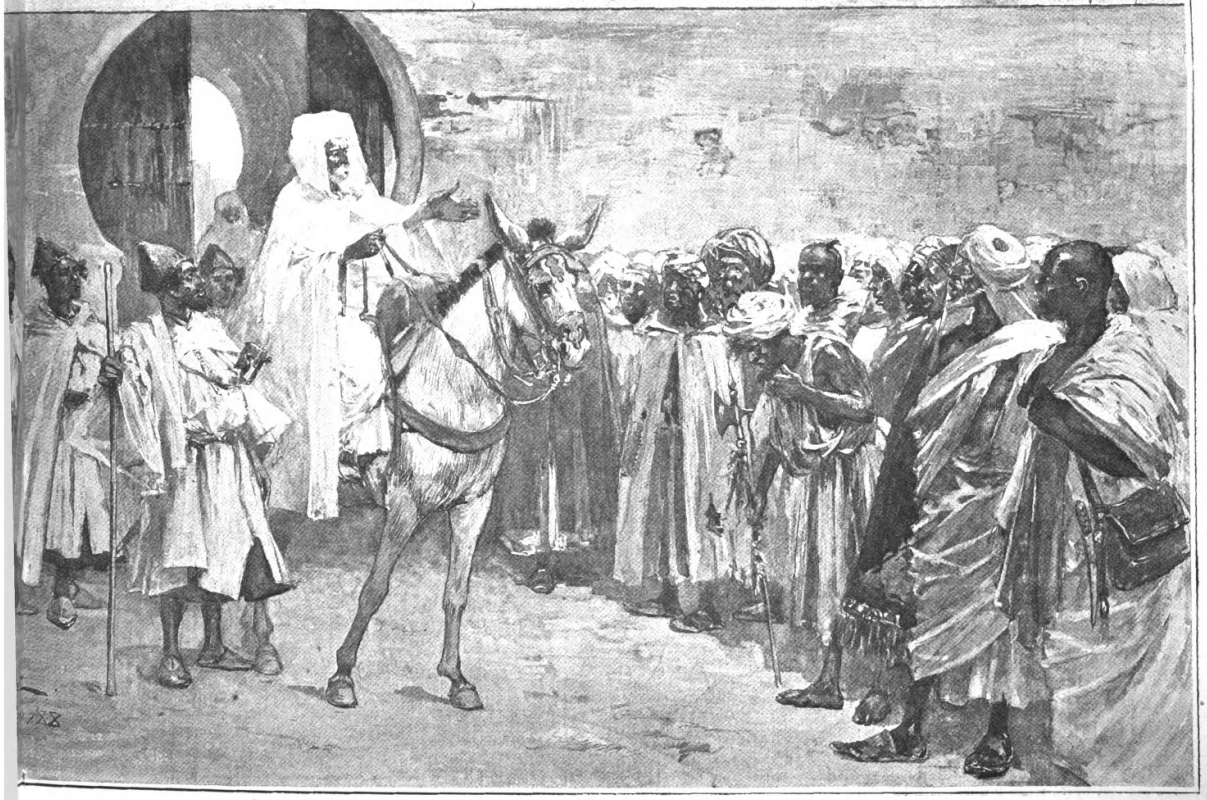
"Love's Thorn" is a song by Tito Mattei, who has enhanced the effect of a melody of expressive simplicity by an accompaniment of a varied character, comprising some rich harmonic treatment, yet offering no considerable difficulties. Messrs. Patey and Willis are the publishers; as also of "Our dear old Home," words and music by M. Watson—an unpretentious yet pleasing song, with some good contrasts of key. "The Crown of Love," by F. N. Löhr, and "Who was it?" by J. L. Roeckel, are songs also issued by Messrs. Patey and Willis. The first is a good specimen of the sentimental style; the other is in a lighter vein, with some effective reiterations of a piquant phrase in the accompaniment. Both songs, in their different styles, will be welcome in drawing-room circles.

MARRIAGES.

Major-General Sir Henry Ewart, K.C.B., Equerry to the Queen, and the Hon. Evelyn Clementina Heathcote-Drummond-Willoughby, eldest daughter of Lord and Lady Aveland, were married on Nov. 3 at St. Paul's Church, Knightsbridge. Princess Mary Adelaide, Duchess of Teck, the Duke of Teck, and Princess Victoria were among the congregation. The bridegroom was attended by Lord Henry Vane-Tempest as best man. The six bridesmaids were the Hon. Margaret, Hon. Nina, Hon. Cecilie, Hon. Alice, and Hon. May Adelaide H.-D.-Willoughby, sisters of the bride, and Miss Ewart, niece of the bridegroom. The bride's youngest brother, the Hon. Peter Robert H.-D.-Willoughby, was also in attendance in a white satin costume copied from a print of Charles Edward as a child. The bride was accompanied by her father, who led her to the altar and afterwards gave her away. The bridal presents were numerous, and included, from Princess Mary Adelaide and the Duke of Teck, a gold fichu brooch, with sapphire centre and pearl at each end. Sir Henry received from the Queen a white marble bust of her Majesty on an alabaster pedestal. The Prince of Wales presented the General with a silver-gilt mounted cut-glass claret jug, in case.



The marriage of Mr. Hulse, M.P. for Salisbury, eldest son of Sir Edward Hulse, Bart., with Miss Lawson, only daughter of Mr. Lawson, of Hall Barn, Beaconsfield, was solemnised on Nov. 1 in the parish church, Beaconsfield. Mr. Lawson gave his daughter away. Captain Douglas Dawson (Coldstream Guards) was the bridegroom's best man. The bridesmaids were Miss Goetz and Miss Evelyn Goetz, cousins, and Miss Dorothy Lawson, niece of the bride; Miss Maitland-Crichton, niece of the bridegroom; Miss Hylda Marshall, Miss Berens, and Miss Genevieve Harvey; and there were two pages, Masters David and Henry Maitland-Crichton, nephews of the bridegroom. The presents numbered over four hundred.



The Home for Crippled Boys, Kensington, has received a gift of £1000 from the trustees of the residue of the estate of the late Mr. Edward Boustead, of Clapham-park.

SCIENCE JOTTINGS.

A RAINY DAY.

For hours past the rain has been falling, until every leaf and spray has become dripping wet, and the whole atmosphere saturated with vapour. There has been no stirring outside the domicile to-day. Not even an invitation from a friend (in waterproofs) to fish eels in the brook could tempt me out of my snuggery, where, deep in "Robert Elsmere," I have been passing the hours of the morning. True, eels will and do bite in wet weather more readily than other denizens of the brook, perhaps, and there is good fun (from an angler's point of view) to be got out of a nice two-feet lively member of that serpentlike race of fishes. But the charms of an enthralling book and the genial warmth of the first fire of the season are together sufficient temptations to remain indoors. There is no sign of a clearing yet. Mr. Piscator is yonder in the meadow whipping the stream. The macadamised road in front of the snuggery has been washed almost bare of its dust and débris, and the side-channels overflow with the downpour from the clouds.

Looking at that road, one sees something suggestive of bigger things than raindrops, and mightier currents than the streams of the pathway. Observe how, between the imbedded stones of the road, the water-drops gradually collect to form rills. Note again, how the little rills unite to make streams. See how rill joins rill, until quite a respectable current, as to size, runs into the channel of the overflowing gutter. The gutter itself is made and formed by such rills. The road is, indeed, the "catchment basin" of the rivers, which its gutters represent. If you were to draw a map of that road, its rills, rivulets, and gutters, you would imitate clearly and closely the chart of every big river you know. For, in truth, the biggest river differs only in kind, and not in degree, from the rill on the road. It is fed and nurtured by its streams, exactly as that gutter is fed before your eyes to-day. There is a whole lesson in physical geology spread out before us this rainy day, in the shape of that soaking roadway; and from small things at home to great things abroad is but a step, which the scientific use of the imagination will bridge over easily enough.

Look again at the rills in the road, and note the work they are accomplishing in the small arena they occupy. For see, how the road is washed bare by the rain, its dust-particles having been swept away to the gutters at the sides. This is the first work of the rill and the river alike. Each cuts out a channel for itself—the river through the land, on a big scale; the rill between the stones, on a small one. Again, each is a carrier and transporter of the débris which it detaches from the land. The sodden and dirty water of the gutters is the result of the sweeping away of the things of the earth by the rills. If you take up a tumbler of that gutter-water, and allow its sediment to settle, you will find it is one-half mud. Multiply your one tumbler-full of such débris by the thousands that have flowed along the roadways to-day, and you may estimate how great must be the amount of solid matter which a rainy day disposes of, in that it sends all its material first to the rills, then to the gutters, and finally to the brooks and the rivers themselves.

Turn your thoughts next to the rivers of the world. The same action meets your mental gaze that you see in that roadway. The river is an eater-away, an eroder, of the land; and it is likewise a transporter of the materials it steals from the solid earth. Be it slow or be it rapid in its course, its action is essentially the same in character. When you come to multiply the daily wear and tear of the river by its yearly work, the amount of material it is seen to carry down to the sea is found to exceed belief. Think of what the Amazon, and the Mississippi and Missouri, the Danube, Volga, Rhine, Rhone, and even our own Thames must accomplish in this work of earth-wear day by day! Millions of tons of matter are removed from the land, from mountain-peak and valley alike, and carried to lake or sea; just as the rills on the road pour their burden into the gutter beyond. There is no cessation to this action. It is perennial, incessant, everlasting, as a world-phenomenon, and will continue until this orb of ours becomes a waterless, dried-up cinder of a globe like the moon itself. This action of running water is, in truth, a serious thing, speaking geologically. For the tendency of every rill and river is to wear down the land-surfaces through which it flows to the level of the sea. If you open a geological text-book, you will find the rate at which each river performs this work of earth-sculpture duly chronicled. It is not the least interesting part of the history of running water, however, to find that, on a miniature scale, the rain-rills in the road are doing their best to emulate the work of their greater neighbours of the valleys and the plains.

You have seen how the rills of the road cut out their channels through the interstices of the stones, and shape their course according to the obstacles they encounter in their journeys to the gutter. Each rill is like your winding river. With a spice of philosophy, it goes round what it cannot sweep away. This is the case with many a stream you know which meanders through flat lands, without the flood and force necessary to carve out a straight course and to sweep all before it. The Thames in its flat-lands, or the "sweet winding Devon" of the north, whereof Burns sings, illustrate rivers which wind in a sinuous course because they have not the force necessary to sweep away the obstacles which oppose them. But when you read of the doings of such a river as the Rio Colorado of the West, your respect for the work of running water increases vastly in extent. The Colorado river, in part of its course, runs through rocky defiles, or "cañons," of immense depth. These cañons measure in some parts more than a mile in depth, and extend for many miles as the natural course of the river. Now, it is provable that the river itself has actually made these cañons. It has slowly, but surely, through the long ages, cut and carved its way downwards through the rock, until it has found a channel a mile deep from the surface. Geologists will tell you that this river has been a successful sculptor of the earth, because its waters carry just a sufficiency of sand to eat out, as does a file, the hard substance of the rocks. This is river-action on a great and grand scale, it is true; but nevertheless it leads us backwards, by simple enough steps and gradations, to these rills of the roadway and to the gutters by the side of the street.

One word more before you draw the blinds and shut out the dismal prospect and the dripping rain. All is not waste in this action of running water. The material torn from the land is not lost to the world; it is only changed in its form and uses. Deposited in lakes and seas by the rivers, it will form the matter from which new rocks will be constructed. Nay, even to-day many a river filling up its lake is a land-maker, just as you see that drain yonder has become choked with the débris of the rills. The Mississippi has, for centuries, been making new land at its delta out of the débris of the old. To-morrow, you may see how the water-borne material has been deposited at the drain-mouth in the road, as it is being laid down everywhere in the world's history by the rivers that thieve and steal from the land with one hand, and give back their spoil with the other. Such are the lessons which are taught us by a rainy day. ANDREW WILSON.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

T G (Ware).—Quite right, but spare the slain.

M A S (The Hague).—We explained that the Knight printed on White's K 3rd ought to have been Black, with this correction the problem is correct.

F N Braund.—Most acceptable, thanks.

C Adamson (City Club).—Thanks for the information. Always glad to hear from you.

W H E (Boarp, Sweden).—Your problem is quite unintelligible to us. Bishops do not move like Rooks, nor unite as Queens.

E J Winter Wood.—Much obliged. It shall duly appear if correct.

Peterhouse and Others.—We are in communication with the author on the subject.

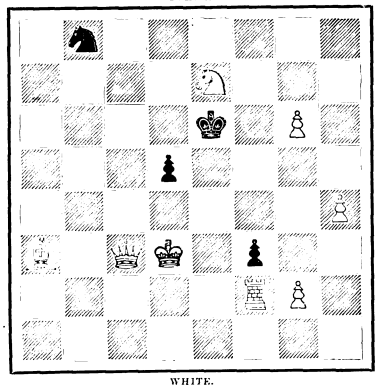
J G Hanbin, E F A, and Others.—Q to Q sq will not solve No. 2325; P to K 3rd being a good defence.

Hereward.—Marked for immediate insertion.

E Bohnstedt (Bonn).—Thanks for problem; who is the author?

Correct Solutions of Problem No. 2320 received from: G B Hewett (Middle Colaba); of No. 2322 from E Bohnstedt; of No. 2323 from E Bohnstedt, W H Reed (Liverpool), Shuffertin, P C (The Hague), Jacob Sage, and Thomas Chown; of No. 2324 from John G Grant, H S B (Ben Rhydding), R Elliott, E Bohnstedt, J Bryden, W H Reed, M A S (The Hague), Hereward, Dr Gustav Weltz (Heidelberg), Ruby Rook, Quotidiane (Ben Rhydding), P C (The Hague), W P Welch, Bernard Reynolds, H C Sessions (Furnival's Inn), and J King.

Correct Solutions of Problem No. 2325 received from Ruby Rook, Howard A Dawn, E Bohnstedt, W H Reed, John G Grant, Dr F St, E Phillips, E Casella (Paris), Jupiter Junior, H S B (Ben Rhydding), A Newman, Bernard Reynolds, Rev Winfield Cooper, Alpha, W R Hamblin, T Roberts, J King, R Worters (Canterbury), F C Cook (Carlisle), Dane John, J Thorn, R H Brooks, Shuffertin, Lt.-Col Loraine, J Hepworth Shaw, A H Mole, C R P, E Louden, W Von Bevertmoth, J Bryden, Peterhouse, R F N Banks, Mrs Kelly, James Sage, Columbus, J Goskirk, Alfred Aldridge, W R Railton, Wilson, Grimsargh-Sandis, E Field (Sunbridge), J D Tucker (Leeds), J Hall, J Dixon (Colchester), Nugel, W H Hayton, T Chown, J Ross (Whitley), Hereward, F G Tucker (Pembroke), T G (Ware), E G Boys, Martin F, Percy Ewen, E Loens, W Hillier, G J Veale, and J Ryder.



Solution of Problem No. 2323.

WHITE.	BLACK.
1. K to R 4th	P to B 5th
2. P to Q 4th (ch)	K moves
3. Q or B Mates.	

If Black play 1. K to Q 3rd, then 2. Q to Q 4th (ch); if 1. Kt to Q Kt 7th, then 2. P to Q 4th (ch); and if 1. any other, then 2. Q to K B 4th (ch), &c.

PROBLEM No. 2327.
By J. Paul Taylor.

BLACK.

WHITE.

White to play, and mate in two moves.

Mr. Blackburne, in continuation of his tour, went through the usual programme at the Midland Institute, Birmingham, on the evenings of Oct. 23, 24, and 25. On the first night he played seventeen concurrent games against an exceedingly strong team of local players, and won thirteen, three of the remainder being lost, and the other drawn. The blindfold match was against eight picked men, in which he scored four wins against one defeat and three draws. On the 25th he played twelve of the St. George's, Birmingham, drawing one game, and winning all the others. Going on to Manchester, he met twenty-two members of the Athenæum Club there on Friday, Oct. 26, and obtained sixteen wins, losing with four, and drawing against two. He plays at Burton-on-Trent on Nov. 6 and 7.

The annual match between the Manchester and Liverpool clubs took place at the rooms of the former on Saturday, Oct. 27. Liverpool had everything its own way, winning 7 games, drawing 3, and losing 1; the only winner for Manchester being Mr. D. Y. Mills, lately a leading Metropolitan amateur and ex-Champion of Scotland.

The great tournament of the City of London Chess Club began on Monday, Oct. 22, and has proved highly attractive to its members. The room where the contest is held is crowded with competitors, as many as thirty boards being in play together. Amongst the winners so far are the names of Messrs. Jacobs, Vyse, and Ross; but several well-known amateurs had not taken their part in the first round at the date of the secretary's last communication.

Those who wish, for use or for pleasure, to keep a record of any game, position, or problem that may attract them, will find the "Bristol and Clifton Chess Recorder" of much assistance. It takes the form of a note-book, and is lined and figured for the games, with the useful addition of as many blank diagrams for whatever purpose they may be needed. Messrs. Taylor, Sons, and Hawkins, of the *Times and Mercury*, Bristol, are the publishers, and the price is the now fashionable sum of one shilling.

The Athenæum Chess Club, at its own rooms, beat the Ludgate-circus team by 8½ games to 6½.

For the "Chessplayers' Annual and Club Directory, 1889," the authors, Mr. and Mrs. T. B. Rowland, 9, Victoria-terrace, Chontarf, Dublin, invite the following particulars of chess clubs:—Town, club name, year established, place of meeting, time, number of members, annual subscription, laws, president, hon. secretary.

The Amethyst Chess Club commenced their second season at their rooms, Church-street, Stoke Newington, on Saturday, Oct. 27; Mr. Stevens, a prominent member of the City of London and North London Chess Clubs, was the visitor, and played simultaneously fifteen games, winning nine and losing five.

A match between the North London and London Banks Clubs was played on Oct. 30, and resulted in a victory for the former by seven games to five.

A match was played at the Plymouth Chess Club on Oct. 29 between the married and single members; and, after a close contest, resulted in a victory for the latter by 8½ games to 4½.

We have received the seventeenth annual report of the Bristol and Clifton Chess Club, from which we learn that the club has benefited by an unusually large accession of members, and much activity has been shown in bringing to a successful issue the various contests in which the club has been engaged. Mr. H. L. Leonard wins the champion cup, having defeated Mr. N. Fedden, the last year's holder. Mr. A. T. Perry takes the chief prize in the handicap, and Mr. R. Griffith the junior cup. At the annual general meeting Mr. W. Tribe was, by a large majority, elected president and, unanimously, hon. treasurer for the year. A vote of thanks was accorded to Mr. N. Fedden, the retiring president, for his services during the past two years.

A match has been arranged between Mr. Steinitz and Herr Tschigorin, the Russian champion, to be played in America early next year.

Several important football matches took place on Nov. 3. At the Rectory Field the London Scottish defeated Blackheath by three goals and a try to a try; Bradford defeated Richmond on the ground of the latter by two tries to nothing; and at Newcastle a match between the Maoris and a local team was drawn.

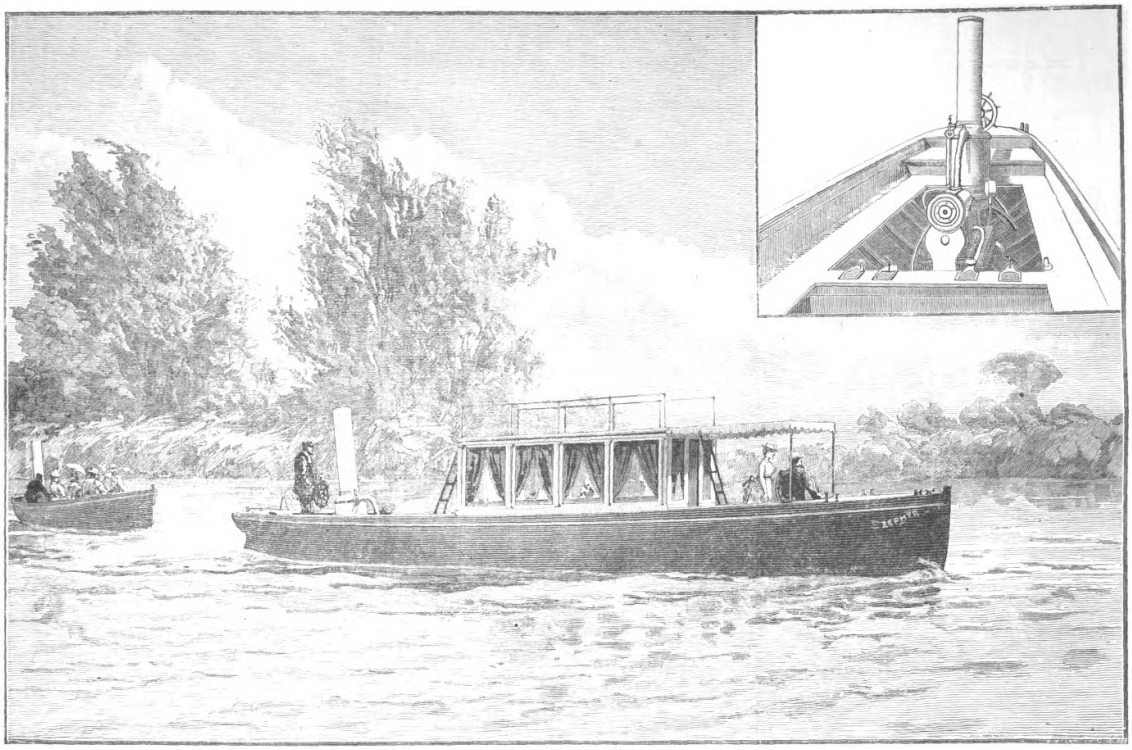
Lord Emly, Vice-Chancellor of the Royal University of Ireland, has conferred degrees on the successful candidates at the recent examinations, including Miss Letitia Walkington, M.A., as Bachelor of Laws, and Miss Margaret Johnston and Miss Mary Robertson as Masters of Arts, with honours in experimental science. Fourteen ladies took bachelor's degrees in arts, with honours, one of them gaining a scholarship.

NOVELS.

Hartas Maturin. By H. F. Lester. Three vols. (R. Bentley and Son).—It has lately been estimated, with regard to quantity, that one-third of the present average supply of novels would suffice for the actual demand; and, with regard to quality, that two-thirds of those now published are not worth even the blank paper on which the "copy" was written, much less the reams of other paper on which the hundreds of book-seller's queries are printed. Why they are written, printed, and published the reviewer has no business to inquire; but it becomes his unwelcome duty, now and then, to show why they should not be read by sensible persons, whom he would help to avoid the disgust that he has been obliged to suffer for their sake. It is not, however, against the feeble and insipid, the trivial and vulgar, or even the sensual and licentious tales, which some authors present as pictures of domestic and social life, that a warning is most needed. Dulness can be left to its own lack of attraction; while indelicacy soon betrays itself to the aversion of readers endowed with average good taste. Among other objectionable kinds of bad novels are those which cater for a morbid appetite to pry into supernatural mysteries by the lurid light of a hideous crime, glaring upward from the nether region, and raising phantoms of superstition, in some form of so-called "spiritualism," where simple moral and religious consciousness ought alone to be invoked. This unwholesome tendency is the worst fault of "Hartas Maturin"; but, in the present confused and excited state of popular opinion with regard to theological and metaphysical questions, any novelist who propounds a startling theory of the future life, different from that usually entertained by the orthodox, may reckon upon gaining a certain amount of attention. We are not called upon here to discuss that psychological speculation, or to deny the doctrine of its singular mystic prophet, a Mr. Bastian, residing sometimes in Whitechapel, sometimes in a lonely cottage on Leith Hill, near Dorking, a worker of miracles and a saintly apostle. He maintains that it is consistent with the true Christian revelation. It appears to be a modification of the very ancient creed of metempsychosis, taught by Asiatic philosophers centuries before Christ, and reported by Pythagoras and other Greek sages, but rejecting the extreme of the transmigration of human souls into souls of beasts. Anyone, learned or unlearned, who thinks himself at liberty to exercise his imagination in conceiving possible modes of existence for the individual spirit after quitting a mortal body, may, without general censure—so far as we know, even without ecclesiastical censure—accept the idea of its passing through a succession of other human lives. This is supposed to be a way of continuing its spiritual discipline here on earth, perhaps through many generations, until the undefined period of its final destination. But we do protest against using such an idea, which must be, whether true or false, of vast importance to religion and morality—and to human happiness in the sacred affections of mutual love and friendship—as a mere piece of literary machinery for the fantastic novelist in a trumpery work of fiction. Dr. Hartas Maturin has murdered his first wife; and immediately on her death, the soul of this woman has become the soul of a new-born female infant belonging to another family. This babe grows up to be a very sweet and beautiful girl of seventeen; the murderer, a clever, handsome, rich, and distinguished man of forty, is about to take this girl for his second wife. But she, being thrown into a trance, has a vision in which she seems to herself to *be* the first wife, and experiences in her dream all the circumstances and sensations that really attended the murder; and she thereby becomes a witness to the crime. What a monstrous story! What good can it do anybody to read such wild nonsense? The belief in a transmission of the spirit through successive mortal lives is rendered utterly intolerable by adding to it the capacity, in any mental phase, of recollecting the outward experiences of another former life; and the imaginary exercise of that faculty would open the way to impostures and delusions fatal to the peace of society. Its supposition is even more pernicious than the contemptible tricks of the spirit-mediums and the infatuated credulity of their dupes; for the rapping and writing communications to these from the disembodied spirits do not meddle so much with past affairs. The author of "Hartas Maturin" can have had no reprehensible intention; and we will only point out the inconsiderateness, not to say the impropriety, of employing this notion to concoct an idle romance. Other faults of the tale are excusable as failures of conception or of execution. The herd of third-rate novelists, in their imitative run after each other on the same notable incident, resemble a flock of sheep jumping the same way over a ditch or stile. Ever so many of them have lately presented to us, with slight variations, the wicked scientific member of the medical profession, a vivisectionist of course, who poisons several of his family and friends. Mr. Grant Allen took his turn, the other day, in this just and discreet line of fiction; and a pretty mess he made of it, not doing much harm, we hope, to the funds of the Middlesex Hospital, or to University College. As for Dr. Maturin, if any discerning reader should spend time on the perusal of his nefarious career, it will be apparent that all the actions related of him, as a man of consummate ability and remorseless selfishness, are precisely the things he would not have done. If he wanted to be elected M.P. for a metropolitan district, and to spend £5000 in procuring his election, there are many lawful ways of buying local influence far more efficaciously than by a donation of that sum towards the purchase of a public park. If he wanted £5000 for any purpose, being the husband of a lady with £100,000, of which fortune he had the reversion, he could have raised it with no great difficulty. His wife being greatly admired in society, and he being esteemed an admirable husband, while their beautiful house was frequented by the leading families in the borough for which he was candidate, it could not serve his ambition to put her to death. As she was fond and proud of him, and he did not wish to marry any other woman till seventeen years afterwards, one does not see the motive he had for killing her, by which he incurred the direst suspicions on the part of her uncle and of her most intimate lady friend. He was living in affluence on the interest of her fortune, and did not want to spend the principal. After succeeding in his Parliamentary ambition, and gaining high political office, he remains a cheerless widower till he is captivated by the charms of a penniless young girl—not what might be expected of Hartas Maturin! Finally, when Netta Vane, having preternaturally remembered, by the mystic effect of "reincarnation," how cruelly her predecessor was murdered with a suffocating gas, refuses to become the second Mrs. Maturin, this atrocious, cold-blooded egotist behaves like a raging madman. Having walked all night from London to Dorking, for the purpose of shooting the Prophet Bastian, he goes to sleep in the cottage, which catches fire, and he is burnt to death. So much for Hartas Maturin, the most unreal creation of a rather clumsy, but very audacious writer of fiction. There are, however, descriptive passages which merit a word of praise; the scenery around Leith Hill is vividly and truthfully pictured; and the sojourn of the Vane family in the Greek island of Mytilene is an agreeable idyll, with strong local colouring.

THE NEW LORD MAYOR AND SHERIFFS.

The new Lord Mayor of London, Mr. Alderman Whitehead, of Highfield House, Catford Bridge, Kent, was born in 1834, at Appleby, Westmoreland. He was educated at the Appleby Grammar School. Early in life he entered into the Bradford trade, and came to London in 1860. Having retired from business, he was elected in 1882 Alderman for the Ward of Cheap, and in 1884-5 served the office of Sheriff of London and Middlesex. He has been chairman of the visiting Justices of Holloway Prison, and is one of the visitors of the City of London Asylum, and on the committee of Christ's Hospital and Emmanuel Schools, also of St. Bartholomew's, Bethlehem, and other hospitals. He is a governor of Queen Anne's Bounty, and a past-master of the Fanmakers' Company; one of the Deputy-Lieutenants for the City of London, a Justice of the Peace for Kent and Westmoreland, and a Deputy-Lieutenant of the county. He is a Knight Commander of the Servian Order of Takovo, and a Knight Officer of the Belgian Order of Leopold. He is on the board of management of the Commercial Travellers' Schools, a trustee of the Rowland Hill Benevolent Fund for Aged and Distressed Post-Office Servants, and a member of the council and committee of distribution of the Hospital Sunday Fund. He is a member of the Devonshire and City Liberal Clubs, being on the committee and political council of the latter. In 1880 he was unanimously invited by his party to come forward for West Kent, but declined at that time to stand. In 1885, and again in 1886, he was induced to contest the northern division of Westmoreland, but met with defeat at the hands of the Hon. William Lowther. He is an extensive traveller, having visited most countries of Europe, the United States, Australia, and New Zealand. In 1860 he married Mercy Matilda, fourth daughter of the late Mr. Thomas Hinds, of Bank House, St. Neots. Their family consists of four sons and two daughters.



Mr. Alderman and Sheriff Gray was born at Stockton-on-Tees in 1826. His father was then head-master of the Grammar School of that town. When the son was but six years of age his parents came to London, and he was educated at the Royal Asylum of St. Anne's Society. On leaving school, he entered the office of a colonial broker in Mincing-lane. Mr. Gray has been successful in business, and is now senior partner in the firm of Messrs. Anderson, Fairley, and Gray. In 1881 he was elected to the Court of Common Council for Tower Ward, and two years later he became an Alderman. He is a member of the following committees: Epping Forest, Law and City Courts, and City School; also a governor of the Royal Hospitals. He is a member of the General Produce Brokers' Association, the committee of Mincing-lane Benevolent Fund, and the committee for the Reformation of Boys on board the Cornwall and the Tower Ward Schools, and a director of the London and Lancashire Fire Insurance Company.

Mr. Sheriff Newton, who was born in the year 1849, at Hull, began his commercial career at Burton-on-Trent. Later, he entered into partnership with his brother, the late Captain Newton, whose business of shipowner was then extended to London. Mr. Newton is engaged in other commercial enterprises, being proprietor of the business of H. Love and Co., Borough. He is also a director of two or three financial companies.

THE "ZEPHYR" SYSTEM OF PROPULSION FOR LAUNCHES.

At the last meeting of the British Association, the President, Sir Frederick Bramwell, drew attention to the probability of a great change in obtaining motive power. He referred to a new method of propulsion introduced by Messrs. Yarrow and Co., of Poplar, in which a volatile spirit instead of water is used for obtaining an expansive vapour. Up to the present time, Messrs. Yarrow and Co. have only adapted the plan to steam-launches. In these it has proved a very marked success, so that for small powers it may take the place of steam. The system may here be briefly described. The whole of the machinery is placed at the stern; it consists of an engine of very simple and special construction and a generator. This generator, which produces the spirit vapour, is placed close to the engine, and is very compact and light. It comprises a coil of copper pipe, surrounded by a casing, within which the spirit is made to circulate continuously; in its passage it is converted, by means of a relatively small amount of heat, into vapour, which passes to the motor and drives it, just as steam drives an ordinary engine. This motor is connected to a shaft and a screw, as usual, which propels the boat. The heat is obtained from a flame produced from either spirit or ordinary petroleum. The engine is started by simply making a few strokes with a pump and applying a lighted match to the burner, and in three minutes the vaporised spirit in the coil shows a pressure of from 60 lb. to 70 lb. on the square inch, and then the boat is ready to get under weigh at full speed. The spirit, after having passed through

The Engine and Generator of Spirit-Vapour.

LAUNCH PROPELLED ON THE "ZEPHYR" SYSTEM.—BUILT BY MESSRS. YARROW AND CO., POPLAR.

the engine and done its work, is condensed, and issues forth in a liquid state into a tank placed in the bow. It is then pumped back into the generator, re-evaporated, and again condensed; the same process being carried on continuously. Consequently, there is absolutely no waste, the same spirit being used over and over again. After the boat is started, the entire machinery is automatic, requiring no attention whatever, nor any skilled engineer to look after it, so that one man, if the steering-wheel is placed near the machinery, can take entire management of the boat with perfect convenience to himself. A small handle is fitted, by which the engines can be started, stopped, and reversed. As will be seen from our Illustration, owing to the machinery being placed quite aft, it leaves the entire central portion of the boat available for passenger accommodation, which position in an ordinary steam-launch is occupied by the machinery. The reason why the engine and generator can be placed at the stern is on account of their small weight; and as evidence of the lightness of the whole arrangement, it may be stated that a launch 30 ft. in length weighs only a ton; and one 21 ft. long, 10 cwt., which is about half the weight of a steam-launch of the same size and power. We would add that the whole arrangement is free from dirt or smoke, no coal being taken on board for the furnace.

ART MAGAZINES.

The *Magazine of Art* for November opens with a paper by Mr. W. Cosmo Monkhouse on the work of Mr. Alfred Gilbert, A.R.A., one of the pioneers of the new school of English sculpture, influenced much by Donatello and other Florentine sculptors of the fifteenth and sixteenth centuries. Mr. Frith, R.A., contributes another of his tersely expressed protests against the artistic fads of the day, and inveighs with renewed vigour against his *bête-noir*, impressionism, in "Realism versus Sloppiness." Mrs. Pennell, in her paper on "Wells and its Cathedral," with its charming illustrations by C. E. Mallons and Joseph Pennell, cannot fail to interest her readers in the quaint historic old town she describes so picturesquely. Mr. William M. Rossetti has written a description of the various sketches and portraits of his celebrated brother, Dante Gabriel Rossetti, now extant, some of which are reproduced for this article.

The opening paper in the *Art Journal* for the current month is one continued from the October number on "A Modern Private Collection"—that, namely, of Mr. Humphrey Roberts, of Kensington; among the examples reproduced are a drawing by Mr. A. W. Hunt, Mr. Albert Moore's "Kingcups," and Mr. Alma Tadema's "On the Stairs." Mr. Edwards Roberts' experiences in "The American Wonderland," as he calls the marvellous Yellowstone Park district, are also continued from the last issue. Mr. Marcus B. Huish contributes more "Notes on Japan and its Art Wares"; and Mr. Joseph Hatton another paper on "Provincial Clubs," this month of Manchester and Leeds. One of the most interesting articles is that by Mr. Claude Phillips on the great Alsatian painter, Jean Jacques Henner.

The *Art Annual*, or yearly extra number of the *Art Journal*, for 1888 is some account of the life and work of Mr. J. C. Hook, R.A., by Mr. F. G. Stephens. The eminent marine-painter has already been several times the subject of biography, but such is the popularity of the artist that any facts relative to his life and works cannot fail to be of interest. Although now best known as a painter of sea and rocks and boats, Mr. Hook began his professional career as a portrait-painter, and executed many figure subjects exhibited in the Royal Academy and elsewhere, of which several are reproduced in the *Art Journal*. One of the most beautiful of the pictures reproduced is "The Mirror of the Seamew; or, The Gulls' Toilet," in the possession of Sir John Millais, the artist's intimate friend, and is purely a picture of sea and rocks. This annual will be welcomed gladly by all who have been carried out of dusty London to fresh sea-breezes by Mr. Hook's wonderful seascapes on the walls of the Academy.

The fourth monthly publication, by Messrs. Sampson Low and Co., of *Artistic Japan*, a journal conducted by Mr. S. Bing, with the assistance of many English and French connoisseurs, the English edition being in charge of Mr. Marcus B. Huish, has an elegant and attractive appearance. It is technical, descriptive, and illustrative, rather than historical, the leading article being a treatise, by L. Falize, on the Japanese methods of decorating bronze and other metal with coloured enamel. The next writer will be M. Edmond de Goncourt. There are eight separate plates, on thick paper, representing curious and beautiful ornamental designs of native art.

The fourth number of *The Salon*, a monthly review of "art, fashion, music, and the drama," contains several engravings of pictures, "The Trial of Constance of Beverley," "The Morning Hymn at an Orphanage," and views at Chatsworth. There is much brief and summary comment on topics of the day belonging to these departments, a short tale, "The Comedian's Tragedy," and a review of the memoirs of Mr. Sims Reeves.

Lady De Keyser, the Lady Mayoress, has been presented with a diamond bracelet and earrings by the Court of Common Council, in remembrance of her courtesy and kindness at the Mansion House during the mayoralty of her husband.

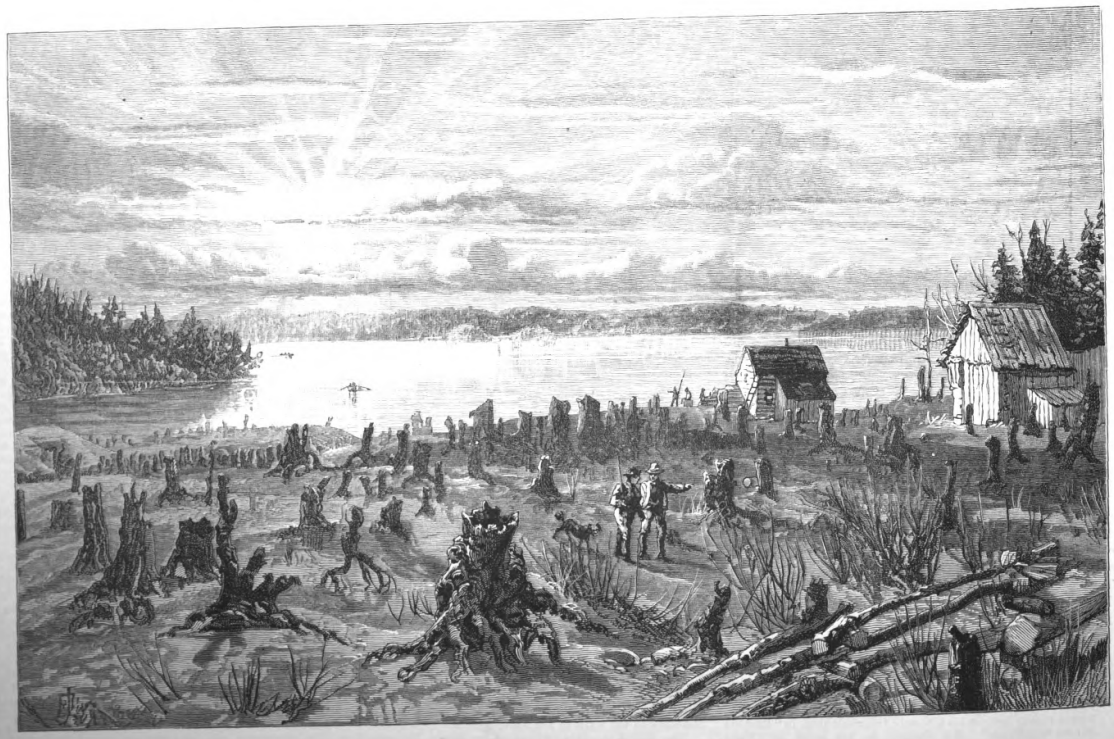
A ballad or operatic-tableau concert will be given each Thursday during November at the Royal Victoria Hall, Waterloo Bridge-road; a science-lecture each Tuesday; and variety entertainments on Monday, Wednesday, and Saturday.

The Earl of Yarborough's Hounds commenced the hunting season on Nov. 1, when the meet was at Brocklesby. The Master gave the customary hunt breakfast, which was largely attended.—Colonel J. T. North, of Eltham, has taken over the duties of Master of the Mid-Kent Staghounds. On Oct. 31, Colonel North entertained the hunt at breakfast at Farningham, and a field of 500 horsemen took part in the opening run.

The fourth annual exhibition of ancient art needlework, curious old brocades, and laces is open at the Art Galleries of Howell and James (Limited), Regent-street. The exhibition is interesting, not only on account of the rarity of such antique specimens of weaving and embroidery as have been brought together in this collection, but also as showing the beauty and thoroughness of the work done in ancient Persia, India, and Turkey.

MR. ALDERMAN AND SHERIFF GRAY.

MR. ALDERMAN WHITEHEAD,
THE NEW LORD MAYOR OF LONDON.



MR. SHERIFF NEWTON.

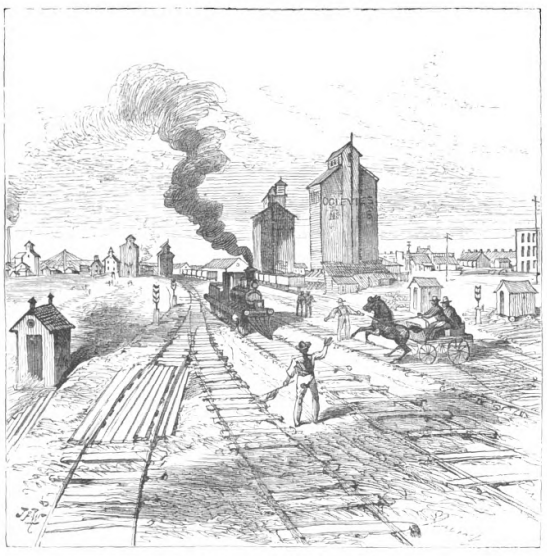
CALGARY, AT THE FOOT OF THE ROCKY MOUNTAINS, 2262 MILES WEST OF MONTREAL.

THE CANADIAN PACIFIC RAILWAY: SKETCHES BY OUR SPECIAL ARTIST, MR. MELTON PRIOR.

THE CANADIAN PACIFIC RAILWAY.



We present this week, as promised, the first of a series of Sketches made by our Special Artist, Mr. Melton Prior, to furnish Illustrations of a grand and important work accomplished by public enterprise in the greatest of the British Colonies, an achievement that is destined to have political and commercial results, as we confidently hope, most beneficial to the whole of the British Empire, and by which not only the national possession of a very large portion of North America is rendered more secure, but our intercourse with the farthest countries of Asia, with Japan and China and the East Indian Archipelago, and possibly hereafter with Australasia, obtains a new route. "Across Two Oceans," with the intervening breadth of the American Continent entirely traversed by railways over lands under British sovereignty in the vast territories of the Canadian Dominion. It is henceforth impossible—even if, by a hostile combination of European Powers which is not likely ever to arise in force superior to that of our own navy in the Mediterranean, the Suez Canal were to be closed against us, and if the safety of the Cape route were also compromised—it has become impossible for all the Powers of Europe to deprive England of direct access to the East, since Canada has made for us a road through the Far West to the Far East, by which a belt of steam-traffic, on sea and land, under the British flag, binds together the Old World and the New. In our own temperate latitudes, from London to Montreal, from Montreal to Vancouver, from Vancouver to the nearest islands of Eastern Asia, crossing 220 deg. of longitude, this region of Imperial dominion and maritime supremacy is given to be held by Englishmen; and it will be our own fault, whatever may be the disposition of any foreign nations, if we do not keep the Empire and the facilities of trade that England enjoys at the present time.

This is the grand consideration, from a British point of view, in estimating the Imperial value of the Canadian Pacific Railway; but with regard also to the spread and growth of that magnificent colony, until a late period not one but several colonies and remote settlements, now joined by a Federal Government with institutions as free as those of the United States Republic, the line of railway is actually proving what it was designed to be—the mighty instrument of agricultural, commercial, and industrial enterprise. It is rapidly covering "the Great Lone Land," the ancient hunting and trapping-ground of Indians and of the Hudson's Bay Company's fur trade, the "Red River" and the thousand miles of prairie, the Rocky Mountains, and the rugged highlands and forests of British Columbia, and the creeks and inlets of its Pacific coast, with a robust and energetic civilisation. For Canada is already so much of a nation, with her five millions of people of vigorous European race, accustomed to manage their own affairs, that she does not wait for help from England, for labour or capital—though she will pay well for both—and she certainly does not want Imperial guidance, counsel, or credit, in this huge task of filling up the empty places of half a continent with farms and villages and towns, abodes of thriving industry and comfortable homes. The Canadian nation, we expect, will be twenty or thirty millions before Old England is half a century older; and every Colonist feels sure of the capabilities of that vast country, whose geography is on such a scale that the British Islands might be dropped into one of its lakes. We take no account, indeed, of the greater part, about two-thirds, of the territorial extent of "British America," which is, on the whole, nearly as large as all Europe, and as large as the United States; but, setting aside the northern regions, Canada possesses more than a million square miles of territory favoured with a climate fit for the habitation of our countrymen and for agricultural industry. The soil and the climate are better as you go west, and are better than in many parts of the United States lying some degrees farther to the south. In mineral wealth, including coal as well as useful and precious metals, Canada is abundantly endowed, while her forests and her fisheries are most valuable possessions; her manufactures and her shipping exceed those of any country with the same population. There is ample justification, then, for the estimate that we form of the Canadian future; to which reference is here made only as the prospect, from a colonial point of view, attending the completion of the Canadian Pacific Railway. It is a line made by the Canadians for their own benefit, not expressly for the advantage of British Imperial policy, strategy, or commerce; and it is quite unlike the line sometimes talked of from North to South Australia, for it runs through fertile plains, and through a mountainous region which is rich in valuable minerals, and near great navigable rivers and lakes, which cannot fail to support a great traffic and a large population.

There are about 13,000 miles of railway in Canada at the present time. Every place of any importance has its one or more railway-stations. The three principal systems are the Canadian Pacific (4319 miles), Grand Trunk (2600 miles), and the Intercolonial (1190 miles). The remainder of the mileage is made up of smaller lines in the various provinces. The Dominion and Local Governments and municipalities have contributed, in one way or another, a fourth part of the cost. The number of passengers carried in 1887 was 10,698,638, and the freight is put down as 16,356,335 tons. There is no country in the world better served by railways than Canada.

The Canadian Pacific Railway is now in operation to the Pacific Ocean, and the rapidity and energy displayed in its construction deserve special mention. Until 1881, the line was being built by the Government; but in that year the work was undertaken by the Canadian Pacific Railway Company, the contract requiring its completion in ten years. It was, however, finished in December, 1885—nearly six years before the stipulated time; and it is one of the greatest engineering achievements of modern times. It is the shortest of the three great trans-continental lines, the distance from Montreal to Vancouver being 600 miles less than from New York to San Francisco. By the Canadian Pacific Railway, too, New York, Boston, and Portland are brought within from 300 to 500 miles nearer the Pacific coast by rail than formerly; and the distance from Liverpool to Japan and China, viâ the Canadian line, is shortened by about 1000 miles. The construction of this railway and the Intercolonial Railway has cost Canada about £24,000,000, equal to an annual burden of nearly £1,000,000, and about 18,000,000 acres of land. The Canadian Confederation may be considered as having been consolidated by means of this railway. Each province has now communication with the others and with the seaboard, and in consequence a great impetus will be given to trade and commerce. Eastern Canada has long had railway facilities, but Manitoba, the North-West, and particularly British Columbia, have until recently remained more or less isolated, and therefore practically undeveloped. The railway, however, now brings this state of things to an end. Besides, it has opened up a large tract of fertile land in Manitoba and the North-West, unencumbered with timber, ready for the plough, and considered to be the largest wheat-field in the world. This tract of land is at least 900 miles long and 300 miles wide, or an area of over 200,000,000 acres, all more or less suitable for agricultural purposes, for the raising of wheat and other crops, and the breeding of cattle; and its population is rapidly growing. Without the railway the country must have remained an "illimitable wilderness." With it there is afforded the prospect of bright and happy homes for a large number of inhabitants, increased markets for local and British products, and a new era of prosperity for the Dominion. Branch lines have already been made in different parts of the North-West, and more are projected. Charters have been granted for a railway between Manitoba and Hudson's Bay, in anticipation of the shorter route through the Hudson Straits to the Atlantic Ocean being available for a sufficient time each year for commercial purposes. Not only have the people of Manitoba connection with the Pacific Ocean and with Eastern Canada through British territory, and access to the great lakes, but there are also two lines running to the United States boundary, joining there the American system of railways. Coal has been discovered in large quantities along the line of the railway; mines are being worked, coal is now sold at all the railway stations at a reasonable price, and dependence has no longer to be placed upon the supply from the United States.

Montreal, a city of 160,000 people, at the head of the navigation of the St. Lawrence, is practically an Atlantic Ocean port for large ships, though nearly six hundred miles from the open sea; though in winter the Lower St. Lawrence is closed by ice, Montreal is always accessible by railway either from Halifax, in Nova Scotia, by the Intercolonial line, or from Portland, Boston, or New York. While the Canadian Pacific Railway Company has a line to Quebec and others into

BRANDON, MANITOBA, WITH GRAIN ELEVATORS.

the maritime provinces, the eastern terminus of this great railway is at present at Montreal. Here are located its extensive shops for locomotive and car building and repairing. Here is its grain elevator of 600,000 bushels capacity, which the export trade over its lines had soon outgrown, so that a second and third of equal size and capacity have been required. The admirable terminal facilities are so arranged that the steamer or ship can take in grain and move other cargo at the same time, and the elevator charges are reduced to but one cent a bushel. At Montreal are the grand passenger station and the general offices for the company; while at Lachine, above the city, the railway company have constructed a second great bridge across the St. Lawrence. This bridge, to connect the Canadian Pacific lines on both sides of the river, is about 3500 ft. long, a single-tracked truss bridge, built on seventeen stone piers and abutments, and elevated 60 ft. above high water.

By the Canadian Pacific Railway we will commence the journey up the great tributary valley of the Ottawa from Montreal to the city of Ottawa, the Dominion capital, and beyond to the west. From Montreal to Vancouver is a distance of 2906 miles. Our Special Artist writes as follows:—

"At Montreal I called at the offices of the Canadian Pacific Railway Company, and was introduced to the manager, Mr. Van Horne, who at once became interested in the object of my visit—namely, to obtain passes and all information I could get for my sketching tour across from the Atlantic to the Pacific, by the most northern railway-line on the American Continent. I need hardly say that Mr. Van Horne did everything in his power to assist me; and as he is the ruling authority of this vast railway system, it was easily accomplished. I said good-bye to him with hearty thanks, being provided with passes and letters of introduction to all the principal officers of the company I was likely to meet on the road.

"Having engaged my berth in the sleeping-car, and seen my luggage duly labelled, I started on one of the finest trips across a vast continent that any traveller could desire.

"The first station of any importance we stopped at was North Bay, where we arrived at half-past nine in the morning. North Bay is a bustling little town on the romantic shores of Lake Nipissing. It has a population of 1600 people, with four churches and eight hotels, the only really good one being the Pacific Hotel, under the management of Mr. Mackie, where every politeness is shown to you and arrangements made for shooting or fishing-parties. Five years ago the spot on which the town stands was a virgin forest, and it was only by the Canadian Pacific Railway coming through and putting up a few sheds for the navvies, with a store to supply the workmen, that this place was started, which soon developed into a small town. A speculative firm of Americans, Messrs. J. and W. Murray, purchased the surrounding land four years ago, and the town land almost entirely belongs to them. Buildings are still being put up and roads are being made, and there is no doubt that from its peculiar position on the main line, North Bay will, in a very short time, become one of the most flourishing and important of these towns.

"The Nipissing district is said to be one of the very finest for sport. There is moose-hunting—those animals weighing from 500 lb. to 2000 lb.; there are red deer, black bear, hares, partridges, wild ducks, and wild geese. The best fishing is to be had about four and a half miles out, at a charming spot known as Trout Lake. Here, in the season, which commences on June 1, sportsmen of the rod or line are to be seen in parties—some from England, as well as from the United States and Canada. Here the speckled trout is to be caught, weighing from half a pound to two pounds and a half; and salmon trout from 10 lb. to 30 lb. A lady last season caught a magnificent specimen weighing 35 lb. It is quite a sportsman's headquarters at Trout Lake. At a house owned by two brothers named Jessop, the elder, Dick Jessop, supplies boats, dogs, guides, fishing-tackle, tents, cooking utensils, and all necessary equipment for shooting or fishing; and for a party of five or six, will do the whole thing for four dollars a day, and labour, the party providing their own provisions and extra luxuries. There is a road cut through the forest to Trout Lake; and the view on arrival is charming beyond description. I think a row on the lake to Four Mile Bay is alone worth the journey. Many settlers on the shore are to be seen clearing the ground and building houses. I am bound to own I was delighted with my visit to Mr. Jessop's fishing resort, and I made two Sketches of the spot, also a small view of the principal street in the town of North Bay. Unfortunately, on the return drive, the rain came down unmercifully, which put an end to my sketching. A Canadian buck-board carriage is not one of the most comfortable at any time, but in rain is simply horrible. It is a framework with four wheels and a board fixed across for you to sit on, which cannot be very luxurious, though it makes easy running for the horse; and I was not sorry when the hotel came in sight, and, later on, when I heard the sound of the train that was to take me on to Sudbury, another very young town on the Canadian Pacific Railroad."

Sudbury Junction, where the branch line commences which passes by the Denison gold-mines to Algoma, Lake Huron, opposite Manitoulin Island, and to the Sault Ste. Marie, the rapids by which Lake Superior discharges its surplus waters into Lake Huron and Lake Michigan, was mentioned in our last. The main line of railway proceeds westward, reaching the north shore of Lake Superior at Heron Bay, and keeping along the shore to Port Arthur, in Thunder Bay, where it plunges into the region of forests, rocks, rivers, and small lakes, between Lake Superior and Manitoba; the region which was traversed with much toil, chiefly in canoes, by the Red River Military Expedition of 1870, under command of the present Lord Wolseley. The city of Winnipeg, on the site of the old "Red River Settlement," to the south of Lake Winnipeg, 1423 miles from Montreal, is reached on the morning of the third day; this city is the flourishing capital of Manitoba, a province containing already some 120,000 people, with the best land for agricultural occupation. In this province, far on the line, is the new town of Brandon, with a 4500 inhabitants, a great wheat-market for the Manitoba farmers, of which our Special Artist supplies a View, with another Sketch of the warehouse for corn, and its shaft called a "grain elevator," through which the corn is pumped up, like a liquid, from the waggons below to the topmost floor—the contrivance now much in use at the centres of the American corn trade. Beyond Manitoba, the great prairie provinces of Assineboia and Alberta, respectively occupying the region of the South Saskatchewan and that nearer to the Rocky Mountains, with the Bow River and other large streams, extend more than a thousand miles; and to the north of Alberta is the territory of Athabasca, hitherto unoccupied, but which is described as equally promising, the climate being really less severe than that of Eastern Canada. The places along the line, Qu'Appelle, Regina, Moosejaw, Medicine Hat, and Calgary, which are small towns of rising importance—Regina is the political capital of its territory—need not detain us at present, except to stop at Calgary, a very pretty little town, situated in a broad valley, between the Bow and Elbow rivers, overlooked by the white peaks of the Rocky Mountains. To this place, and to Banff, a little farther on, we shall be called again by the next batch of our Special Artist's Sketches.

Lord Northbrook has built a new church on his estate at Stratton, in memory of his mother.

A new portable vapour bath, known as Mezzetti's "Victoria" Bath, is now in use in many of the London hospitals. By means of a spirit lamp, a kettle of water is rapidly heated, and when the water is boiling the patient can take a seat inside the frame and waterproof cover and prepare for the enjoyment of a most delicious vapour bath. The Victoria Bath may be obtained from all the principal ironmongers, as well as from the sole manufacturers, Messrs. Maxime and Co., 150, Old-street, London, E.C.

Mr. G. E. Lewis, of 32 and 33, Lower Loveday-street, Birmingham, has shown us his new, light, treble-grip gun, which he has named "The Ariel." Mr. Lewis is known as the maker of "The Gun of the *Period*," which has taken honours wherever shown. The gun we saw, though a 12-bore, weighed only 5¾ lb., and this lightness is obtained without any sacrifice of strength; in fact, though the action is shorter and narrower than an ordinary 20-bore gun it is absolutely stronger, and this strength is obtained by the use of a new pattern of bar or front-action locks, which Mr. Lewis is using. Sportsmen will understand this when we say that the main-springs and all the internal work of the lock are behind the hammer, only the lock-plate itself being let into the body, which leaves the latter much stronger than usual. This gun, in its finished state, has passed through the ordeal of proof, the charge of which is more than double that used in a 12-bore cartridge. To gentlemen no longer able or willing to carry a 7 or 7½ lb. gun, or for hot climates, where weight tells, these light guns are indeed a boon. The maker guarantees it as being equal to all the charges of nitro compounds—i.e., Schultze E.C. and J.B., that may be used, as well as with the ordinary black powder.

CASSELL and COMPANY'S ANNOUNCEMENTS.

9. The Seamy Side.
10. The Case of Mr. Lucraft.
11. 'Twas in Trafalgar's Bay.
12. The Ten Years' Tenant.

London: CHATTO and WINDUS, Piccadilly, W.

INSTITUTE OF PAINTERS IN OIL-COLOURS.

The Council must doubly be congratulated on the present exhibition. The number of the pictures is considerably reduced, and the quality proportionately raised. English *genre* painting is liable to certain definite and apparently ineradicable faults—the chief being a persistent effort to tell a large story in a small canvas; but English landscape art is every year adapting itself more and more successfully to the cabinet or easel pictures which attract the majority of the purchasing public.

On the present occasion we shall limit our remarks to the contents of the Central Gallery; but it is fair to say that this preference is without any disparagement to the other rooms, in which, perhaps, the most distinctive works are to be found. Beginning with the President's single work, "Maud and May" (250), the daughters of Mr. Meredith Crosse, we fear that Sir J. D. Linton's admirers will be somewhat hardly pressed to find satisfaction in this arrangement in red. The two young girls are represented as musicians—the one in profile at the piano, and the other in full face with her violin in her lap. In the modelling of both figures Sir J. Linton seems to have been equally unfortunate, and the result, if accepted seriously, might be regarded as highly prejudicial to the girls' success in life. Of course, in every technical detail—in the stuff of the dresses, the gilt leather of the screen, the rich colours of the tapestry—Sir J. D. Linton shows his unrivalled skill and power. There is far more poetry and imagination in Mr. F. D. Millet's "Tender Chord" (299), although the girl who stands at the side of the muslin-curtained window is not in herself a bit more beautiful than the President's sitters. But Mr. Millet has made a charming picture of the girl, the notes of whose guitar have awakened in her mind the memory of some past happiness. Another clever and sympathetic study is Mr. C. E. Plimpton's "Despondent" (335), a girl with her violin lying almost unheeded in her lap. The face is full of feeling as well of expression, and the whole picture is pitched in harmony. Of the other single figures which attract notice are Mr. R. Arnold's "Norah" (217), Mr. Yeend King's "May and Marguerite" (372), Mr. George Morton's "Fortune-Teller" (375), and Mr. W. M. Wyllie's study (398) of a man in fancy dress; but it is only the two first-named whose work shows each year evidence of increasing skill, who will add to their reputation on the present occasion. Mr. Alma Tadema's study (367) of two Roman girls "at home" in the days of the Cæsars is not overcrowded with classical knowledge and effect. The red-haired girl who is reclining on a sofa listening to the budget of news brought by her dark-haired friend is charming and delightful in every respect; and there is thrown over the little scene a subdued colour and softness to which Mr. Tadema does not always treat us. The figure of the girl whose back is turned towards the spectator does not please us so much, the flesh, muscles, and drapery being too much "bunched" to be graceful. Mr. Blair Leighton's "Au Revoir" (288), a lady descending an elaborate staircase in a simple courtyard, and Mr. G. L. Seymour's "Eastern Potentate" (293), owe their attraction to their surroundings; and, in like manner, Miss Miriam J. Davis's "Hiding" is well worthy of notice on account of its delicate colouring.

The more distinctly *genre* works are, as is usual at the Institute, marked by a certain sense of humour. Mr. Fred. Roe's "Mutual Suspicion" (227) is a cleverly-painted variation, though somewhat hot in colour, of the old story of the dubious guest in the days of highwaymen; but whether the gentleman who is warming himself in the ingle-nook is thief or thief-taker is left to the spectator's fancy. Mr. Chevallier Taylor's "House of Cards" (239) is a trifle too grey in its light and too black in its shadows; whilst Mr. Stanhope Forbes spoils one's complete enjoyment of "The Fisherman's Reading-Room" (241) by the incongruity of the lighted lamp and bright day-illumined window in the background. This group of literary politicians is nevertheless admirable and full of character, though, perhaps, a trifle less strong in contrast than Mr. J. H. Lorimer's "Fisherman's Strong Cove" (272), where we have a similar scheme worked out even more boldly. In this case we are almost disposed to think that the reflected light on the bladders which hang from the roof of the fisher's cave-hut is too bright, and almost overbalances the bit of open sea and sky that one sees through the open door in the distance. In a very different key and full of bright sunshine is Mr. David Carr's "Sunday Dinner" (340). Like the two before-named works, it bears witness to the seaside experience of the artist, who has caught without exaggeration the self-importance and contentment of the little fisherboy, who is bringing home the baked dinner for the Sunday meal. The setting of the figure is, however, the best part of Mr. Carr's picture, and shows how fully he can enter into the brighter side of humble life, where toil has not brought everything to dull, faded hues. Mr. Fred. Morgan's "Tired Gleaners" (313) occupies a sort of middle place between Mr. Carr's work and that of a popular French School of Art. The more humorous phase of *genre* painting is well represented by Mr. Dendy Sadler's "Corked" (323), a questionable bottle of port wine offered by a country client to the family lawyer. The pair are seated in a pleasant garden, ready, perhaps, to enjoy the gossip of the neighbourhood, when the unpleasing thought is brought home to the visitor that it is unnecessary to prolong his stay. Mr. Frank Dadd's "Awaiting Sentence" (265) is bright in colour in spite of the awful fate impending over the youthful apple-stealer, who, apparently, is brought before his own grandfather, from whom the despoiled farmer is seeking justice. Mr. Watson Nicoll sends a good pendant in "Forbidden Fruit" (276), but here the merit is in the painting of the foliage rather than in the attitude of the marauders. Mr. J. C. Dollman's "Vols. I., II., and III." (357) represents three young ladies on a bench at various stages of an exciting novel; and indifference, interest, and excitement are cleverly depicted in the three faces. Mr. John White's little family group (360) happily recalls the lines of Cowper's "Task":—

> 'Tis pleasant through the loopholes of retreat
> To peep at such a world; to see the stir
> Of the great Babel, and not feel the crowd—
> To hear the roar she sends through all gates
> At a safe distance!

Mr. Seymour Lucas's "Original Sketch for St. Paul's" (404) is, we presume, a study for a larger picture; for, although painted with the care he gives to his best work, the subject more properly belongs to historical painting, representing, as it does, Wren and his critics discussing the plans of the cathedral.

In landscape work, the Institute is generally well provided, and this year is no exception. Mr. Alfred Parsons' "Still Waters" (319) is a charming little backwater, overhung by bright, sun-touched foliage, which stands apart from the rest of the landscape work. Scarcely less attractive, though in a wholly different style, are Mr. Fred. Cotman's "Flooded Glebe" (240), Mr. Geo. Chester's "Old Rickyard" (249), Mr. Homer Watson's "Lowland Burn" (242), and Mr. Halfwright's "Norfolk Marsh" (235), in all of which some very distinctive painting is displayed. Of almost equal merit are Mr. Herbert Snell's "Autumn" (253), Mr. Claude Hayes' "After the Floods" (261), Mr. H. C. Fox's "October Afternoon" (263), Mr. A. Heleké's "Study of Heather" (321) and "A Bright October Day" (330), both rich in colour, though the sandy background of the latter is a little too pronounced. Mr. Alfred East's "Bree Day" (346), Mr. C. H. Poingdestre's "Marble Mountains of Carrara" (356), and Mrs. Alfred Williams' "Evening after Rain" (399), all show a touch and appreciation of Nature, and give confidence in the future of English landscape painting.

The leading American etchers have at length agreed upon a step which, we trust, will lead to the removal of some international grievances, and will at the same time give to etching that place in art which it occupies in European countries. The Society of American Etchers not only proposes to hold annual exhibitions, but further to protect the works of its members by a system of stamping, analogous to the printsellers' stamp in this country; to limit the editions of each work, and thus to give guarantees alike to the artist and the purchaser. The officers elected for the ensuing year are Mr. Thomas Moran, president; Mr. C. T. Turner, secretary; and Mr. Fred Dielman, treasurer. The society has its offices at 19, East Sixteenth-street, New York City, U.S.A.

The first of Miss J. E. Harrison's course of lectures on "The Temples and Cults of Ancient Athens" was delivered, on Nov. 2, to a crowded audience, in the theatre of the South Kensington Museum. By means of views and diagrams, Miss Harrison showed the growth of the Acropolis and the building of new temples out of the materials and on the foundations of older ones. Of the original form of worship practised by the oldest inhabitants of Attica we shall probably learn very little; but, as Miss Harrison showed, the slight traces discoverable amongst the débris point to an early recognition of Cecrops as the founder of the Attic race; and his connection with Gaia, the Earth-Goddess, would seem to suggest that the Athenians were content to refer their origin no further back.

A memorial window has been placed in St. Luke's Church, Maidenhead, in memory of the late Admiral Sir A. Cooper-Key. The window contains a representation of "Christ instructing from a ship the multitude on the shore."

Lord Arthur Hill, M.P., in recognition of his efforts to secure the success of the Irish Exhibition, has been presented with a service of plate by the exhibitors.—There is to be a Winter Exhibition at Olympia. The main features are to be manufactures and industries, art galleries, a fair of all nations, promenade concerts, and a children's pantomime.

The results of the American observations of the last transit of Venus, in 1882, have been tabulated and summarised by Professor Harkness. Ten stations of observation had been established in the United States, and 1472 photographs of the transit had been taken. The mean of the results gives the parallax as 8·847 min.—that is, the mean distance of the earth from the sun is about 92,315,000 statute miles.

The medallions of the Queen on the Jubilee Memorial Clock-Tower at Weymouth were on Oct. 31 unveiled by the Mayor (Alderman John Groves), in the presence of the Earl of Ilchester (Lord Lieutenant of the county), Mr. Troyte Bullock (High Sheriff of Dorset), Colonel Hambro, M.P. for South Dorset, and a large concourse of the leading inhabitants of the town and county.

THE MANUFACTURING

GOLDSMITHS' & SILVERSMITHS' COMPANY,

Show-Rooms: 112, REGENT-STREET, LONDON, W. (Adjoining Stereoscopic Company)

Supply the Public direct at Manufacturers' Cash Prices, saving Purchasers from 25 to 50 per Cent.

HIGH-CLASS JEWELLERY. The Stock of Bracelets, Brooches, Earrings, Necklets, &c., is the largest and choicest in London, and contains designs of rare beauty and excellence not to be obtained elsewhere, an inspection of which is respectfully invited.

ORIENTAL PEARLS.—Choice strung Pearl Necklaces, in single, three, or five rows, from £10 to £6000; also an immense variety of Pearl and Gold mounted Ornaments, suitable for Bridesmaids and Bridal Presents.

PEARL and DIAMOND ORNAMENTS.—A magnificent and varied collection to select from.

BRIDAL PRESENTS.—Special attention is devoted to the production of elegant and inexpensive novelties suitable for Bridesmaids' Presents. Original designs and estimates prepared free of charge.

WEDDING PRESENTS.

COMPLIMENTARY PRESENTS.

CAUTION.—The Company regret to find that many of their Designs are being copied in a very inferior quality, charged at higher prices, and inserted in a similar form of advertisement, which is calculated to mislead the public.

They beg to notify that their only London retail address is 112, REGENT-STREET, W.

"A SUCCESSFUL BUSINESS." "We know of no enterprise of recent years which has been crowned with greater success than the Goldsmiths' and Silversmiths' Company, of 112, Regent-street, who, just seven years ago, opened their show-rooms to place the productions of their workshops direct before the public, thus saving purchasers the numerous intermediate profits which are obtained by 'middle-men' on high-class goods. Such has been the appreciation by the public that the Company have now the largest business in England, and are quite supplanting the old-fashioned houses that pride themselves upon having been established so many decades, but have utterly failed to keep pace with the times, and find it impossible to depart from their long credit system, entailing bad debts, for which cash buyers have to compensate."—Court Journal.

DIAMOND ORNAMENTS.—A magnificent assortment of Rings, Stars, Sprays, Flies, Necklaces, &c., composed of the finest White Diamonds, mounted in special and original designs, and sold direct to the public at merchants' cash prices.

SAPPHIRES from Ceylon, but with London cutting, mounted alone, or with Diamonds, in a great variety of ornaments.

NOVELTIES.—A succession of Novelties by the Company's own artists and designers is constantly being produced to anticipate the requirements of purchasers.

CASH PRICES.—The Company, conducting their business both in buying and selling for cash, are enabled to offer purchasers great advantages over the usual credit houses. All goods are marked in plain figures for cash without discount.

APPROBATION.—Selected parcels of goods forwarded to the country on approval when desired. Correspondents, not being customers, should send a London reference or deposit.

COUNTRY CUSTOMERS have, through this means, the advantage of being supplied *direct* from an immense London stock, containing all the latest novelties, and which are not obtainable in provincial towns.

COLONIAL AND FOREIGN Orders executed with the utmost care and faithfulness under the immediate supervision of a member of the Company. Where the selection is left to the firm, customers may rely upon good taste and discretion being used, and the prices being exactly the same as if a personal selection were made.

TESTIMONIALS.—The numerous recommendations with which the Goldsmiths' Company have been favoured by customers, is a pleasing testimony to the excellence and durability of their manufactures.

OLD JEWELLERY, Diamonds, and Plate taken in exchange or bought for cash.

MEDALS.—Awarded Seven Gold and Prize Medals and the Legion of Honour, a special distinction conferred on this Firm for the excellence of their manufactures.

CATALOGUE containing thousands of designs, beautifully illustrated, sent post-free to all parts of the world.

GOLDSMITHS' AND SILVERSMITHS' COMPANY, 112, REGENT-STREET. CATALOGUE POST-FREE.

COPIES OF THE ABOVE PICTURE, SUITABLE FOR FRAMING, MAY BE HAD GRATIS AND POST-FREE BY SENDING ADDRESS TO ELLIMAN, SONS, AND CO., SLOUGH, ENGLAND.

For Obituary, &c., see page 566, Wills and Bequests, see page 568, Ladies' Column, see page 570.

MUSIC.

The performances of the National Russian Opera Company at the "Jodrell" (late "Novelty") Theatre have continued to consist of repetitions of Rubinstein's opera "The Demon," the production of which on the opening night, Oct. 22, was duly noticed by us. The fine singing and acting of M. Winagradow in the title-character has been, throughout, the chief feature in the representations of the opera.

Mr. William Carter's concert at the Royal Albert Hall, in celebration of Hallowe'en (already briefly referred to), brought forward Miss Josephine Simon, a young vocalist from San Francisco, who made her first appearance here, and met with a very favourable reception. She possesses a soprano voice of very good quality, which will be heard to greater advantage when her style is more matured. Mr. Sims Reeves and other eminent vocalists contributed to the concert, which included some effective part-singing by Mr. Carter's excellent choir, some skilful violin-playing by Herr Johannes Wolff, and other items. The programme was, appropriately, chiefly of a Scotch character.

We have previously alluded to the opening of a new series of concerts of the Royal Albert Hall Choral Society (now called the "Royal Choral Society") with Mozart's "Requiem" and Rossini's "Stabat Mater," the performances of which must be further spoken of hereafter.

The competition for the "Lady Jenkinson Prize" of £5 (for the best performance of a pianoforte sonata of Beethoven) took place, at the Guildhall School of Music, on Nov. 1, when it was awarded to Kate Augusta Davies. There were twenty competitors.

Four of the new series of Saturday afternoon concerts at the Crystal Palace have now taken place. At the latest, on Nov. 3, a new "Festal" symphony, by Mr. H. Gadsby, was performed for the first time. Orchestral works by the same composer had previously been brought forward at these concerts with considerable success. That now referred to is the most important and the best of Mr. Gadsby's productions. It consists of the full complement of movements, in most of which the jubilant style appropriately prevails, the intermediate "Adagio" being chiefly characterised by melodious grace. The working out of the details of each movement is very skilful, and the instrumentation full of effective variety. The symphony was so favourably received that it will, doubtless, soon be heard again. The instrumental programme of the day included some graceful dances by Schubert (for stringed instruments), ballet music by M. Saint-Saëns, and Mdlle. Janotha's fine pianoforte playing in Mendelssohn's first concerto, and a "scherzo" by Chopin. The vocalist was Mdlle. Douilly, who was favourably received on her first appearance here. The violin obbligato to one of her songs was well played by Miss M. Douglas. The Promenade Concerts given on Thursday and Saturday evenings at the Crystal Palace have been rendered so attractive as to prove widely welcome to the large neighbouring public.

London musical activity will receive an important and powerful impulse on Nov. 12 by the resumption of the Monday Popular Concerts at St. James's Hall. The inauguration of the thirty-first season of these excellent performances will bring gladness to the multitudes who throng to them in just appreciation of the high and pure musical influences which they subserve. The opening concert, which will be of strong and sterling interest, will include the co-operation of Madame Néruda (Lady Hallé), and MM. L. Ries, Straus, and Piatti in the string quartet; Miss Fanny Davies as solo pianist, and Miss Liza Lehmann as vocalist. The first of the Saturday afternoon performances will take place on Nov. 17, when Sir Charles Hallé will be the solo pianist.

Mr. Isidore De Lara will give vocal recitals, to take place at Steinway Hall, on the afternoons of Nov. 13 and 27; and Herr Waldemar Meyer announces two important orchestral concerts, to take place at St. James's Hall, on the evenings of Nov. 22 and Dec. 12. Herr Meyer is a skilful violinist, who has studied under Herr Joachim and gained eminence abroad, and, recently, in this country.

The London Ballad Concerts will be resumed, for the twenty-third season, at St. James's Hall, on the evening of Nov. 21. Several eminent vocalists will contribute to the programme, which will also comprise violin performances by Madame Néruda (Lady Hallé).

It is gratifying to hear of the recovery of Madame Trebelli from her recent severe illness.

The Royal Society of Musicians will celebrate its 150th anniversary on Thursday evening, Nov. 29, by a grand performance of Handel's "Messiah" in Westminster Abbey. Madame Albani, Madame Patey, and other eminent artists will be the soloists, and there will be a full band and chorus conducted by Dr. Bridge, organist of the Abbey. The occasion will be one of high and special interest, it being the first performance of the "Messiah" in the Abbey since that of 1834, when it was given, also for the benefit of the society named above, by command of King William IV.; another point of interest being the fact that Handel was a member and large benefactor of the Royal Society of Musicians. It is to be hoped that the coming performance will result in substantial money aid to an institution that renders great service in the support of decayed musicians, their widows and orphans, and this by a system of unobtrusive and economical self-management that has few parallels.

The eminent music-publishing firm of Ricordi, of Milan, London, and elsewhere, has lately acquired the important copyrights and other trade interests of F. Lucca, of Milan, who has retired from business. By this means, the already vast number of valuable publications comprised in the catalogue of Messrs. Ricordi has been very greatly increased.

Notice is given that the State apartments at Windsor Castle are closed until further orders.

During October, according to the Board of Trade returns, 23,478 emigrants of British origin left our shores, of whom 16,583 were English, 2325 Scotch, and 4570 Irish; 15,781 went to the United States, 2010 to British North America, and 3059 to Australasia. The total numbers in October, 1887, were 16,214 English, 2387 Scotch, and 5040 Irish, who went to the above-named places in about the same proportions.

MARRIAGE.

On Sept. 27, at the house of the bride's father, by the Rev. G. A. S. Adams, English Chaplain at Rosario, Frederick W. Whiting, fourth son of the late Captain George W. Whiting, R.N., to Anna Gatcombe, eldest daughter of J. Frederick Norman, of Santa Fé, Argentine Republic, and grand-daughter of the late John F. Norman, of Staplegrove, Somerset.

DEATH.

On Oct. 31, William James Malet Temple-Barrow, Esq., of Clyde House, Twickenham, and of Southwell, Notts, the eldest son of the late Captain C. I. Barrow, of Southwell, Notts, aged 36.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

OBITUARY.

LORD NEWBOROUGH.

Sir Spencer Bulkeley Wynn, third Baron Newborough in the Peerage of Ireland, and fourth Baronet of England, died on Nov. 1, aged eighty-five. He was second son of Sir Thomas Wynn, third Baronet, first Lord Newborough, by Maria Stella Petronilla, his second wife, and succeeded to the family honours at the death of his elder brother, in 1832. He married, May 10, 1834, Frances Maria, eldest daughter of the Rev. Walter De Winton, of Hay Castle, Breconshire, and by her (who died on Nov. 18, 1857) he had several children. The eldest son, the Hon. Thomas John Wynn, dying in the lifetime of his father, the title devolves on his eldest son, William Charles, now fourth Lord Newborough, who is in minority, having been born in 1873. The late Lord's daughter, Isabella Elizabeth, is married to Rowland, Viscount Hill. A very curious and interesting story attaches to Maria Stella, Lady Newborough, which is fully narrated in Sir Bernard Burke's "Vicissitudes of Families."

SIR BENJAMIN CHAPMAN, BART.

Sir Benjamin James Chapman, fourth Bart., of Killna Castle, Westmeath; Lord Lieutenant and Custos Rotulorum of that county, died on Nov. 3. He was born on Feb. 9, 1810, the second son of Sir Thomas Chapman, second Bart., by Margaret, his wife, daughter of Mr. James Fetherston, of Bracklin Castle, and succeeded to the title and extensive estates of the family at the death of his brother in 1852. From 1841 to 1847, he sat in Parliament on the Liberal interest for the county of Westmeath. He married, in 1849, Maria, daughter of Mr. Richard Steel Fetherstonhaugh, and had two sons and one daughter. The elder son, now Sir Montagu Richard Chapman, fifth Bart., of Killna Castle, was born on Feb. 22, 1853.

We have also to record the deaths of—

Sir Lewis Whincop Jarvis, on Nov. 2, at his residence, Middleton Towers, King's Lynn, after a prolonged illness, in his seventy-second year.

The Rev. George Cooper, M.A., R.N., at his residence, Fairfield, Liverpool, on Oct. 25, aged eighty-five years. He was senior naval instructor and chaplain, having entered the service in 1835. He served on the flag-ship Blenheim at the taking of the forts of Bocca Tigris and the capture of Amoy and Chin-hae in 1841, and received the Chinese war medal for meritorious services.

Count Van Bylandt, the Netherlands Minister to the Court of St. James, who was specially instructed to attend the bicentenary celebration of the landing of the Prince of Orange, on Nov. 5 laid the foundation-stone for a statue of the Prince, to be erected on the beach at Brixham, Devon. There was a large concourse of spectators.
